Sixth. Do you believe that the functions of the Government's National Labor Relations Board should be divided so that it does not serve as both the prosecutor and the jury at the same time? If you believe in this basic American principle of prosecution by one party and judgment by another, then you should support this bill.

FREEDOM OF WORK

Seventh. Do you believe that any American who wants to earn his daily bread should be required to pay an outrageous toll, without his consent, before he can even enter upon a job? If you believe that every American should have his Constitutional freedom to work protected, then you should support this bill.

Eighth. Do you believe in a separate Federal mediation service to help assist labor and management in their relations? If so, you should support this bill because that is another of its provisions.

Ninth. Do you believe that an employer should have the right of free speech with his employees so long as his words are free from threats? If you do believe in the Constitutional rights of American employers, as well as the rights of his employees, then you should support this bill.

Tenth. Do you believe in limitations placed on labor welfare funds to prevent their abuse? If so, you have still another reason for endorsing this bill.

I have cited some of the basic problems that the provisions in this bill will help solve. I believe that every American who has the interests of his country at heart can answer all the questions that I have asked in a manner that will permit him to support this legislation.

A TIME FOR DECISION

You remember the words of Shakespeare about "the tide in human affairs which taken, leads on to fortune, omitted binds all our lives to shallows and miseries." We are at this turn of the tide now in our labor, management, and public problem.

If we can have this legislation enacted into law, with or without the approval of the President, then America can open up a new era of harmonious industrial relations. She can set a standard for the world of peace in her industry, with labor, management, and the public benefiting therefrom.

I stated at the outset that this is a bill for the American public—not for American management, not against the American labor, but for the American public—the group which is hurt most by unlawful strikes, which is hurt most by racketeering and hurt most by communistic infiltration into unions.

As a member of the American public, I believe that each of my listeners, whether you are a working man or woman, a housewife, a farmer, a businessman, small or large, a student—can support this measure wholeheartedly, can urge your Congressmen to back it up, and urge the President to sign it.

CONCLUSION

This, as I have indicated, is another hour of decision. Industrial peace or industrial chaos depend on the outcome of this bill. We saw what happened when the President vetoed the Case bill; America was plunged into chaos. Let that not happen again. This bill is not a panacea for all labor problems, but it is a big step in the right direction.

God grant that we are strong enough and wise enough to take the road toward industrial peace and abundance by enacting this pro-American labor bill.

America's Interest in a Just and Final Settlement of the Palestine Question

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Thursday, May 22, 1947

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include herein the following address delivered by Sumner Welles on Monday, May 19, 1947, at a dinner of the American Jewish Congress, Boston, Mass.:

I am grateful to Mr. Silberman and his associates for the privilege they have afforded me of addressing this great dinner held under the auspices of the American Jewish Congress.

I know of no organization whose members have devoted themselves more unselfishly and more effectively, not only to the relief of human suffering, but also to the task of making our democracy a system which will, in truth, be based upon the observance of that essential principle of the equality of right and of opportunity of every citizen, upon which the liberties of the people of the United States have in part been founded.

The problems with which you have resolved to deal were never more urgent. No American citizen who believes in our democracy or who is moved by compassion for the hundreds of thousands of wholly innocent men, women, and children who have suffered, and who are still suffering, the effects of the cruelest tragedy of which we can conceive, could fail to express to you his hope that you will achieve the utmost measure of success in your present endeavors, and do that which lives within his power to be of service to the cause to which you are dedicated.

I do not believe you have asked me to come to speak to you merely in order that I limit myself to generalities or to mere expressions of sympathy and of support. The times in which we live are far too critical, and the objectives which we all are seeking are far too pressing in their immediate significance for that to be permissible. The safety of our country's institutions, the ultimate salvation of great numbers of human beings overseas who are presently homeless and destitute, and the welfare and future peace of the peoples of the world are to no slight extent dependent upon the just and rapid solution of the problems which are uppermost in the minds of all of us here tonight.

It is, therefore, inconceivable to me that this should be a moment for evasion or for the attempted palliation of fundamental issues.

We know that in some parts of this country of ours discrimination against some of America's ablest, most loyal, and most useful citizens is not only being practiced assiduously, but is unfortunately still increasing. We

know equally that there are individuals in the United States who are sedulously spreading those doctrines of anti-Semitism which have poisoned the body politic of so many of the countries of the Old World. Some close friends of mine who are members of the Jewish faith, and for whose judgment I have long since had a very high regard, have said to me that it is inexpedient to speak openly upon this subject since to do so would only arouse further and more bitter feeling and would tend to accentuate, rather than allay, the antagonisms which already exist. I cannot share that view.

It seems to me that here in the United States the surest corrective for this insidious evil that is already demonstrating its corrosive influence in so many of our communities, is to bring it out whenever it is perceived into the full sunlight of public opinion. It may well be that certain forms of legislative enactment may be required in order to insure the observance of standards by which unjust discrimination in such fields as those of employment may be immediately prevented. But from the larger viewpoint, it will only be the salutary force of American public opinion itself that can permanently eradicate this iniquitous anomaly from our American policy. For, thank God, it is un-American in every aspect. It has its origins in the evil and discredited past of an older civilization. It was revived at the behest of a criminal paranoiac who, as an individual, was responsible for the greatest calamity which the modern world has known. I, for one, have not the slightest doubt that, if they are given the opportunity to know by chapter and verse what is now going on in certain parts of this country, and to familiarize themselves with the nature and sinister character of the individuals and organizations that are spreading these doctrines of hate, an overwhelming majority of the American people would of their own initiative take prompt action in each community to find an American antidote for this poison before it spreads further. But public opinion will not be aroused until the danger is brought home to the American people, until they perceive the menace inherent in it to the individual liberties of every one of them, and before the press and radio report, consistently and with full detail, and whenever they occur, all evidences of those forms of discrimination which are a disgrace to our free traditions and the very negation of our American life.

It has been truly said that our generation is a tragic generation. We have suffered directly in our intimate personal lives from the results of the two world wars through which most of us have lived. There has been perhaps no more deplorable consequence than the fact that, because of the continuing deterioration in the moral structure of our civilization, the spiritual values and the humanitarian standards by which our western peoples had been so often guided seem to have well nigh vanished. It is only a few generations ago, because of the atrocities inflicted by Turkish despotism upon the minorities in Bulgaria that Gladstone raised the conscience of the British people to a fever of white heat, and the course of British policy was wholly changed. Little more than a decade later the Armenian massacres profoundly shocked the American as well as the British peoples. The wave of indignation which rapidly spread throughout western civilization at least saved the lives of many who would otherwise have been slaughtered.

Within the past 10 years we have witnessed the greatest mass murders which the world has ever known. We have seen the atrocious liquidation in cold blood of nearly 6,000,000 defenseless men, women, and children. The bestial horror of it all staggers the imagination. But far too often the voices that were raised before the war, or during the earlier years of the war, to tell the American people of the crimes that were being perpetrated were heard with apathy or incredulity. Yet today, when the scope of these atrocities has been officially disclosed, when those chiefly responsible have at length been justly punished, even when photographic evidence has been widely distributed, there are but few signs of that popular moral revulsion from which alone can spring the assurance that the American people will, in fact, never again permit such things to occur.

It was not long ago, when I was in a city of our own Middle West where documentary films showing a small part of what had actually taken place had been presented, that I was met by the assertion on the part of several of the leading citizens of that community that this was all largely propaganda and that it was well known that the true facts had been deliberately and grossly distorted. Assertions such as these are almost identical with those reported to have been made by the many Germans to whom the same proofs had been disclosed.

And it is, unfortunately, in a like spirit of individual aloofness that so many of us here in the United States today are viewing the continued confinement in the concentration camps for displaced persons in central Europe of the survivors of Hitler's mass liquidations. More than a quarter of a million men, women, and children, all that are now left of those persons of the Jewish faith, who had proved themselves to be such valuable citizens of Germany and Austria, have now been confined for more than 2 years. There are several hundreds of thousands of others who are living in constant fear and in utter destitution in eastern Europe. In their vast majority they are unwilling to return to the homes of their origin. Who can blame them for not wishing to go back to scenes of the most bitter tragedy? It is easy for us to say that the world of the future which we, as a nation, have fought to create, must guarantee to every individual a life secure from fear and free from any form of discrimination. Yet you and I realize that these refugees know that it will be long before the virus of antisemitism is eradicated from the mentality of a majority of the populations in central and eastern Europe, and that these survivors would have scant likelihood during their lifetime of finding peace or happiness or economic security in the countries where they were born.

It would have seem logical that the peoples of the western democracies, and particularly the people of the United States, would have felt it a primary obligation to provide these unhappy survivors with an immediate opportunity to obtain new homes in lands across the seas where they would be assured of liberty and of physical and of economic security, and that every step should have been taken to speed the process for their removal. Yet most of the unfortunates are still immured. They are increasingly uncertain as to whether they will have even enough food and clothing to see them through the coming months. But, what is worst of all, they are becoming bereft of all hope that new and safe homes will ever be made available to them. The plight of these Jewish refugees is a blot upon the conscience of this Nation. Their fate must become a matter of immediate concern to the people of the United States. We, as a nation, should never permit ourselves to forget, any more than the peoples of the other western democracies should permit themselves to forget, that we all bear our common share of responsibility for having permitted the development of conditions in the so-called civilized world as a result of which these people are homeless and hopeless today, and as a result of which the great majority of their fellows died at the hands of Hitler's executioners.

There can be no sound reconstruction of Europe and no creation of a new world order founded on equity until a full measure of justice has been dealt to this pitiful remnant of a sorrowful and afflicted people.

Is it not long since time that the Government of the United States should assert the leadership which is inherent in its world position, and recur to that idealism which has so often in the past marked our people? However much his detractors and his traducers may attempt to defame the resplendent memory of the great dead, you and I know that, were Franklin Roosevelt alive today, his voice would not only have long since been eloquently raised in behalf of this cause, because of our moral obligation, as well as because of its intrinsic justice, but that the effective impact of this Government's influence would have been felt so that this act of reparation might by now have been accomplished.

For what has been needed has not been only official expressions of sympathy, official suggestions that a relatively small proportion of the refugees be enabled to emigrate to the home of their fathers, or even the measures of material relief enacted for the benefit of those confined in the displaced persons camps. What was infinitely more necessary was the persistent day-in, day-out exercise of the influence of our Government, and a willingness on the part of the United States to share, if necessary, in the burdens and responsibilities involved, in order that Great Britain should be compelled to comply with her obligations under the mandate and permit the immigration into Palestine of a majority of the European refugees, and so that the remainder might find new homes in the Western Hemisphere and in other suitable regions of the world.

We have every reason to remember that the ideal of the National Jewish Homeland first came within the bounds of realization because of the Balfour Declaration, and because of the willingness of an earlier British Government to assume a mandate over Palestine. We have every reason to remember the incentive given in those first years to the miraculous progress made by the Jewish settlers by many humane and devoted administrators sent to Palestine by the British Government.

But we have equally every reason to condemn unsparingly the policies which Britain has pursued in Palestine during the past 10 years. For it is a record which is marked by injustice, by inhumanity, and by ineptitude, and by a flagrant disregard for the legitimate rights of the Jewish people, as well as for Great Britain's international obligations. The white paper of 1939, which is redolent of the fetid atmosphere of the appeasement era and which restricted immigration into Palestine to a bare handful each year, cost during the war the lives of untold thousands of refugees from eastern Europe and from the Balkans who otherwise could have obtained a haven of safety in Palestine.

Nevertheless, the loyalty and the valor of the Jewish contingents throughout the war could not have been more superb. Yet that same white paper, notwithstanding the control of the present British Government by the Labor Party which has long professed its support for the aspirations of so many of the Jewish people with regard to Palestine, is still retained in force. The unanimous recommendations of the Commission appointed by the British and American Governments which, had they been carried out, would have to some degree alleviated the condition of the displaced persons in Europe, and corrected some the injustices from which the Jewish residents of Palestine are suffering, were ignored or rejected by the British Cabinet. After weary months of futile discussions, the British Government sponsored a proposal for a form of partition of Pales-

tine—in the concoction of which I regret to say representatives of this Government participated—which was one of the sorriest travesties of a just solution which can well be imagined. Such a project would not only have rendered it altogether impossible for the Jewish people in Palestine ever to offer new homes there to the refugees of Europe, would not only have prevented them from ever establishing any independent or autonomous government, or of ever developing any prosperous economy, but it would have subordinated them for all time to come to whatever policies future British governments might decide to adopt. And since this project was rejected, and later officially disclaimed in Washington, we have seen the constant gowth of repression and of terrorism in Palestine. We cannot extenuate the crimes of the terrorists. But crimes such as theirs are bred by rank injustice, by martial law, and by military retaliation, and by the execution in the sacred name of justice of men who are struggling to be free, and to secure liberty and safety for the persecuted members of their race.

Now, after 2 years of sterile procrastination, the British Government has at last been compelled to submit the problem of Palestine to the United Nations.

The United States is once more given the opportunity for leadership in a righteous cause. It cannot only now regain to a very considerable extent the prestige which it has sacrificed by the course which it has pursued with respect to Palestine during the past 2 years, but it can vastly enhance the authority of the United Nations itself, if it will only take the steps which it can take to make certain that, when the recommendations of the special committee appointed by the United Nations are presented to the General Assembly in its regular session next autumn, those recommendations represent a plan for a just and permanent settlement, and that final action be taken upon them by the Assembly before the end of that session.

We cannot afford to let this year of 1947 come to its end without a final settlement. We cannot agree that the British Government should once more refuse to acquiesce in the decisions which may be reached. For the problem of Palestine, we must recognize, is no longer merely a question of justice to the Jews. It has also become a question fraught with grave consequences to the maintenance of world peace. For however much Mr. Bevin may lightheartedly brush to one side the possibility that a continuation of existing conditions in Palestine would endanger world peace, there are few objective observers of the international scene of today who can share his levity in that regard.

The bitterness of spirit which British policy has engendered, the opportunities for the growth of a blind and exaggerated form of Arab nationalism which British evasions and procrastinations have afforded, the refusal of our own Government to play any responsible or authoritative part in the shaping of events during the past year and a half, have all contributed to making it improbable that that kind of a solution for Palestine which, from the broader perspective, would have been most likely to redound to the common benefit of the Jewish people as well as of all the peoples of the Near East, can now be achieved.

I, myself, however reluctantly, am forced to the belief that the only kind of solution which today is practicable, which will to some extent recognize the legitimate aspirations of the Jewish residents of Palestine, and which can afford the immediate hope of resettlement to the refugees in Europe, is some form of partition.

But no form of partition would be acceptable, or even conceivable, unless it allotted to the Jews an area within Palestine amply sufficient to provide homes for all of the Jewish people in Europe who wish to go there; unless the areas to be placed under Jewish sovereignty were contiguous, rather than gerrymandered, as in the iniquitous partition proposal of last autumn; unless such territory comprised the major extension of the sea coast, and unless it contained the whole of the Negev, so that such development projects as that of Dr. Lowdermilk for the creation of a Jordan Valley Authority could be carried out,.

That is clearly the minimum objective. But in event that is achieved, the present and future residents of the Jewish Commonwealth of Palestine would be given the opportunity to create their own democratic government, to control immigration as they themselves might determine, and to build up with the same amazing success which marked the efforts of the earlier settlers a prosperous national economy through which the living standards of the whole region would soon be raised. We would then have every reason to hope that, after the stresses of the moment had passed, some form of commercial and financial collaboration, and some form of cooperation in the development of the natural resources of the entire Near Eastern area might be found between the new Jewish state of Palestine and the surrounding countries of the Arab world.

If such a solution is found for the Palestine problem by the United Nations next autumn, the contention will presumably be advanced by Great Britain that she is no longer in a position to accept the financial and military burdens which that solution would impose upon her. Should that prove to be the case, you may remember that the provisions of article 106 of the United Nations Charter are sufficiently ample in their scope to make it possible for these responsibilities and burdens to be jointly shared by the major powers, for so long a time as it may be necessary to insure the peace and security of all of the inhabitants of Palestine, or until such time as the United Nations itself is competent to take over these obligations.

It is for all of these reasons that I believe the need to find a just, a constructive, and a permanent solution of the Palestine problem has become an urgent challenge to the American people and to the capacity of their Government for enlightened leadership.

If such a solution can be found this year, we will be justified in the belief that we may yet avert a spiritual and physical break-down of the inmates of the displaced persons camps. For to them it would mean that a sure salvation was at last at hand. If such a solution is found we must be realistic enough to recognize that it will be more probable that the bars to immigration in the countries of the Western Hemisphere, and in others of the less densely populated regions of the earth, will be more rapidly let down, and that the narrowly selfish fears with which communities are obsessed when they are confronted with the possibility of having to give shelter to great numbers of destitute persons will thereby be dissipated.

But in the broader sense, if such a solution is found, it must necessarily prove to be a bulwark for our own democracy. For, if the future safety and welfare of our own Nation depends, as it must, upon the creation of an international order instinct with the spirit of justice, and through which freedom of religion, freedom from fear, freedom from want, and freedom of expression are in reality guaranteed to all peoples, justice must at last be done to the Jewish people who, above all others, have been the most bitterly afflicted in the history of mankind.

The people of the United States, by a renewed consecration of themselves to the preservation in their own land of those human liberties which have made of this country the hope of humanity, and by an unfaltering determination to see that justice and freedom are now at last given to those who have long been oppressed and who have greatly suffered, can hasten the reign of peace and help to bring to pass that free world order for which they believe their victory was won.

Statement by Senator Myers on Interior Department Appropriations

EXTENSION OF REMARKS
OF
HON. FRANCIS J. MYERS
OF PENNSYLVANIA
IN THE SENATE OF THE UNITED STATES

Friday, May 23 (legislative day of Monday, April 21), 1947

Mr. MYERS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a statement made by me before a subcommittee of the Senate Committee on Appropriations regarding H. R. 3123, the Interior Department appropriation bill, for the fiscal year ending June 30, 1948.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

I know of your desire to make drastic cuts in Federal expenditures, but I also know that none of the members of this subcommittee would consciously seek to make those economies at the risk of our national economy or of lives or health or safety of our people or of the fundamental obligation of any government—particularly our Government—which is to encourage, insofar as possible, the raising of the standards of all citizens.

That is why I am here today. I am hopeful the committee will not sustain cuts merely for the sake of economy and with complete disregard of the functions of government affected by such cuts.

In passing, for I am not here to testify today on this aspect of the bill, I would like to say that I am in sympathy with the efforts of Senators and governors and citizens generally of the great western areas of the country in seeking to maintain efficient speed of operation of their reclamation projects, and if this committee takes action, as I hope it will, to restore funds for this purpose, I can assure you of my support on the Senate floor. Much as I and my constituents in Pennsylvania desire reduction in Government costs, we do not want this accomplished at the expense of the self-liquidating, wealth-producing projects of reclamation which, by increasing national wealth, income, and opportunity, help all America and thus help Pennsylvania too.

My main purpose here today, however, is to discuss H. R. 3123 in terms of what it means directly to the Commonwealth of Pennsylvania, to the industries of Pennsylvania, to the people of Pennsylvania. Pennsylvania has a direct and sizable stake in the enactment of an appropriation bill adequate to meet the needs of the Interior Department. In that respect, it is vital to the entire country, which depends upon Pennsylvania for many of the most basic of industrial products, that Pennsylvania industry be enabled to operate efficiently and with whatever assistance is necessary from the Federal Government in research and in other fields.

I don't think this committee would for a moment look favorably upon Government

"economy" which would put hobbles on production of Pennsylvania's steel or coal or coke or oil or alloys or other basic commodities vital to the entire economy of the United States. And yet, a review of some of the functions which would be affected were this bill to become law in its present form, as it was adopted by the House, convinces me the economy of H. R. 3123 would be a serious blow to the economy of Pennsylvania, and, therefore, of the whole Nation, because of Pennsylvania's status as perhaps the dominant source of essential industrial needs.

As I want to point out in greater detail, not all of the functions of the Interior Department in which the State of Pennsylvania has a vital interest actually occur in Pennsylvania, but many of them do. For instance, although the Interior Department is carrying on few activities in Pittsburgh directly related to steel production—there are some, and they are very important—what the Interior Department discovers concerning coking coals and iron ore reserves in other parts of the country, for instance, are of urgent interest and importance to Pittsburgh and to Pittsburgh's steel industry.

Similarly research in oil recovery, in Pennsylvania or anywhere in the United States, is vitally important to that region of Pennsylvania and of nearby States which produce the best lubricating oil in the world, 100 percent pure Pennsylvania oil. This bill sharply curtails such research, including that at Franklin, Pa., where a small staff which has been doing magnificent work would have its budget cut about in half. This is indeed false economy, because America needs the oil this research can bring out of the ground.

False economy is evident, too, in the House action in eliminating the Ground Water Branch of the Geological Survey. I venture the Government saves enough in water costs over a period of years at just one installation in Pennsylvania, the Philadelphia Navy Yard, as a result of functions of this agency, to more than pay for the entire cost of this ground water program nationally. What it means in dollars and cents to industry is incalculable.

Now I want to take up some items of the bill in specific detail, particularly from Pennsylvania standpoints.

ANTHRACITE LABORATORY

There is one matter in this bill relating to an activity exclusively in Pennsylvania which I want to take up now. It is covered by title II of the bill on page 79 as the bill was passed by the House and is entitled "Surplus Appropriation Rescission." I am asking to have that entire title stricken from the bill.

It recaptures an appropriation of $450,000 made last year by the Congress and approved by the President for the construction and equipment of an Anthracite Research Laboratory under the Bureau of Mines. As the bill now stands, this appropriation would be covered into the Treasury.

If that provision is retained in the bill, the Anthracite Research Laboratory authorized by Congress in Public Law 812, Seventy-seventh Congress, in December 1942, and held up during the war, would be abandoned. This would be one of the most shameful repudiations of a solemn obligation which it would be possible for the Congress to make.

I never thought when this modest appropriation sailed through the Congress last year without controversy of any kind and with little questioning or debate that I would find myself at this time forced to appear before a congressional committee to justify it. There is even now no controversy over the need for the laboratory. Instead, a comedy of errors in the House—a comedy of errors with more tragedy than comedy connected with it—resulted in the complete elimination of the project following an attempt by a member of the House Appropirations Committee to have the project located within his own district.

Briefly, the background story is this: In the 1930's the anthracite industry of Pennsylvania—and it is an industry to all practical purposes confined to Pennsylvania—was a very, very sick industry. Unemployment in the northeastern area of Pennsylvania where anthracite coal deposits are located was far above the national average. So desperate for work were the skilled deep-mine coal miners of this area that they took matters into their own hands and began their own little coal holes which they worked singly or in groups.

Coal bootlegging—unauthorized mining of coal on land owned by or claimed by the coal companies and in back yards and in any likely spot where a seam of coal might be reasonably close to the surface—became a major, if illegal, industry in the anthracite area. This coal was peddled for whatever it would bring and although helping to sustain body and soul for the miner and his family, it also contributed to a further deterioration of the market for the legitimate coal mine operators. A vicious circle developed, with the mines being forced to lay off more and more of their employees because of two factors: the depression level of purchases and also the strong competition of the coal bootleggers.

The men that were laid off at the mines thereupon in many cases themselves turned to bootlegging and this added production cut further into the market of the regular mines, which were then forced to lay off more miners and thus this circle continued and got more vicious. Bootleg production reached a staggering production of 6,000,000 tons a year.

Efforts to end bootlegging by legal or forceful methods failed because there was little sentiment among law enforcement officials or juries to punish a man for doing the only thing he knew how to do in order to buy food for his family. The only thing the skilled miner knew how to do or had an opportunity to do in those days was to mine coal.

The plight of the anthracite region of Pennsylvania became so dramatic that President Roosevelt early in his administration, at the suggestion of Congress, appointed a commission to investigate ways and means for improving economic conditions in the anthracite areas. One of the recommendations of this commission was the establishment of a laboratory to develop and investigate new and extended uses for anthracite, and to aid the industry in creation of better techniques of mining anthracite so as to bring down the cost of the fuel and aid it to retain and even expand its markets.

I might point out here that anthracite, although once one of the major sources of all fuel in the United States and important in many industrial processes, is now almost exclusively a domestic fuel for heating purposes. But even so, eastern Pennsylvania and much of the eastern seaboard are dependent upon this fuel. Washington homes and apartment houses and public buildings, for instance, were provided with this fuel all during the war when there were periodic crises in the supply of many other fuels. There was no crisis in hard-coal supply.

The war, of course, brought a great revival in the level of economic conditions in the anthracite industry because of the tremendous demand for fuel. But anthracite, on which more than a million Pennsylvanians depend directly or indirectly for their economic future, may again become a sick industry unless its own efforts, which are substantial, are augmented by the modest assistance of the Federal Government as represented in this small appropriation.

As I said, the appropriation sailed through the Congress last year. It provided, as specified in the enabling legislation, that the laboratory be built in the anthracite area of Pennsylvania. Naturally, there was great competition among the various areas which extend over 10 counties for the location of the laboratory. It was left to the discretion of the Secretary of the Interior to select a site. Numerous sites were not only suggested by individual localities, but were, in fact, offered free of charge to the Government. A committee of three representing the coal companies, the United Mine Workers Union, and the public, the latter representative being a faculty member of the University of Pennsylvania, finally recommended the laboratory be built in Hazleton, Pa., presumably because it was just about in the geographical center of the anthracite area. Numerous other sites were, of course, considered suitable. Acting on the recommendation of this special committee, however, the Secretary designated Hazleton as the site.

Immediately there was a great uproar on the part of other districts which also had suitable sites available.

According to the transcript of the House hearings into this matter, the Department of the Interior was immediately notified by a Congressman who had just become a member of the House Appropriations Committee that it had better not obligate any of the money for the laboratory until the House Appropriations Committee investigated the circumstances of the location of the laboratory. Since this Congressman is a member of the Interior Department subcommittee of the House Appropriations Committee, his warning, of course, would warrant more than passing consideration. I understand there was a further warning to the same effect from Chairman TABER. As a result I understand no work was done on the laboratory under the coercive nature of these warnings coming from Members of Congress in exceedingly strategic positions insofar as the Bureau of Mines and the Interior Department are concerned.

The hearings of the House disclosed exceptional energy on the part of one of the subcommittee members in seeking to establish some sort of political plot to locate the laboratory in a district other than his. If politics were involved, I have no knowledge of it. As the senior Senator from Pennsylvania, and as one of only six Democrats in the Congress from Pennsylvania, I should think that if politics had been involved in this location, I would have known something about it.

Several attempts were made last year by chambers of commerce and other groups in the anthracite area to enlist my aid in having the laboratory established in one or another specific location, but I can truthfully say that I did not bend a finger to aid any political or economic or sectional group in having this laboratory located.

All I am concerned about is that there be a laboratory and that it be located in the anthracite area of Pennsylvania.

In any event, in order to run interference for a fellow member in this contest, the House Appropriations Committee this year rescinded last year's appropriation and then reappropriated the same amount of money with the specification that the laboratory be built at Schuylkill Haven, Pa.

Naturally, this evoked a storm of protest from the area previously designated as the site. Although the appropriation was subject to a point of order, the Appropriations Committee of the House persuaded the Rules Committee to waive points of order in the rule on the bill and persuaded the House to uphold that rule in a vote on the floor.

The resulting floor fight raised such confusion and chaos over this appropriation that a surprise amendment to eliminate the appropriation entirely was suddenly approved.

This would have been all right had the House also struck out the rescission feature of title II of the bill, but it refused to do so, and thus last year's appropriation has been recaptured at a supposed saving of $450,000—one of the worst examples of false

economy I have seen in Congress for some time.

I should like to read you a statement made by the Federal Anthracite Coal Commission in its report of April 1942:

"Since 1933, $169,238,000 has been spent for Work Projects Administration and $142,434,000 for other types of public assistance in the five important anthracite counties. This amounts over the period to $268 per capita, as compared with only $183 per capita for the rest of Pennsylvania and $142 per capita for the United States as a whole. In December 1941, 10.7 percent of the population of these counties was on public assistance or Work Projects Administration as compared with 5.8 percent for the rest of Pennsylvania. Together with Civilian Conservation Corps and National Youth Administration funds, total relief expenditures since 1933 approach one-third of a billion dollars. The Federal Government has a major interest in reducing these disproportionate relief costs in the anthracite area by a positive long-term approach to the economic and social rehabilitation of the area. This would be far less costly than supporting a large permanent population on relief."

I have before me a telegram from Martin P. Kennedy, president of the Scranton Chamber of Commerce at Scranton, Pa., urging restoration of this laboratory and reporting that there are now 50,000 unemployed in the anthracite region of Pennsylvania. Gentlemen, this is an astounding total. It represents the contraction of the anthracite industry over a period of years, and foreshadows vast unemployment and suffering—and expense to State and national funds—unless this area can be revived.

Now I want to make clear that the people of the anthracite area of Pennsylvania are not listlessly and unconcernedly sitting by and waiting for the Federal Government or the State government to come to their rescue. They are doing something—something dramatic—about their economic position.

Communities throughout the area are making determined efforts to diversify their industrial pattern, bring in new businesses and new industries, provide and stimulate employment, and otherwise contribute to better economic conditions. The people of Scranton and vicinity, for instance—particularly the chamber of commerce, whose president I have just quoted—raised thousands and thousands of dollars locally from rich and poor alike to buy surplus war plants from the Federal Government and sell or rent them—at a loss if necessary—to industries which would use them in peacetime.

I have here a copy of the Plain Speaker, newspaper, of Hazleton, Pa., in another county, showing what the people of that community have done and are doing in economic self-help. Nearly three solid pages of small type are devoted to listing the names of Hazleton-area residents who contributed sums ranging from 10 cents to $20,000 each to a fund to bring new industry to the community. Its first great achievement was to "land" the location in that area of an Electric Auto-Lite Co. This is a remarkable example of real Americans courageously attacking the problems of their own economic future with hard-earned dollars and great determination.

The anthracite industry itself, meanwhile, is budgeting a good share of its income to research in the development of new automatic burning equipment for anthracite and has great hopes in the success of this project, which should help to put anthracite on a competitive level from the so-called convenience of use standpoint with any other fuel.

There is one point I want to make about this anthracite area which I believe requires making. That is that labor and industry in the anthracite area have learned over many years to get along together. While nearly all the other mines of the Nation are now under Government control and operation, the anthracite mines remain completely free enterprise because management and labor were able to agree on working contracts without the need for Government intervention. Management and labor together in the anthracite area realize the need for cooperation for their own survival.

The best witness to this would be a coal-industry official. The Shenandoah General Mine Board, at Shenandoah, Pa., recently sent me this statement:

"Anthracite mine workers are aware of the problems facing the hard-coal industry, they have a splendid working record as far as suspensions are concerned, losing only 43 days over a 20-year period, and are under good leadership of the United Mine Workers of America in districts 1, 7, and 9. That's the opinion of C. M. Dodson, president of C. M. Dodson Coal Co., of Bethlehem, as expressed in the firm's weekly bulletin to the trade.

"The following appeared in a recent issue which is self-explanatory:

"'A story which needs badly to be told in behalf of anthracite developed in the course of a conversation in our offices the other afternoon. We were discussing a variety of things, including the recent 17-day bituminous suspension, and our visitor, a local newspaper editor, asked this question:

"'"Exactly what is the record of strikes in anthracite? I recall the suspension of 8 or 9 days last June and a 2- or 3-day lay-off in 1945," he said, "but tell me the hard-coal facts about strikes prior to that."

"'Well, that was a poser. We hemmed a bit and hawed some more and said we'd better consult the record, although our impression was there had been trouble every 2 or 3 years over a long period of time. Here's what we found:

"'We discovered there had been a total of only 43 days lost through industry-wide strikes or suspensions in the last 20 years—an average of slightly more than 2 days a year since 1926. Further study of the records revealed that this "time off" was more than made up by the anthracite miners having given up their vacations throughout all the war years and in 1946, and having worked all 29 days in February 1944.

"'The two decades prior to 1926 reveal a quite different story, it is true, for from 1906 to 1926 a total of 442 days were lost through industry-wide strikes, or an average of 22 days' production per year. But the fact remains that anthracite's record in more recent times has been unusually good.

"'This is something, we think, which retailers and others in the industry should know and which the general public most definitely should be told. Anthracite, being coal, has suffered in consumer estimation, and the best friends of anthracite—those of us in the business—fail to impress the public with the really good record of our industry in the labor field. (How many other industries have a better record?)

"'We, for one, are pleased that the anthracite miners were not emotionally stampeded into sympathy action in the recent bituminous suspension. Under good leadership in districts 1, 7, and 9 of the United Mine Workers, hard-coal miners went about their business, except for a brief flare-up by a small minority.

"'There seems to be a growing realization among anthracite miners that the industry faces serious competition, that production must be maintained, and that the men themselves have considerable responsibility in helping protect the industry and its market. We believe anthracite miners are doing some serious thinking about their future. The rest of us in the industry, including retail dealers who are in direct contact with the consuming public, might do well do realize more consciously that anthracite has been the dependable fuel in more ways than are contemplated by reference to its burning qualities.

"'C. M. DODSON, *President.*'

"SHENANDOAH GENERAL MINE BOARD,
"JOSEPH MACHULSKY, *President.*
"WALTER ZEMBER, *Secretary.*"

SYNTHETIC LIQUID FUELS

On this item, I am undoubtedly going to surprise some of my colleagues in the Senate who are members of this subcommittee by stating flatly that I do not now intend to oppose the $2,000,000 cut enforced by the House in this Bureau of Mines activity. Some of my friends on the subcommittee have accused me from time to time of resisting any and all budget cuts merely on principle. That is not a fair accusation. I have stated many times that I am agreeable to cutting the budget wherever it is safe to do so, and apparently this seems to be such an instance.

I am not sure of that fact, but at least I have been unable to obtain from the Department data sufficient to compel me to oppose this cut. The cut seems to be of a technical nature, involving contract authorization, but I have no direct evidence of immediate damage to the long-range program of synthetic liquid fuel development. I hope that is correct. If I am wrong—if the House was wrong in making this cut—then the results should show themselves reasonably soon and it will be time to demand correction.

I am, however, vitally interested in the success of this program of research in synthetic liquid fuels, particularly because of developments in connection with it within my State. The Bureau of Mines is developing a laboratory in, and a pilot plant near, Pittsburgh for production of synthetic liquid fuels from Pennsylvania coals, using two different processes. There is work also being done by the Bureau both at Pittsburgh and at Morgantown, W. Va., on gasification of coal. These are very significant programs for the future of coal—and for the future of the gas and gasoline supply. So successful have researchers been in producing gas and liquid fuels from coal that the Pittsburgh Consolidation Coal Co. is now launched on a great commercial venture into this same field, having announced its intention of building a pilot plant at Library, Pa., with the intention of establishing a $120,000,000 plant later also in western Pennsylvania. This indicates great things for coal's future. The process the private concern will use is one on which the Bureau of Mines has long been engaged in research, and much of the Bureau's work on catalysts, reaction conditions, and on the nature of the products has been made available to private industry to assist in developing the commercial processes. I think that is one of the fundamental purposes of Federal research.

As I said, I have not been convinced that the $2,000,000 cut by the House will be serious. It may well be. Deficiency appropriations may be required to keep the work going. I hope the subcommittee will draw out the Bureau in complete detail on this matter so that we can all be sure about this cut. It seems to mean largely a juggling of the Bureau's funds and the elimination of emergency reserves. But I am assured the essential features of the program, at Pittsburgh and elsewhere, will continue, and on that assurance I do not now oppose the reduction.

However, in making this $2,000,000 cut, the House reduced from $140,000 to $100,000 the amount available for this program in the home office—in headquarters—in the District of Columbia, for personal services here in coordinating the national program, and I think that is a big mistake. This small sum may well mean the difference between success and failure of a multi-million dollar program because the staff of technical experts needed for effective direction will be materially reduced when it

should instead be strengthened. I urge restoration of this comparatively picayune amount.

OIL AND GAS INVESTIGATIONS

This item in the Bureau of Mines budget was reduced by the House by $327,000 or more than a third, leaving $579,000. This means, specifically, in Pennsylvania, a cut in the budget of the Franklin, Pa., research center of the Bureau from $89,000 to about $38,500. In the present fiscal year, this office has had $81,000 to spend.

It is money it has been spending well. I mentioned earlier the accepted leadership of Pennsylvania crude among all lubricating oils. It is the best oil in the world. It came from the first oil field to be discovered in America and this field has given hundreds of millions of barrels of oil to America for her industry, her military establishment, her economy.

Unfortunately, many years ago the oil from this field was so accessible as well as valuable that, like many other natural resources, it was exploited with little regard for the future. The gusher production from these wells was drawn off and then well after well was abandoned with millions of barrels of oil left unrecovered in the earth.

We know better now and we are going back to that abandoned oil and coaxing it out of the earth. We are finding there was more oil left in those abandoned wells than was originally removed from them.

The oil, as I said, must largely be coaxed out of the earth now in Pennsylvania and adjoining fields and the only way to get it out is by scientific application of secondary recovery methods. The Bureau's petroleum field office at Franklin is providing the help the operators—and they are largely small operators—need to get this oil out of the ground.

More than 15,000 small operators produce oil from 34,000 wells on approximately 1,500,000 acres in this region. There are few big fellows in the group.

In the 5 years the petroleum field office has operated at Franklin, the small staff, originally of six engineers but expanded this year to nine engineers, has produced tangible results far in excess of the modest cost, results incalculable in terms of the added oil they have helped to provide us with during the war. Although Congress last year authorized employment of 14 engineers on this project, and although the Bureau is trying to find sufficient qualified men to bring it up to full strength, the cut made by the House in this bill would mean a reduction of force, I am informed, to six engineers and one clerk.

Is that sensible economy? I might point out to this committee that the one person in the entire Congress who over the years became perhaps the best known exponent of economy, Congressman RICH, appeared before the House committee to urge, not a cut in this item, but allowance of the complete budget amount.

The Bureau had hoped to establish a subfield office at Bradford, Pa., to engage in secondary recovery studies of water-flooding operations. However, should this House cut stand—and I am sure this committee would not allow it to stand—this suboffice cannot be opened.

One of the Bureau's accomplishments in Pennsylvania within the past few years was a new technique developed with the aid of local oil producers in gas drive operations, involving the flowing of oil from stripper wells. Originally intended only to replace pumping equipment, which was scarce during the war, it is now showing promise of producing more oil than was formerly produced by pumping.

One lease in Venango County was on the verge of being abandoned 2 years ago, but because of the aid of the Bureau's Franklin office in providing scientific know-how on the new principle, the production rate has advanced substantially, operating costs have been reduced, and the operator is now drilling about 20 more wells on this same lease. As of now, there are more than 200 wells in nearby areas, I am informed, using this flowing principle of recovery. Operators in this and other fields are daily requesting the Bureau's help in changing over to the new method.

When we recall that in 1925 the remaining proved reserves of crude oil in the Pennsylvania-New York-West Virginia area were estimated at 150,000,000 barrels, whereas 488,000,000 barrels have actually been taken out of the ground there since then, with 209,000,000 barrels of proved reserves now remaining, we can readily see that technological progress, provided largely by the Mines Bureau, has given us more than a half billion barrels of oil we never thought we had 20 years ago. It is known now that perhaps another billion barrels exist in the Appalachian region.

Research has given us that extra oil.

Can we, then, ignore the value of research in this field when we in the United States and, as a matter of fact, all nations, are on a world-wide search for more and more oil?

In the same way that the oil-recovery program of the Bureau brings wealth—and oil—to Pennsylvania and the Nation, so the natural-gas investigations of the Bureau are also important to my State and to all States. Pennsylvania produces even today tremendous quantities of natural gas, and this gas is vitally needed in the steel and related industries of the western part of Pennsylvania. I want to see the Mines Bureau permitted to continue its natural-gas investigations because we do not produce as much gas in Pennsylvania as we need. The shortage last winter, as a matter of fact, was acute, despite large shipments of the fuel from other States. This bill as it now stands would, I am afraid, curtail if not kill off entirely some of these important investigations.

OIL AND GAS DIVISION

The Oil and Gas Division, in the Secretary's Office, has also been cut by the House, in this case from $463,900 to $124,000.

I think this is the poorest kind of economy, because it means throwing overboard the compilation of vital statistics and the coordination of America's petroleum industry into a cohesive pattern. The Oil and Gas Division, which is the only agency we have for the establishment of a unified national petroleum policy, must be provided with the funds with which to operate. To give this agency merely a small portion of the amount it actually needs even to police the "Hot Oil" Act and to amputate all of its other functions would be, I believe, an irresponsible abuse of the appropriating power without regard to our economy or to our national defense. I ask the amount be restored.

MINE SAFETY

I am very pleased that the House committee made no slashes into this important work and I hope the Senate committee will similarly not seek to reduce these vital appropriations. Along the same lines, I might note the fact that $105,000 for anthracite investigations proposed by the Budget has weathered the economy storm in the House and will do likewise, I hope, in the Senate. This fund finances the construction and testing of new mechanical mining equipment, including a novel coal planer discovered originally in Germany. Flood-prevention-control studies under this appropriation have disclosed billions of gallons of water in 125 pools separated by barriers from the mines. The Bureau is seeking to determine if these barriers are adequate to prevent future disaster.

TESTING FUELS

The cut in this item was from $595,000 to $302,285. It doesn't sound very important or very urgent. But the seeming unimportance of the item is misleading, especially if we are considering true economy. One of the purposes of this fund is for research in lowering the costs to the Federal Government of the operation, maintenance and replacement of Federal boiler-plant equipment. This work protects over $750,000,000 of Government heating and power equipment. How much does this modest appropriation save us, as taxpayers? I cannot get exact figures, but estimates run as high as $10,000,000 a year. Even a tiny fraction of that would justify the entire appropriation. Not only the Government, but industry, too, shares in the dividends from this research, and it is only a part of the Bureau's activities under this heading.

Yet the House cut would mean a one-third cut in this work.

The only new item included by the Budget Bureau's request for testing fuels is a vitally important function for Pennsylvania steel, but it would not go through if this cut is not restored. This item was for $25,000 for research on improvement of coking practices, and the work was to have been done in Pittsburgh. The House bill kills this program aborning.

I am informed that the lignite gasification pilot plant at Grand Forks, N. Dak., will have to close if the amount for testing fuels is not restored. This plant, in developing high hydrogen gas from lignite, could help materially, I am informed, in the development of processes for making lower-grade iron ore suitable for steel use to replace the high-grade ores we are rapidly depleting in the Minnesota range. Faced as we are with the prospect of the exhausting of our high-grade ores in 20 years or so, I think it vitally important not only to Pennsylvania but to the Nation that we plan ahead and develop a substitute material.

METALLURGICAL RESEARCH AND PILOT PLANT

Along the same lines, I want to point out some of the effects of a cut of $1,000,000—from $1,600,000 to $600,000—in metallurgical research. The Bureau has under way an extensive program for the use of off-grade ores which could supplant present ores if the need arose, thus preventing geographic and technical reorganization of the iron and steel industry.

As one example of this work, it initiated its sponge-iron program in the ferrometallurgical laboratory at Pittsburgh and pilot plant tests were conducted at Johnstown, Pa., Raleigh, N. C., and Laramie, Wyo. The Laramie and Raleigh plants would have to close down under this appropriation cut, and the Pittsburgh work on fundamental studies would be seriously curtailed. This, I believe, is poor economy indeed. America has been blessed for so many years with such an abundance of natural resources that I am afraid too many Americans, and some Members of Congress, take these things for granted and refuse to recognize the danger of depletion.

The Bureau is operating pilot plants for the production from domestic ores of such vitally needed, but unfortunately scarce, alloying materials as nickel, chromium, vanadium, tungsten, cobalt, titanium, and so on. The House bill would close down completely the vanadium, tungsten, and antimony plants and seriously curtail those producing nickel, cobalt, and titanium. Can we afford that?

The question might be asked here: Is the Bureau competing with private enterprise in these fields? The answer is "No." The Bureau, under this program which would now be curtailed so drastically, began in 1943 to produce experimentally electrolytic manganese, a material capable of being substituted for nickel in a variety of steels and which can be produced from low-grade ores. The plant was so successful, a commercial plant was erected at Knoxville, Tenn., which has now an estimated capacity of 4,000,000

pounds per year. Steel producers in Pennsylvania, I might say, take a greater portion of the output of this plant than do those of any other State. Once its work was shown to be commercially practical and useful, the Bureau withdrew from its manganese metal production and it is turning to new problems—that is, if Congress will let it do so.

INVESTIGATION OF DOMESTIC MINERAL DEPOSITS

If the Senate of the United States is willing to allow a 50-percent curtailment in mineral explorations in the United States at this stage of our history, following the terrific rate at which we used up our minerals during the war, I will be, indeed, surprised and amazed. Yet that is about what the House has proposed in its cut in this item from $1,600,000 to $800,000.

I am sure I do not have to go into detail in this matter before this subcommittee, composed as it is of so many Senators vitally concerned with our future metal needs. Suffice it to say, however, that in Pennsylvania, alone, the Bureau had intended drilling in four counties for lead and zinc, which we know is critical, and in another county for copper. As for copper, we all recall a few weeks ago, when the copper tariff moratorium bill was before us, how industries throughout our States deluged us with requests for passage of this measure in the hopes it would encourage marketing here of foreign copper. Time will tell whether this expedient will bring substantial relief. But in the meantime, any efforts to find more copper in the United States should certainly be encouraged.

The Pennsylvania copper drilling project, which would probably be abandoned under this fund cut, was scheduled to take place in Montgomery County. Lead and zinc explorations are under way in Lancaster County and were supposed to start in Chester, Bucks, and Blair Counties, where these metals previously were mined many years ago. The Lancaster operation will probably be limited substantially and the other three, I am informed, will be abandoned unless sufficient funds are made available.

PITTSBURGH STATION, BUREAU OF MINES

The House cut here of 25 percent from $200,000 to $150,000 hits at one of the most important coal research centers of the world. Its work deals with fundamentals of coal composition and production, mining methods and safety, coal cleaning and preparation, coal carbonization, utilization efficiency and so on.

It has been doing outstanding work on smoke abatement and on coal technology generally. It is now seeking methods of providing the steel industry with suitable coking coal from Greene County and elsewhere now that the Pittsburgh bed in Fayette and Westmoreland Counties, the greatest source of coking coal in the world, is becoming depleted.

I ask the restoration of this $50,000 cut and I know western Pennsylvania industry joins me in that request.

ECONOMICS OF MINERAL INDUSTRIES

I am sure the mining industry will be able to put up a sufficiently convincing argument to show this committee the need for restoration of the cut made by the House of $678,000 representing the elimination completely of bituminous-coal statistics gathering and compilation. This cut would end a function which has been carried on for 10 years and which has, I can testify, saved this country immeasurable hardship and dislocation in the past. It is not only the mining industry, but all industry which uses coal, and thus, the Nation generally, which benefit from this work. To know where our coal is, and what kind of coal and how much is available is vital to an industrial Nation like ours which depends upon that coal.

Coal is still a critical material, I might say, particularly in view of the needs of suffering millions abroad whose needs will require us to ship sizable amounts of this fuel for relief purposes and for the restoration of economies wrecked by long years of war.

It is vital, I repeat, that we know at all times how much coal is on hand and where it is located and what qualities are represented. The Bureau of Mines is the only agency, public or private, which can compile that data in useful and accurate form.

GROUND-WATER INVESTIGATIONS, GEOLOGICAL SURVEY

Stopping this activity, as proposed by the House, at a so-called saving of $845,000 is another example of irresponsible "economy" at the expense of normal, traditional, necessary functions of Government. The House committee, in its wisdom, has proclaimed that this work is "not justified" and should be done by the States.

Mr. Chairman, shall we leave weather forecasting to the States? This proposal is no less nonsensical.

The Geological Survey has the trained manpower—which the States do not—and the equipment—which the States do not—to do a vast research job with little expense. In Pennsylvania, for instance, this function costs the Federal Government only about $15,000 a year—I do not have the exact figure before me—but the State matches it dollar for dollar and together this sum represents the total working capital on a job which saves the Federal Government untold thousands of dollars in water costs at the Philadelphia Navy Yard alone.

In addition, the service provides Pennsylvania cities and industries with scientific data on underground water which is of vital importance.

Stopping the program now would bring to an abrupt end studies which have been going on since 1931 on water-level fluctuations in observation wells, studies essential in predicting future availability of ground water. In recent years the service has aided numerous communities in Pennsylvania to obtain essential data on their own groundwater supplies. A major cooperative program is now under way with Philadelphia and another with Pittsburgh. Both would stop.

The Philadelphia Planning Commission has urged me to enlist the committee's aid in restoring the appropriation, pointing out that without the essential data the city would be handicapped enormously in completion of plans for the industrial development of Philadelphia and its metropolitan area. The study now under way, this commission informs me, will be extremely valuable to industries seeking locations in or near Philadelphia, industries which require ground water for numerous reasons, chiefly involving chemical content of the water.

Should this work end now, the Philadelphia commission reports, the money the city has already spent in behalf of the work would be money thrown away since no other agency exists to do the technical work.

The members of this subcommittee, I am sure, already know of the importance of the ground-water work of their own States, and, I think, will agree with me on the necessity for restoration of this very modest appropriation, modest in terms of the valuable services it brings to all of our people, and particularly to industry and to tax-supported agencies.

May I say in conclusion, after this very lengthy presentation, that I was amazed to find, in looking into the matters in this bill which I have discussed, how very diverse and important are many little-known functions of the Government in our own States.

The action of the House committee in cutting the Interior Department funds so substantially has brought home to me, and I think to many Senators, the real service we do receive from a host of Federal agencies providing technical and research assistance, agencies which go about their work quietly and unostentatiously and which we seldom appreciate until we are on the verge of having their functions eliminated.

Speech of T. Russ Hill at Banquet of Southern States Industrial Council, Washington, D. C., April 30, 1947

EXTENSION OF REMARKS
OF
HON. MARION T. BENNETT
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES

Friday, May 23, 1947

Mr. BENNETT of Missouri. Mr. Speaker, under leave to extend my remarks, I include the following address, which I commend to attention of the Congress and the country:

THE SOUTH AS I KNOW IT

(By T. Russ Hill)

Mr. Toastmaster, members of the Southern States Industrial Council, ladies, and gentlemen: It would be relatively easy to spend all of the allotted time reciting statistics to prove how well the South has done on her own since she was left absolutely destitute some eighty-odd years ago. Not only was she destitute, she was oppressed. Her accomplishments in that short period of time are a glorious chapter in the Nation's history. When the attitude of today's prostrate nations of Europe are considered, the story of the South's rise takes on new luster. The European nations are dazedly begging crumbs from others' tables. The South in her darkest hour never begged or winced. She has come far under her own power. The spirit that made that possible cannot be put on a statistical chart. She has done well and will do better, and she has the brains and courage with which to do it on her own. Many who are so busily engaged in trying to pass laws to regulate the South into salvation should drink deeply from her reservoirs of Americanism and courage and gain strength thereby to bolster the Nation against a lot of sophisticated nonsense that threatens its verities and, therefore, its existence.

The beauty, charm, hospitality, gentleness, and valor of the South are known throughout the world. Its share croppers, gunpowder tempers, and illiteracy ratings are almost as well known. The South means this and more to almost everyone, but there are other characteristics of the South which are more important to the Nation at this disturbing moment. Because of what these elements represent, they mean more to national security than anything else that belongs to the South that is known to me. This is increasingly true in the light of current conditions.

Since the war the Nation has experienced a discord beyond a normal expectancy for such a period. The people have turned from fighting their enemies to quarreling among themselves and with their friends. The heroism of sacrifice which characterized the war effort has been choked out by the grasping of greed. The workers who were fused by fear are engaged in conflicts of hate. There are ample evidences of the abuse of power by labor and by management, while power politics has reached a new high or a new low according to the point of view. Wages and prices have played an exaggerated game of leap frog, spiraling into a war of nerves under the threat of economic revolution.

These and other eruptions of the period have jangled the people into a sense of insecurity, and filled them with forebodings for

their futures. In many important quarters a "what's the use" attitude prevails. This uneasiness is fanned by the evident agreement of the leading economists that we are in a boom spiral which will turn into a depression by middle or late summer. Buyers' strikes, heavy inventories, industry's pricing responsibilities, large profits, labor demands, budgets, and taxation are 2-inch, front page headline news frightening in their implications and, therefore, devastating in the reaction upon the morale of the people. So much so that constructive action is hampered. In such an atmosphere it is difficult to estimate and correct the basic causes of surface eruptions. The proper emphasis is not given to hidden elements of security, bulwarks against the avalanche of ruin which some forecasters hear roaring down upon the people carrying varying degrees of injury for all.

Too many present conditions must only be considered as paralleling those of 1920. On this premise there must be a 1921, if not a 1929, somewhere in the future. It is inconceivable to others that the country could allow its spirits to again ebb to the level of this belief. The Nation pulled up stakes and ran for the caves in 1929 when just such roars as are now being heard echoed through the land. Courage instead of ghost hunting would have reversed the trend then as it will in 1947–48. Even completely discounting the favorable condition of Government bonds, private debt, savings accounts, and money in circulation in the Nation today, not to mention the world's needs now as compared to the late teens—forgetting all these plus factors would not justify a damaging recession in our economy. Only a recession of spirit can permit it to happen. Certainly a strengthening of spirit, a difficult process because of the contrary selling being done, will prevent it.

There is no clearer example of this defeatist attitude than the fact that is found necessary to defend the American system at home and abroad. The fact this Nation pulled the world through two wars in 30 years, financially and industrially, is evidently overlooked. Being the only solvent world power today, and in the process of underwriting and actively manning the rehabilitation of that world, is not considered as basic evidence for our system—rather an invitation for much of the world to take a shot at democracy. Until late years people have continuously come to this country to get away from their systems of government and to get a chance to carve out their own destinies. They are now coming to tell us how good those same systems are and to ask us to adopt them. Some among us who sponsor the cause of those foreign systems are good sounding boards for their doctrines here as well as abroad. Such go lecturing to those people on the fallacies of America and her leaders. Naturally many abroad are susceptible to such preachments. Being stripped to the bone it is something of a consolation to find that a land they regarded as so fortunate could be in such danger of going to pieces. Thus they draw away from us if not actually lining up against us.

If her people get the facts America will be too shrewd, too sensible to come up with the wrong answer on collectivism under any name. Such systems are moon bayings as far as material worth or spiritual benefit to man is concerned. They cannot match ours in a single department. There is nothing new in or to them. Their leading exponent cannot even put her stolen machine tools into successful operation because of the poor management that always characterizes such governments. For the same reason poverty and some hunger stalk her lands in spite of lend-lease equipment and materials forwarded to offset such conditions. America has no need for such a system. She has one that has taken her on the fastest run of accomplishment in the world's history. It may need a new bearing here and there or some other slight overhauling, but it is still the best government ever conceived by man. Recent history strengthens that fact.

When the people stop listening to the rattles, mechanical and vocal, and get to their causes, the jitters of the day will give way to hard thinking and constructive action. Laws and policies of expediency will be superseded by those based upon facts. Modern man is not as brilliant as he pretends. His spontaneous and crisis judgment is, therefore, not good nor conducive to the continued smooth performance of the democracy to which he belongs; America needs to revalue her tap roots and then take the offensive. She is entitled on her record to do so. A defensive role does not benefit her or belong to her. Neither is such an attitude good for one world no matter what the boundaries. Reducing America to the political status of other world powers would mean the end of hope for all mankind everywhere. She cannot continue to back up under appeasements' press or because of false conceptions of free speech. To do so will hasten the destruction of those things she seeks to save. There will then be no consolation in measuring the extent of the losses or in nursing regrets.

To be sure, there are many underlying economic causes for the distorted condition in the Nation. The chief ones lie deeper than wages, prices, production or controls. Because such are not obvious they are often overlooked, particularly by the average citizens, which are most of us. The correction is not too difficult. The will to correct is something else. Both can only be superficially discussed here.

One of these underlying causes, it seems to me, is taxation. The basic question cannot be whether to have more or less taxation. The purpose for which the tax is levied and what the money will accomplish for the Nation when spent for that purpose is the important thing. Taxation of any successful individual or business to provide for the unsuccessful is a basic plank in the platform of the advocates of an alteration of our way of life; that is natural, because that practice will destroy it. It is a two-edged knife of annihilation because it destroys ambition in one and encourages indigence in the other. The answer is all indigence, all wards of the State, which by the process has been deprived of its milk for succor. That is what Alexander Dumas was warning against when he wrote long ago, "If we are to submit absolutely to the level of equality, we had better choose the level of nobility. I like equality that elevates, and not that which lowers mankind." Taxing the automobile business at the beginning of the century to keep the buggy and wagon plants going would have been today's theories in operation then, stopping the progress and development of the Nation. When taxation is for the essential functions of government only, without the extras, democracy will be relieved of its spasms.

Another is money manipulation; selling bonds, printing money, taking it, and spending it. Such processes push the money supply ahead of the merchandise it can buy. We have reached that stage here. With a money supply now of $163,200,000,000, highest in our history by almost $100,000,000,000, it is past time to stop the printing presses and start paying the debt. That illustrious son of the South, the late O. Max Gardner, cried out against this practice. "Three words," said he, "taxes, borrowing, and spending stand as silent monuments to mark the fall and decline of character, credit, and governmental stability in every hamlet, city, and State throughout the length and breadth of this Nation."

A third is monopoly of labor which forces laborers out of their jobs at the whim of an industry-wide union czar. Why do the workers strike when the call goes out from headquarters? Because they know they cannot work again if they do not. Why cannot apprentices get started in many trades? Because competition in labor is not welcomed by the oldsters. These conditions stiffle progress and therefore destroy jobs. It is the steel band of an organized minority, forged in the furnace of greed for power and tempered in the laws written primarily in the same spirit. The freeing of labor and the holding of its despoilers, within and without, to strict accountability is the third of the fundamental economic adjustments required to relieve the Nation of its present nausea. The "closed shop," and the same thing by another name, the "union shop," (crucifiers of human liberties) and the right of promiscuous striking must be weighed in that light and not the light of who loves or hates labor or industry.

Laws alone will not suffice. Our Congress has been much concerned about a labor law. "Tough" and "wild" are the 2 types mentioned. No labor law alone can solve this problem any more than prohibition and controls solved those problems. England has laws forbidding strikes against the government, laws against secondary strikes and boycotts, against wildcat strikes and mass picketing, against political contributions by unions, and laws requiring financial reports by unions. What did these do for England? The will of the people, not law, is the remedy. There is no one here who does not know what that will is in labor matters as well as the other 2 needed basic corrections. Probably the people have not expressed that will strongly enough to secure proper conduct. They will and action will come, but probably not until the plums of '48 have been gathered and that could be a bit late.

In this battle to increase the spirit of the people, look to the South. She has the requisites, still undiluted, for citizenship of force and character. That is what the South means to me, and I am grateful to the Omnipotent that she stands at this particular time just as she is—solid. Whether she is an economic disgrace or an economic opportunity is unimportant in the battle before us. Her zeal for the elementary tenets of the democratic way of life is much more important. The contributions of southerners during the past 15 years to the continuance of our way of life will not be completely evaluated in our day. The South's ratings may be low in some categories, but not in the particular requirements of democratic citizenship.

Her irresponsibles may resort to lynchings, a form of savagery which may be lower or higher than the political death-beating in New York of a worker at the polls or an ambush slaying in Peoria of a president of a railroad. It is popular in some so-called more enlightened centers to point the finger of scorn at the South. One day even these centers may see the sunrise of a revitalized democracy. The glow will be from the South. There, possibly to a greater extent than in any section of our land, are the ingredients of the lost cord in the fabric of our democracy. It is the lack of that cord which is largely contributing to the breakdown of the spirit of our people. That failing spirit is spawning the "What's the use" attitude.

Three of the vital cords in our democratic fabric are strong and easily recognized. There is the crimson cord of glory, spun on our battlefields, against which there can be no indictment. The crosses of victory on the breasts of many lands and many men attest that. The silver cord of culture, outlined in the establishment of colleges and libraries, research and extension courses, lectures and radio, art, music and drama, is an equally vivid monument. The golden cord of industry, the wonder of the world, needs no statistical support or eulogistic treatment. It is

enough to state that it paid for the first two. But the platinum cord of character, particularly in human relations, is not so clearly defined. It is almost invisible. Its weakness endangers the entire fabric of democracy. The South, as I know her, embodies the elements for restoring that invisible cord. The three cardinal elements necessary to produce that cord are basic with her people.

The southern people almost universally practice a belief in God, the cornerstone of democracy, and the chief element in the weaving of the lost cord of our way of life. Freedom of speech cannot be found where freedom of worship does not exist. In fact, no freedom exists without this belief on the part of the people. All America needs to hear and heed what my friend Fred Zeder, of Chrysler, told a group of scientists in this city recently—that the Master Mechanic is needed. The vast majority of the people of the South believe that, and take it seriously. When the same percentage of the rest of the Nation believe that and defend it without flinching against the blitzkrieg of ism, atheism from any quarter, within or without, the lost cord of character will begin to take shape and peace will begin to settle over our land and then the world. Long ago a historian wrote that God could not see the South lose with Stonewall Jackson praying for it so He had to take Jackson. The South still prays to the same God who never let Jackson lose a battle and who cradled him in peace in the thick of the battlefield. A peace that enabled him to mutter with his last breath, "Let us cross over the river and rest under the shade of the trees." That is characteristic of the South as I know it. The fires of worship burn on her millions of altars—enough to start the furnaces for tempering the metal of character throughout the Nation.

The southern people blindly love the flag, another required element for the reclamation of the lost cord of the American way. In the South is the only county in the Nation from which not a man was drafted in the first war—every eligible male volunteered. Travel the South and question people in all stations and activities. You will not find one native who supports or believes in any other form of government. He may be in rags, but the flag still covers him. He may know nothing of the Constitution, the bill of rights, the budget, or one world, but he does know the stars and stripes of the flag and will fight for it at the drop of a hat. He belongs to the "what's right with America" group and refuses to listen to the "what's wrong with America" destructionists.

The South puts heavy emphasis upon the home, basic in the character of a nation. She is often assailed for living in the past, for being reactionary, for clinging too long to the odor of jasmine, lavender, and old lace. However, no face-lifting has been able to pull her away from the cornerstone of society, the home. That far overshadows the ridicule often thrown at hoop skirts or Prince-Albert-coat ways, especially in this day of 30-percent divorce rates and spiraling juvenile delinquencies. The latter are eating away at the Nation's platinum cord. Nevertheless nothing very serious will happen to this Nation internally as long as man's castle is his home and so regarded. The South is the bulwark of this philosophy.

From the pages of history countless other southerners, so schooled, step to portray the South as I know it far better than I could ever do. Their challenge is still the South's challenge today. It rings from the plains of Texas to the heart of Maryland. From the depths of hearts stimulated by justifiable pride in their accomplishments and humbled by divine solicitude, they cry: "Leave us our freedom that we may continue to carve out our own destinies; that we may make even greater contributions to the continuance of this greatest Nation on earth."

Overseas Scrap Essential to United States Steel Mills so Farm Equipment Can Be Made

EXTENSION OF REMARKS
OF
HON. HAROLD C. HAGEN
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Friday, May 23, 1947

Mr. HAGEN. Mr. Speaker, I come from Minnesota, the State that supplies the steel industry of this Nation with about 80 percent of its iron ore.

The last two wars have been a terrific strain on ore resources, and we must anticipate the day when the supply of high-grade ore will be gone. For that reason every possible effort should be made to conserve scrap iron.

There are millions of tons of scrap iron scattered throughout Europe, Asia, and in the south Pacific. The United States has plenty of shipping which could be used to bring back this scrap iron to be used in the steel industries. The Navy Department is in process of investigating the ways and means of returning at least a part of this scrap to the United States. Their efforts should receive the support of every citizen interested in the future welfare of this Nation.

Following is an editorial from the Daily Metal Reporter of May 15, 1947, which graphically portrays the need for effective action in connection with the return of scrap iron to the United States:

OVERSEAS SCRAP ESSENTIAL FOR UNITED STATES STEEL MILLS

Charity should begin at home, especially as far as scrap iron is concerned.

The Philippine Government recently announced that it will sell 1,000,000 tons of scrap iron and steel to the highest bidder in any part of the world.

The United States was to deliver to Manila, presumably as a gift, surplus war goods valued at $100,000,000, but either through mishandling or pilferage these have shrunk to a value of about $75,000,000, so that our Treasury may be asked to fork over an additional $25,000,000 to the new republic.

What is the connection between these three seemingly unrelated items? Simply this. At a time when our own steel mills and foundries are in urgent need of scrap, when automobile manufacturers and other industries are unable to operate at capacity because of a steel shortage, our Government is disposing of vast tonnages of war surplus scrap iron and steel, either directly or indirectly, to countries in Europe and Asia which in turn are reselling them.

Under the circumstances it is not surprising that Congressman HAROLD C. HAGEN recently declared in the House: "I was amazed recently to discover that our Government is doing little or nothing toward returning to this country the scrap steel resulting from the war. This is the scrap which our steel mills desperately need if they are to reach full production." He went on to say that "Present stocks of iron and steel scrap are the lowest on record. They're even lower than back in the war years when we were conducting scrap drives. Yet in Europe and on the Pacific islands there are millions of tons of scrap in the form of out-of-date or damaged war equipment, bombed bridges, buildings, and so on."

There has been a great deal of talk about returning the Government-owned scrap from the Pacific and from the European theaters of war, but thus far it has been chiefly talk and little action. In the meantime, our steel mills, unable to get an adequate supply of scrap, are using more pig iron which of course means greater use of iron ore, coal, and coke, the precious natural resources on which depend the future prosperity of the Nation.

If the steel mills maintain their present rate of operations this country will be short of scrap for a long time to come, and the reason is quite obvious. During the years 1941 through 1945 the United States production of steel amounted to about 427,000,000 tons. It has been estimated that 33⅓ percent of this total left the United States in the form of ships, tanks, guns, ammunition, and other war matériel. Others estimate that about 50 percent was shipped abroad. A good portion of this tremendous tonnage is probably in Davey Jones' locker, never to be returned. The remaining tonnages have been scattered throughout the four corners of the world, wherever there was a likelihood of the implements of war being needed with which to fight the enemy. The country has therefore lost anywhere between 142,000,000 and 218,000,000 tons of potential scrap, scrap which will never be returned to the United States. To that extent we are so much the poorer and will have to draw on our natural resources to make up the deficiency.

Of course the United States is a rich nation. That is why all foreign nations are coming to us for loans. But we will remain rich only so long as our natural resources hold out and are capable of supplying our vast industrial machinery with the raw materials they need in their operations. These natural resources have been intrusted to us for future generations and we would be violating that trust and also endangering the future safety of the Nation if we dissipated these reserves.

All the more reason, therefore, for bringing back to the United States the scrap iron and steel, estimated at several million tons, that are located in different parts of the world and which are still owned by the United States. The longer they are left there, the less will there be to bring back either as a result of pilferage or deterioration.

The steel industry is the backbone of our economy. There is hardly an industry that is not dependent on it. The steel mills are in urgent need of scrap and unless they get it, it will prove difficult to maintain their present rate of operations.

It's all right for Uncle Sam to be generous and to make gifts and loans. But he mustn't overlook the needs at home. We need the scrap iron that would have been available in this country had it not been for the fact that the war forced the United States to ship so much of its steel in various forms to all parts of the world.

Now is the time to bring back as much overseas scrap as possible.

American Liberalism Faces the Future

EXTENSION OF REMARKS
OF
HON. JAMES E. MURRAY
OF MONTANA
IN THE SENATE OF THE UNITED STATES
Friday, May 23 (legislative day of Monday, April 21), 1947

Mr. MURRAY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address entitled "American Liberalism Faces the

Future," which I delivered at the annual dinner of the Liberal Party of New York State, in Brooklyn, N. Y., on May 21, 1947.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Mr. Chairman, it is a real privilege and an honor to join with my friends of the Liberal Party on this occasion for a discussion of the labor legislation now pending in the Congress.

The grave problems which confront us today arise more immediately out of the dislocations of the war and the widespread devastation and bankruptcy which has affected the whole world. In America, while we were not invaded by armies, our economy nonetheless has suffered serious consequences which will trouble us for many years in the future.

We must not overlook the fact that the problems besetting us are not altogether new. For many years, our economy has been undergoing serious changes in basic economic and political principles. For 50 years, we have been witnessing a rapid concentration of ownership in business and industry with excessive prices and profits causing recurring periods of deflation and unemployment. There can no longer be any doubt but that our economy is controlled and manipulated in the interest of the few and at the expense of the many. Our people are becoming more disturbed and restless. Our system of free enterprise is losing its appeal to many disillusioned citizens.

The depression which followed the Wall Street crash of 1929 was a serious threat to the continuance of our economic system in its then badly battered condition. We were able only to provide temporary solutions through Government control and regulation of banks, stock exchanges, utilities holding companies and other segments of our economy, along with the creation of huge Government loaning agencies and programs of relief, public works, and other such alleviating measures. But even the prodigious program of the New Deal in the early thirties, while correcting many of its serious evils, failed to overcome its fundamental evils and reestablish our economy on secure footing. We were blocked in our efforts for fundamental reforms, and it was not until the outbreak of World War II, when the need for a huge program of national defense developed, that we were able to provide employment for the millions of our workers who were receiving Government relief.

While for years prior to World War II we were witnessing a rapid concentration of industry and expansion of monopoly, we had hoped that the trend towards collectivism would be checked and genuine free enterprise would be restored. But so far we have been disappointed in these hopes. During the war and since the war, concentration has proceeded apace and no efforts are being made to check it by new legislation or by an effective enforcement of existing laws.

We have no definite program other than the antimonopoly laws before the country today which would bring about a solution of these basic problems. And now, in the face of this growth of monopoly, high profits, and lowered purchasing power, our workers are confronted with a program of drastic and vindictive labor legislation designed to break down the strength of labor unions. This legislation is based on the notion that labor has become a monopoly and that it, instead of industry, is the cause of all our economic misfortunes and dislocations.

Of course, every intelligent person must know that the real heart of our present danger lies not in any labor monopoly, but in the lack of balance between wages, prices, and profits, and the resulting maldistribution of the national income. Since the destruction of price control and other stabilization controls in 1946, the cost of living has risen faster than wages and salaries. The result is that the workers of the Nation have fallen further behind in purchasing power and consequently our markets are breaking down. Prices have gone up with great rapidity but profits have gone up still faster. These conditions necessarily have created a difficult problem in adjusting wages to meet existing conditions.

We are now undergoing a stage of inflation which, it is feared, will develop into a real recession and large-scale unemployment. Already we have considerable unemployment in many sections of the Nation. In some places unemployment compensation has been exhausted for thousands of unemployed workers. This, not labor, is the real problem before the country—the problem of meeting these conditions intelligently and preventing a run-away depression.

Unfortunately, common sense and statesmanship have departed from the high places where we should expect them. We find a reactionary Republican Party undertaking to blame all these economic consequences on labor, whereas the correct course should be to provide an intelligent program for the development of mutual forbearance and cooperation between management and labor while we work to uncover and remedy the underlying causes. This certainly should be the correct course if we are to avoid confusion and chaos in the field of labor-management relations which may seriously threaten the future of free enterprise. We will never get industrial peace in this country through punitive legislation. Vindictive laws will not increase production or efficiency, both of which are essential to national prosperity. But instead of statesmanship, which recognizes these principles, we find a reactionary group in Congress, backed and abetted by reactionary groups in our economy, seeking to lay all the blame for our economic troubles on labor because of labor's insistence on increased wages to meet the high cost of living.

The basic problem is, as I have already stated, the imbalance between wages, prices, and profits, and the unfair distribution of national income. Congress, instead of addressing itself to the study and solution of this problem, has set out on a wild crusade to crush labor as the culprit causing all our economic troubles.

And so we have the Taft-Ball bill in the Senate and the Hartley bill in the House, both designed to curb labor and break what they call "the labor monopoly." The question which disturbs liberal-minded people is whether we can have labor-management peace in this country through the operation of mutual trust and cooperation between men and management or whether there is to be inaugurated a system of punitive laws designed to weaken and embitter labor and make it amenable to the power and dictation of arbitrary management.

At the hearings we were warned against adopting the latter course by able witnesses who appeared before us. The Senate Committee on Labor and Public Welfare, however, adopted the course that drastic legislation must be enacted to break the so-called labor monopoly. The bills which came out of both the House and Senate were well designed to accomplish the purpose of weakening labor. During the course of the debate, the Senate bill, through amendments, was made much more severe and drastic, and, as it now stands, can only result in one end, and that is the creation of bitter discord, dissatisfaction, and confusion in the field of labor-management relations, and further undermining our free enterprise system. The same is true of the House bill.

This effort to hamper and weaken labor is just another episode in the long and tragic conflict between labor and management, starting in the period when labor was regarded as a mere commodity to be exploited just as any other commodity in the country. It was that policy and that creed which, more than anything else in our history, has marred the great record of American democracy.

But now, as another period of deflation and unemployment approaches, which may well threaten our whole democratic system, we find ourselves engaged, not in efforts to truthfully and honestly correct the real ills and wrongs which beset our economic system, but we find ourselves involved in another desperate move on the part of a reactionary Congress to break down labor so that big business may continue its dangerous course toward collectivism.

Millions of citizens in our country today are viewing this exhibition of reactionary power politics in the Congress with unconcealed apprehension. Even in the ranks of business many forward-looking, progressive-minded American businessmen are recognizing that the Congress is pursuing a course which can only lead to ruin. Speakers before the Association of American Managers at a convention in Chicago not long ago publicly declared that business was "muffing the ball" in the present economic situation. Many of the most intelligent businessmen in the Nation recognize that our modern, high-speed, mass-production economy cannot operate, much less maintain high living standards, without the clear cooperation of all groups—workers, farmers, businessmen, and Government. There is not a citizen in the country today who possesses a true understanding of national and international economic conditions who does not dread the result of this struggle between labor and management.

It has become unmistakably clear that the Republican leadership has waged its campaign on the basis of a set of slogans—"the people have given us a mandate"; "labor has become too strong"; "labor must be put in its place." These slogans have been widely and persuasively "sold" to the public. But in the end they will never succeed in convincing the average American citizen who is awake to our times that only American labor is corrupt. The truth is that trade-unionism in our country is the bulwark of our democratic system and our strongest defense against communism. No amount of propaganda can convert a false issue into a true one. I predict that this maneuvering for political advantage in this most dangerous period of our history, to put the President on the "spot," will ultimately prove to be the greatest mistake the Republican Party has made in its history.

We cannot approach the problem from the standpoint of what the individual labor leader may desire, or what the individual industrialist may prefer, or what any particular group may demand. There can only be one honest approach to this problem which goes to the very root of our democratic and economic structure, and that approach is the common good—the welfare of the whole American people. From that sound approach our first objective should be to maintain our American industrial system on the basis of equal justice to every worker and every employer.

We remember only too well the long, lean, and bitter years of the last depression. We remember the brief inflationary boom of 1929 and the prolonged bust of the early 30's, and we have hoped that such conditions would never return.

It seems to me that if the American people gave this Congress any mandate it was to avoid those mistakes; it was to prevent the return of breadlines and apple stands. Yet today we are beginning to dig economic storm cellars against a serious recession which many regard as inevitable. The American people see the cost of living still rising—still rising, I may say, despite the solemn assurances of the Republican leadership and

the NAM that the destruction of OPA would be the best safeguard against inflation. They see wholesale prices more swollen than ever, while many merchants are finding themselves unable to move their stock of goods and are taking losses. They see that their neighbors on fixed incomes are being forced to tighten their belts.

Do you think the American people will blame picketing, boycotts, the closed shop, or jurisdictional strikes for these ominous recession developments? Who would dare to suggest that the American people as a whole have permitted themselves to become so befuddled by NAM advertising propaganda? They know that we have never been "picketed" into a depression, or "struck" into a recession, or "boycotted" into an economic crisis. No, the real fact of history is—and the American people know it full well from bitter experience—that we are "speculated" into panics, we are "profiteered" into depressions, we are "priced" out of prosperous markets. When they see the ever-widening gap between prices and purchasing power, when they see corporate profits at heights never reached before, when they see monopoly power at its zenith in American history, then their mandate must be directed to the cure and not the aggravation of these basic causes of economic confusion and chaos.

Corporate profits after taxes increased from 1945 to 1946 by $3,000,000,000, from a total of $9,000,000,000 in 1945 to twelve billion in 1946. In the last quarter of 1946, profits attained an annual rate of fifteen billion. Salaries and wages at the same time declined from $111,000,000,000 to one hundred and six billion, a drop of $5,000,000,000.

This disparity between wages on the one hand and prices and profits on the other is widening in 1947. The share of labor in the total national income, even though the ranks of labor have been swelled by millions of returned veterans, will be smaller than it was in 1945, while profits continue to soar. The reduction of the purchasing power of working people is a danger signal we dare not ignore. Already relief rolls throughout the Nation are lengthening.

We are at a truly critical stage in our economic history. A prolongation of the gap between purchasing power and prices, between wages and profits, can only spell disaster for our economy. Yet at this critical stage the Republican Party is sponsoring legislation which will not only foster industrial misunderstanding and strife but will widen that gap between wages and prices which already endangers our prosperity. They seem to have forgotten 1929, when a reactionary national government and the weakened labor unions of that period gave the monopolists and speculators a free hand that took us into the costliest depression in our history.

We cannot promote industrial peace, prosperity, and employment by harassing and weakening labor unions. Our entire labor history is testimony to that fact. To insure free and wholesome collective bargaining in the public interest, we must have strong, free unions which can bargain with employers on equal terms—unions which have sufficient security so that their leaders can devote most of their time to improving working conditions, settling grievances, and promoting productive efficiency instead of having to worry continuously about how to preserve the union organization from hostile attacks. We shall secure and maintain industrial peace not by destroying the legislative pattern which has been built up so painfully during the past dozen or more years, but by correcting and preventing the economic ills which lead to labor conflict—inflation, unemployment, substandard wage levels, and needless suspicion between labor and management.

The supporters of this pending legislation contend that it will contribute to industrial stability and efficiency—as well as to industrial peace. Again, they misread the lessons of our industrial-relations history. You do not attain stability and efficiency in industry by weakening unions. Labor-management cooperation in the railroad industry came not during the period of union weakness (that was the era of the great violent railroad strikes) but when the railroad unions had become strong. Labor-management cooperation in the garment industry was not possible when employers could rely upon wage cutting as the chief means of making profits. It came only after the unions were sufficiently strong to prevent this device from shielding the weaknesses and inefficiencies of poor management. Similar stories can be told in industry after industry—construction, glass, pottery, paper and pulp, hosiery, and many others.

Unfortunately, the contribution which strong and effective unions have made and are making to industrial stability and efficiency are not adequately known and appreciated by the American public. The newspapers headline the strikes but they rarely mention even on their back pages the quiet accomplishments in thousands of American shops and factories of union-management cooperation. It is ironical and disturbing that in a nation which so strongly desires industrial peace and stability, we find that strife and conflict are considered the most newsworthy subjects. But it is one thing to put the exceptional occurrence into the headlines; it is quite another thing to make it the basis of general legislation which affects the innocent 99.9 percent of workingmen.

Strong unions are essential not only to preserve the high standards which have been won by our American workers but also to lead the way to still further achievements. Steady jobs at good wages for a full work year, the raising of the present inadequate minimum wage levels, the extension and improvement of our social-security programs, the provision of adequate safety conditions—these and many other laudable goals which are essential to continued industrial peace and stability can be secured only if we have strong unions striving for them. By weakening and harassing unions, these bills will accomplish the opposite effect.

The sponsors of this labor legislation loudly protests that they seek only to restore the balance between the power of labor and the power of management, to restore the equality of the parties. They protest too much. The inequality of bargaining power between workers and employers does not result from legislation, and equality cannot be effected by legislation in a free enterprise economy. The inferior bargaining position of labor arises from the economic relationships that necessarily exist between workers and employers in a free-enterprise economy. The Clayton, Norris-LaGuardia, and Wagner Acts recognized this basic inequality and sought to strengthen the position of the workingman in the interest of a more democratic and fairer economy. But as we have seen, labor has not yet achieved equality with management, it has been unable to protect itself against inflation, for example, as effectively as have corporations. The pending legislation, therefore, cannot restore a balance which never existed but is designed merely to give management a freer and stronger hand than it now enjoys.

After all, the test of power at the bargaining table is the results achieved. True, labor is now able to make its voice heard at the bargaining table and to achieve more of its objectives than it was able to in the '20's. But certainly no one will seriously argue in the face of the economic facts I have already cited that labor enjoys a bargaining position equal to that of organized employers. I maintain that the essential premise of the Clayton, Norris-LaGuardia, and Wagner Acts, namely, that the bargaining position of labor is not equal to that of management, is still valid and the essential premise of the pending legislation is false.

Let me call your attention to the provisions of these bills which reveal them nakedly as weapons to be used against labor, rather than a sound legislative program to promote the general public interest.

It is unthinkable that the President can approve legislation as repressive as the Taft-Hartley proposals. Even though the Taft-Ball measure which passed the Senate is not worsened in conference, it goes far beyond the careful and studied views of the President expressed in vetoing the Case bill in 1946 and his recent state of the Union message of January 1947.

These measures unquestionably strike a body blow at basic liberties. Freedom of contract is repealed by banning the closed shop, restricting the union shop, and limiting the check-off. The freedom of working men and women to join trade-unions is diluted by a variety of provisions weakening the Wagner Act and its administration. Freedom from "government by injunction" is discarded by allowing Federal courts again to issue injunctions (contrary to the Norris-LaGuardia Act) in many cases.

The administration of labor laws is weakened by removing the Conciliation Service from the Department of Labor; a step disapproved by industry and trade-unions alike. Company-dominated unions are now to be allowed to appear on the ballot in Government elections. The internal discipline of unions is weakened by allowing expulsion of members only for nonpayment of dues.

The bill enormously increases the Federal Establishment handling labor laws; ballots are required on union security issues and on whether a strike shall take place, in addition to those now conducted. The Federal courts are brought into every grievance case by allowing suits for violation of contracts. The process of collective bargaining is rigorously defined rather than left to the free desires of the parties. Unions must file burdensome and detailed reports with the Secretary of Labor on matters which are already, with few exceptions, public knowledge.

After careful study I presented a bill embodying the President's program which was, in my judgment, fair, constructive, and acceptable to management, labor, and the public. I regret to say that the representatives of the majority party were so little interested that they threatened for a time not to allow the bill to come to a vote; a dramatic illustration of the temper in which this legislation has been drafted and passed.

In the event it becomes law, industry, labor, and the public will regret the Taft-Hartley bill far more than they did the Smith-Connally Act. In many respects this bill is like the British Trade Unions Act of 1926, another repressive piece of legislation, which did nothing to check strikes but preceded the establishment of the labor government in England.

This bill is an answer to nothing. It means more and extended litigation, uncertainty, and labor difficulty. Our labor situation now is healthy; recent contracts in most basic industries give promise of labor peace—if not unsettled by legislation—for a long period to come. We should address ourselves to high prices and diminishing purchasing power, with their ominous threat of another depression. We cannot fritter the country's time away in an effort to punish a few people and thereby weaken the bargaining and consuming power of the great mass of the people which constitutes the lifeblood of our entire economic system.

At this critical stage in our history, the true tests for any labor legislation must be: Does it perfect the great collective-bargaining developments in America or does it disrupt them? Does it enhance the legitimate

security requirements of trade-unions or does it undermine security and promote irresponsibility? Does it strengthen the power and freedom of organized labor which helped to make this Nation the mightiest industrial power in the world, or does it weaken that power? By these tests the Republican labor program must be rejected—not merely as unfair to labor but as harmful to the whole American economy and the American people.

Now let me emphasize one point—abuses have developed in labor relations. Those abuses should be remedied. I am already on record in the minority report of the committee as being in favor of legislation to remedy those abuses, and I have introduced such legislation and voted for sound regulatory provisions, but I am opposed to the type of punitive legislation now before us which strikes at the legitimate rights of our working people and renders them helpless to resist the drive of a few giant corporations for even greater power than they now enjoy in running our economy. One of the last reports of the Senate Small Business Committee showed that a mere 250 corporations—less than one-tenth of 1 percent of all American corporations—control fully 67 percent of all our industrial assets. That report shows the rapid acceleration with which control of our economy is passing into fewer and fewer hands.

For over half a century the American people have tried to fight the rapacious trusts and monopolies which threatened their economic liberties and security. But monopoly which the people have sought to control through the Sherman Antitrust Act passed by Congress over 50 years ago has become even more powerfully entrenched in the American economy, and more dangerous to its welfare than ever before. We know today that monopolistic development in the American economy after World War I was an important factor in the boom and bust of the 1920's. We remember the antilabor open-shop drive which preceded the 1929 boom and bust and we recognize similar forces at work again.

Is this then the time to cripple the power of labor unions which constitute the only protection of the living standards of our people? Not if we want to maintain a free and prosperous economy in which independent small business and independent workers can retain their rights. Not if we want to avoid a repetition of bread lines and bonus marches. Not if we want the anxious, confused, and struggling world to turn to America—an America of triumphant democracy and stable prosperity.

Statesmanship in Steel

EXTENSION OF REMARKS
OF
HON. FRANK BUCHANAN
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Friday, May 23, 1947

Mr. BUCHANAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the New York Times of May 23, 1947:

STATESMANSHIP IN STEEL

A year ago steel production was held up for 4 weeks because the union and the employers could not agree on a wage increase. This year President Philip Murray, of the CIO, and also of the United Steelworkers Union reached a 2-year agreement with the steel companies. At Atlantic City this week his 41-member executive board unanimously accepted his statement that this contract must be kept and that there must be no work stoppage during its period.

To emphasize this point, Mr. Murray quoted again from the first section of the United States Steel agreement: "The company and the union encourage the highest possible degree of friendly, cooperative relationships between their respective representatives at all levels and with and between all employees. * * * They believe that proper attitudes must be based on full understanding of and regard for the respective rights and responsibilities of both the company and the union."

Steel is basic in our economy. Two years of peace in this industry will make for peace and prosperity in other industries. But the spirit of this agreement, and the spirit in which Mr. Murray cites it, are even more important. Men who sell their labor and men who hire labor may differ to the end of time as to prices and conditions. But if they are able to compromise the differences and achieve "friendly, cooperative relationships" the public will call down blessings on both their houses. In steel, if not yet in coal and some other major fields, there has been notable—and one hopes lasting—progress toward this ideal.

Small Business Supports H. R. 1672

EXTENSION OF REMARKS
OF
HON. WRIGHT PATMAN
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Friday, May 23, 1947

Mr. PATMAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to insert the results of a poll taken by the National Federation of Small Business among its members on H. R. 1672. I am the sponsor of this bill and I believe its passage to be vital to the interests of small business.

It is a very wrong situation indeed, when large chain corporations can operate many of their retail outlets at a loss for the purpose of destroying independent competitors and then deduct the losses incurred on such stores, operated below cost, from their income-tax payments to the Government. Operating such stores at a net loss in order to liquidate independent business is, of course, a manifest and flagrant form of unfair competition. To permit, however, users of this practice to deduct losses deliberately incurred for such an unfair and illegal purpose from their just income-tax payments to the Government is adding insult to injury.

I note, therefore, with great satisfaction, that the numerous members of the National Federation of Small Business have given H. R. 1672 their overwhelming endorsement. In the poll, 94 percent of the members favored the passage of H. R. 1672. Only 5 percent were opposed, and only 1 percent of the entire membership of the Federation did not vote.

The National Federation of Small Business is reported to have the largest individual business membership of any organization in America and I am indeed heartened by their enthusiastic support of H. R. 1672.

New Deal Cannot Keep on Fooling People

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 20, 1947

Mr. SMITH of Wisconsin. Mr. Speaker, the governmental bureaucrats who have been confronted with budget cuts have been conducting a vicious campaign to discredit the present Congress. As part of my remarks, I am including herewith an editorial which appeared in the Janesville Gazette, Janesville Wis., on May 16. This editorial is evidence of the fact that the people are beginning to catch on to the New Deal propaganda line. This element is not interested in cutting expenses but its true concern is keeping faithful followers on the Government pay rolls.

WHAT KIND OF DEAL IS THIS?

Mr. Plain Taxpayer is being given a double deal in Washington by the spenders of his hard-earned dollars. Many, it is true, are sincere in their desire and effort to provide service to the American people. Others, however, are straining every fiber to preserve what they have and to expand where they can.

The double deal comes about through the methods being used to prevent any budget cutting by Representatives and Senators. For this time, the gentlemen who have been the New Deal and war babies, established in bureaus no longer essential or through the vast expansion of Government alphabetical agencies called for by the New Deal's protracted "emergency"—this time they appreciate the seriousness of Congress.

Those methods are not all on the level. For example, one Government department after another has threatened wholesale firings, especially in the home districts of unfriendly legislators. Interested pressure groups are being told that the cut will kill their pet projects and threatens to end services essential to the public welfare.

The classic case is that of the Customs Commissioner, W. R. Johnson, a bureaucrat since 1920 who sent notices to his field offices to fire upward of 1,500 customs inspectors and assistants because the House had cut his appropriations. The Senate had not even considered the matter then, and there was no such necessity.

The public, of course, was astounded and wrote to Congressmen demanding to know what kind of economy was this, cutting out port and border patrols. Then Johnson took it back—his story had been "misleading," he admitted.

The fact is that the Customs Bureau's $47,000,000 was as much as it got last year. The public is easily misled by spenders like Johnson.

Any cut in the proposed Truman budget, no matter how small, was publicized by the offices concerned as a veritable blitz, so devastating as to cut off essential public services.

Along with others the post offices have been warned that any cuts will mean "cut in essential services"—reduction in postal service to the public.

The Bureau of Labor Statistics has undertaken a sort of Gallup poll in an effort to show Congress how much the Bureau's work is appreciated and demanded by the public.

Actually, most of these agencies have mushroomed during the last administration and during the war to cover crises and war-

time demands which are now past, and the taxpayer knows it. He is tired of paying for waste in Washington. He has demanded economy, and he is beginning to resent the kind of tricks being foisted today to justify wartime-high budgets.

Few critics have been more specific in their comments on the President's budget than Prof. Fred R. Fairchild, of Yale University.

"I am convinced," he said, "that the supposed benefits of Government spending are an illusion. Government has no magic power to raise the standard of living by spending money. What it gives to some, it takes from others; and in so doing it tends to impair some of the finest attributes of our American character and our free economy.

"Now, nobody wants to limit the Government's spending power to the extent of preventing the performance of its essential functions. But I am certain that very substantial cuts could be made without producing any such results."

It is clear that tax rates, forced up by the war, are too high for peacetime expansion. They should come down as soon as inflation no longer threatens. A shift in that picture is almost here. Building construction has sloughed off and other signs point to some recession and a leveling of prices.

The proposed tax load is nearly seven times the amount of revenue raised in 1940, the year next preceding the war.

It is seven times that raised in 1921 and nearly ten times that of 1922.

Why should it cost the Government in 1948 four times as much as in 1939 to perform its essential functions?

Excluding the British loan and interest on the public debt, why should cost of the Treasury Department be ten times as much in 1948 as in 1939?

Why should we pay six times as much for our Department of Commerce in 1948 as in 1939? And for the Department of Labor seven times as much?

Another area for cutting of Government expense is in the more than 40 Government corporations, where Professor Fairchild says, "There is at least flagrant lack of fiscal control by Congress and strong presumption of unnecessary and wasteful expenditures of public money."

Yet the Washington bureaucrats tell us they cannot cut expenses without the public's suffering loss of essential services.

President Truman promised he would fight these cuts. Fight against one of the two real demands made by public in the elections last year.

If the public wants to pay less in taxes it is up to taxpayers to write our Congressmen and Senators and tell them so.

Taxes can be cut and payments on the debt can be made at the same time.

The Answer to the NAM

EXTENSION OF REMARKS

OF

HON. CHET HOLIFIELD

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Friday, May 23, 1947

Mr. HOLIFIELD Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following radio address entitled "The Answer to the NAM" by William Green, president of the American Federation of Labor, broadcast over the Mutual network:

I appreciate this opportunity of debating the pending antilabor legislation with the president of the National Association of Manufacturers because that organization—the NAM—is the real sponsor of the slave-labor provisions in the Taft-Hartley bill.

What is the NAM? It is an organization dominated by the most reactionary, labor-hating interests in America. In support of that charge, let me cite a few major black spots in the NAM's record.

The NAM opposed the child-labor amendment, because by taking children out of school and putting them to work in factories, certain employers can cut wage costs. Isn't that a noble position?

The NAM opposed social security, bank-deposit insurance, the Wage-Hour Act, and the whole body of social-justice legislation intended to make life a little better and safer for the great masses of the American people.

Less than a year ago the NAM promised that prices would be reduced if only price controls were killed—and then its members proceeded to make a killing at the expense of the American people.

Today the NAM opposes legislation to provide millions of new homes for veterans and workers, and instead it demands the abolition of rent control, a step which would subject every family living in a rented house or apartment to the mercies of profiteering landlords.

This organization—the NAM—that has consistently fought in the past against every decent measure to protect the public welfare and is still battling against such measures, now has the effrontery to claim that the antilabor legislation which it actively sponsors will serve the public welfare.

In view of the record, I think the American people have a right to view with suspicion anything that the NAM stands for.

Mr. Bunting, the President of the NAM, has challenged me to answer two questions in this debate and I am more than glad to do so.

Question No. 1: First, he asks, "Is one legitimate gain of labor denied in the proposed legislation?"

The answer: "My dear Mr. Bunting, that question is almost childish. Congressman HARTLEY admits that his bill virtually repeals the National Labor Relations Act, which is labor's Magna Carta. Senator TAFT admits that his bill has rewritten the National Labor Relations Act from beginning to end. These provisions alone distort and destroy the whole basis of free collective bargaining. For instance, Senator TAFT's bill permits employers to say "No" and keep on saying "No" to all union proposals instead of requiring them to sit down and try to reach a friendly and cooperative agreement with the representatives of their workers. How could collective bargaining operate on such a basis?

"Further than that, the Taft-Hartley program is aimed at destroying union security. It opens the doors wide to a flood of damage suits in the courts against unions. This would make it impossible for them to function effectively. It provides for a return of Government by injunction. That would compel free American citizens to work against their will for private employers or face imprisonment. If these and many other provisions do not destroy the legitimate and basic right of labor, as well as its recent gains, I would like to know what would."

Question No. 2: Secondly, Mr. Bunting asks: "Do the proposals in this legislation serve the public welfare?"

The answer: "Emphatically, they do not. Many years ago Abraham Lincoln said, 'Whatever hurts labor hurts the Nation.' That wise statement is just as true today. Everyone who works for a living is labor. Whatever hurts labor, hurts them. The transparent attempt to separate the identity of labor and the public, which is fostered by the NAM's propaganda campaign, is designed to hoodwink the American people. Organized labor represents directly some 15,000,000 union members and their families. Indirectly, it represents and speaks for another 45,000,000 workers as yet unorganized. You can't hurt 60,000,000 Americans with punitive legislation without striking a damaging blow against the public welfare."

The whole purpose and intent of this legislation, regardless of the pious claims made for it, is to weaken the labor movement and make it impossible for unions to function. The effect would be to undermine and destroy the wage standards established by unions. In turn this would force all wages down, because union standards set the pace for all other workers. The result would be a slash in mass purchasing power and far lower production, because people would not have the money to buy what they need. Factories would be forced to shut down and millions of workers would lose their jobs. If that happens, America would find itself buried deep in another disastrous depression.

The Taft-Hartley bill paves the road to such a depression. Labor would not be the only one compelled to travel that road. Merchants, farmers, professional people, and the public as a whole would suffer.

Mr. Bunting, in a speech on May 16, said labor leaders insist "no legislation is necessary." I challenge that statement. We have asked Congress to enact necessary and constructive laws, but Congress has failed to do anything about them. I am talking about laws to provide health insurance for the American people—to widen social-security benefits—a higher minimum wage and decent housing. Such laws are obviously in the public interest, but the National Association of Manufacturers bitterly opposes them. God help America when the NAM is to be the final judge of what constitutes the public welfare.

The Right Answer—Terminal Leave Pay Bonds of Ex-Servicemen

EXTENSION OF REMARKS

OF

HON. DWIGHT L. ROGERS

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Friday, May 23, 1947

Mr. ROGERS of Florida. Mr. Speaker, under leave to extend my remarks in the CONGRESSIONAL RECORD, on the question of making terminal leave pay bonds negotiable so that the veteran may get cash on these bonds, I include an editorial from the Tennesseean, of Nashville, Tenn., dated May 19, 1947, discussing the feasibility and righteousness of this plan:

THE RIGHT ANSWER

Representative ROGERS of Florida has come up with what seems at first glance to be the right answer to the problem of getting terminal leave cash into the hands of enlisted veterans who need it.

Much of the country has had an uneasy conscience about the difference between officer and enlisted terminal leave payments ever since we began to demobilize men from the service. The officers automatically received payment for leaves during the war which they were unable to take because of overseas duty.

Unfortunately, there was no such provision for enlisted personnel. After most of the men in service had been demobilized we partially assuaged our consciences by providing for terminal leave payments to enlisted men in bonds, cashable at the end of 5 years.

This still left considerable injustice toward enlisted personnel, many of whom needed the money to help them squeak through this era of rising prices.

A substantial move has been afoot for some time to change the law and let the servicemen have their pay at once. It has been resisted not only by the antiveteran and economy blocks in Congress but also by many level-headed legislators who feared the sudden flood of cash all over the country might be the final ingredient to set off a wild and uncontrollable explosion of inflation.

Representative ROGERS' proposal meets all the valid objections to the immediate cash proposal merely by providing that the veterans may sell their bonds to private investors not below face value plus accrued interest to date.

The economy bloc likes the idea, because it calls for no immediate Government expenditure while they are at the ticklish task of balancing the Budget and reducing the national debt and taxes.

Also the fact that the budget is in balance cuts off the Government's need for the private investors' funds that would go to the veterans.

The move will not be in the least inflationary, as it will remove as much money from circulation as it puts into the hands of veterans.

At present security prices the veterans' bonds are such a sound investment that there is little likelihood of any veteran who needs cash for bonds failing to find a purchaser.

Another good feature of the proposal is that it will allow the veterans who desire it to remain investors at good interest rate instead of forcing them to cash the bonds—and at the same time those who have to have the cash can get it.

Representative ROGERS is a Democrat, but the Republicans who have been somewhat embarrassed by their failure thus far to do anything to please the big bloc of veteran voters are likely to jump to support the measure.

Location of Atomic Energy Laboratory in Du Page County, Ill.

EXTENSION OF REMARKS
OF
HON. CHAUNCEY W. REED
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Friday, May 23, 1947

Mr. REED of Illinois. Mr. Speaker, under leave to extend my remarks, I include herewith the following resolution adopted by the House of Representatives of the Sixty-fifth General Assembly of the State of Illinois:

House Resolution 61

Whereas it is proposed to locate an atomic-energy laboratory engaged in research for the development of all phases of the energy, including military, in Du Page County on approximately 4,000 acres of land now occupied by homes, farms, and forest preserve; and

Whereas the Atomic Energy Commission did not hold a public hearing on this matter, thus depriving interested citizens of an opportunity to be heard; and

Whereas the Department of Conservation of the State of Illinois has advised that the location of the laboratory would be a severe hardship on the residents of this area in that the laboratory would require millions of gallons of water from an area which is already in danger of a water shortage due to the rapidly receding water level; and

Whereas the dispossession of residents of the land to be taken over would add an extreme hardship through increasing the already serious housing emergency already existing in the county; and

Whereas the acquisition of the Du Page tract is entirely unnecessary because of the existence of a far more suitable location in nearby Elwood, Ill., on some 40,000 acres of Government-owned land formerly used as an ordnance plant and equipped with highways, water system, railroads, electricity, housing and hospital facilities; and

Whereas the location of such a plant in a more remote Government-owned area would provide a margin of safety not possible at the Du Page location and would result in saving millions of dollars of the taxpayers' money: Therefore be it

Resolved by the House of Representatives of the Sixty-fifth General Assembly of the State of Illinois, That we respectfully petition and urge the Congress of the United States to investigate the obvious advantages of locating the proposed laboratory in some Government-owned area in the hope that the Atomic Energy Commission may consider the desirability of using such a Government-owned or Government-controlled site; that a copy of this preamble and resolution be forwarded by the secretary of state to the President of the Senate, the Speaker of the House of Representatives, and each Illinois Member of Congress at Washington.

Adopted by the house, May 14, 1947.

HUGH GREEN,
Speaker of the House.
FRED W. RUEGG,
Clerk of the House.

Jews in American Wars

EXTENSION OF REMARKS
OF
HON. JACOB K. JAVITS
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Friday, May 23, 1947

Mr. JAVITS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include excerpts from an article in the Jewish Veteran, the national publication of the Jewish War Veterans of the United States, by J. George Fredman, former national commander of the Jewish War Veterans of the United States and Louis A. Falk, member of the national executive committee of the Jewish War Veterans.

The excerpt follows:

JEWS IN AMERICAN WARS

The story of Jewish participation in all the wars of our country, beginning with Asser Levy, the Dutch Jew, who in 1654 fought for the right to stand guard with his fellow burghers in Niew Amsterdam, down through World War II, with its Sgt. Meyer Levin, Corp. Barney Ross, Lt. Raymond Sussman and Gen. Maurice Rose, is told in this book.

* * * * *

It is hard to single out any special chapter or section of the book for particular mention. Some may derive a special pleasure from the antiquity of the stories of the early Colonials who fought with George Washington, such as Francis Salvador, who won the sobriquet of the Southern Paul Revere; others may be more interested to learn of Commodore Uriah P. Levy, a colorful naval hero, who did so much to abolish corporal punishment in the Navy; or that some ten thousand Jews fought on both sides with equal bravery in the War Between the States, seven of whom were decorated with the Congressional Medal of Honor.

Still others, interested in the present rather than the past, will thrill to the exploits of Sgt. Meyer Levin, the bombardier who made history, in the early stages of the war, with Capt. Colin Kelly; with the story of the poignant and dramatic message of Irving Strobing of Brooklyn, the last message heard from Corregidor before General Wainwright and his gallant men surrendered to the Japs; the story of that great athlete, Barney Ross, and his heroic efforts at Guadalcanal; or of Corp. LeRoy Diamond, who with Private Schmidt killed 200 Japs on the Solomons; or the story of how Lt. Raymond Sussman, 26-year-old shipping clerk, won the Congressional Medal of Honor, for killing 17 Nazis and capturing 32 in what was practically a one-man war.

There are also stories of the roles played in the higher echelons by Jewish generals and admirals. There is, of course, the story of how Maj. Gen. Maurice Rose, commander of the Third Armored Division, was killed in action in the last days of the war, as he was racing through Germany in a brilliant final drive to victory. Other high-ranking Jewish officers mentioned include: Brig. Gen. Julius Ochs Adler, general manager of the New York Times, who saw service in both World Wars; Admiral Ben Moreel, highest ranking Jewish officer in Navy history, who, as Chief of the Bureau of Yards and Docks, organized and commanded the famous Seabees, which achieved such engineering wonders for the Navy; Brig. Gen. Edward S. Greenbaum, who also served in World War I, and won the Distinguished Service Medal in World War II, as executive assistant to the then Under Secretary of War, Robert P. Patterson; Rear Adm. Lewis L. Strauss, who served as special assistant to the Secretary of the Navy and is now a member of the United States Atomic Commission; Rear Adm. Joseph Greenspan, a career man in the Coast Guard; Brig. Gen. David Sarnoff, the chief executive of the Radio Corporation of America, whose knowledge of communications proved invaluable; and others.

Several pages are devoted to the 211 Jewish chaplains who volunteered and served on all fronts, and the large percentage of Jewish doctors who served.

The authors have included two pages of statistics covering respectively World Wars I and II. For World War II, they show that more than 550,000 Jews served in all branches of service, that 11,000 were killed in action while 40,000 were wounded. Of those in service, 80 percent served in the Army, 17 percent in the Navy, 2 percent in the Marine Corps, and 1 percent in the Coast Guard. The Air Corps had the largest percentage of those in the Army with 33½ percent, the infantry was next with 16¾ percent. About 60 percent of all Jewish physicians in the United States under 45 years of age were in service.

American Jews received a total of 52,000 decorations, citations and awards. The Silver Star was awarded to 1,600 Jews, the Distinguished Service Medal and Cross and Navy Cross was awarded to 157, and Lieutenant Sussman received the Congresisonal Medal of Honor.

A Chance To Revive an Old Tradition

EXTENSION OF REMARKS
OF
HON. MICHAEL A. FEIGHAN
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 21, 1947

Mr. FEIGHAN. Mr. Speaker, the sad plight of 850,000 displaced persons in camps in Europe will be given consideration by the Committee on the Judiciary

when hearings scheduled for June 4 are conducted on H. R. 2910. The merits of this bill are discussed in the column by Anne O'Hare McCormick, appearing in the New York Times May 19, titled "Abroad," which follows:

ABROAD—A CHANCE TO REVIVE AN OLD TRADITION

(By Anne O'Hare McCormick)

Americans are vehemently critical of the British administration for its refusal to open the gates of Palestine at once to 100,000 Jewish refugees and of the Arabs for their opposition to further immigration into that bitterly contested land. At the same time, according to reports from Washington, a stiff fight is developing in Congress against the Stratton bill, introduced by a Republican Representative from Illinois to help solve the problem of displaced persons in Europe by permitting 400,000 to come to the United States during the next 4 years.

The inconsistency between what we demand of others and what we are willing to do ourselves is highlighted by a comparison of the number of immigrants allowed to enter Palestine legally right now and the number received in this country under the quota system. Under the restrictions of the hated white paper, still in operation, 18,000 Jews are permitted to settle annually in the Holy Land, a tiny and barren country with a population around 2,000,000. The average annual immigration into the United States since 1929 is hardly more than twice as much, 40,000, and this includes people of all nationalities and denominations who scatter over a territory of continental extent, vast resources, and many thinly settled areas.

PORT OF THE HOMELESS

Our present immigration quotas, small as they are, have been unfilled for years. From the open-door policy of the last century, which populated and developed this country, we have reverted to the restrictive attitude of Canada and Australia, which has left them small powers in spite of their size and potentialities. The United States is a great power because of the number and energy, the mixed blood and varied skills of its people. Out of this blend developed a human ferment and a pattern of society that made us the most productive and therefore the richest nation on earth.

Many arguments on practical grounds could be advanced for increasing the present quotas, or at least for filling them up. There was a time when other arguments appealed, when we thrilled to think of this country as the port of the homeless, the land of opportunity for the adventurous and the ambitious; above all, as the haven of the oppressed. Perhaps this idea is not dead. Representative FELLOWS, of Maine, chairman of the Judiciary Subcommittee which will conduct hearings on the Stratton bill, complains that there is "a very definite propaganda from all over the country" in support of the measure. He suspects it is the work of a strong, well-paid lobby, but one prefers to believe it is just the old American spirit asserting itself. Maybe the country is not as scared to absorb a dribble of new blood as some of its representatives imagine it is.

But this is a larger theme. The Stratton bill has nothing to do with permanent immigration policy. It is a simple emergency measure, limited to a 4-year period, to enable the United States to do its share in relieving a condition which is more shameful than other problems because it is small and easily dealt with. It proposes that 400,000 of the 850,000 displaced persons in camps in Germany, Austria, and Italy shall be admitted outside the regular quota system but subject to all the immigration requirements. Instead of costing money, the plan will save the funds spent for their support in camps. Relatives, friends, church and civic organizations have agreed to pay all expenses and provide shelter. The immigrants will be distributed in various parts of the country and help relieve shortages in farm and domestic labor.

OUR GREAT TRADITION

Most of the displaced persons are Poles, refugees from the Baltic States, Yugoslavs and Czecholovaks. Less than 20 percent are Jews, the majority of whom desire to go to Palestine; half are women and children, and all are stateless in the sense that they refuse to stay in Germany or go back to the lands absorbed by Russia or dominated by Communists. At present the charge of the Army and UNRRA, they will presumably become the responsibility of the International Refugee Organization when and if that body begins to operate. Progress in setting it up is slow, and it might be observed in passing that Congress should exercise care lest the constitution as finally ratified contains provisions such as discrimination against all persons of German ethnic origin, wherever they come from and whatever they have endured, and prohibition of propaganda against repatriation.

At best, IRO is only another temporary expedient. These people cannot be kept in camps forever. For the most part they are the kind of citizens who would be an asset to any community—determined to be free, desperately eager to work and to take root in a new world. They are the fit who have survived the hardest tests to which human beings have ever been subjected. With plenty of room, plenty of bread, plenty of work to do, America, of all countries, owes it to the displaced to make place for them.

But principally we owe it to ourselves—to our great tradition, to the investment in people that has made us what we are, to our peace of mind in an hour when the public conscience has to be stimulated by the private conscience. If America does not give the example in this work of rescue, who will? Who will heed the "Voice of America" if it speaks in one sense and acts in another? And if we do act, it is certain our purposes will be clearer in this action than in anything else we can do in Europe.

Home Owners' Loan Corporation

EXTENSION OF REMARKS
OF
HON. FRANK BUCHANAN
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Friday, May 23, 1947

Mr. BUCHANAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Pittsburgh Post-Gazette of May 22, 1947:

HOLC PROGRESS

The latest figures on activities of the Home Owners' Loan Corporation are an impressive testimonial to the thrift and determination of the American people as well as proof that not all of the New Deal's economic ventures were costly failures.

When the HOLC was created at the pit of the depression in 1933 it was expected that it would suffer losses. It took over distressed mortgages totaling $3,492,000,000 on the homes of 1,017,821 citizens.

Now John H. Fahey, head of the Federal Home Loan Bank Administration, announces that HOLC has a net profit of $21,600,000 to show for last year and that its ultimate liquidation will be accomplished with a profit to the Government. The original investment has been reduced by about 82 percent.

The HOLC did more than give hard-pressed citizens new hope and an opportunity to save their homes. It also bailed out savings banks, mortgage companies, and insurance companies faced with bankruptcy.

At a time of great economic distress, when the financial structure of the Nation was threatened, the Government stepped into the picture with vision and courage. This governmental departure from tradition has been fully justified, economically as well as sociologically. It shows that Government can be useful in the preservation of private enterprise.

Colonel Hallaren, Director of Women's Army Corps

EXTENSION OF REMARKS
OF
HON. EDITH NOURSE ROGERS
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Friday, May 23, 1947

Mrs. ROGERS of Massachusetts. Mr. Speaker, the appointment of Lt. Col. Mary A. Hallaren, Lowell, Mass., as Director of the Women's Army Corps was announced by the War Department on May 7. Lowell and Massachusetts take great pride in this promotion of Lieutenant Colonel Hallaren.

The new Director was simultaneously promoted to the grade of colonel. Officiating at the ceremony was Maj. Gen. W. S. Paul, Director of Personnel and Administration.

Colonel Hallaren has been Acting Director since March 11, 1947, when Col. Westray Battle Boyce retired for reason of physical disability. The third Director of the Corps has had wide experience in Army administration. A graduate of the first WAAC officer candidate school, she was sent to the United Kingdom in July 1943, as commanding officer of the first battalion of Wacs sent to England for duty with the Eighth Air Force. Later when thousands of Wacs were assigned to the European Theater of Operations, she was appointed Staff Director for the Air Forces.

Under her guidance the Wacs in England weathered the "little blitz," the V–1 and V–2 rocket bombs, and later hazardous crossings into Normandy.

In 1944 I saw at first hand the superlatively fine work of Colonel Hallaren in England and France.

The "Little Colonel"—she stands tall to make the 5-foot height requirement—was named WAC Staff Director for the entire European theater in July 1945 and served in that capacity until March 1946 when she was appointed Chief of the Civilian Employee Relations Section, G–1, by General McNarney, theater commander. Returning to the States in June 1946 she was appointed Deputy Director, WAC, and named Acting Director on March 11, 1947.

In recognition of her outstanding military service, she has been awarded the Legion of Merit with an Oak Leaf Cluster, the Bronze Star Medal, and Croix de Guerre with gold stars. She also wears the WAC ribbon, the European theater ribbon, the Victory Medal, the American

theater ribbon, the occupation ribbon, and the Army commendation ribbon.

Colonel Hallaren attended Lowell State Teachers College and Boston University. After graduation she taught in Lowell and Lexington, Mass.

Colonel Hallaren has great knowledge of her own country and of foreign countries. She spent her vacations traveling on foot through the great Northwest with a 15-pound pack on her back, and a determination to see the rural beauties of her native land. Later she lived in Paris and other European capitals in peacetime, tramped through mountain regions in Yugoslavia. One walking tour found her crossing the Andes on foot. She has lectured on her many travel experiences and written several articles on the customs and traditions of the countries where she has lived.

She is ideally fitted for her position. She has the confidence of the War Department and she inspires loyalty and enthusiasm in the Wacs. She typifies the kind of service which the Wacs gave. At the fifth birthday celebration of the WAC, Wac after Wac said to me, "Thank you and the Congress for our opportunity to serve our country."

Italian Peace Treaty Is Cruel and Stupid

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 20, 1947

Mr. SMITH of Wisconsin. Mr. Speaker, Dorothy Thompson recently summed up the objections to the Italian peace treaty now pending in the Senate. I agree wholly with her views. I include as part of my remarks the article which appeared in the Star:

ITALIAN PEACE TREATY HELD CRUEL AND STUPID—PACT AWAITING ACTION BY SENATE SEEN VIOLATING PROMISES

(By Dorothy Thompson)

"Practical people" want the Senate immediately to ratify the Italian "peace" treaty. None of its apologists thinks it a good or even decent treaty. They merely argue that it was the best we could "get," that Italy will be better off with it than hanging fire, that until it is signed we cannot enter into peaceful intercourse with Italy.

Why not? After the last war we made peace with Germany, but we did not sign the Treaty of Versailles.

If our Senate has to accept this treaty what is the good of giving its Members constitutional power to accept or reject? The logical end of the argument is that once a Secretary of State has "negotiated" a treaty, the Senate must rubber-stamp it. What then becomes of the constitutional system?

Since the middle of the war, the American people have been rubber-stamping. A few men have decided between them matters affecting the lives of millions. They have not even found it necessary to explain their acts nor justify them in reason or morality, and we are already seeing the terrible results of those "bargains."

DON'T OUR LEADERS LISTEN?

All of them consist of giving away other people's property, rights, and lives. This wretched document takes from Italy territory culturally Italian from the dawn of history, agrees to the evacuation of the Italian-speaking population, rewards Yugoslavia's dictator with essential Italian resources, creates an "internationalized" Trieste cut off from rail communications, electric power, and its agricultural hinterland. We are pledged to defend this city, in which Tito's agents are actively conspiring, while we renounce defending Italy herself.

The same newspapers which announce State Department urgings to ratify quote the State Department as warning Americans against visiting Yugoslavia because it is not safe. The inhabitants of Venezia Giulia are, however, to be permanently turned over without any safeguards to this same Yugoslavia. Don't our leaders listen even to themselves? Why must we aid and defend Greece against the same regime to which we open Italy? Is it because the Government of Greece is more democratic than that of today's Italy? If we pass this treaty, there will not long be a government either democratic or friendly to us in Italy.

We are told that if we do not ratify the Italian treaty, the Soviets will reject the Hungarian and Romanian. They will not leave Austria, nor come to terms about Germany.

But we have been unable to get an Austrian agreement; Russian troops guard the communication lines in Hungary and Rumania, and their presence aids local agents to liquidate the opposition. Does anyone doubt they will remain until they accomplish their purpose?

UNJUST, STUPID, AND CRUEL

I would be against the Italian treaty even if there were a democratic and humane regime in Yugoslavia because the treaty is unjust, stupid, cruel, dangerous, and in violation of solemn promises.

Of one thing we can be certain. This is no way to stop communism. Communism is the final haven for those who have lost all faith in God and freedom and turn to anonymous bitter collective force. We shall not stop communism by thinking we can buy off human despairs with less than the cost of a bomber fleet or restore human faith without sacrifice.

Communism can be halted only by alleviating human despairs of soul and body, through the vision and practice of a moral order. The people not only have to eat; they have to believe there is such a thing in the world as righteousness and love.

All this is not practical; but with the world as it is, after practical men have so made it, there is no reason whatever for thinking they are right.

Strike Has Become Public Enemy No. 1

EXTENSION OF REMARKS
OF
HON. JOHN W. GWYNNE
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Friday, May 23, 1947

Mr. GWYNNE of Iowa. Mr. Speaker, in accordance with permission granted me, I include herewith a radio address delivered recently by W. Earl Hall, editor of the Mason City Globe Gazette, Mason City, Iowa:

STRIKE HAS BECOME PUBLIC ENEMY NO. 1

Every American capable of sober, intelligent thought ought to sit down by himself, or herself, and give about a half hour of thoughtful consideration to that blunderbuss weapon of the industrial world known as the strike.

It isn't necessary to surround one's self with books. No opinion of the experts is needed. The question need only be:

"What are strikes doing to me and my country?"

No matter who's doing the thinking, the conclusion—the answer—to that question can only be one thing:

"Strikes are bad business for everybody—the worker, the employer, and most important, to the general public."

Now would be a most appropriate time for the thing I'm suggesting for the reason that the telephone strike, which affected everybody in America to some degree, is so fresh in the memory of all.

What is true with respect to this telephone strike in a conspicuous and well-nigh indisputable way is true of nearly every strike in our modern society. And what is that truth?

It's that nobody is the winner, everybody is the loser. Whatever is gained by striking, granting that there is such a thing as a gain, could be had by use of the civilized rules of law which prevail in other areas of democratic society.

Let's take a brief look at that telephone strike.

After a month's stoppage, in which telephone service for the public was crippled in varying degrees, depending on the local situation, the controversy was resolved.

And that's the significant point about all strikes. They're always settled. The fact that they're settled after the strike suggests—if indeed it doesn't prove—that they could be settled before the strike.

Employees are now back on the job, receiving an average of somewhere around $4 a week more than when they left their posts. This is materially less than workers in several other fields have obtained by negotiation, without striking.

It's a notable fact that the demand set by union leaders in advance of the strike was $12 a week, across-the-board. Refusal of management to meet that demand precipitated the walk-out.

After a month off the job—with no paychecks coming in—the strikers agreed to return to work for an increase which was approximately only a third of their leaders' demand.

The question arises therefore whether by setting up such an unreasonable condition for averting the strike, the union leaders themselves didn't preclude any possibility or basis for reaching a settlement without strike.

This isn't a question pondered alone in my mind. It's a question that's being asked by those who in blind faith followed their leaders' orders.

In the cold dawn of the morning after they're reflecting on the fact that while engaging in a distasteful picketing duty, they went payless for a full month. Their leaders didn't, it's to be assumed, but they did.

Even if it be assumed that none of the increase which came to them could have been had without the walkout, it will take months to make up what was lost.

But no telephone worker is gullible enough to believe that it was necessary to strike to gain a salary adjustment. Numerous pay increases in recent years have been given to them on their employers' own motion.

An assumption with ever so much more plausibility is that an increase of more than has been received by striking could have been had by realistic and skillful negotiation on the part of their chosen leaders.

Somewhere along the line, workers who take the rap when a strike is called are going to ask for an accounting from their policy-makers who are obsessed with just one idea—to strike—when there's a controversy with management.

So much for the telephone strike.

Now let's get back to the main theme of my visit with you, the stupidity of strikes in general.

Of course, as I've already suggested, if there could be an application of intelligent self-interest by every citizen of America to the problem, it would be solved almost overnight.

There would be universal acceptance of the fact that a strike in our industrial economy is no more defensible than a war between nations. Both are bad business. Both are relics of our uncivilized past.

But I'm not optimistic enough to believe that what I'm saying here is going to come to pass at once. Progress is slow in a democracy.

In the situation as it exists, the most important step that can be taken is to have it established that strikes in areas where the health and welfare, even the lives, of the public are involved shall be illegal.

"But you can't do that in a free country," some will say. And I suggest he say it to some young man who was jerked out of his civilian lifework to risk his life on the battlefield in defense of his country. This may not be democracy in itself, but it's the way to preserve democracy.

It's more than a guess that Josef Stalin is expecting ultimately to take over in our country, because our Government is so weak that it can't discipline our people even to the extent of perpetuating our way of life.

Outlawing strikes in public-service areas is no more than an extension of the rule of the good of the many, long ago recognized and applied, in scores of other fields of our society.

When a lad enters the army, he knows that he can't strike. When a nurse enters her profession, she is obligating herself first of all to bring relief to the suffering. Despite occasional lapses, this is an accepted condition of employment for police, postal workers, and many other Government employees.

If in its extension there is any compromise with the basic concepts of democracy, the alternative must be faced. And that grim alternative is the death of democracy. So this step, it seems to me, is both justified and realistic.

What I'm saying here is, I assure you, in no wise predicated upon an opposition to the principles of labor organization or collective bargaining. Unions accepting responsibility along with benefits can exercise a constructive influence in our industrial economy.

The ultimate answer to the kind of industrial strife we've been witnessing in our country—unless voluntarily we pursue the course of common sense and refuse longer to be led by demagogs—lies in the direction of giving legal status to industrial disputes and providing laws and courts for their adjudication.

This is a subject to which I've addressed my commentaries several times in the past. On this occasion, therefore, I'm not going to go into detail.

Justice through laws administered by courts did not spring fullflowered in our country or in the world. In the stone age, right was always on the side of the caveman with the biggest spear—or whatever their weapon may have been.

Gradually down through the centuries the idea of supplanting force with laws has gained a roothold. Today our court system is accepted by all. When two people, or two companies, have a difference they can't resolve, they resort to the courts—not to their guns.

Nobody—I least of all—believes that our system of justice is perfect. It isn't. But not many oppose the basic idea of a court system. More and more our freedom has tended to become a freedom under law. Law and order have become the principal ingredients of civilization's advance.

More and more, too, the public's welfare is being given primacy. Under early day American concept, outdoor plumbing could have been defended as the right of an individual. But that right was curbed and eliminated when it was found that one person exercising his right was imperiling the health of his neighbors.

It is this principle that must prevail under the system of labor-dispute courts which are as certain for America as tomorrow's sun. The rules will be laid down and interpreted by qualified judges as they affect labor and management.

But, even more important, there is going to be a regard for the public's stake in industrial controversy which has been shamefully passed over in the dog-eat-dog doctrine too prevalent in the past as labor and management contended for their advantages.

Impartial courts applying fair and intelligent laws can bring to the industrial economy the same boon they have brought to all other segments of American life. Why they have been so long delayed, and why there is so much resistance to them from both labor and management, is something beyond my understanding.

Justification offered for all strikes of recent years in America has been the claim that existent worker income wasn't sufficient to cope with mounting living costs. That's a proper diagnosis. But the remedy chosen has been wrong to the point of absolute stupidity.

Living costs are high and mounting. But why? For the simple reason that there have been more dollars than goods—more demand than supply—more need than means for meeting the need.

What am I leading up to? I think you know. But before I tell you let me call for the testimony of an expert witness, Bernard Baruch, who by a lifetime of distinguished public service without financial reward qualifies for designation as "America's elder statesman."

"Work," says Mr. Baruch, "will halt inflation, produce homes, provide food for the world, and bring economic stability to the United States, thereby discouraging our strongest enemies.

"One by one our allies are—or think they are—exhausted. That means they stop work. But usually we find that exhaustion is the result of stopping work, and not the other way around.

"That can happen here. Don't let us be sucked into the maelstrom.

"Be sure of this: Today we are on the brink of an engulfing inflation. There is only one way out. That is by work.

"The more we produce, the less will be the cost of living; the more things we can buy, the easier will be the building of our reserves—physical, financial, and spiritual—for we shall be free of worry, the absence of which is a sense of security."

All right, what happens when men strike? They quit work. Production in their particular field ceases. Ultimately, at a higher wage, they come back to work. That means an addition to the Nation's supply of dollars.

But—and this is the fundamental fact which must be driven home—it doesn't mean there is more goods to be purchased with those additional dollars, to the exact contrary it means there are more dollars competing with each other for the already too reduced supply of commodities or services.

This is the condition which has set the well-known spiral of inflation into being. The very condition which seems to justify a strike today will create the justification for another strike 6 months or a year from now.

In short, our economy is enmeshed in a vicious cycle.

Either we quit striking and produce more, individually and collectively, or we're heading toward the kind of bust that overtook us—and for the same reasons—back in 1929.

It doesn't take any economist to tell us about this plight we're inviting for ourselves as matters stand. Everybody can—and should—think it through for himself.

Statement of Liberalism

EXTENSION OF REMARKS
OF
HON. JAMES E. MURRAY
OF MONTANA
IN THE SENATE OF THE UNITED STATES

Friday, May 23 (legislative day of Monday, April 21), 1947

Mr. MURRAY. Mr. President, I ask unanimous consent to have included in the Appendix of the RECORD a statement made by 87 leading American liberals, setting forth what they consider to be a standard of political conduct for those who believe in liberalism or progressivism as a middle way between the extremes of reaction and communism—the true highway toward the fullest achievement of American democracy.

This statement of liberalism accuses the American Communist Party and its sympathizers of an un-American lack of forthrightness, and announces the refusal to associate with American Communists as a proper and reasonable requirement for anyone who is to be of practical help to the cause of liberalism in the United States. The statement of these 87 liberal leaders draws a proper distinction between association with American Communists and their sympathizers, on the one hand, and, on the other, an objective attitude toward the problems of Russia and a hope for peaceful relations with that country. These liberal leaders point out that "failure to reckon with the above distinction occasions the grave present-day plight of the liberal-progressive cause."

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

The future of our country and the world may easily turn on the preservation of a reasonable solidarity among those liberal and progressive Americans who today possess the balance of power in national affairs. Liberalism or progressivism, being a middle way between the extremes of reaction and communism, is subject to accusations from both extremes. It is important therefore to point out the sharp distinction which must be made between partiality for the American Communist Party and its sympathizers on the one hand and an objective attitude toward U. S. S. R. and a desire for friendly relations between our two countries on the other.

The American Communist group—registered party members, together with their more or less unofficial adherents—has its roots in a foreign land, and the record shows that it follows the behests of a foreign government. It carries on its activities and exerts its influence with an un-American lack of forthrightness. An announced refusal to associate politically, either as an individual or as a member of a group, with this American Communist entity, registers the conviction that the highest service to our own country and the world implies working wholly through American channels and so with unquestioned loyalty to our own people and their Government. It is not unreasonable therefore to expect that those with whom we associate politically so declare themselves. To deny this is intellectual escapism and may be politically disastrous.

Contrariwise, it is unreasonable and against the public welfare to bring accusations against an American citizen either because he evidences interest in the U. S. S. R. and a measure of sympathy with some of the

things going on there or criticizes certain current practices and attitudes in that country.

The failure to reckon with the above distinction occasions the grave present-day plight of the liberal-progressive cause. Until this impasse is resolved, the partisan and nonpartisan forces which have increasingly guided the United States of America in recent years will remain divided and wellnigh impotent.

Signed by the following:

Melvin D. Hildreth, lawyer, member National Progressive Committee 1932 to 1944.

Raymond Swing, commentator, chairman of the board of United World Federation.

Louis Bromfield, author, farmer.

Henry Chapin, author, New Hope, Pa.

Stuart Chase, author, lecturer, accountant.

Morris L. Cooke, consulting engineer.

David Cushman Coyle, author, engineer.

Michael M. Davis, doctor, public health.

Samuel S. Fels, philanthropist, president Fels Naphtha Soap.

Frederick P. Gruenberg, social worker.

William Draper Lewis, director, Law Institute.

Russell Lord, author, editor of The Land.

Howard W. Odum, sociologist, University of North Carolina.

George Biddle, painter, author.

O. C. Merrill, engineer, former Executive Director, Federal Power Commission.

Cyril G. Fox, industrialist, Philadelphia, Pa.

James G. Patton, president, Farmers' Union.

Harold Evans, lawyer, Philadelphia, Pa.

Struthers Burt, author, editor.

Abe Fortas, lawyer, formerly Under Secretary, Interior Department.

Watson Davis, director, Science Service.

Robert D. Kohn, architect, formerly president A. I. A.

Stuart Mudd, M. D., biochemist, University of Pennsylvania.

Henry S. Graves, forester, formerly dean Yale Forestry School.

Robert P. Brecht, professor of industry, University of Pennsylvania.

Arthur Upham Pope, authority on Persian art, director Russian Institute.

Thurman Arnold, lawyer, formerly head Antitrust Division, Department of Justice.

Harold J. T. Horan, Time magazine.

Henry St. George Tucker, recently presiding bishop Protestant Episcopal Church.

Jacob Billikopf, authority on industrial relations, Philadelphia.

Richard B. Scandrett, Jr., lawyer, president Survey Associates.

Ordway Tead, chairman, board of directors, New York City School of Higher Education.

Harold S. Buttenheim, publisher, the American City.

John Bauer, economist, New York City.

Edward L. Bernays, public relations, New York City.

McAlister Coleman, author.

Jerome Nathanson, director, Ethical Cultural Society.

Paul H. Appleby, head Maxwell School, Syracuse University.

John A. Lapp, authority on industrial relations, Chicago.

William H. Fineshriber, D. D., Rabbi, Philadelphia.

Wayne Coy, Washington Post.

Percy S. Brown, executive director Filene Goodwill Fund, Boston.

Harry Elmer Barnes, historian, columnist.

Melvyn Douglas, actor.

Baker Brownell, professor of philosophy, North Western University.

Gilbert E. Dean, dean of engineering, Lehigh University.

William L. White, author, New York City.

Arthur Garfield Hays, lawyer, authority on civil liberties.

Henry Seidel Canby, Saturday Review of Literature.

William Templeton Johnson, architect, San Diego.

Vida D. Scudder, sociologist, Wellesley College.

Ernest S. Bradford, economist, College City of New York.

Francis J. McConnell, Methodist Episcopal Bishop.

Benjamin H. Kizer, banker, Spokane.

Robert R. R. Brooks, economist, Williams College.

Earl G. Harrison, dean law school, University of Pennsylvania.

Clinton S. Golden, labor leader.

A. L. James, Jr., United States Army retired, Charlotte, N. C.

Charles F. Jenkins, publisher, Farm Journal.

Christian Gauss, Princeton, N. J.

Arthur W. Macmahon, political scientist, Columbia University.

Max Radin, professor of law, University of California.

John A. Fitch, sociologist, New York School Social Science.

Edward A. Ross, sociologist, University of Wisconsin.

Eduard C. Lindeman, sociologist, N. Y. C.

Margaret Causey, widow of James H. Causey, National Progressive Committee, 1932–40.

Joseph Schlossberg, labor leader.

John W. Edelman, labor leader.

Leon C. Marshall, dean graduate school, American University.

Judson C. Dickerman, engineer, formerly with Federal Trade Commission.

M. F. Ashley Montagu, anthropologist, Hahnemann Medical College.

Paul F. Brissenden, industrial relations, Columbia University.

William H. Davis, chairman, transportation board, New York City (formerly chairman, War Labor Board).

Hazel Bazett, scientist, University of Pennsylvania.

Bart J. Bok, professor astronomy, Harvard University.

Dorothy Kenyon, lawyer, New York City.

Otto T. Mallery, author, Philadelphia, Pa.

Maurice B. Visscher, scientist, University of Minnesota, president American Association Scientific Workers.

Frank P. Graham, president, University North Carolina.

Max Lerner, editor PM, economist, Williams College.

Florence J. Harriman, author, formerly Ambassador to Norway.

Alexander Hamilton Frey, law school, University of Pennsylvania.

Allan M. Butler, pediatrician, Harvard Medical School.

Upstream Aspects of the Missouri Basin

EXTENSION OF REMARKS

OF

HON. JAMES E. MURRAY

OF MONTANA

IN THE SENATE OF THE UNITED STATES

Friday, May 23 (legislative day of Monday, April 21), 1947

Mr. MURRAY. Mr. President, I ask unanimous consent to have included in the Appendix of the RECORD a statement by John W. Spencer, regional forester, United States Forest Service, Denver, Colo., made before the Missouri Basin Inter-Agency Committee at Cheyenne, Wyo., on January 16, 1947.

This statement contains the very important observations of an eminent United States Forestry Officer, who points out in a concise and objective manner certain long-neglected aspects of regional development programs for the Missouri Basin. In presenting these problems to the Missouri Basin Inter-Agency Committee the author points out that not only is the volume and character of water subject to human control to a considerable degree, but that upstream conditions in the Missouri River Basin will determine in large measure the nature of the problems of control and use downstream.

While this paper was not written to support any particular bill, its facts give strong proof for the need of an overall, unified program under single, responsible control in order to insure a proper balance between all the special interests in the vast area of the Missouri River Basin. For that reason it is important that the Congress be given access to this statement through the pages of the CONGRESSIONAL RECORD.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

UPSTREAM ASPECTS OF THE MISSOURI BASIN

Down through the ages from the very dawn of civilization man has hoped and struggled for the day when he could harness the untamed forces of nature.

Presumptuous, selfish perhaps, but withal admirable for its very audacity, man's plan is to bend these gigantic forces to serve his own ends.

Today, in the concept of the Missouri Basin development, we see such a plan taking shape and form. Tangible, ponderable, physical, materialization of things that have existed only in the minds of men.

It is breath-taking in its daring, this plan which involves the taming of a mighty river system.

When you see the rolling waters of the Missouri impounded behind the massive dams of the Army and Reclamation engineers, safe from the threat of floods, and then released and again reimpounded when, where, and as the engineers see fit, you just begin to realize what this plan really means. These same waters, as they are released, will bring life and prosperity to the reclamation projects along their course. Even the very act of releasing these waters produces the light, heat, and power so vitally necessary to the economy of the basin. Lastly, the natural rainfall and the little surface waters will, through soil conservation practices, bring the blessings of full-crop production without the hazards of erosion. In the culmination of this plan we will see a tremendous river system from its furthest sources to its mouth, tamed to the will of man. Its powers for destruction and ruin will be controlled and converted to the useful service of society.

The Forest Service is proud to have a share in this program, even if it is an inconspicuous one, along with the Corps of Engineers, the Bureau of Reclamation, the Soil Conservation Service, and other agencies. Just where does the Forest Service come into this picture? Upstream. Way back up along the Continental Divide where the melting snows of the Rockies produce the water which creates the normal stream flow of the upper Missouri. This is the very same water which will be

stored behind the engineers' dams and used for power and to satisfy the thirsty lands of the reclamation projects.

It should be apparent that the maintenance of this upstream water supply, both as to volume and usability, is essential to the fullest use and benefits of the downstream developments.

It is also apparent that if the volume of usable water produced regularly each year can be measurably increased, then the scope and value of the basin plan will be correspondingly widened.

These statements imply that, from a given source area, the volume and character of water is, in a degree, subject to human control. This, gentlemen, is precisely the point which this paper attempts to bring to your attention.

All through human history peoples in arid and semiarid lands have attempted to supplement or replace natural rainfall by using irrigation water. These people, both ancient and modern, found irrigation water more dependable as to quantity and distribution than on-the-spot precipitation. They also had faith that somewhere else—at the source area of their water—precipitation would be adequate and all other factors such that water would be available for the arid lands when needed. Many extensive irrigation works were built and maintained successfully for long periods of time and then gradually dwindled in use and finally disappeared. Historical evidence does not indicate any profound changes in climate cycles sufficient to explain these failures. On the contrary, the physical evidence on the ground quite clearly indicates that the treatment of the water-source areas was responsible for the failure of the water crop upon which these people depended.

Very well, if human abuse of a source area can ruin its water yield, is it not reasonable to expect that proper treatment of the source area would, at least, perpetuate its water crop? This, of course, is an inferential conclusion, but modern research indicates affirmatively that proper treatment of a watershed is reflected in increased water yields. I will come back to this later.

Let us look now at the principal water-source areas of the Missouri Basin.

These are the mountainous rim of high, rough, wild lands along the western boundary of the basin, plus a few isolated mountain masses such as the Black Hills of South Dakota, the Bighorns of Wyoming, and the Absarokas of Montana.

This mountain-rim area is divided by climate into several zones. The most important as a water source is the high-elevation belt of heavily forested land which lies along the backbone of the Rockies. Here precipitation so exceeds local consumption of water that water yields available for irrigation use reach 12 inches or more per year.

This is a zone of dense forests, interspersed with mountain meadows and with smaller areas of open range land above timber line. The high range is used for summer grazing by sheep, while the lower meadows are mostly used by cattle. With their large yield of water, these lands have a capital value for water alone of $50 to $100 per acre, aside from their value as timber and forage producers and for recreational use.

Precipitation on this high-altitude zone is largely in the form of deeply accumulating snow which melts through a prolonged spring period ending in late June or July—well into the crop-growing season of lower elevations. Summer rainfall consists mostly of light and frequent showers. In general, there is a relatively low risk of floods and erosion.

Lying below this zone of high water production is a long belt of mountainous land which yields some water for downstream use, but of smaller amounts and with higher hazards of erosion. Precipitation is less and evaporation higher, so that timber is more sparse and grasslands extensive. The soils are commonly erodible on these lower slopes, and heavy rainstorms are abundant. With these sensitive conditions, very serious erosion and sedimentation have been caused by timber cutting, fire, road construction, and especially grazing. The effect of this erosion on the water resource is further aggravated by the fact that rivers flowing from the zone of high water production must pass through this belt, picking up a heavy load of sediment on their way to the populated valleys below.

Adjacent to the mountains is another climatic and vegetational zone on which downstream water developments are dependent for full success and longevity. This is the rolling area of grass and sage land lying below the principal water-yielding slopes. It yields little annual stream flow but may give origin to enormous volumes of silt brought into streams by brief but intense summer rains, wherever the protective mantle of vegetation has been greatly reduced by overgrazing. That such overgrazing has been the case with resultant deterioration and erosion, is attested by the silting of the Guernsey Reservoir, where over 30 percent of the capacity has already been lost. Another instance of excessive erosion from this land zone is the silt load of the Big Horn River, estimated to carry nearly 13,000 acre-feet of silt per year—the highest contribution by any of the Missouri tributaries.

In the January issue of Harper's, Bernard DeVoto, writing about the results of watershed erosion, states:

"The economic effects are obvious. The range becomes less productive; it will feed fewer sheep and cattle; the exhaustion of the best remaining portions is hastened. Stock owners sink into debt, go bankrupt, give up. The yield of farmland declines; ruined land will produce no crops at all, impaired land produces constantly smaller crops. Real-estate values drop steadily; the cost of maintaining irrigation systems and the cost of fertilizing land rise even more sharply. The standard of living declines. People begin to move away and find their land unsalable. People who were intending to move in decide not to do so. Relief rolls increase. Communities begin to die."

He also brings out the far-reaching effects of watershed deterioration in his statement:

"The effects of watershed erosion may be felt hundreds or even thousands of miles from the areas where the damage is done. Children may drown near Kansas City this year because a cattle baron had too many steers along the Big Horn before 1890."

And again:

"You have seen the Missouri River at Kansas City, an opaque stream half-saturated with silt. A great part of that silt gets into it from the Yellowstone River, above whose mouth the Missouri is comparatively clear. The Yellowstone is fed by many streams, of which those from the south carry the most silt, the Tongue, the Rosebud, especially Powder River, and most especially the Big Horn. Above the mouth of the Big Horn the Yellowstone is comparatively clear. These plains rivers are depressing and rather sinister to look at, and they always have been helping to carry the mountains to the sea. But one reads with amazement descriptions of them written before the Civil War. They were comparatively clear streams, streams whose gradual, geological erosion of the land had not been accelerated—as it was when the cattle business came to Wyoming and Montana."

This erosion belt which contributes its unwelcome silt load to the Missouri River is composed of vast areas of Federal, State, and private lands. It is not the purpose of this paper to cover the erosion problem and its causes in detail. It is mentioned here merely to call attention to its magnitude and to predict that unless it is effectively stopped, the operating life and efficiency of the downstream developments will be greatly impaired.

The high-altitude mountain lands, previously mentioned, are the heavy water-yielding areas and supply, by far, the greatest portion of the usable water to the upper basin. These water-producing lands are, for the most part, embraced within the boundaries of some 16 national forests.

Throughout the entire period of its administration of these forest lands the Forest Service has endeavored to follow an integrated form of management. Every effort has been and is being made to develop and conserve, through wise use, all of the natural resources within these forests. The water crop, the timber crop, the production of forage for domestic stock and for wild game, and the development of human uses and recreation have been the dominant values and the basic considerations of management.

The Forest Service has always been keenly appreciative of the great value and importance of the water crop. However, as time goes on and developments such as the Missouri Basin plan are projected, this water crop takes on new and added significance.

It is now becoming apparent that we need to amplify and expand our technical knowledge relating to watershed management. We have uncovered some striking and important leads which should be explored and developed without delay.

Up to the present, a limited but highly significant program of research in upstream watershed management has been carried on by the Rocky Mountain Forest and Range Experiment Station with headquarters at Fort Collins, Colo. Of the two other Forest Service experiment stations in the Missouri Basin, the Lake States station at St. Paul, Minn., has had a very small program of forest influences research, and the Northern Rocky Mountain Station at Missoula, Mont., has been able to give attention to watershed problems only through its research on timber and range management.

As a part of research by the Rocky Mountain station, studies of logging practices have shown how erosion induced by timber cutting operations may be kept to a minimum. Other studies have resulted in guiding principles for logging road location and construction so that erosion channels are not created. In the front range of Colorado have been demonstrated methods of drainage and road-bank treatment by vegetation applicable to roads and highways.

Experiments in controlled but commercially practical grazing by cattle have shown how the maintenance of a good protective cover of vegetation on range land is compatible with profitable livestock production. In fact, land depleted by long-continued overgrazing to the point of heavy erosion can be restored to good watershed condition by proper grazing controls and reseeding of the worst areas.

Recently strong experimental evidence has been accumulated to show that the forester may be able to do much more than mere protection as his share in watershed development in the Missouri Basin. Research of the past few years by the Rocky Mountain Forest and Range Experiment Station has indicated that properly managed timber cutting on high-altitude watersheds may result in a very substantial increase in stream flow, while at the same time meeting the requirements of erosion protection and maximum production of timber. In a lodgepole pine forest typical of the mountain country at the head of the Missouri Basin, the removal of commercially salable timber increased the amount of water available for stream flow by about 3¼ inches, or about 30 percent over that ordinarily available from a virgin forest of this type. Erosion has been negligible in the 6 years since this cutting

was done and the site is in good condition for the growth of a new timber stand. Experiments now under way in the spruce-fir forest type have yielded preliminary results of a similar nature.

Within the past year, the Forest Service and the Bureau of Reclamation have entered into a cooperative agreement for expanded research into the aspects of water yields from high-altitude watersheds. Winter snow accumulation and factors involved in snow melt and evaporation are being studied in their relation to resultant stream-flow, with the primary object of improving water allocations to the betterment of planning by consumers.

Past and present research pertinent to watershed protection and to increasing water yields have been largely on a sample-plot basis and confined to a few combinations of topography, soil, and vegetation. Water yield studies, for example, are at present limited to a series of sample plots and two small watersheds, all located on a minor tributary of the Colorado River. These watersheds are undergoing a period of calibration, following which one of the pair will be cut over according to careful plan. The resultant effect on water yields, observed over a number of years, will be the test of our sample plot results for that locality and set of conditions.

The experiments and needs just described apply with certainty only to the central Rocky Mountain region. In contrast, specific facts and knowledge are almost wholly lacking for the various watersheds composing the northern end of the Missouri headwaters. The need for such knowledge is especially urgent in Montana: First, because of the gigantic river development plans already started; second, because little or no research has been done to determine specifically the influence of varied management practices in combination with physical factors on upstream drainages. General principles developed elsewhere no doubt apply, but it is now essential to know "how much." Sound planning of Missouri River basin developments require that these influences be known more specifically and taken fully into account from the beginning. Otherwise, mistakes and wasted effort may result.

Knowledge is needed now to show the interrelationship of varied local climatic, geologic, soil, and land-use factors of Montana watersheds on water yields, distribution and quality. Information from other regions—Colorado, Utah, and California—is useful but cannot be safely accepted as being fully applicable to Montana conditions.

For all parts of the Missouri headwaters, including the territory to be studied by both western experiment stations, a number of fundamental questions still need to be answered. A few of these questions on which research is required are listed below:

1. How can forest cutting and utilization practices be varied to minimize water losses, to increase the timely yield of water from snow melt or rainfall on different slopes and elevations without incurring accelerated erosion?

2. What degree of range utilization and what standard of distribution of cattle and sheep can be practiced without unwarranted impairment of soil stability? Under what conditions can grazing use be manipulated to influence water yields desired?

3. To what extent may cover types on varied slopes and soils be manipulated or changed—by clearing, fire, cultivation, etc., without excessive sacrifice in watershed value?

4. How can soil deterioration and erosion already incurred be remedied most quickly and cheaply?

5. How can recreational, fish, and wildlife resources be managed and developed in harmony with watershed values and other resources?

6. How can range and forest and wild-land management practices be modified to minimize the long-time expense of water storage by structures through delay run-off, reduced siltation and flood crests?

These questions are not complete. They merely illustrate the scope of specific new knowledge needed as a factual basis for sound basin developments.

The resources and condition of the upper watershed lands constitute the basis for the successful development and life of irrigation and water power downstream, and expanded research is essential to guide the successful management of these upstream lands. Such expansion would largely consist of carrying current lines of investigation into new territory and environments. In our water-yield studies, for example, we need to set up several pairs of triplicates of small watersheds within the high-altitude zone of the Missouri Basin. Such watersheds, chosen to sample different forest types and topographic factors, would be used to test our sample plot results and would provide the broad base necessary to calculate the benefits in water yield to be derived from purposeful, managed timber cutting. Since the timber resource itself is of great importance, we must learn for a variety of conditions the best methods of cutting to insure maximum permanent timber harvests. Furthermore, in order to insure the harvesting by private operators of the timber which would be removed for watershed-management benefits, we need to learn and demostrate efficient logging, processing, and marketing methods so that production will be profitable.

As regards domestic stock grazing, we need to extend our present research to cover representative areas within the Missouri Basin so that methods of providing adequate watershed protection, as well as optimum returns from livestock production, can be learned and demonstrated.

Along with research in these upstream lands, some studies need to be added on the management of the grazing lands of the high plains. Such research should include active grazing management, methods for rehabilitating deteriorated lands, and studies of the relative value of various native forage plants in erosion control.

In addition to the studies themselves, we need more accurate information covering the physical features of these vast upstream watersheds. To begin with, we should complete the Forest Service mapping program without delay. We should have topographic and planimetric maps based upon aerial photography following current Federal standards for the entire watershed area.

Given such maps, it will be possible to delineate the most important water-yielding lands, to outline the major timber types and to pick out the specific areas where erosion is present or threatened. With such maps and surveys we can translate research results into an administrative-action program that will intelligently and effectively protect the water source areas.

This rather sketchily describes the way in which the Forest Service of the Department of Agriculture fits into the pattern of the Missouri Basin plan.

Yours is the gigantic job of building the massive dams, the huge power plants, and the diversion and reclamation works.

Yours is the task of developing the physical structures. The Soil Conservation Service and others have the great responsibility for establishing the treatment and use of the basic soil resources, and all of us together are working for a better, more practical and permanent economy.

The Missouri Basin is the heart of the Nation's bread basket, and its wise, orderly, and permanent development will, in large measure, determine our country's prosperity and future welfare.

But, through all of this, let's keep in mind the threat imposed by the destructive forces of nature. Erosion and flood prevention, it is true, are properly uppermost in our immediate basin planning.

However, let's not forget the example of those ancient nations whose physical works and dreams of greatness are now buried beneath desert sands.

Neglect and abuse of the water-source areas can injure or wreck our own plans just as completely as happened in the dimly recorded past.

The laws of nature are eternal.

This paper was prepared by the Rocky Mountain Forest and Range Experiment Station, Fort Collins, Colo., and John W. Spencer, regional forester, region 2, United States Forest Service, Denver, Colo.

Delivered by Regional Forester Spencer at Cheyenne, Wyo., January 16, 1947.

Ratification of Treaties With Italy, Hungary, Rumania, and Bulgaria

EXTENSION OF REMARKS

OF

HON. KENNETH B. KEATING

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Friday, May 23, 1947

Mr. KEATING. Mr. Speaker, under leave to extend my remarks, I include an editorial from the Rochester Times-Union dealing with the ratification of the treaties with Italy, Hungary, Rumania, and Bulgaria.

In view of the stalemate reached at Moscow, no adequate reason has been advanced, in my opinion, for any speed in the ratification of these treaties, filled as they are with so many important one-sided concessions.

FUTILE RATIFICATION

Peace being indivisible, there is no rush about ratifying the fringe treaties with Italy, Hungary, Rumania, and Bulgaria. Peace hangs on what is done with Germany and Austria. Without peace in Central Europe it is meaningless to have peace around the edges.

Ratifying these treaties will not forward the principle aim of a general peace but it can damage that aim.

Ratification would mean that we could begin paying reparations to Russia—through Italian relief.

It would mean we would withdraw from a strategic area in Europe—from which we can guard our lines to Austria, Germany, Greece and Turkey—without corresponding withdrawals by Russia. The Soviet Union hangs any withdrawals from eastern Europe on the Austrian treaty, which she steadfastly blocks.

Ratification would disarm Italy at the doorstep of the defiant, belligerent and expansionist Russian puppet, Tito. He has killed American airmen, defied the United Nations and he wants Trieste. Does anybody honestly suppose that he will take seriously a United Nations police force there?

Peace can spread to the fringe rapidly enough when the powers are ready to make peace at the center. But such a peace as is proposed for the fringes opens the way for incidents which would make peace impossible at the center.

The Meaning of Liberty in Industry-Labor Relations

EXTENSION OF REMARKS
OF

HON. ELBERT D. THOMAS

OF UTAH

IN THE SENATE OF THE UNITED STATES

Monday, May 26 (legislative day of Monday, April 21), 1947

Mr. THOMAS of Utah. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address entitled "The Meaning of Liberty in Industry-Labor Relations," which I delivered incident to the inauguration of Dr. Raymond Bernard Allen as president of the University of Washington, at Seattle, Wash., on May 22, 1947.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Regardless of what happens tomorrow we are now finishing what might be termed another noble experiment in our industry-labor relations. For some time now our country has found itself in the midst of agitation which can be termed an attack upon labor organizations, wherein a demand is made that protections be removed from the organizational processes and the processes of collective bargaining. To one who has believed that we were on the right track in preserving liberty and freedom in our industry-labor relations, I cannot help but feel that constant agitation on the part of those who, for the last generation, have fought labor on the score that labor organization denied men their freedom of action are using freedom only as a cloak to cover their attempts to destroy freedom and liberty for the working men and women of America.

Now let me say this by way of preface, and also by way of conclusion, for it is my conception of the meaning of liberty in our industry-labor relations, trite as it may seem, that there can be no liberty without respect for others. There can be no freedom without respect for the public welfare. There are no rights unless those rights are linked with duties and responsibilities. No better definition can be given for liberty and for freedom, in a political sense or in a labor sense, than the one expressed so often by Jefferson, that one can be free to do only so long as that which he does does not interfere with another.

There are no absolutes in freedom. When Rousseau stated that all men are born free but everywhere they are in chains, I am sure that he never meant that the babe at birth had any chance of survival if it were left free to survive, nor did he assume that all of the chains that bind men to their social responsibilities are of a degrading or slave-confining nature. Liberty and freedom in any phase of life depend upon all of the circumstances of that life. Man is free to eat if he has bread. Man is free to breath if he has air. Man is free to come and go if he has strength to move. Can there then, under any circumstances, be freedom or liberty for anyone only as that freedom or liberty is made?

We now have had about 50 years in the development of the freeman in industry under Supreme Court definition and the expansion of legal rights in the growth and development of those definitions. Before that time man's right to seek freedom through organization was interpreted in law as conspiracy. It was in a Utah case, I think, one which my own father had something to do with because he was in the legislature at the time the law was passed, where man's freedom in the modern industrial sense had its start. There had been a great disaster in one of our coal mines and scores of men lost their lives. This made our society thoughtful about conditions under which those men worked. The whole country had passed through troubles of the depression of the nineties, the labor troubles incident to that depression and the political reactions to both. But, at this time, there dawned in the minds of certain men that tired miners, overworked miners, were a menace to their fellows and, therefore, to society, and the 8-hour law in the mines was the result.

Of course, there was the sordid aspect to this great reform. The workingman was charged with advantage taking and industry was charged with attempting to exploit and overwork laborers. But the idealist accepted the thesis I have advanced and when the law was challenged in the courts the opposers to the law also took the idealistic approach. Suit was brought in the name of one of the miners who said he had a right to work as long as he wanted to work, that depriving him of working 12 hours a day was a destruction of his liberty and an infringement of freedom of contract. Strange as it may seem, but nevertheless it was true, and it occurred a few months before Mr. Dewey made his profound pronouncement that he did not know whether the Constitution followed the flag or not, but he was sure the Supreme Court followed the election returns. This is what the Court decided. It denied that there was any freedom for the employee because it said the "proprietors lay down the rules and the laborers are practically constrained to obey them" (*Holden* v. *Hardy* (169 U. S. 366, 397)).

This case is important in at least three ways and it has a bearing upon our present-day situation. First, the State stepped in, showing a public interest. Second, the Court denied that there was any freedom for the worker under the conditions regulating his work because the employer prescribed the conditions and he had to submit. Therefore, there was no freedom of contract because the employer had the absolute right to hire and fire. And, third, it showed definitely that if the individual employee was to enjoy any freedom he must gain it by alining himself with other employees in the seeking, by united action, of a right for all to work at the pleasure of all.

Note how a later interpreter of our law in the Supreme Court followed this reasoning, for, in sustaining the constitutionality of the National Labor Relations Act, the Supreme Court said: "A single employee was helpless in dealing with an employer; that union was essential to give laborers opportunity to deal on an equality with their employer" (*National Labor Relations Board* v. *Jones & Laughlin Steel Corporation* (301 U. S. 1, 33)). Thus, as a new freedom was born through the act of the Utah Legislature and the decision of the Supreme Court just before the turn of the century, so it was confirmed by the Supreme Court of the United States in the middle of the last decade and the theory of liberty in industry-labor relations as defined under what is spoken of as the period of the New Deal had its birth and start, its evolution. The Supreme Court sustained the new theory of collective bargaining and for 10 years it became the recognized practice of our land.

Another development had taken place. Federal rights in the field of labor had become recognized and the old pronouncement that manufacturing, mining, and agriculture were of purely local concern ceased to exist. The public's welfare today in industry-labor relations is as broad as our Constitution itself, and industry and labor, as they affect commerce in the United States, must seek their rights under the theory that they are of common or national concern.

The theory that was accepted in the Utah case that for the good of the State the hours of miners' labor per day could be limited has expanded into the theory of the Fair Labor Standards Act. This act bears my name. It became one of my responsibilities when I became chairman of the Education and Labor Committee, and I was chairman of the conference that reported the conference report. This act, too, has been challenged as a result of the portal-to-portal pay legislation. Thus upon these two acts, the cornerstones of what I have termed above, New Deal industry-labor relations legislation rests, but there is still another.

The third cornerstone, what I hope will constitute the firm basis of sound industry-labor relations, is the cornerstone which grew out of the industry-labor conference called immediately after Pearl Harbor, over which President Roosevelt appointed me to preside and out of which came my motion. This motion was simple in its effect, simple in its wording. It was meant not to refer just to wartime, but to become a basic principle for a new labor-industry relations constitution. The motion which was passed read:

1. There shall be no strikes or lock-outs.
2. All disputes shall be settled by peaceful means.
3. The President shall set up a proper war labor board to handle these disputes.

I repeat it was a simple one. There shall be no strikes and no lock-outs and all disputes shall be settled by peaceful means. In rapid succession the War Labor Board was set up, then the Executive order defining the meaning of the workweek, then pay for extra hours which had the effect of extending provisions of the Fair Labor Standards Act to thousands of new workers. This maintained the high standards of that act at a time when war pressures and war demands might have destroyed the laborer's enjoyment of his rights under that act. Thus three corners of the basis for decent industry-labor relations were laid down and dedicated to the American laboring man.

There is still a fourth corner which remains to be filled. That corner is greater than all of the rest. It is the freedom from war-free, repressive, and disruptive legislation which would destroy the rights and freedom and liberty that rest upon the other three stones.

There were attempts to extend the Selective Service Act to all labor. There were attempts to force service in the Army for punitive purposes. There were attempts to force the laborer to stay on the job, work where he was told to work. And there were attempts to draft certain fields of labor. But all of these failed, failed primarily because the American people in their judgment and in their thinking saw that, while the state had the inherent right to call men to service in the defense of their state on a selective basis, a right which was developed in law from a mathematical theory that the whole is greater than any of its parts, the state must maintain proper limitations. Therefore, this theory should not be made to apply and the state restrained itself from becoming completely totalitarian and refused to move into the fields of industry and labor.

In the development of these great cornerstones to freedom and liberty for the laborer the state has built its theory upon the political concept that the majority shall rule. Thus I repeat, it has turned its back upon the notion that liberty and freedom are absolute. The rights of the minority are maintained in a true democracy by a concept of common consent and a recognition of the notion that the minority must be protected

and thus, politically speaking, the genius of the American Government rests not so much upon the fact that the majority rule, as it does upon the fact that the minority shall be respected. But, just as in our political conception of majority rule, the minority maintains its respect and its right and its freedom by recognizing the right of the majority rather than eternally contesting it. Just so in its labor relations, the minority must be satisfied with enjoying a right, a privilege, and an advantage that majority rule gives and must not attempt to destroy the freedom of all, both majority and minority, by interfering with the majority's right to speak for all. That in substance is what bids fair to be destroyed as a result of the labor legislation which is now being considered. Just as American democracy could become so unstable that it would surely totter to a fall as the majority's right to lay down the policy is continuously and everlastingly questioned and interfered with and challenged, so the laboring man will lose all his rights if he individually persists in individual freedom to bargain for himself, to contract for himself, to act for himself without the support and help of his fellows. Industry-labor relations in America will revert to the day of considering organization as conspiracy if we again in law allow the advantage taker to promote objection to the majority and sustain the advantage taker on the thesis of protecting individual right and individual freedom. Thus industry and labor both have liberty and freedom only so far as they are willing to submit to the will of the majority in the protection of and working out of that liberty and freedom.

To assume that there is such a thing as an absolute right to strike would likely destroy all decent relationships between employees and industry, and probably would result in the destruction of the basic elements which hold society itself together. No law can provide any right at all, unless it is linked up with certain duties and responsibilities. When a man becomes an employee, he assumes some duties and some responsibilities. For him to interpret his right to strike as being an absolute right, entitling him to quit work while the water is turned on in the plant for instance, thus destroying the employer's property, or for him to interpret the right to strike as permitting him to quit work while leaving in a mine certain equipment in such a way as to result in costly destruction, would obviously be most improper. No person has a right to do such things. No one has a right to act against society. No one has a right to destroy it.

All our liberties depend upon our being free only to the extent that we do not interfere with the freedom of others. Any other kind of liberty will eventually mean no liberty at all.

Another great historical event which should form the basis of a new educational approach to better industrial labor relations at home and the advancement of peace throughout the earth was the establishment of the International Labor Organization, based upon the simple theory that the raising of the standards of the people of the world is the only sure way to the peace of the world. In the wake of such philosophy has come all of the aspirations of the common people of the earth. Never has the world seen that which has taken place today among the common people of the whole world. World War II was called the people's war in more places than in America. Study contemporary art, drama, and literature and see how simple concepts laid down in the basic theory behind the International Labor Organization have become the aspiration of literally millions of people on the earth.

As a result of intolerable conditions in those nations ruled by single-will tyrants, thousands of refugees, dubbed intellectuals, have come to America. The effect of the thinking and working of these men is not yet apparent. I predict a greater intellectual renaissance in this glorious land of ours, a renaissance which will affect the whole world, a renaissance of scientific thinking and political idealism which will be pointed out by future generations and which will make the last half of the twentieth century a century of inspiration such as the world had in the sixth century B. C. and the first century A. D. We are living in mighty times; times which will result in universal acceptance as significant in the history of ideals as were the democratic ideals of the gospel of Buddha and the antiaristocratic ideals of the Confucian philosophy based upon the training of man, whose nature is good; as great even in its lasting significance as was the greatest of all contributions in the development of democracy, the discovery by Jesus of the individual and of that individual's worth in the eternal scheme of things. There will be no single concept quite as great as that given the world by Jesus. But in the renaissance every idea developed will be complementary to those of the sixth century B. C. and the first century A. D. And that the ideas will be lasting is assured because they will be developed under the auspices of that government which has evolved upon the theories of our founding fathers.

I repeat, the very acme of decent industry-labor relations in the United States and the one on which we should have based all of our industry-labor actions since its inception was the industry-labor conference held in Washington in 1941. A new thing happened in industry-labor relations at that time when the representatives of industry and of labor unanimously accepted my motion that there should be no strikes and no lock-outs but that all disputes should be settled by peaceful means. That is the foundation upon which to build. Make your industry-labor techniques rest upon that constitution and you will have industry-labor peace in America. Whoever was responsible for a different approach and for the belittling of the great action taken in 1941 is responsible for much of the industry-labor suffering we have had in the last few years. Whoever is responsible for not living up to the principles of that great promise made is responsible for keeping back the peaceful evolution of our industry-labor relations for a whole generation.

You cannot do away with the evils incident to the stoppage of pay, the idleness of strikes, the slipping back into poverty and debt, the keeping of kiddies from schools, and the actual killings which have sometimes resulted by law. This is the lesson of our times. I repeat, a guaranty of labor technique in law will not make for peace. A recognition of the broad objectives for which all should strive in our society is the key to final labor peace—higher standards, decent schools, honest hours, protected savings, and equal opportunity for each to move into the field of his great aspiration and into the sphere of his potential capacity.

What is the great fear in America today that underlies the threatening industry-labor unrest? Despite our Full Employment Act and despite our prayers, the unconscious juggling for position in our present-time industry-labor strife is a fear of future unemployment. We may be in for it; I do not know. But when we again come face to face with this problem let us recognize it. It is a religious undertaking and will be attained only through zeal amounting to a religion. Who today in the United States will defend some of the practices we proved in our civil-liberties investigation?

The constitution of decent industry-labor relations is the motion accepted by industry and labor in 1941. That did not destroy any rights. That merely said that we will turn to the techniques of peace rather than the techniques of war for the settlement of our disputes and for the attainments of our objectives. That should be fundamental in America. Our courts do not always pronounce absolute justice, but no one would like to see disputes between Americans or between Americans and their Government settled by direct action.

I am a product of the American public school system. I went to kindergarten and I finished with a Ph. D. It took a long time, and I did other things, but during every minute of my education I was exposed to American ideals. If there is a rule of history to which I can turn now as a guide, it would be the 150 years struggle in our own country to make a political concept work and become universally accepted. The founding fathers worked out the Federal system on the simple idea of allowing those things which are of purely local concern to be settled locally, but those which are of common concern to be handled by representatives delegated to speak for all. We builded bigger than we thought. That governmental technique is the basis of our political liberty. It is the key not only to national peace in a Nation made up of 48 States, but also it is a key to a theory which can become world-wide. Thus we have created, as a result of American experience, a conception of government which can produce world organization and give us world unity. As a result of the creation of the Russian Soviet system, Russia furnishes a technique which can expand into a world organization. And the British Commonwealth of Nations idea gives us another pattern.

While men have dreamed of peace since the beginning of time, they did not invent a form of government which might become world-wide and, therefore, insure the peace. No longer is the concept of world government merely theory. No longer is it based upon prayer and aspiration. The way of peace is in the world. Whether the world will tread the path of peace remains to be seen. It can only do so if it understands where it is going. Education is a process of leading. The new world needs leadership. We shall succeed or we shall fail, therefore, on the basis of the character of that leadership. The kind of leadership the world needs today is leadership growing out of deliberations of trained deliberators, using as a basis for argument the knowledge of history, the facts of society, the understanding of man and his nature. That is the democratic way and by no means the easy way. Will you deal with biased partisan strife, the unquestioned will of a leader, or will you deal with fundamentals. Your children and your children's children have an interest in the answer which you give to that question.

My prayer is that you will all say that American democracy, American freedom, and American liberty all center in a single concept: individualism with a social conscience and a sense of responsibility; and, when American democracy works and reaches its conclusions, it is understood by all that that which it does it does by common consent.

One Hundredth Anniversary of Raising of American Flag in New Mexico

EXTENSION OF REMARKS

OF

HON. DENNIS CHAVEZ

OF NEW MEXICO

IN THE SENATE OF THE UNITED STATES

Monday, May 26 (legislative day of Monday, April 21), 1947

Mr. CHAVEZ. Mr. President, I ask unanimous consent to have printed in the Appendix an address delivered by me and also an address delivered by Hon.

Joseph J. Lawler, Third Assistant Postmaster General, at Santa Fe, N. Mex., on October 16, 1946, on the occasion of the one hundredth anniversary of the raising of the American flag in the Territory of New Mexico.

There being no objection, the addresses were ordered to be printed in the RECORD as follows:

ADDRESS OF HON. DENNIS CHAVEZ AT SANTA FE, N. MEX., ON OCTOBER 16, 1946

One hundred years ago Gen. Stephen Watts Kearny raised the flag of freedom over the Palace of the Governors. Today this distinguished assembly has gathered to commemorate the event and our Nation is honoring him by the issuance of a memorial stamp.

The New Mexico Kearny found was in every way unlike the America which he knew—the people, the language, the customs—everything was different. Yet in 100 years the same people with the same customs, and in most instances the same language, are Americans in every sense of the word. The problem of minorities, which has caused so many of Europe's wars, does not exist in New Mexico. There are differences, it is true, but thanks to the tolerance and decency of most people in New Mexico we have gone far toward their amelioration.

When Gen. Manuel Armijo chose not to fight at Glorieta, New Mexico embraced the American flag with all its heart. Whenever our country has been in danger our sons have been the first to answer the call of duty.

In the Civil War native New Mexicans fought on both sides. In the war with Spain Armijos and Oteros joined Teddy Roosevelt. After the First World War the French Ambassador came to Albuquerque to bestow the Croix de Guerre on Nick Lucero.

When General Kearny invited the New Mexicans to be American citizens he could not have envisioned the glorious role which our gallant Two Hundredth Regiment was to play in Bataan.

Native New Mexicans appreciate the true meaning of the flag which General Kearny raised 100 years ago. They have fought and died for that flag. We owe a great debt to the heroes of Bataan. We owe a debt to Joe Martinez, who gave his life on Attu. His family received our country's highest award, but we are not worthy of calling ourselves American if we forget what he did and not live up to what Americanism really means.

Early in the war, a marine colonel told me about a young man from New Mexico named Garcia who on Tulagi singlehandedly charged and captured a Japanese dugout on the top of a hill. The colonel told me he had seen many acts of bravery, but none to equal Garcia's.

New Mexico knows what it means to live under the American flag. We want to make Americanism work. We are making it work. In this gathering today the postmaster, the mayor, the sheriff are native New Mexicans. The next judge of this district will be a native New Mexican. New Mexico realizes that such conditions would not be possible if the swastika flew over this city.

There are a few minor differences, but, on the whole, New Mexico has developed real tolerance and understanding. We have set an example for the world to follow. There are a few amongst us who do not like the mayor of Santa Fe because his name is Lujan. Such men are more to be pitied than condemned. Their intolerance is based on ignorance and most of us feel sorry for them because they are not Americans.

General Kearny raised no ordinary flag 100 years ago. General Kearny raised the flag of freedom, of liberty, of opportunity. We love that flag. We respect what it represents, and we will always fight for that flag.

In doing honor to the man who brought it to New Mexico, we also honor the men who have given their lives to protect it. We are mindful of our obligation to make Americanism work. Above all, in this city of holy faith, we should thank God that we live under the Star-Spangled Banner.

ADDRESS OF HON. JOSEPH J. LAWLER, THIRD ASSISTANT POSTMASTER GENERAL, SANTA FE, N. MEX., OCTOBER 16, 1946

It is indeed a genuine pleasure and a great honor for me to be here in New Mexico today participating in these ceremonies commemorating the centennial of the entry of Gen. Stephen Watts Kearny and his gallant army into this beautiful city of Santa Fe in 1846.

On behalf of the Post Office Department, I bring the most cordial greetings of the Postmaster General, Hon. Robert E. Hannegan, who has given concrete evidence of the esteem in which he holds the good people of this region by approving the issuance of this special stamp.

The issuance of a commemorative stamp is a rare and unique honor to any State, to any celebrity, to any great cause, or historical event. Requests for such stamps are countless. There are hundreds of deserving categories, and the selection of the occasion or subject to be honored is most exacting and difficult. It requires not only substantial background and great worth, but it takes as well the most skillful and powerful presentation. But despite the fact there is great competition for this rare recognition, you can thank Senator DENNIS CHAVEZ for having pleaded so vigorously and so brilliantly that the case for the Gen. Stephen Watts Kearny stamp was given the hearty approval of the Post Office Department.

The design for the new stamp, which is being first placed on sale here in Santa Fe exclusively today, is in my judgment one of the most beautiful and appropriate that could be issued. It is in the 3-cent denomination, the most useful and popular category. The design was submitted to the Department by Senator CHAVEZ. It is a reproduction of a painting entitled "The Captive of Santa Fe." The artists, the designers, and the engravers have well performed their tasks. If one but studies this minute masterpiece, which measures but 1.44 inches in length and 0.84 of an inch in width, he will discover an almost unbelievable development of exact detail. The central design reproduces the full painting depicting the raising of the American flag before the governor's palace here in Santa Fe, in 1846. In the background rises your noble mountains. At attention on his steed is General Kearny accompanied by his trusty aides and faced by his stalwart dragoons atop and before the palace in that thrilling moment when Old Glory fluttered to the breeze for the first time above that historic mansion. This scene represents the culmination of an outstanding military accomplishment in the annexation of this great center of a vast empire without the firing of a single shot or the shedding of a drop of blood. In rugged outline is the pillared governor's palace. Supplementing all this fine pictorial detail are the inscriptions that identify this stamp with this particular commemoration. In the upper left-hand corner is the wording "Stephen Watts Kearny Expedition" in three lines of dark Gothic lettering. Centered below the vignette in the same style of lettering and numerals is "1846 Entry Into Santa Fe 1946." On the extreme right in a shaded vertical panel appears "U. S. Postage" in dark-face Gothic, and below this wording in the same panel is the denomination "3¢" in white-face Gothic. The predominating color is a selected maroon. Truly a masterpiece in engraving and printing by master craftsmen of the United States Bureau of Engraving and Printing.

It would be presumptuous of me to dwell at any great length upon the gallant exploits of General Kearny. He is dear to the hearts of all Americans, but more particularly to people of the great Southwest, to whose people his career is well known. Still, while his story is familiar to all of you, I would be remiss if I did not recount briefly upon this occasion the impression his life and career have made upon me.

General Kearny was a striking military man, a true pioneer—a great American as evidenced by his career as a lieutenant in the War of 1812 and down through his explorations and trail blazing through the vast West to 1846 and beyond until his untimely death in 1848.

Yet he was more than a soldier. He was a great statesman, a great humanitarian, a great administrator, and, to my mind, one of the greatest marks of his genius was the address he made to the people of Santa Fe at the time he took possession in the name of the United States, at which time he stated among other things: "We have come with peaceable intentions and kind feelings toward you all. We come as friends to better your condition and make you a part of the Republic of the United States. We mean not to murder or to rob you of your property. Your families shall be free from molestation; your women secure from violence. My soldiers shall take nothing from you but that they shall pay for. We do not mean to take away from you your religion * * *. Every man has a right to serve God according to his heart. * * * In our Government, all men are equal. We esteem the most peaceable man, the best man. I advise you to attend to your domestic pursuits, cultivate industry, be placable and obedient to the laws. * * * I do hereby proclaim my intention to establish in this department a civil government on a republican basis, similar to those of our own States. It is also my intention to continue in office those by whom you have been governed, except the governor. I am your governor—henceforth look to me for protection."

And on that day there was born a new era for New Mexico, for the Southwest, and for the United States of America, for as much as you have gained by this change in allegation, you have given back through your loyalty and effort, and with other progressive and freedom-loving people of all other sections have made this Nation what it now is, in greater measures, the United States of America.

It is most fitting then that the greatest tie which binds these States—the Post Office Establishment—be the instrument through which the achievement of Stephen Watts Kearny and this new alliance be commemorated by the issuance of this beautiful stamp in this your centennial year. It is fitting, too, that this stamp be issued in Santa Fe exclusively today and that the sheet of its first run be presented to an outstanding citizen of the United States, a leader of the Southwest, Hon. DENNIS CHAVEZ, United States Senator from New Mexico and chairman of the Senate Committee on Post Office and Post Roads.

Senator CHAVEZ, I take great pleasure in presenting to you this album appropriately autographed by your good friend, Hon. Robert E. Hannegan, Postmaster General of the United States.

Timely Observations

EXTENSION OF REMARKS

OF

HON. WILLIAM C. COLE

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Friday, May 23, 1947

Mr. COLE of Missouri. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial

by Arthur V. Burrowes, editor of the St. Joseph (Mo.) News-Press:

TIMELY OBSERVATIONS

When we were in the East last month we got just a little put out at gentle gibes about how many Missourians Harry S. Truman has put on the Federal pay roll. We were with Congressman WILLIAM C. COLE one night, and the conversation veered to that. One of us mentioned that New York did not fare so badly under Franklin Roosevelt. That led our publisher to suggest to Congressman COLE that he have someone dig in and find out just how the two Presidents compare on native State appointments. Congressman COLE's investigations have borne fruit.

The research section of the Library of Congress has prepared for the News-Press a list of all Senate-confirmed appointments of both Franklin Roosevelt and Harry Truman. Even taking into consideration that Mr. Truman has been President slightly over 2 years and Mr. Roosevelt was President more than 12 years, the Truman Missouri-longing is less evident than his predecessor's penchant for finding worthy New Yorkers for Federal positions.

From April 12, 1945, to May 1, 1947, the United States Senate confirmed 14 Missourians whose names Mr. Truman sent in. To this must be added one nomination not yet confirmed, that is of Judge John C. Collet to the United States Court of Appeals. That is seven Missourians a year. Now how about Mr. Roosevelt? From March 4, 1933, to April 12, 1945, the day he died, Mr. Roosevelt had 153 New Yorkers confirmed by the United States Senate. That is an average of better than 12 New Yorkers a year named to a post so high that the Senate must confirm.

The Senate-confirmed names do not tell the whole story. Three men close to the President had been Missourians, for instance, Clark Gifford, special counsel to the President; Maj. Gen. Harry Vaughan, military aide to the President; and Charles G. Ross, secretary to the President. They are not included in that total of 14 mentioned in the paragraph above.

But for every one of these not listed from Missouri in the Library of Congress citation requested for us by Congressman COLE, there are two or more from New York in that same category. Nowhere in that list of Senate confirmations will you find the name of Thomas Corcoran, of New York State, the witty Tommy the Cork, whose antics so delighted the late chief. You will not find the name of the astute and brilliant Ben Cohen, who with Corcoran was about as close to the throne in those early New Deal days as anyone could get. Cohen was from New York.

Nowhere in that official list will we find the late New Yorker Louie Howe, devoted friend and worshiper of Franklin Roosevelt, Governor of New York. F. D. R. took Howe from Albany to Washington in 1933 as his secretary. Nor do we find the name of Raymond Moley, also of New York. No man carried more prestige, no man had more influence with F. D. R. at a certain period than Mr. Raymond Moley of the State of New York. After the break came Mr. Moley became a special writer for Newsweek and is still on the staff of that magazine.

It is true that some of Truman's Missouri appointments were given great publicity. Leading the list like Abou ben Adhem is Robert E. Hannegan, Postmaster General. We defend that appointment. Good grief, if you cannot reward the fellow who got you your job you are a heel indeed. Other Missouri appointments that attracted much attention were John Snyder as Secretary of the Treasury, Stuart Symington as Assistant Secretary of War, and James K. Vardaman to the Federal Reserve Board. Attracting less attention was Bennett Clark, two-term Missouri Senator, named to the Court of Appeals for the District of Columbia.

But for Truman's Hannegan there was Roosevelt's Jim Farley. We won't go into the respective merits of the two Postmasters General, we are just saying F. D. R. went to New York for his man. Mr. Roosevelt got Rex Tugwell, Harry Hopkins, Frances Perkins, all from New York. But in fairness to the memory of the dead President let it be recorded that on the list of New York eminents called to the service by Roosevelt we find the names of Robert Patterson, Robert Jackson, James V. Forrestal, Nelson Rockefeller, Henry Morgenthau, Henry L. Stimson, Claude Bowers, Ferdinand Pecora, Nathan Straus, and Joseph P. Kennedy.

We could argue this thing from all angles, even to the quality of Roosevelt-picked New Yorkers against Truman-picked Missourians. That is a matter of opinion. Leaving out lesser men, also all the kitchen cabinet members of both Presidents, what do we find as to official advisers? That means the Cabinet of the President. Mr. Truman named two Missourians, a Postmaster General, and a Secretary of the Treasury. Mr. Roosevelt named seven from his own State of New York, a Secretary of Commerce, an Attorney General, a Secretary of the Navy, a Secretary of the Treasury, a Secretary of War, a Postmaster General. About the principal conclusion we draw from these observations is that Presidents go home to ask their friends to come surround them.

Mothers, Boys, and Universal Military Training

EXTENSION OF REMARKS
OF
HON. HENRY D. LARCADE, JR.
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES

Monday, May 26, 1947

Mr. LARCADE. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I wish to include the following editorial from the Washington Daily News of May 24, 1947, as follows:

MOTHERS, BOYS, AND UNIVERSAL MILITARY TRAINING

Congressmen to whom we've talked about universal military training say much of the opposition comes from mothers. Mothers oppose it, they say, because they didn't raise their boys to be soldiers. They sent their oldest sons off to Germany and Japan, and they want to keep the younger ones at home. That's easy to understand.

But universal military training will not make them soldiers. They will remain civilians, under the control of a civilian commission of which no member can be a soldier. They will not be members of the Military establishment; the Army and Navy will be run just as they always have been run.

Universal military training is precisely that—training. It is a long-range program to teach each boy for 1 year, whenever he can best spare the time between his seventeenth and twentieth birthdays, just what will be required of him if his country ever has to go to war again and he is drafted to fight.

While in training, he will not be subject to the Articles of War. Instead, he will live under a special Code of Conduct, drawn up by a committee of civilians. For minor offenses, trainees will try each other.

He will not be sent overseas. He will not be liable for any future military service unless there is war. If war comes, he can be drafted. But he would be drafted anyway.

The War Department's plan is simply to prepare each young American for an emergency it hopes will never come—an emergency which his training—and the training of millions like him—may well prevent.

Mothers would want their boys—if world events force them to become soldiers—to be able to defend themselves. And that is what universal military training means. General Eisenhower says it has been his experience that a trained soldier has a three times better chance to survive than a man who goes into combat without experience, or with only that training permitted by a rapid wartime mobilization.

Elimination of Discrimination in Employment

EXTENSION OF REMARKS
OF
HON. DENNIS CHAVEZ
OF NEW MEXICO
IN THE SENATE OF THE UNITED STATES

Monday, May 26 (legislative day of Monday, April 21), 1947

Mr. CHAVEZ. Mr. President, I ask unanimous consent to have printed in the RECORD questions and answers prepared by me in connection with Senate bill 984, having to do with the elimination of discrimination in employment.

There being no objection, the matter was ordered to be printed in the RECORD, as follows:

Mr. President, because of increasing inquiries about the provisions of S. 984, a bill introduced by the junior Senator from New York for himself and Senators SALTONSTALL, SMITH, MORSE, DOWNEY, MURRAY, MYERS, and myself, as the time for the beginning of Senate Labor and Public Welfare Subcommittee hearings approaches (June 11, 12, 13, 18, 19, 20), I ask unanimous consent to insert in the Appendix of the RECORD a set of questions and answers dealing with the principal points of interest in S. 984.

1. Question. What does the bill provide?

Answer. It will prohibit discrimination in employment because of race, religion, color, national origin, or ancestry (sec. 5). It creates a permanent national commission against discrimination in employment to prevent such discrimination (sec. 6).

2. Question. Why should we outlaw discrimination in employment?

Answer. It is un-American. It results in low income for minority groups, thus limiting the market for goods and employment opportunities generally. It leads to interracial conflict. It creates a supply of strikebreakers. It forces minority groups into substandard conditions of living, detrimental to the community. It depresses wage levels. It decreases the Nation's capacities for full production, stable prosperity, and security (sec. 2a). It injures our standing with the United Nations (sec. 2c).

3. Question. What groups are forbidden to discriminate by the bill?

Answer. Agencies of the Federal Government; employers of 50 or more persons whose operations affect interstate or foreign commerce; Federal contractors and subcontractors who employ 50 or more persons; labor unions whose practices affect interstate commerce (sec. 3).

4. Question. What types of discrimination are forbidden by the bill?

Answer. Only discrimination in employment or union membership, i. e., hiring, discharge, wages, seniority, transfers, demotions, upgrading, union auxiliaries, etc. (sec. 5). The bill does not apply to discrimination in education, transportation, recreation, voting, or places of public accommodation.

5. Question. What principal minority groups are protected by the bill?

Answer. Thirteen million Negroes, 5,000,000 Jews, 20,000,000 Catholics, 3,000,000 Americans of Mexican and Hispanic origin, 11,000,000 persons of foreign birth.

6. Question. How will the Commission be constituted?

Answer. It will be a permanent salaried Commission of seven members, appointed by the President with the advice and consent of the Senate, for 7-year terms (sec. 6). The size of its staff will depend upon the amount of money Congress appropriates for it.

7. Question. How will the Commission determine whether an employer or union has discriminated?

Answer. By careful and thorough investigation of the complainant's charge, the employer's or union's explanation, and the surrounding circumstances. The burden of proof will be on the complainant, not the party accused. If the Commission believes the charge has merit it will seek to adjust it by informed and voluntary methods. A new feature of this bill provides for the setting up of regional, State, and local conciliation councils to promote fair employment practices by information, education, and conciliation. Where settlement is not possible by conciliation, the Commission will conduct a full and fair hearing in which the party charged has the right by counsel to present his version of the facts and to cross-examine witnesses. After the hearing, the Commission will issue a decision and order (sec. 7). If the order is not complied with, the Commission will appeal to the Federal Circuit Court to enforce it. Defiance of the court will subject the accused party to penalties for contempt of court. The Commission's administrative procedure is like that of ICC, FTC, SEC, FPC, FCC, and other administrative agencies (sec. 8).

8. Question. How can discrimination be proved?

Answer. The acts or statements of a party charged are used to prove discrimination. In many cases discrimination is flagrant and revealed by newspaper advertisements, discriminatory orders to employment agencies, pay-roll records, or contracts between unions and employers. In other cases, an employer's pattern of rejections or statements made by personnel officers often indicate discrimination. Weak complaints will be dismissed by the Commission without even the necessity of a hearing.

9. Question. What penalties are provided for violators?

Answer. No criminal or civil penalties, except (1) a penalty of from $100 to $500 for refusal to post notices regarding the act in work places, and (sec. 11) (2) a fine of up to $500 and imprisonment up to 1 year for forcibly interfering with a member or employee of the Commission in the performance of his duties (sec. 14). The Commission may merely petition a Federal court to compel obedience to its orders. Violation of a court decree is punishable as a contempt of court. The Commission's orders are enforcible only by the courts after full hearing.

10. Question. What is the penalty when a Government official or agency discriminates?

Answer. The Commission may request the President to compel obedience to its orders (sec. 10).

11. Question. Does the bill require an employer to hire Negroes, Jews, Mexicans, or other minorities?

Answer. No. An employer may hire or reject anyone he pleases, on any basis and for any reason, so long as a needed and qualified person is not rejected because of his race, religion, color, national origin, or ancestry (sec. 5).

12. Question. Does the bill require an employer to hire a particular percentage or quota of Negroes or of any other minority group?

Answer. Definitely not. The bill provides only that employees shall be selected on the basis of their qualifications (sec. 5). A quota plan makes hiring dependent upon nonoccupational qualifications and is, therefore, itself discriminatory.

13. Question. Will the courts be able to review the decisions of the Commission?

Answer. An employer or union aggrieved by the Commission order may appeal to the courts. A court will review all questions of law. On questions of fact, the findings of the Commission will have to be supported by substantial evidence (sec. 8). This is the customary procedure for judicial review of administrative agencies and has been approved by the Supreme Court. Orders against Federal agencies are not subject to review.

14. Question. Does the bill apply to State or municipal employees?

Answer. No; nor does it apply to any State agency.

15. Question. Does the bill apply to small retail stores or domestic servants?

Answer. No. It applies only to those employers who are engaged in interstate commerce or operations affecting such commerce and who employ 50 or more persons (sec. 3).

16. Question. Are religious, charitable, fraternal, social, educational, or sectarian nonprofit corporations or associations subject to the bill?

Answer. No (sec. 4). But labor organizations are included (secs. 3 and 5).

17. Question. Will the bill make possible racketeering, blackmail, or groundless suits?

Answer. No; because the Commission will dismiss all groundless charges on its own initiative, without formal proceedings and before there is any contact with the accused employer (sec. 7a). The wartime Fair Employment Practice Commission dismissed two-thirds of all the complaints filed with it. It thus served as a necessary safety valve for people who thought they were discriminated against. The Commission, likewise, would fill this need.

18. Question. What guaranties are there that the Commission will not itself be biased and unfair?

Answer. The members of the Commission will be appointed by the President of the United States and will have to be approved by the United States Senate (sec. 6a). That is the best guaranty of a fair-minded Commission. In addition, the orders of the Commission can be enforced only by the courts (sec. 8). The Administrative Procedures Act of 1946 and the Supreme Court require a fair hearing before an administrative agency.

19. Question. What supervision will Congress exercise over the Commission?

Answer. Congress will pass upon its annual request for an appropriation. Congress also may, by concurrent resolution, amend or cancel any regulation of the Commission (sec. 13). Congress can at any time investigate the conduct of any administrative agency.

20. Question. Is there enough discrimination in employment to justify a Federal bill?

Answer. The wartime FEPC received almost 7,000 complaints since it was created in July 1943, and it had jurisdiction only over war industries or Government agencies. Many of these complaints involved thousands of workers or an entire industry. In its final report, FEPC included a postwar study of employment practices in 11 American cities and found discrimination increasing. The report's final recommendation was for permanent legislation against discrimination in employment. "No device will solve the problem short of the enactment by Congress of Federal fair employment legislation" (p. XVI).

Bills have been introduced in 20 States proposing the elimination of discrimination. This indicates how widespread the problem is. Only one-quarter of the wartime FEPC's cases originated in the South.

21. Question. Is this a new idea in Federal legislation?

Answer. No. The United States Constitution forbids discrimination by the Government; this bill extends the principle to employers and trade-unions. In the last 10 years Congress has enacted 23 laws which forbid discrimination in their enforcement.

22. Question. Is the bill constitutional?

Answer. Certainly. The United States Supreme Court has repeatedly condemned discriminatory employment practices. A New York law forbidding discrimination by trade-unions was recently upheld as constitutional.

23. Question. Does the bill prohibit prejudice?

Answer. No. Prejudice is a state of mind. The bill prevents the act of discrimination which affects pay envelopes. Discrimination can be eliminated or at least greatly reduced by a firm national policy. This law will protect those who do not discriminate.

24. Question. But discrimination is based on prejudice; prejudice is an attitude of mind; is there any more chance of changing this attitude than there was of the prohibition law changing the drinking attitudes of the Nation?

Answer. This law has nothing to do with prejudice itself; it merely seeks to prevent one person's manifestations of prejudice from inflicting themselves upon the economic life of another, within the limits of Federal jurisdiction in employment.

This bill is related to prejudice only as laws forbidding driving while drunk are related to drinking.

25. Question. Can the bill be enforced effectively?

Answer. No law ever receives 100 percent obedience, but the great majority of employers and trade-unions are law abiding. The small minority will have to conform. Even the wartime FEPC without sanctions and with a small staff was able to stop a great deal of discrimination. And today State laws in New York, New Jersey, and Massachusetts are actually working successfully. This bill is identical with them in purpose and method. A similar bill has just been passed in Connecticut.

26. Question. Isn't this bill class legislation? Does the bill confer special privileges on minorities?

Answer. No. No special privilege is granted any group. It merely assures equality of opportunity and equality of treatment. It requires that persons shall be hired on the basis of their qualifications and not rejected because of the immaterial fact of their color or religion or place of birth.

27. Question. Does this bill impair or conflict with existing State laws?

Answer. No. It dovetails with State laws. It does not invade States' rights.

28. Question. Cannot this problem be handled by the States themselves?

Answer. Only four States—New York, New Jersey, Massachusetts, and Connecticut have comprehensive and effective laws forbidding discrimination in employment. Federal action is needed to protect States having such laws against unfair competition in other States that do not have such laws. Federal action is also needed because most large employers or trade-unions have plants or locals scattered throughout the country in every State. Finally, Federal employees can be protected only by a Federal act and uniform standards and enforcement. The Federal Government can most effectively enforce the Federal Constitution.

29. Question. Does this bill promote social equality?

Answer. The bill has nothing to do with personal or social relationships. It is concerned only with equality of job opportunity.

30. Question. Will such a law cause riots or bloodshed?

Answer. On the contrary, it will lessen the danger of such violence because orderly governmental procedure will be substituted for mob action. After the last war there were

26 major race riots. A repetition must be avoided. If enacted, this bill will do that job.

31. Question. Cannot this problem be handled by education alone?

Answer. No. Education is desirable, but as a supplement, not an alternative, to Federal legislation. There are always a few employers or unions who cannot be relied upon for voluntary cooperation. Legislation itself is a most effective form of education. The problem is so urgent it requires immediate action, without waiting for the slow, uncertain processes of education. Education alone in the last 80 years has not proved effective.

32. Question. Is not the Supreme Court decision in the Negro fireman's case adequate to eliminate discrimination?

Answer. The decision in *Steele* v. *Louisville Railroad*, decided December 18, 1944, applies only to discrimination arising from a contract between an employer and a labor union. It leaves untouched all the varying forms of discrimination engaged in by employers acting alone. There are no Federal statutes today which forbid racial or religious discrimination in employment.

33. Question. Wouldn't this bill destroy the American system of free enterprise?

Answer. Free enterprise does not mean unlimited license. The basis of Anglo-American jurisprudence is the realization that every man owns and operates his property and business subject to the requirements of the public welfare. In the long run, his survival and prosperity depend upon the publice welfare. If there were no impartial governmental referee continually on guard, the free-enterprise system would soon destroy itself. Besides, there is no truly free enterprise as long as work opportunities are arbitrarily denied certain groups regardless of ability, character, aptitude, and training.

34. Question. Doesn't this bill create another regulatory body when business is already burdened with regulations?

Answer. Scores of laws safeguard the property and other rights of business. Human rights are no less important than property rights, and equally deserve the protection of law.

35. Question. Doesn't this bill restrict the rights of an employer in employee selection and take away his right to manage his own business?

Answer. No restriction is placed on the employer's right to employ or to up-grade an employee on the basis of his own judgment of the candidate's traning, experience, ability, personality, or whatever standards he may choose to set. Nor does the law force business to hire any person or refrain from firing any specific person. On the contrary, it protects the employer in his right to choose the best candidate without regard to race, religion, color, or national origin.

36. Question. The law provides for conciliation to work out such problems. Is it fair to insist that an employer hire members of a minority group if his other employees refuse to work with them? Won't this induce friction between the workers themselves and between workers and management?

Answer. The law applies to unions as well as to management, or it would be discriminatory in itself, and the industries where the law would apply are for the most part unionized. Besides, it has been the experience of the overwhelming majority of employers who have (many of them for the first time during the war) employed minority-group workers that their fears of employee friction were not realized, once management had taken a firm, clear-cut position.

37. Question. Wouldn't an employer be forced to hire a complainant, even though the employer has no vacancy and would have to fire an employee to take the complainant?

Answer. The Commission would have no authority to compel an employer to hire when no vacancy exists or to fire an employee to create a vacancy for anyone.

38. Question. Won't enforcement of such a law add to the businessman's cost of running his business?

Answer. On the contrary, it will protect him in his right to hire the best man for the job. It will help also to eliminate unfair price cutting by competitors who pay lower wages to members of minority groups. It will promote smooth working relationships, reduce labor turn-over and interruptions, and thereby promote efficient production at lower unit costs.

39. Question. Has the Federal government the right to interfere with the way in which a man conducts his business?

Answer. It is the legitimate concern of a community that industry within its environs should employ all available labor, without regard to race, religion, color, or national origin. The short-sighted employer who limits the materials he can produce and sell because he refuses to hire minority-group workers not only keeps down his own profits; he also keeps down the income of the entire community. Raising the living standards of the most depressed group in a community automatically results in raising the standards of all other groups. The corner grocer, the dry goods merchant, the public utilities, all prosper when the workingman has a job and decent wages. Establishing fair employment will add, in the case of Negro wage-earners alone, a new domestic purchasing power and market of about $10,000,000,000 a year, according to estimates by the National Association for the Advancement of Colored People.

40. Question. Why shouldn't the Federal courts handle this problem instead of a new administrative agency?

Answer. An administrative agency is necessary—

(a) To prevent the flooding of courts and the clogging of their calendars to the detriment of their other work;

(b) To screen out worthless complaints which otherwise would harass innocent employers or unions. A respondent has to defend every suit filed in court, but most administrative agencies dismiss from two-thirds to three-fourths of all charges submitted;

(c) To protect the rights of employees without compelling them to hire their own lawyers;

(d) To insure speedy action and avoid delays and excessive costs in the courts;

(e) To insure uniformity by having one agency interpret the bill, subject to supervision and correction by Congress, instead of 94 Federal district courts;

(f) To permit a commission of experts to devote full time to the problem;

(g) To avoid the necessity of criminal penalties which juries hesitate to impose.

41. Question. Why does not the bill allow an accused party a jury trial?

Answer. Except for refusal to post notices and interferences with Commission offenses in their duties, the bill imposes no criminal or civil penalties, nor should it in this type of legislation. The only sanction the bill provides is a cease-and-desist order, carrying no penalties. A jury trial (used in criminal cases or private suits to settle private differences) is inapplicable. Society has a stake in eliminating discrimination and should therefore assume the responsibility and costs of such enforcement, rather than leave it to private parties to hire their own lawyers and enforce the national policy. Such enforcement by private suit is haphazard and means long-drawn, complicated, expensive litigation.

42. Question. Does this bill repeal or impair veterans' preferences?

Answer. No. All veterans' preferences are explicitly continued in effect (sec. 12). The bill forbids discrimination only because of race, color, creed, national origin, or ancestry. It does not forbid discrimination because of war service.

43. Question. Who introduced the bill?

Answer. S. 984 was introduced March 27, 1947, by Senator IVES for himself and for Senators SALTONSTALL, SMITH, MORSE, CHAVEZ, DOWNEY, MURRAY, and MYERS. On the same day the identical bill (H. R. 2824) was introduced in the House of Representatives by Congressman FULTON. Since then other Representatives joined in cosponsoring the bill. Senator ROBERT A. TAFT, chairman of the Senate Labor and Public Welfare Committee has named a subcommittee to hold hearings on S. 984 and to make a report and recommendation to the full committee. The members of this subcommittee are: Senators FORREST C. DONNELL, Missouri, chairman; IVES, New York; SMITH, New Jersey; ELLENDER, Louisiana; and MURRAY, Montana.

44. Question. What national groups are supporting this legislation?

Answer. The following is an incomplete list:

Alpha Kappa Alpha Sorority.
American Association of University Women.
American Civil Liberties Union.
American Federation of Labor.
American Friends Service Committee.
American Jewish Committee.
American Jewish Congress.
American Unitarian Association.
American Unitarian Youth.
B'nai B'rith.
Catholic Interracial Council.
Central Conference of American Rabbis.
Common Council for American Unity.
Congregational Christian Churches (Council for Social Action).
Congress of Industrial Organizations.
Delta Sigma Theta Sorority.
Evangelical and Reformed Church, General Synod.
Federal Council of the Churches of Christ in America.

Problems of Education

EXTENSION OF REMARKS
OF

HON. JOHN J. SPARKMAN

OF ALABAMA

IN THE SENATE OF THE UNITED STATES

Monday, May 26 (legislative day of Monday, April 21), 1947

Mr. SPARKMAN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address delivered by me recently at the State convention of the Alabama Educational Association at Birmingham, Ala.

There being no objection, the address was ordered to be printed in the RECORD as follows:

President Hulbert, members of Kappa Phi Kappa, and guests, I am honored to be with you today and to discuss with you some of the problems facing this country in its efforts to improve the schools and thereby raise educational standards.

I am aware that a group of this kind, leaders in your chosen work, know the situation regarding serious issues of your profession. Schools today are facing a crisis—a crisis that has not appeared suddenly on the horizon, but has developed over the past 8 or 10 years, and has been unheeded by the general public despite the warnings of many educational leaders and a few laymen.

The teacher situation is tragic. Even prior to 1940 over 50,000 inexperienced teachers entered the profession annually; each year about 4,000 with substandard training were given certificates to teach; and the average annual salary (classroom teachers and administrators) was only $1,441. Since the outbreak of World War II, conditions have grown steadily worse. More than 350,000, over a third of the competent teachers in 1940–41, have left the profession. Only one-half of the teachers employed in 1940–41 are still teaching today. Fifty thousand men have left the profession since 1940 and few will return. Only about 15 percent of all elementary and high-school teachers are men. It is important that we take necessary steps to induce more men to enter the teaching profession. We do not have too many women teachers, but we certainly do not have enough men, particularly young men in the profession.

According to estimates of the United States Office of Education, there were 109,000 emergency teachers in 1945–46. A few of these would do a good job, but the great majority are unqualified. Despite the increase in enrollment, we have today about 860,000 teachers, or 60,000 fewer than we had in 1940–41. It is estimated there are 75,000 unfilled positions. Some who left the profession were serving in the armed forces, but the great majority have gone into better-paying positions in business, Government service, and industry. I fear that most of them will be permanently lost to the profession. In a study made by the New York Times it is stated that the average teacher in the United States today has had 1 year less education than she had in 1939, and 60,000 have only high-school education or less.

The tragedy of this picture is not alone in the inadequate schooling received by at least a fourth of our children. Fewer students are training to be teachers than ever before. In 1920, 22 percent of all college students attended teachers' colleges, only about 7 percent of all college students attend teachers' colleges today. While it is realized that all students who attend teachers' colleges do not enter teaching, the ratio of those attending teachers' colleges and of those entering the teaching profession is about the same. Very few veterans are preparing to teach, and only about 20,000 of the 1,000,000 veterans in American colleges and universities are in teachers' colleges. In 1946 only 3,757 students completed preparation for elementary teaching compared to 10,182 in 1941; 4,954 completed preparation for high-school teaching in 1946, compared to 9,327 in 1941. Young people did not prepare for the teaching profession in adequate numbers during the war, and they are not doing so now. Primary reason is the wage differential as compared with salaries in other fields.

In the February 15, 1947, issue of Business Week some estimates are presented to show which occupational groups have benefited most from the war and postwar boom. The estimates compute how much more or less on the average certain occupational groups are now receiving in real income as compared with 1939. The results will interest you. Farmers have an increase in average spendable income, in terms of 1939 dollars, of 155 percent, coal miners of 61 percent, business and professional men of 25 percent, while school teachers are at the bottom of the list with a 20-percent drop in real income. These estimates are based on average and do not reflect the experience of any single individual. The farmers, coal miners, and businessmen do not have too much income, but it is startling that we have permitted conditions to develop which enable some wage-earning groups to gain in purchasing power over teachers to suffer a 20-percent loss. If we continue to pay our teachers, who have spent much time and money in preparation, less than the local building custodian, less than the collector of the street garbage, or less than any position requiring little or no education, we shall kill all incentive to enter your profession.

As we observe how few young people are in and are entering the teaching profession today, we have cause to wonder what the situation will be 15 or 20 years from now. The result will be even less adequately staffed schools than we have today unless a remedy is effected. There will be waste of the greatest resource we have in this country—human resources. Surely we all want a program of conservation of our national resources, but at the top of the list there must come our boys and girls. And if this aim is to be accomplished we have to have teachers adequately trained. What America will pay tomorrow for neglecting its human resources today will be tenfold the cost of financing a sound educational program now. We must give more pay to the teachers of our 30,000,000 American children and young people, we must help to create more pride in the teaching profession, we must be sensible in the personal liberties we allow our teachers before criticizing them; in short, we must make the teaching positions so attractive that the most intelligent young folks of this country will vie with each other for an opportunity to enter this profession. This condition should exist for rural and urban schools alike. Situations should not exist that permit the rural teacher to receive only 60 or 70 percent of the pay received by urban teachers. It appears unlikely that an equal quality of teaching can be had at these extremes of compensation. More than half the children of this country are born in rural areas. Thus we can assume that the greater number of pupils is receiving the poorer instruction. The seedbed of our population should have equal opportunities with other areas.

There is a direct relationship between the qualifications of the teachers and the educational growth of our children. While many classrooms do have inadequate equipment, and thousands of school buildings are in a dilapidated condition, the biggest single factor in the decline of good training for our youth is the teacher crisis facing us today, and I say this with full knowledge that the parents of many homes fail to assume their proper responsibility in rearing and training children. Five million youths of school age are not in school; 2,000,000 more will suffer a major impairment because of poor teachers. The 1940 census showed that the average citizen of 20 years of age had attended school only 9 years. This is not sufficient education to enable voters to weigh adequately fundamental problems pertinent to the survival of our Government. Thirteen and one-half percent of our total population over 25 years of age have not completed more than 4 years of school, and over 10,000,000 of our citizens are functionally illiterate. We all know about the tremendous loss of manpower during the war, militarily and otherwise, due to neglect of our schools and inadequate instruction during the past years.

The story could continue endlessly. Not only is the over-all picture ugly, but the inequalities in opportunities within the States individually and collectively will frighten anyone as to the fate of this country who will take the time to acquaint himself with existing conditions. The total money spent on schools has been increased during the war years, but remember that purchasing power of the dollar has declined, and our buying strength as compared with 1939 has decreased.

In 1944–45 the average expenditure per child in the United States was $125.41, with New Jersey heading the list at $198.33. Mississippi was last with an expenditure of $44.80. Alabama spent $56.90. The highest State spent four and one-half times the lowest, yet the lowest spent a greater percentage of its income than the highest, about 3½ percent to 2½ percent.

There are two factors that play forcefully against any effort to lift education to the desired and equitable national level. One is the difference in per capita income, the other is the difference in birth rate in different parts of the country. In 1945 the national average per capita income was $1,150—ranging from a high of $1,595 in New York to a low of $556 in Mississippi. Alabama per capita income was $700. The number of school children 5 to 17 years of age per 1,000 population ranges from 296 in South Carolina to 178 in California. Alabama has 282. More children to educate and less money—far less—with which to do it. Figures also show that the cost per classroom unit range from a high of about $6,000 to a low of about $100 per year, a corresponding difference exists between the highest and lowest of teacher's salaries. The situation may be summed up as follows:

Some States are rich in wealth, poor in children, generous in expenditures for education, low in financial effort to provide generous expenditures, and fortunate in their educational results. Other States which are rich in numbers of children, but poor in ability to pay for their education, provide only meager expenditures for their schools and get inferior educational results, on tax rates which are high as compared with the country as a whole.

Obviously one of the remedies for our present desperate plight is more financial aid, on a local, State, and National scale. In this brief talk I want to treat this subject largely on a national level, but I do want to emphasize as strongly as I know how that it is imperative that we not wait for Federal aid to schools to cure our financial and educational ills. We must do more on a local and

State level than even before, and I have been pleased to read in the Alabama newspapers of recent weeks that you and your State leaders propose to do just that. Too, it is encouraging to note that many local school systems are endeavoring to expand and improve their educational facilities. Gadsden with its proposed new building program and Montgomery with its 15-percent raise given teachers are just two examples of sound local effort.

The Federal Government for many years has provided funds for education services. In 1785 and again in 1787 financial help was given to promote education in the Northwest Territory. During his administration James Monroe vetoed Federal aid for internal improvement, but during the first half of the nineteenth century many colleges and universities, including the University of Alabama, were given grants of land. The Land Grant Act of 1862 (sponsored by Mr. Morrill, of Vermont) brought into being colleges of the type of Auburn, thereby giving greater impetus to agricultural, engineering, and experimental services. The Smith-Lever, Smith-Hughes, and George-Dean laws provided and extended vocational aids. More recently a law sponsored by Senators GEORGE, PEPPER, and HILL more than double vocational funds. We all recall the school buildings erected through WPA and PWA moneys, and the schooling provided for boys and girls through NYA. The veterans' training program gives aid to public schools today. The school-lunch program is a most worthy expenditure which I shall do all in my power to help continue. All in all, more than 150 bills have been passed in the history of Congress to provide Federal aid for education.

The help so far, however, while greatly needed, has been more or less of a specialized nature. The matter in which you and I are tremendously interested now is that of general Federal aid to education—aid to the public elementary and high schools. As early as the 1880's it was realized that, due to the ravages of war and the loss of property and wealth during the reconstruction days, the South needed aid to educate its children. Senator Blair, of Maryland, proposed that a certain percentage of the money derived from tariff be given to the South. Later, in the early twentieth century, Dr. John W. Abercrombie, of Alabama, while Congressman at large, exerted effort to secure general Federal aid to education. In 1915 the Sheppard-Townes bill proposed general Federal aid to education and also a Secretary of Education in the President's Cabinet. During recent years Senator HILL, of Alabama, has assumed the lead in ardent efforts to secure Federal aid for the public elementary and secondary schools.

In 1936 when I first campaigned for election to Congress I advocated, among other things, Federal aid to education without Federal control. I have been for such a program ever since, and am a member of the bipartisan steering committee which was organized to assist in getting this legislation passed. It seems now that the bill (S. 472) by Senators HILL, TAFT, and others, has the best chance of becoming law. As you know, this bill would provide for a Federal expenditure of $250,000,000 annually by 1950 (beginning with $150,000,000 in 1948 and $200,000,000 in 1949) with absolutely no Federal controls. Alabama would receive about $19,000,000 annually.

We would be optimists indeed if we expected no opposition to Federal aid for schools. Alabama and the South would be immediate beneficiaries. And yet I realize that a request for this legislation cannot be justified on a purely local or sectional basis. I believe it would work to the good of the whole Nation and to the preservation and strengthening of our democracy. The South's inability to meet the efforts of the wealthier States has been shown, and yet our endeavors are greater than in the richer sections of the country.

Perhaps these conditions alone do not present sufficient justification for asking for Federal aid to solve our school problem in the States of low educational opportunity. If every child grew up and remained in the State of his birth, we might not be warranted in asking for help. Fortunately, however, we do not have barriers in the United States to prevent migration among the States of the Union. A great part of this migration is not the school children but the adult who has or has not received adequate educational training. His productive capacity in the State to which he moved will depend upon his previous training. Thus it seems that the States which receive these migrants would be willing, even if selfishly so, to help train them. It would be advantageous to do so, since thereby would be had a producer of better quality and greater capacity. You gentlemen know that according to the 1940 census about 27,000,000 people lived in States other than in which they were born. Of the 12 States having the largest number of residents born in other States, only 1 is in the Southeast and two are in the Southwest. The other 9 are in the Northeast, the middle region, or the far West. I think it is right, as I am sure you do, that the Nation as a whole bear the cost or part of the cost of educating these people. It is a disadvantage to the States which receive them to acquire ill-trained men and women.

Our national debt today is about $260,000,000,000. It will take wealth to pay this debt. There is a direct relationship between the income of individuals and their educational advancement as measured in terms of years of schooling. On the average, the more years spent in school, the greater is the adult income. It is just as true that there is a direct relationship between the school expenditure per child and the per-capita income; the larger the school expenditure per child, the greater the per-capita income. These findings, and others equally forceful, were established through a study of the United States Chamber of Commerce. This study shows conclusively that more and more wealth can be created if this Nation will provide sufficient and effectual training to its youth. This newly created wealth can be used to pay our huge debt and our rich States will profit thereby from their contributions to Federal aid.

We risk a tremendous danger to our national welfare to permit a large segment of our population to suffer inadequate schooling. We are all citizens of one Nation, we are Federal citizens. When our well-being is threatened because of war or some other calamity, the whole Nation is called on to meet the menace, the rich States the same as the poor. If millions of our citizens are unable to answer the next call to duty, under circumstances through which we have just passed, whether they are physically or mentally handicapped or both, the existence of our country as we know it will terminate.

Your fraternity is one of leaders, and thus you occupy an enviable position. Leadership is needed not only on a national scale, but to provide for equal opportunities within our own State, cities, and counties. Alabama has been and is a leader in this regard, but there is more to be done. The more achievement you can show, the stronger our argument in the national Congress for Federal aid. Guidance from you can jolt the American people into acute awareness that the scale of teachers' salaries is too low, and into the realization that unless effective remedial measures are taken the grave conditions which now exist will continue to deteriorate.

During recent months another ominous warning has come to us from many parts of the country. Teachers have torn a leaf from industry. They have seen the power of the strike and in some instances they have used the power of that weapon. I do not wish to be understood as advocating striking by teachers. In fact, I am greatly disturbed that they are taking this means of showing their discontent. True their desperate financial plight has encouraged this action, and because of this state of affairs teachers' strikes have met with public toleration and even sympathy. But teachers are not working with mere commodities. They are molding the citizenship of tomorrow. It seems to me that once one has assumed this great responsibility, he should remain at his post of duty until the end of the school term at least. Yet we may as well be realistic to acceptance of the fact that teachers are human, and that inevitably they are going to use whatever means may be available to them to better their position in a highly competitive race in which they are fast being left behind. Because teachers are shaping the very destiny of tomorrow, we must recognize the obligation we owe them to correct this situation.

Leadership from groups such as yours can be utilized on a Nation-wide basis to prove to our people we can afford to pay for effectual education. For example, the aid of businessmen should be enlisted. It can be regarded as a form of enlightened selfishness for businessmen to want more and better schools. We know the more education people have, the higher salaries they earn and the more goods they buy. Large consumption of manufactured and farm products adds up to a better national way of life and more comfortable and happier living.

Recently an editorial pointed out that Great Britain plans to spend some 6 to 7 percent of its annual national income, and that Russia plans to spend some 17 to 20 percent of its annual national income on all phases of education. Grant that they need it more right now, but look ahead to the next 15 to 50 years, if we continue to spend a mere 2 percent. We must drive home the truth that the only hope for the future lies in giving each succeeding generation superior training. The question is not: "Can we afford more?" The fact is we must.

Your position carries with it a responsibility which I am sure you will not evade. If you can help to make America a land of opportunity in fact as well as in name, if you can help to convince our people that when we neglect our children we are playing with destiny, if you can help to provide means whereby our youth will advance as rapidly and as soundly in democratic sociological and political sciences as we have in physical sciences, you will have done much to save this Nation. In this jet-propelled, supersonic, and atomic world we cannot afford less.

Sermon by Very Rev. Ignatius Smith During Tribute to the War Dead

EXTENSION OF REMARKS
OF
HON. C. WAYLAND BROOKS
OF ILLINOIS
IN THE SENATE OF THE UNITED STATES

Monday, May 26 (legislative day of Monday, April 21), 1947

Mr. BROOKS. Mr. President, on the occasion of the ninth annual military memorial mass, held in the Amphitheater at Arlington National Cemetery on Sunday, May 25, 1947, the sermon was delivered by the Very Reverend Ignatius Smith, of the Catholic University of America. This annual mass, in tribute to the war dead, was sponsored by the Washington general assembly, fourth degree, Knights of Columbus, in cooperation with the National Committee of Catholic

Societies. The pontificant of the Mass was His Excellency Most Rev. Amleto Giovanni Cicognani, the Apostolic Delegate to the United States.

In his sermon Father Smith points out very strongly that while godless government seeks totalitarian empire, we continue to be a great Nation in God's judgment because we are not too proud or too powerful to acknowledge Him publicly as the Author of our freedoms and the Master of our destiny.

On the eve of Memorial Day, which we celebrate next Friday, I ask that this great sermon, paying tribute to the heroes who died that we may live, be printed in the Appendix of the RECORD.

There being no objection, the sermon was ordered to be printed in the RECORD, as follows:

We assemble in this silent city of the dead to do honor to those who are buried here and to honor at the same time all the dead who once wore the uniforms of the armed forces of our country. We honor them because they and their uniforms are the symbols of a great nation always dedicated to peace but never too indifferent to fight in the defense of our land, our liberty, and honor.

We assemble to express our heartfelt gratitude to our departed service men and service women for their dedication to this Nation. Some of them died in battle, many more of them fought valiantly and lived on; all of them showed their willingness to keep this Nation prepared for the defense of our Republic. They paid what, in the name of patriotic justice, is due to our democracy for the advantages it has extended to us. They paid the debt of citizenship with hallowed service that meant the sacrifice of time, of liberty, of comfort, of health, and even of life itself. And that we are able to live on in the enjoyment of our democratic freedoms we owe in no small measure to them. We offer today this religious memorial service as a token of our gratitude and to let them in another world know that we are neither forgetful nor ungrateful.

We give honor and thanks to our departed service men and service women, we also pray God on this day of consecrated memory to be merciful to them who have not yet entered into eternal happiness. It is our privilege, in the name of honor and gratitude, to help with our prayers those who, in purgatorial watchfulness, cannot help themselves. Of this privilege this illustrious gathering avails itself this memorial day of 1947, by offering to Almighty God the supreme act of our Catholic religion, the holy sacrifice of the mass.

The most important personage at this memorial service is the Omnipotent Son of God, Jesus Christ, the Redeemer of mankind. It is He who is offered to God in this holy sacrifice of the mass for the repose of the souls of our departed servicemen and servicewomen. And what more fitting offering could be made? On Calvary Jesus gave up His life for the salvation of mankind. In this continuation of the sacrifice of Calvary that same Savior is offered to God for the eternal rest of those who offered themselves for the greatness and security of the United States of America.

The greatness of this Nation is better understood by those who have met their God in judgment than by many who have been left behind. The glory of this country before the other nations of the world and the determination to keep that glorious greatness undiminished was the motive of their service. The preservation of this same national greatness devolves upon us who are left behind them. In what does this national greatness consist? We might be called great because of our tremendous natural resources and our national wealth. That is only a partial reason for our grandeur. We might be called great because of our spirit of industry or our inventive genius or our devotion to popular education. Of these we are proud but they do not sufficiently explain our eminence. We might be called great because of our military air and naval power. Of this we are proud and for this we pray undiminished strength, but in this is not found the complete explanation of our right to glory. We could be called great because we have provided sanctuary for the persecuted and underprivileged peoples of the world and because we have given them opportunity to develop their personalities and to raise their families.

In this too we glory; but even this is not the full cause of our greatness. We should be called great because we have achieved so high a standard of living for all our people and because we are determined that underprivilege and distress shall be wiped out. But this does not explain sufficiently our greatness. We ought to be considered a great Nation because of our recognition of the dignity of human personality and of the rights of individuals and nations. Even in such exalted humanitarianism is not discovered the secret of our grandeur. The explanation of our greatness cannot be given without reference to the Almighty Creator and Judge before whom our deceased friends have passed in judgment. Would that these departed souls would rise up and speak to us of what they have learned from God in another world about the greatness of our country.

Would they not remind us that from the very beginning the founding fathers recognized the sovereignty of God over men and nations while other nations were declaring war on the Almighty? Would not the souls of the departed recall to us that the charters of our freedom acknowledge that our democratic rights to life, liberty, and the pursuit of happiness are unalienable because they come from the God whom no nation has the right to bar from the boulevards of political and social life? Would they not retell to us the constant rededication of our Nation by our Chief Executives, for 171 years, in time of war and of peace, to the Providence of the Deity? Would not our departed servicemen and women, whom we honor today, ask of us to remember how often the sovereignty of God has been recognized officially in all these years when we have been asked as a people to ask God's pardon for our national crimes, to thank Him for the blessings He has bestowed on us and to beg Him for a continued protection of our country. Despite the neglect of God by so many millions of our people, could not the departed heroes tell us that they have learned that our greatness rests on the fact of our American alliance with our Creator? In this alliance we are pledged to protect divine rights everywhere and God seems to have pledged us special power and life because of our godliness. American democracy separates church from state but it never intended to divorce God from either government or the lives of our people. On this Memorial Day when godless government seeks totalitarian empire we are a great Nation in God's judgment because we are not too proud or power mad to acknowledge Him publicly as the author of our freedoms and the Master of our destiny.

It is well for us, if we can learn from the dead whom we memorialize, that God is the secret of our power, the source of our grandeur and the end of all our living. God and His rights can never be a mere incident in our national life if our greatness is to endure. The existence, the personality, and the worship of God can never be repudiated if the glory of this Nation is to be perpetuated. When the rights of God are ignored the rights of men are in jeopardy. The sanctity of individual human nature, the basic concept of our democracy, will never be respected where the sanctity of God is denied. History teaches that the death knell of a nation is sounded when totalitarian government seeks the death of God and where nations attempt to forbid God to His people. People are really slaves when the worship of God has to be bootlegged in secrecy instead of being openly practiced, as we do today, for the solace of our dead, for the grandeur of our Republic and for the honor and glory of the God of men and of nations.

The lives of the deceased defenders of our Nation's honor and freedoms teaches us that our love for our country must be demonstrated by our service of the Nation, in time of peace as well as in time of war. Our love of God must likewise be evidenced by the service of worship of His Infinity and by obedience to His laws. Our country and our God are closely allied. Our love of our Nation, our patriotism, is intimately connected with our religion. We love and worship our Maker because of these acts we owe God as a matter of just debts that must be paid here or hereafter. We love and serve our Nation because we are indebted to it for so much and because our debt must be paid. Our patriotism is not built on a desire for world conquest. It is not fired by hatred of other peoples. Our patriotic devotion to our Nation rests on our appreciation of what this country has done for God and for all of us without exception and on our conscientious determination to keep our country great and godly. We are traitors to our God when we are traitors to our Nation. We fail our Nation when we fail our God. That patriotism we could be taught from another world by the men and women whom we honor, for whom we pray and to whom we are grateful today.

They challenge us to carry on in the defense and the diffusion of the freedoms which are the foundation of our American and democratic way of life. These freedoms have been won and preserved only at the cost of great sacrifice. Every one of them has been baptized by the blood of fighting and victorious American patriots. The freedom of our homes, the freedom of assembly, the freedom of worship, the freedom of speech and other means of communication, the freedom of election, the freedom of labor and of property, the freedom of education and of recreation, the freedom of trial by jury—these are liberties for whose preservation we must continue to work and pray. Ours is the task to pass these American freedoms down to future generations despite the subversive threat to them from within or outside the Nation. Ours is the task to keep the Nation attentive to the rights which God has given to humanity and alert in its efforts to enable our people to enjoy their God-given liberties.

This is the message preached to us under this starry flag by these silent graves and tombs. This is the responsibility placed on us by God and by the spirits of our deceased service men and women. To be indifferent to such a message and such responsibility would savor of criminal ingratitude totally alien to genuine Americanism. We pledge to them and our God endless memory of their services to us. We pledge faith and service to God and our Nation's heroes and heroines. Eternal rest grant unto them, O Lord, and may perpetual light shine upon them. May their souls and the souls of all the faithful departed rest in peace. Amen.

World Communists Total 20,000,000

EXTENSION OF REMARKS

OF

HON. DANIEL A. REED

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 15, 1947

Mr. REED of New York. Mr. Speaker, I wish to call attention to the fact that

the Communists in Greece number 75,000, according to an article which appears in the Washington Daily News of Monday, May 26, 1947. In view of the fact that the United States is credited with 70,000 Communists, it may be necessary to call upon Greece to aid us in ridding this country of Communists.

The fact that there are only 5,000 more Communists in Greece than in the United States makes the recent appropriation of $400,000,000 seem a little out of proportion to the necessity aroused by the propaganda of the administration.

According to the following article, written by Harrison Salisbury, which I am inserting in the RECORD, under leave to extend, Turkey is not listed among the countries which have communism.

PARTY MEMBERS IN UNITED STATES

(By Harrison Salisbury)

There are slightly more than 20,000,000 active members of the Communist Party in the 46 principal countries of the world, a United Press survey revealed today.

Eighty-five percent of the Communist Party membership is concentrated in Europe and Russia, with almost twice as large a membership in other European countries as in the Soviet Union itself.

On a membership basis, the overwhelming percentage of Communist strength is concentrated in Europe. In no other geographical area with the exception of China do the statistics disclose large Communist Party membership.

ON-THE-SPOT CHECKS

The statistics on Communist Party membership were obtained in all but a few instances by on-the-spot checks by UP correspondents. They were obtained from Communist Party estimates and official reports. In cases where there was reason to doubt these estimates the UP correspondents made independent checks to determine the approximate membership.

The survey shows the following geographical distribution:

Russia	6,000,000
Europe (exclusive of Russia)	11,304,525
China (estimate)	2,000,000
Asia (exclusive of China, Russia, and Asia Minor)	301,000
Near East	13,700
North America	141,000
South America	340,000
Total	20,101,225

The survey covered 21 countries of Europe, 9 in Asia, 6 in the Near East, 4 in North America, and 6 in South America.

The UP survey placed Communist Party membership about 1,500,000 higher than the 18,592,300 reported at an official Communist Party conclave in London last March. The party's own membership survey covered 66 countries compared with the 46 in the UP survey.

The 20 additional countries included in the Communists' own survey all were small and accounted for only a few thousand members.

CHINA QUESTION MARK

The UP figures were believed to be accurate in all cases except for China. The 2,000,000 Chinese Communist Party ownership is that claimed by the leadership of the Chinese Communist Party.

However, Walter Rundle, UP staff correspondent at Shanghai, commented: "Neutral observers place the actual figure nearer 200,000."

On either basis—200,000 or 2,000,000—the Chinese Communist Party is still the largest outside of Russia and Europe. It's only rival for size is the now suppressed Communist Party of Brazil, which claimed a membership of about 200,000.

Outside Russia the largest Communist Party membership is concentrated in Germany, where it is estimated to total 2,221,125 members, including the SED—the leading party of the Russian zone, formed by merger of the Social Democrats and the Communists.

FRANCE, ITALY NEXT

Next in size come the Communist Parties of France and Italy each with an estimated strength of approximately 2,000,000. They are closely followed by the Czechoslovak Party numbering 1,700,000 The Yugoslav party presumably is about the same size as that in Czechoslovakia. However, no membership figure could be obtained and Yugoslavia is not included in the survey.

All of the other countries of eastern Europe have comparatively large Communist Parties. The largest membership is claimed by Bulgaria with 850,000, followed by Hungary with 650,000, Poland with 600,000 which includes merged Socialists and Romania with an estimated 500,000.

Only a handful of Communist members are reported in the Near East, where the party is illegal in most countries except Palestine and Lebanon. Lebanon is regarded as the ideological center of the Middle East movement. There are estimated to be about 5,000 members in Lebanon and an equal number in Syria.

The situation is much the same in Asia outside of China. The largest Communist membership is estimated for Indonesia with 100,000, but the movement there is split among a number of local leaders, including several individualists who appear to have skimpy ideological contacts with regular Communist Party doctrine.

The largest Communist membership in North America is that of the United States with about 70,000 followed by Cuba with 40,000, and Canada with 23,000. In South America, Chile ranks second to Brazil with 50,000 followed by Peru with 35,000, Argentina with 30,000 and Venezuela with 20,000.

The country-by-country break-down follows:

Europe

Russia	6,000,000
Austria	175,000
Belgium	100,000
Britain	43,000
Bulgaria	850,000
Czechoslovakia	1,700,000
Denmark	60,000
Finland	40,000
France	2,000,000
Germany (including SED)	2,221,125
Greece	75,000
Hungary [1]	650,000
Iceland [1]	1,000
Italy	2,000,000
Netherlands	60,000
Norway	34,000
Poland (including Socialists)	600,000
Rumania	500,000
Spain (police estimate)	400
Sweden	156,000
Switzerland	25,000
Total	17,304,525

[1] Unchecked official Communist Party estimate. Yugoslavia is not included due to lack of official figures.

Near East

Palestine	1,000
Lebanon	5,000
Syria	5,000
Egypt	500
Iraq	200
Iran	----------

Asia

China [1]	2,000,000
Japan	70,000
India	63,000
Indonesia	100,000
Siam	2,000
Malaya	10,000
Indo-China	2,000
Burma [1]	4,000
Korea	50,000
Total	2,301,000

[1] Unchecked official Communist Party estimate.

North America

United States	70,000
Canada	23,000
Mexico	8,000
Cuba	40,000
Total	141,000

South America

Brazil	200,000
Chile	50,000
Argentina	30,000
Colombia	5,000
Venezuela	20,000
Peru	35,000
Total	340,000

Senator Lodge's Views on Foreign Policy

EXTENSION OF REMARKS

OF

HON. HENRY CABOT LODGE, JR.

OF MASSACHUSETTS

IN THE SENATE OF THE UNITED STATES

Monday, May 26 (legislative day of Monday, April 21), 1947

Mr. LODGE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial which appeared in the Springfield (Mass.) Union regarding the speech which I made on foreign policy here last week.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

SENATOR LODGE'S FOREIGN POLICY

In a recent address Senator HENRY CABOT LODGE, JR., outlined a foreign policy that should help us win the peace, which we seem to be losing after winning the war, because we have not achieved any of our positive aims. We put out the fire in our neighbor's house without gaining assurances for the benefit or peace of the world while we were in position to do so, and now we are providing materials and labor to rebuild the house under our neighbor's direction.

We made dreadful mistakes when the shooting stopped, as we made mistakes, concessions, and mistaken promises during hostilities. To avoid these mistakes in the future we must have a practical, realistic, and constructive foreign policy, based on experience and the actualities of the world, administered by modern-minded personnel.

This personnel must be specially trained to deal with designing men brought up on the language of force and must be backed by a strong America, with faith in its own doctrines and way of life. "We need," says Senator LODGE, "an infusion of new blood or of new spirit or both into our representation abroad which, excellent though it is in many individual cases, still in certain quarters regards it as outside its province to come aggressively to grips with the forces in the world which so closely affect American destiny."

We must give particular care to selection of personnel in the administration of general relief abroad, including aid to Greece and Turkey. And that is not the end. We must back able men in making it clear through a comprehensive foreign policy that we will aid

only governments which carry out their commitments to the United States and have taken fundamental steps to change their situation permanently for the better. Subsidizing hold-up games and last-minute rescue parties is pouring money down a rat hole.

Our resources are not limitless. We must make expenditures solely in pursuance of an intelligent plan whereby in exchange for our outlays these foreign peoples become self-supporting and thereby enable us to achieve those concrete things which need to be done. It is to our advantage to get these nations back on a self-supporting basis. But in exchange for our aid these nations should strive to "integrate themselves into an economic arrangement which has the possibility of life and growth. It is sickening after each war to reconstruct the same old European crazy-quilt."

"We should work out our raw-materials program as a part of our foreign policy," says Senator LODGE, "for we are short of many very important commodities. We must deal in realities in terms of human freedom, first stabilizing political and military conditions, so that Europe can again become a sound economic risk. So long as the American people think they are getting nothing out of our foreign policy they will complain about granting millions of dollars to foreign governments while we do nothing to ease the high cost of living and the housing shortage here.

"We must," concludes the Senator, "make American democracy an article of export," though he does not name the Voice of America specifically. The Christian concept of the dignity of man "is the strongest revolutionary force in the world," yet "we have allowed the brutal verbiage of communism to gain a greater export currency than our own belief, which springs from external sources and can never run dry."

This means an outlay of time, intelligence, energy and money to present our view and to give compelling demonstration of its worth. "It is the essential first step that we believe in ourselves. Without such belief nothing can be done, and all expenditures are mere waste."

Our foreign policy calls for a strong America—strong in its economic life, strong in its enthusiastic faith in its own institutions and strong in its armed forces. Without these things behind it no foreign policy will amount to anything.

Let's Economize on the Plasma

EXTENSION OF REMARKS
OF
HON. OLIN E. TEAGUE
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 22, 1947

Mr. TEAGUE. Mr. Speaker, under leave to extend my remarks in the RECORD, I am including an editorial from the Temple (Tex.) Telegram:

LET'S ECONOMIZE ON THE PLASMA

Cutting the funds for United States soil-conservation work is like trying to economize on the blood plasma that is keeping a wounded man alive.

Representative W. R. POAGE, of this district, recognized nationally as one of the stanchest and best-informed friends of conservation, is exactly right in his heated protests against the short-sighted economy cuts in the Agriculture Department proposed by the Republican majority in Congress.

Soil conservation is one Federal project that has resulted in a tremendous profit to the Nation. Even if it were a dead loss, we would still have to have it, because without it our soil gradually will become unable to support our growing population. But every dollar spent on soil conservation has returned multiplied in crop yields, present and future.

It is extremely doubtful if the United States could have met its wartime crop goals without the soil-conservation work started in 1933 by the Federal Government. That work has been well done, and is still progressing. In fact, we are just now beginning to come in sight of the goal. At least 20 years more of intensive conservation is desperately needed.

Any central Texan not convinced of the benefits of soil conservation has only to drive out in the country and look at conservation-treated land, then recall what was happening to the same land 15 years ago. It was running down the creeks and rivers, being lost forever—and a lot of it still is.

And while we're on the subject of conservation, the movement to transfer it from the Soil Conservation Service to the Extension Service is completely wrong and foolish. The SCS has built up a force of experts in conservation, is an efficient, going operation. It has done more to conserve our soil than any other agency has ever done. It is doing that now. It has the technical knowledge—the "know how"—to get the job done, if the "economy" boys don't kill the goose that is laying the golden eggs.

The Extension Service is not equipped or staffed to handle our national conservation problem, and there is no reason at all to believe that it could do a better job than the SCS if it were. So where is the sense in taking the conservation movement out of the hands of the agency that has succeeded at it, and handing it over to another agency that would have to undertake an extensive—and expensive—job of organization and expansion before it could even equal what the SCS is doing now?

Of course, there are those who figure the Extension Service would be more susceptible to politics than the SCS, and there are those who think that if the Extension Service controls conservation and they control the Extension Service they will virtually have control of United States agriculture.

But these motives must be apparent to Congressmen, even to the economy bloc, which seems determined that we are going to have economy even if it kills us all. Congressmen who do not understand the score can get it quickly from Mr. POAGE, who knows it from A to Z and is explaining it fully.

A Tribute to Lt. Gen. Ira C. Eaker, Deputy Commander, United States Air Forces, Upon His Retirement

EXTENSION OF REMARKS
OF
HON. BERTRAND W. GEARHART
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 15, 1947

Mr. GEARHART. Mr. Speaker, it is with considerable pleasure that I am able to hand to the Public Printer for inclusion in the CONGRESSIONAL RECORD in which this day's proceedings are recorded, a most timely article in high and well-deserved tribute to the extraordinary service to his country of Lt. Gen. Ira C. Eaker, deputy commander, United States Army Air Forces, who, heavily burdened with the good wishes of those who know and love him and rich in the honors which, with lavish hand, a grateful Republic has bestowed upon him, is soon to retire from the public service.

Not only do I find pleasure in offering this splendid article for inclusion in the CONGRESSIONAL RECORD because it contains a well-merited tribute to a warm personal friend whom I hold in high esteem, but in the article there is much to remind me of others for whom my admiration and affection is also very, very great.

First. It comes from the facile and always interesting pen of Col. Beirne Lay, Jr., a great air soldier in his own right of the war days, an outstanding figure in the literary world of the moment, a gentleman of the first order with whom I have spent many happy hours in congenial association "above the clouds" in flight, and about the banquet tables when the inclinations of men turn to lighter things.

Second. I have clipped it from the columns of the United States Air Services, for a generation and more, the leading periodical within its classification, whose editor is none other than Maj. Earl N. Findley, whose personal charm and enduring good fellowship has endeared him to the thousands upon thousands who know him well and count him friend, especially among those who haunt the inner sanctums of Washington's exclusive Army and Navy Club.

Then, and I recall this with gratitude, it was my good friend Col. Benjamin F. Castle, the father of the immortal Brig. Gen. Frederick Walker Castle, in the honor of whose memory the great airfield at Merced, Calif., is named, who called my attention to the printing which has inspired this grossly inadequate effusion.

This splendid article to which I have just referred, a well-deserved tribute to a great soldier of renown and an outstanding citizen of the Republic, Lt. Gen. Ira C. Eaker, United States Air Forces, is, Mr. Speaker, the following:

EAKER—MAN WITH A PLAN

(By Beirne Lay, Jr.[1])

Adolf Hitler might still be in power had he succeeded in permanently blocking the gate to the Cintro Airport, outside of Lisbon, at 5 o'clock in the morning on February 20, 1942. Two taxies, containing seven American officers in civilian clothes, because of Portugal's neutrality, honked their horns repeatedly at the barred gate, but no sentry appeared. The officers grew impatient. An icy wind fluttered a nearby windsock, but there was no other sound in the blackness.

Then a stocky figure left the second car, strode to the gate, unfastened the cross bar, swung it up with a hard shove, and marched back to his car.

"Go ahead," he told the driver. "We've got to catch a plane." An hour later a DC-3 of the Dutch KLM Lines took off carrying the seed of the giant oak that later crashed on Hitler from the air. When the plane landed in England the civilians changed into uniforms, one of which belonged to Brig. Gen. Ira C. Eaker. The mighty Eighth Air Force

[1] Colonel Lay served on General Eaker's staff when the Eighth Bomber Command was being organized in London, and he is the author of I Wanted Wings and I've Had It, both published by Harper & Bros.; also has appeared in numerous magazines of the first rank. He is devoting his life to writing, and lives at 5017 Ambrose Ave., Los Angeles, Calif.

of the future then consisted of a piece of secret paper in his pocket.

The small incident of Eaker at the gate in Lisbon was not only prophetic but typical of the man who all his life has opened gates while others sat and waited for something to happen. And always, before entering the gate, he has had a plan.

Because of the violent loyalties and scattered antipathies Eaker has inspired during an ambitious career, because of persistent reports that he would become the next commanding general of the Army Air Forces, if Spaatz retired to run for public office, and because as head of the AAF he would play a kingpin role in the determination of national-security policies amidst the pitfalls of the air-atomic age, Eaker has long been a subject of current interest.

The man who built the Eighth Air Force in a year and a half took 25 years, literally, to build a special self. The record shows that he set up a goal and deliberately began cultivating the personal qualifications that would make possible its attainment, an idea not as unique as Eaker's success in living it.

Because of a high percentage of flyers and wives from the Lone Star State before the war, Texas was known as the father, and San Antonio as the mother-in-law, of the Air Corps. Eaker got off to a flying start in 1896 by getting himself born at Field Creek, Tex.—good initial planning. His eventual goal did not crystallize early, for instead of going to West Point, he topped off his civilian education at Southeastern State Teachers College, Durant, Okla., in 1917.

A classmate of the future pioneer military flyer recalls Eaker (pronounced Ayker, not Eeker) as a quiet, serious student, brilliant in the classroom rather than in athletics. He shone as a debater. Because of a habit of getting the facts and digesting them before he talked, he became an unobtrusive leader in student affairs. The others found he usually guessed right.

The serious young man from Texas joined the infantry late in 1917 as a second lieutenant, Reserve. He was drilling with his battalion at El Paso when fate took a hand. An Army airplane, unable to climb over the mountains, landed on the parade ground. Being the nearest officer, Eaker walked over, chatted with the pilot and examined the flying machine. He noticed a loose spark-plug lead, connected it and helped the pilot to start his engine.

"You seem to know more about this than I do," said the pilot. "Why don't you get into flying?"

"How?" asked Eaker.

"Fill out this blank," the pilot said.

Soon Eaker was on his way to an Army flying school at Austin and he's been flying ever since. Pure chance gave Eaker the first shove. He took it from there.

As a pilot in the Regular Army he had embarked on a climb that was to take him to the ceiling of his profession. To go all the way he recognized early the importance of certain obvious essentials—obvious but seldom practiced—health, professional competence plus recognition, broad interests, a plan of action and willingness to mobilize every waking hour toward its accomplishment.

To safeguard health, he became a bug on physical fitness, exercising regularly and hard. Pilots in fighter squadrons Eaker has commanded on maneuvers discovered that the boss wasn't kidding when he routed them out of the sack at 5:30 a. m. for a half hour of groaning calisthenics, a 1-mile run, and a plunge into the icy river before breakfast each morning. Even as a commanding general in England he was a strenuous daily patron of volley ball, tennis, or golf, his wind apparently unimpaired by heavy consumption of cigars—as much of a facial fixture with him as his nose. Reputed to have been at one time a durable drinking companion, he has not pulled at the beaker for years since a flight surgeon called him back for a recheck on his eyes after a convivial evening. He saw in liquor a potential threat to his fitness for flying and limited himself thereafter to a glass of sherry.

The basis of professional excellence in the Air Corps during the twenties and thirties was flying proficiency. Eaker made the cockpit of a single-seater his second home, logging more hours each month than most Army pilots, regardless of the demands of other duties on the ground. During peacetime Distinguished Fying Crosses were doled out like Hope diamonds, but he won the decoration twice—as a pilot on the Pan-American Flight which completed a good-will trip around South America under primitive conditions in 1927, and in 1929 as chief pilot of the *Question Mark*, under command of Maj. Carl Spaatz, which set a world record for endurance by refueling in the air. He joined the Caterpillar Club when forced to bail out of an airplane which developed an uncontrollable spin during a test flight at Bolling Field.

Eaker's determination to keep abreast in flying was best illustrated just before the war, when he held a punishing desk job as executive to the Chief of Air Corps in Washington. Many chair-borne officers got in the minimum required hours and some high-rankers were content to ride in the copilot's seat of large airplanes. In spite of staff duties, Eaker chalked up his customary 30 to 40 hours a month in the newest type fighter planes, his first love. It often meant flying all night and hitting his desk without a wink of sleep. On the first transcontinental flight completed solely on instruments, he flew under the hood in a sensitive P-12 fighter instead of a stable transport plane. As a squadron commander at March Field and later a group commander at Hamilton Field he left no doubt in the minds of his youngest and hottest fighter pilots about who was boss. His method was simple. He outflew them, any time in any weather.

He could be resourceful as a commando and unforgiving as Captain Bligh. At Hamilton Field a civilian contractor was extending the runways. Eaker saw a truck driver cross a runway directly in the path of one of his new boys coming in for his first landing in a P-40. The youngster staggered up over the truck, retracted his wheels and flaps, regained flying speed, and went around for another try. Eaker, white around the nostrils, told the driver, "You nearly killed one of my pilots. Keep off the runway when a ship is coming in."

"I ain't in the Army," the driver shot back. "And I ain't taking no orders from you." Unable, as commanding officer, to involve himself in a physical clash with a civilian, Eaker returned to his office, summoned a big, tough noncom, told him what had happened, and pointed out the offending truck.

"Sergeant," he concluded, "I don't want to see anything happen to that driver."

"No, sir!" said the sergeant grimly. He saluted and left. The pilots had no more trouble with the truck drivers, one of whom had become conspicuously cautious about runways.

Leading a squadron of P-40's on a cross-country flight in foul weather, Eaker was forced down on a muddy emergency strip in a driving rain. All of his pilots landed safely behind him but one. Blinded by mud and water on the windshield, the boy nosed over on his back. It took 10 minutes for Eaker and the others to pry open the jammed canopy of the gasoline-soaked airplane and free of the pilot. A single spark could have exploded the wreck. Eaker immediately transferred the boy out of his group, a severe punishment for any pilot. His reason? Not that the boy had cracked up but that he had violated orders when he shot an emergency landing with a closed canopy, forcing eight men to jeopardize their lives in saving one.

A pattern of deliberate design becomes visible in Eaker's development when it is recalled that few officers combine skill at staff work with the extrovert qualities of the active commander. A pronounced extrovert in his addiction to hunting, fishing, poker, and commanding fighter units, Eaker balanced his personal program with intensive study, not only of the military profession but of civilian fields.

His conviction that most military men were narrow in their interests, and that this handicap became severe as they rose to higher responsibilities, revealed itself while he was a lieutenant in the Philippines. Instead of absorbing beer at the Officers' Club, he absorbed law at the university. In 1924, while on duty at Mitchel Field, he attended night classes at Columbia University in business law. Already facile at expressing himself in conversation, he complemented this talent in 1933 by taking a course in journalism at the University of Southern California. Since then three successful books and numerous published articles have come from his typewriter. Familiarity with the power of the written word aroused his interest in public relations. No Army officer now understands the media of public opinion better than Eaker. He talks the newsman's language.

Excellence as a pilot, as a commander, and as a professional writer with many other civilian attainments might have given Eaker enough versatility in themselves to take him a long way. But he got in his hardest licks as a staff officer. Twice he fought the "battle of Washington" in the chief's office. As a young captain and assistant executive under Maj. Gen. James E. Fechet, he was exposed to the big picture.

From a ringside seat, and sometimes from inside the ring, he learned the nature of the headaches that bedeviled the Chief of Air Corps; the struggles for money with the Military Affairs Committees up on the Hill; the far-reaching consequences of top decisions about new airplanes, engines, tactics, and organization; and the perplexities of the ceaseless tug of war between strong personalities which focussed at the top. He watched the demands on a high commander for sublime patience, political dexterity, quick and enormous grasp of technical data, dynamic energy, cool calculation, and prompt decisions, right or wrong. All these were tools he would need. Eaker sharpened the cutting edge of his own set as the months slipped by.

When he returned, years later, to Washington as executive to his old friend and new chief, Hap Arnold, Eaker had graduated from the Air Corps Tactical School and the Command and General Staff School. More important, he had graduated from his own private school of self-cultivation. It was already noticeable that he had the courage of his convictions and would fight an issue all the way to the top, if necessary. Arnold and Spaatz were the two driving pistons and Eaker the main bearing of an engine harnessed to a terrible load—the preparation of the tiny Air Corps for an explosive expansion under the threat of war.

Often gray with fatigue from studying reports until the small hours, Eaker sat at his desk talking to aviation leaders, industrialists, engineers, crackpots, and ax grinders, while constantly on the phone, answering Arnold's buzzer, checking a mass of outgoing orders, and dictating letters.

It was now a routine habit with him to hang up from a long telephone call and resume dictation in the middle of a sentence without prompting. Even of voice and temper, he juggled a hatful of mental oranges all day long. Officers who had come to him with perplexing problems were repeatedly puzzled when he interrupted them with the right answer before they'd even warmed up.

This was no stunt. He already knew the problem, or recognized it as an old one in fancy dress.

Any doubts Arnold and Spaatz may have had about Eaker's capacity to run a big show had disappeared when Eaker left Washington in 1940, after 3 years of top-speed efficiency in the chief's office, to assume, command of the Twentieth Fighter Group. He was a marked man. War was still a year away, but when it came, Lieutenant Colonel Eaker, aged 44, would be ready—ready to play in the first-team backfield against the Nazis.

Like any strong personality, he had made enemies. His most unforgivable offense had been a consistent habit of making the competition look bad. In the slow tempo of peace years, he was a wheel turning faster than the wheels around him. Many puzzled intimates had found Eaker an enigma. Detractors wrote him off as a slave to ambition, a heartless machine, whose every move was sparked by self-interest. Officers who had known him longer believed that he was a slave to excellence, that his nature compelled him to an all-out effort in every undertaking, and that he never subordinated loyalty to self-advancement. Nobody denied that he was a formidable opponent—a born competitor who didn't believe in losing.

That is the kind of man Hap Arnold needed in January 1942, when he was confronted with setting up an American bomber command in England. The only way to stop Herman Goering was to send an American over there who could lick him. Unquestionably Arnold knew that he was making one of the most critically important appointments of the war when he summoned Brig. Gen. Ira Clarence Eaker to his office and offered him the job.

"But I'm not a bombardment man," said Eaker. "I've spent all my life with fighters."

"I know that," said Arnold, "and I want this bomber command run by a man with a fighter pilot's temperament."

Some day a long book will be written about Eaker's achievement in England, but even a short summary is impressive. When he arrived in London on February 20, 1942, there was not a single American bomber station, supply and repair depot, combat airplane, pilot or mechanic in the British Isles.

Less than 6 months later, on August 17, the first formation of B–17's dropped bombs on Hitler's Europe.

Between these two dates, Eaker made decisions which, had they been different, might seriously have prolonged the war in Europe—or lost it. The first was in his relations with the British, on which the entire success or failure of the American effort depended. Although determined to leave no stone unturned in cooperating with the war-wise leaders of the RAF, he stoutly upheld the untested American concept of daylight strategic bombing, and, like Pershing in World War I, insisted on an autonomous American force. This was not as easy nor as inevitable as it sounds.

In many minds Germany's failure to bomb England out of the war had discredited strategic bombing. The RAF, which had undergone a sad experience with a few B–17's, lacked faith both in the airplane and in daylight precision bombing. They wanted American crews sent over as replacements in British squadrons. Their arguments in favor of night saturation bombing were persuasive and reinforced by experience versus theory. They had won over influential American officers in London to the notion of training American crews with the RAF.

To top everything, a board of 21 experts, British and American, met in Liverpool shortly after Eaker's arrival to appraise the B–17E. Their report damned the B–17E as unsuitable for operations over western Europe and shook the confidence of Eaker's staff—but not Eaker.

"They're wrong," he said. "In any case, the B–17 is the best we can get. We'll have to do the most with the least." B–24's, also under consideration, were not expected to be in quantity production soon enough and they were heavily committed to other theaters.

In retrospect, it is disquieting to speculate on the consequences had Eaker thrown his weight the other way. Final responsibility, of course, was Arnold's but the man on the spot carries great weight. A commander with less judgment and boldness than Eaker might have doomed the bombing offensive at the outset. Vacillation, or basic compromise with opposing views by him at this critical early juncture would inevitably have delivered a still-born infant. Midwife Eaker's judgment that the B-17 could live in Hitler's daylight skies was the slap on the bottom that kept the baby air program breathing. German leaders who later described the grown child as the decisive factor in their defeat must now regret that they did not send every airplane in the Reich over High Wycombe, Bucks, in the spring of 1942 to obliterate Ira Eaker and his headquarters.

Retaining the good will of his opposite number, Air Marshal "Butch" Harris of the RAF Bomber Command, Air Chief Marshal Portal and Winston Churchill, Eaker kept his controversial program skilfully on the rails. Whole areas were allotted for American bases. Eaker protected future morale when he successfully opposed proposals to feed our men with British rations and to put them under canvas, instead of permanent construction, in the bitter English climate. He insisted on having his own combat intelligence organization rather than relying on the admittedly excellent RAF intelligence.

Only a man of exceptionally well-rounded outlook, tact and sharp understanding of public relations could have trod without mishap through the treacherous minefields of the early months. Typical of Eaker's approach was his 8-second speech in reply to a half-hour oration by the Mayor of High Wycombe before a capacity crowd of dignitaries gathered to welcome the Americans.

"I don't believe," he said in answer, "that we should do much talking until we've done more fighting. We hope that when we leave you'll be glad that we came." Then he sat down.

Breadth of mind was reflected in Eaker's selection of the staff he took to England, and which could have made or broken him. West Pointers in London at first referred to "Eaker's amateurs," because he had filled key positions with men straight from civilian life. There were two reasons for this. First, the enormous new AAF bucket contained only a drop of experienced officers. Second, Eaker believed that an able civilian could learn the Army faster than many Army professionals could learn ability. For years he had cocked a weather eye at young friends who were making a mark in civilian life and had jotted down a mental note: "There's a fellow I can use if I ever go to war."

He stopped one such prospect in a hallway shortly before going overseas.

"Want to go with me?" he asked.

"Yes, sir," was the prompt reply. Eaker strode on down the hall. Not until afterward did the prospect learn that Eaker was going to England and why. But 2 weeks later he was aboard the clipper which took off with Eaker and his staff.

It was that kind of loyalty and unquestioning faith in the Old Man that moved mountains in building the foundations of the original VIII Bomber Command. Eaker's amateurs didn't let him down. The early B–17 missions, led by Col. Frank A. Armstrong, Jr., and his Ninety-seventh Bomb group, were a success which stunned the RAF. Many pessimists had expected 75 percent to 100 percent losses. Because of political pressure at home to divert heavy bomber production to other fronts, notably Japan, because of skepticism about the feasibility of operations from weather-bound England and because of intense opposition to the basic plan from many high quarters in our own Government, everything hinged on a promising beginning. A first-night turkey would have resulted in abandonment of the whole program.

Overcoming one black disappointment after another, when promised airplanes, crews, and equipment were committed to other fronts, Eaker faced a second crucial test at Casablanca, where he had to sell the still unconvinced Churchill on continuance of the independent American daylight effort, which had not had time to pay real dividends.

The Old Man, aged 46, moved on to command of the Eighth Air Force, which he turned over as a going concern to Jimmy Doolittle in January 1944, before assuming command of the Mediterranean Allied Air Forces, a higher assignment. Before leaving, he was knighted by King George VI, which gives him the honorary title of Sir Ira Eaker, K. C. B. Churchill paid him high tribute in a farewell speech, a reflection of the rare esteem in which Eaker was held by his English friends on all sides. Our own Government gave him a D. S. M. whose citation was notably short on bouquets and long on accuracy:

"For exceptionally meritorious and distinguished service to the Government in a duty of great responsibility as Commander of the United States Air Forces in the United Kingdom and the Eighth Air Force from December 1942 to 7 January 1944. Upon assuming command of this unit, General Eaker devoted himself to building a formidable air force; largely by his individual efforts and in a minimum of time he overcame shortages then existing with respect to competent and trained personnel and combat equipment of all types. Tactics for large-scale daylight bombing had not been developed; however, General Eaker's brilliant assessment of enemy strengths and intentions, together with his outstanding resourcefulness, led to sound decisions and the ultimate in operational performance. His personality, ability, and untiring effort won the respect and admiration of our British allies with whom he was in constant contact, thus enhancing our prestige and establishing a firm foundation of mutual confidence for future operations. General Eaker, by his noteworthy achievement as an organizer, unlimited display of initiative, energy, outstanding leadership, and his untiring devotion to duty, together with his penetrating analysis of the military situation, made an invaluable contribution to the success of air operations over Europe."

If Eaker needed any finishing touches in diplomacy, he got them in Italy as boss of MAAF, a conglomeration of Allied air forces under one nightmarish roof in a military House of All Nations. Well versed in untangling formidable problems by his experience in England, Eaker achieved unity of effort among the diverse elements of his new Allied command, which was further complicated by shuttle missions to Russian bases and close interservice relations with the United States Navy. An air-power man to the core, and certainly no lover of battleships, Eaker got along well with the sailors. The Navy Department later cited him for "a keen appreciation of the requirements of interservice cooperation," and for "superb handling of air support" during the amphibious landings at Anzio and in southern France.

After 3 years overseas, during which he flew on combat missions from both England and Italy, Eaker returned to Washington in April 1945 to accept the greatest responsibility, and opportunity, of his career. Arnold appointed him Chief of Air Staff and Deputy Chief of the Army Air Forces, the position he now holds.

His health impaired by overwork, Arnold was frequently absent during the ensuing months. Spaatz, at first, was still in the

Pacific. Thus Eaker accumulated considerable first-pilot time at the controls of the AAF through the turbulence of redeployment, demobilization, and the foggy weather of the struggle for a coequal Air Force under a unified department of defense.

The boy from Field Creek, Tex., who faithfully adhered to a program of developing to a maximum his latent personal powers, reached his goal.

To his intimates he acknowledges the lure of the temptation to step out into civilian life. On June 15 he will do so. Eaker has become a powerful engine requiring the fuel of big jobs to run at all—a victim of his own enormous capacity. Civilian or military, his future role, on past form, will be a dynamic one, for few men in the country can duplicate the scope of his experience as an executive.

You sense this when you enter his office in the Pentagon. The man who greets you looks younger than his 51 years, in spite of hard lines around the mouth. Those lines were engraved during periods of months on end when he worked an 18-hour day under fearful pressure in England. Success stories invariably refer to the "inexhaustible energy" of their subjects. Many officers who served with Eaker overseas believe that the pace he held would have reduced most men to talking to themselves while they molded mud pies. The evidence of the ordeal is there on his face, but it gives the impression of strength rather than fatigue.

He speaks so quietly that you are often straining to hear. The strain is worth it. Eaker, whose vocabulary is a well-stocked larder of precision words, has never been accused of uttering a dull remark. He has a habit of saying "I visualize that," instead of "I think that." When he gets through, you realize that he really does visualize what he's talking about.

Instead of offering you a plain cigar, he may give you one that came from Herman Goering's private car on a siding at Berchtesgaden, a small illustration of his addiction to novel possessions, ideas, and people. He has collected celebrities, titles, Prime Ministers, and royalty among his friends. But his friendship with Jock Whitney, for instance, who served on his staff overseas, arose not from a weakness for socialities, but as a natural result of his congeniality with all kinds of people, humble or prominent. He sees no more reason to exclude the latter than the former. In his personal mail, letters from old GI friends outnumber all others 5 to 1. He appreciates the luxury of nice things and fine living, but not as much as roughing it in the outdoors.

His uniform always scrupulously neat, shoes sparkling, he looks the part of the thorough-going soldier he is. On only two professional grounds has he been particularly criticized. Many subordinates believe that his unshakable loyalty to old friends has constrained him to keep more than one unsuited officer in an important position, to his own detriment. But even if true, this has never stopped Eaker from getting results, the final test.

Another alleged fault, which likewise stems from a virtue, is the extent to which he has concerned himself with the details of any show he was running. He has never breezily delegated carte blanche authority to subordinates. Admirers believe that because of his abnormal power of concentration Eaker can grasp far more than most commanders, hence can afford to exercise greater personal control.

Concentration may explain why Eaker is a legend wherever poker players bunch over their cards until the small hours. With a hawk's eye for the sequence of exposed cards, and quick perception of shifting odds, he can probably name 70 percent of the hands against him at a given time. He wins big pots as casually with a pair of threes as with four aces.

Some of those who have been on the receiving end of Eaker's wrath think him cold-blooded. Without losing his temper, but with a chill in his eyes, he can cut a man to ribbons with razor-strokes of the tongue, as an officer of the day who got drunk on duty once found out. But the same eyes can betray the warmth that comes from deep understanding.

Earl Findley, editor of United States Air Services, will never forget what Eaker did for him. Mrs. Findley had suffered a sudden illness from which she never recovered. In the first week of her helplessness, Eaker called at Findley's apartment. For many years Mrs. Findley had made a mince pie for Eaker at Christmas.

"How is the next number of the magazine coming along?" inquired Eaker.

"I haven't thought about the magazine," said Findley, "nor do I intend to go to the office until I can find out more about this illness of my wife."

In a quiet way Eaker made three suggestions for articles, volunteered that he would write one of them as an editorial, another to be signed by the Chief of Air Corps, Arnold, and a book review he said he would like to do under his own name. In the April 1940 issue of United States Air Services these articles appeared. They broke the back of the magazine, relieved the editor of any anxiety on that score. And when the articles were ready, Eaker phoned to say they would be given to a messenger if he would call at his office at 10 a. m. next day.

The articles consisted of an editorial emphasizing General Marshall's love for flying, and how he as Chief of Staff always went by air when he could; a long article answering the question most often propounded by manufacturers of airplanes, under a title which meant What Kind of Airplanes Does the Chief of Air Corps Want? The book reviewed by Eaker was Up and At 'Em by the late Col. Harold E. Hartney.

What impressed Findley most about this act of Eaker's was that, instead of telling him that he must keep his chin up, Eaker sensed the psychological need of the man who could not think of his magazine at the moment, and proceeded to take over Findley's responsibilities on the publication, with brilliant results.

Eaker has been fortunate in retaining the life-long friendship and confidence of Arnold and Spaatz, but he has not ridden to the top clinging to their coattails. On the contrary, Arnold and Spaatz admit that Eaker has carried more than his share of the load all the way. Both pronounce him the kind of blocking back that ball carriers dream about.

He worked to inject more democracy into the AAF. He would have abolished saluting, authorized identical uniforms for officers and enlisted men, except for insignia of rank; introduced two-way efficiency reports, with subordinates reporting on superiors as well as vice versa.

He hammered on four cardinal points for future national security: (1) To entice the best men into our State Department and strive to negotiate international differences so that the soldier will never have to take up the burden. (2) Create an intelligence service that will keep us informed of what is going on in every corner of the world. (3) Retain our military power in being, ready for instant action. (4) Lay all possible emphasis on scientific preeminence.

Married twice, he lives now at Fort Myer, Va., with his wife Ruth, whose picture has appeared with ample justification on the Beauty of the Week page of a Washington paper. They have no children, but their life together will never be empty. A man like Eaker will find some new world to conquer and the smart money will be against the new world. No doubt he already has the course charted in accordance with his dictum: "Most people lack a plan. That's why the fellow with a plan is hard to beat."

He ought to know.

The President Pro Tempore of the Senate

EXTENSION OF REMARKS

OF

HON. HARRY FLOOD BYRD

OF VIRGINIA

IN THE SENATE OF THE UNITED STATES

Monday, May 26 (legislative day of Monday, April 21), 1947

Mr. BYRD. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a very apt article written by Gould Lincoln, dealing with the distinguished President pro tempore of the Senate, published in the Washington Star of yesterday.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE GAVEL OF THE SENATE IS IN EFFICIENT HANDS—VANDENBERG PERFORMS EXPERTLY IN ROLE HE WANTED—VETERAN ATTACHÉS SAY HIS RECORD ONE OF THE BEST

(By Gould Lincoln)

Riding herd on the fractious Members of the United States Senate, each of whom believes he enjoys almost regal prerogatives within that august Chamber, is a full-time job.

For nearly 5 months Senator ARTHUR H. VANDENBERG, of Michigan, has been the Senate's Presiding Officer. Elected President pro tempore at the opening of the present session, he has a remarkable record. Not one of his decisions on a parliamentary question has been challenged by an "appeal from the decision of the Chair."

By his fairness to Democrats and Republicans alike (he is a Republican), he has gained the confidence of the entire body. By his tact, his thorough knowledge of the rules and of parliamentary procedure, he has been able to speed the business of the Senate.

FILLS ROLE OF VICE PRESIDENT

In fact, to observers and to older employees of the Senate, Mr. VANDENBERG stands out as the Senate's ablest Presiding Officer in two-score years.

Under the terms of the Constitution of the United States the Vice President is "President of the Senate." Then, that document continues: "The Senate shall choose their other officers, and also a President pro tempore, in the absence of the Vice President, or when he (the Vice President) shall exercise the office of the President of the United States." Since Harry Truman, elected Vice President in 1944, is now "exercising the office of President of the United States," Senator VANDENBERG is, so far as the Senate is concerned, doing everything that a Vice President can do—and he receives the pay of Vice President, the office room of the Vice President, and the automobile provided for the Vice President.

The Michigan Senator is entitled to all he receives in the way of emolument. For the job of presiding over the Senate is an added burden for the already overworked chairman of the Senate Foreign Relations Committee. Mr. VANDENBERG, however, is a glutton for work and thoroughly enjoys presiding in the Senate, even though it demands long hours.

MANY JURISDICTIONAL MATTERS

The task of presiding in the Senate was immensely increased in scope at the opening of the present Congress because of the new Reorganization Act—the La Follette-Monroney Act which reduced the number of standing committees of the Senate to 15 (there had been 33) and which changed the rules of the Senate in other respects.

It left Mr. VANDENBERG much in the position of a presiding judge who suddenly finds the precedents and the laws changed over night. He has been compelled to institute

a whole new series of precedents by his decisions, and by his interpretations of the changed rules. By the Reorganization Act, the jurisdiction of the Senate standing committees—the subjects which they are directed to handle—was greatly changed.

"Jurisdictional strikes" by labor unions pale into insignificance when it comes to jurisdictional disputes between chairmen of Senate standing committees. The President pro tempore of the Senate has had to devote much study to these jurisdictional troubles. Indeed, Mr. VANDENBERG has had to study hard at night on the jurisdictional cases coming up the next day. Each Senate chairman is jealous of the prerogatives of his own committee.

HIS MERGER RULING STUCK

Take, for example, the case of the Army-Navy merger bill. Under the reorganization terms, the Committee on Expenditures in the Executive Departments is directed to have charge of all "reorganizations" in the departments. At the same time the act provides that the Armed Services Committee (the new combined Committee on Military and Naval Affairs) shall have jurisdiction over legislation having to do with the "common defense generally" and with matters relating to the Army and the Navy.

Senator AIKEN, Republican, of Vermont, chairman of the Committee on Expenditures in the Executive Departments, put in a claim for the so-called merger bill as soon as it was introduced. He put it in writing. In the House the same bill was referred to the corresponding Committee on Expenditures in the Executive Departments. Senator GURNEY, Republican, of South Dakota, chairman of the Armed Services Committee, demanded that the bill go to his committee.

So the issue was joined. Mr. VANDENBERG wrote a clear and succinct decision in the case, giving the bill to the Armed Services Committee. He pointed out that under the language of the Reorganization Act, the bill could have been sent to either of the two committees. However, he held that, since in the last Congress the question of a merger of the War and Navy Departments had been considered by the Military Affairs Committee—and by the Naval Affairs Committee—it would be entirely fitting to send the measure to the Armed Services Committee. Also, he held that the subject matter was one with which the Armed Services Committee must necessarily be engaged, if it was to care for the national defense.

MEETS THE QUALIFICATIONS

Although Mr. VANDENBERG, in his opinion, invited the Senate to decide the matter itself, there was no appeal from his decision. Another example of jurisdictional mix-up over a major piece of legislation involved the bill to establish a Missouri Valley Authority, patterned after the Tennessee Valley Authority. In this case three committees, Agriculture, Public Lands, and Public Works, all might have properly claimed jurisdiction. Under the Vandenberg ruling, the Committee on Public Works got the bill. Here again, there was no appeal.

There are two—perhaps three—rules that must govern a Presiding Officer of the Senate if he is to be a success. The first is to obtain the confidence of all Senators, whether of the majority or minority party; that the rulings made by the Presiding Officer will be fair and free from partisan bias. Second, the Presiding Officer must be fast with his decisions. Any faltering, any apparent unsureness on the part of a Presiding Officer, and the Senate is off to the fair, with a bad hour or two ahead of the Chair. And third, a Presiding Officer must be able to preserve order in the Chamber, largely through his own sureness and personal authority.

Mr. VANDENBERG possesses all three of these qualifications. He has the confidence of Senator BARKLEY, of Kentucky, minority floor leader of the Democrats, and even of the Republican mavericks, like WAYNE MORSE, of Oregon. Second, by never hesitating, he gives the impression always that he knows the rules, that he knows what he is talking about. He never decides in favor of the majority party merely because he belongs to that party.

FILLED IN FOR DAWES

When it comes to keeping order, Mr. VANDENBERG is an excellent performer. He rarely wields the gavel. His "Senators, will you please be seated," uttered in his far-reaching voice, is enough to bring order in itself.

Mr. VANDENBERG'S earliest experience in presiding over a Senate session came just 20 minutes after he had taken the oath as Senator, at the opening of his first term of service in 1928. Former Vice President Charles G. Dawes, who was in the chair as President of the Senate, called the newcomer from Michigan to substitute for him. Mr. VANDENBERG, it happened, had often been in Washington while a newspaper publisher in Grand Rapids and as a friend of the late Senator William Alden Smith. He knew many of the older Senators, and in a good natured way, they started to give him a going-over. He acquitted himself well.

REED GOT QUICK REVENGE

Presidents and Presidents pro tempore of the Senate during the last 40 years have been many and varied. Vice President Dawes immediately after he was sworn in in March 1925 proceeded to give the Senate a lecture. The burden of his song was that, while it was a great thing to have free and open discussion, no Senator should be allowed by his single objection or long-windedness to hamstring and prevent the enactment of important legislation, including the necessary appropriation bills.

As that is one of the powers which Senators jealously guard, never knowing when they may wish to exercise it—or to join with others in a filibuster—feelings were considerably ruffled by the speech of the new Vice President. Especially caustic was the late Senator "Jim" Reed, Democrat, of Missouri, who had been one of the bitter-enders in the fight to prevent the ratification of the League of Nations Covenant a few years earlier. Mr. Reed found almost immediately an opportunity to get back at Dawes, through some flaw in the swearing in of the newly elected Senators—a proceeding which Mr. Dawes had rushed through.

VICE PRESIDENT NAPPING

It was Mr. Dawes, too, who had perhaps the most embarrassing experience ever to befall a Presiding Officer of the Senate. It, too, occurred soon after he had become Vice President. The then President Calvin Coolidge had sent to the Senate the appointment of Charles Beecher Warren, of Michigan, to be Attorney General in his Cabinet. Mr. Warren, who had long been prominent in Republican politics, was the object of a bitter attack by Democratic Senators and by several of the so-called Progressive Republican Senators of those days.

A Vice President can vote in the Senate only to break a tie. When the vote came on Mr. Warren's nomination, it stood 40 to 40—with Mr. Dawes napping at his hotel. He was summoned hastily by Senate attachés, but did not reach the Senate until after the voting was over. Warren's nomination was defeated as the result of a tie vote.

Veterans of the Senate say that Mr. Dawes, before leaving the Senate that afternoon, had been assured by both the Republican leader, the late Charles Curtis, of Kansas, and by the Democratic leader, the late "Joe" Robinson, of Arkansas, that there was no chance of reaching a vote on the Warren appointment before the adjournment hour and it was safe for him to be away. As happens sometimes in the Senate, debate stopped suddenly, and there was nothing left to do but call the roll. This unfortunate experience—which prevented the confirmation of President Coolidge's appointee for Attorney General—coming right on the heels almost of Mr. Dawes' lecture to Senators, was rolled over senatorial tongues with considerable glee.

COOLIDGE HAD TROUBLE

Vice President Marshall, who served 8 years as President of the Senate in the administration of Woodrow Wilson, had a dry humor which helped him over difficult situations. He was a strong partisan, however, and he ruled with the Democratic majority whenever a question arose, and his rulings were in some cases contradicting. It was Marshall who commented, while he was Vice President, that what the country really needed was "a good 5-cent cigar." When he was finally retiring from office, in his farewell address to the Senate, Mr. Marshall described himself as "the greatest listener since the Sphinx sat himself down in the Libyan Desert." He had 8 years of presiding over the Senate.

Calvin Coolidge served as Vice President and President of the Senate for the best part of 2 years and when President Harding died, moved to the White House. Mr. Coolidge had been Governor of Massachusetts and a member of the Massachusetts Legislature. He was not, however, an apt Presiding Officer for the Senate. His slowness to speak—which clung to him almost always—got him into hot water frequently. He could have settled an issue of procedure without difficulty by making a quick decision—but he allowed things to run along. The late Senator Pat Harrison, Democrat, of Mississippi, a great wag, used to take delight in giving the slow-spoken Yankee a tough time by raising all kind of parliamentary questions and demanding that Mr. Coolidge rule on them.

WALLACE WAS IN AND OUT

Henry A. Wallace, as Vice President in Franklin D. Roosevelt's third term, had his dose of presiding over the Senate. He took the job seriously and studied up on parliamentary procedure. However, he spent a great deal of time away from the Senate, presiding over or sitting as a member in several war agencies to which President Roosevelt had assigned him. A 100 percent New Dealer, Mr. Wallace's rulings did not overlook the progressive side. "Jack" Garner, of Texas, Vice President during Roosevelt's first two terms, was a conservative Democrat. But he was a Democrat first and last, as President of the Senate. Having been Speaker of the House before he was Vice President, he tried to run the Senate to the House rules, and, of course, failed.

Charles Curtis, Vice President with President Herbert Hoover, had long experience in the Senate before he became its President. He knew the rules and parliamentary procedure and was a great "gaveler"—pounding away in an effort to get order.

Mr. VANDENBERG demanded the office of President pro tempore of the Senate as well as that of chairman of the Senate Foreign Relations Committee. There were protests from a few of the Republican Senators at the opening of the session that this was too much honor for one man, and that he should settle for one of the two jobs. He was determined, however, and got his way. There was precedent for this. The late Senator Key Pitman of Nevada had been both chairman of the Foreign Relations Committee and President pro tempore.

One of the problems which Mr. VANDENBERG may have to rule on some day is whether a majority vote or a two-thirds vote will be required to bar Senator-elect BILBO, Democrat, of Mississippi, if and when Mr. BILBO presents himself. Mr. VANDENBERG has already decided this question—but he is not making any announcement of his decision now.

Hirohito Virtually Deposed—Emperor Now a Figurehead

EXTENSION OF REMARKS
OF
HON. GEORGE H. BENDER
OF OHIO
IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 14, 1947

Mr. BENDER. Mr. Speaker, under leave granted me to extend my remarks in the RECORD, I wish to include herein an article by Mr. Ralph J. Donaldson, of the Cleveland Plain Dealer:

HIROHITO VIRTUALLY DEPOSED—EMPEROR NOW A FIGUREHEAD

(Article 6)

When Japan surrendered unconditionally on August 14, 1945, General of the Army Douglas MacArthur, as supreme commander for the Allied Powers, was given full authority to determine the future status of Emperor Hirohito. It can now be revealed that the original plans for the occupation were based on the assumption that Hirohito would be deposed.

However, after MacArthur had conferred with the Japanese surrender emissaries in Manila, he became convinced that problems of the occupation would be greatly simplified if Hirohito retained his throne, at least until the occupation forces were firmly established in Japan. The Emperor was represented as being willing to issue any orders required by the supreme commander to implement the surrender. This insured full acceptance of the surrender terms by the Japanese Army commanders and precluded any last ditch stand or suicide attack.

DOCILELY OBEYS

There was no deal made between MacArthur and the Japanese Government that guaranteed Hirohito any imperial prerogatives. In fact, it was stated explicitly that his authority to rule would be subject to the decision of the supreme commander. But it was obvious to all concerned that the Emperor's tenure in office depended on his good behavior. And he has in fact docilely obeyed every directive and suggestion of the occupation authorities.

There has been some criticism, particularly among leftists, because General MacArthur has allowed Hirohito to retain his throne. What these critics overlook, however, is that the Emperor already has been virtually deposed. He has been shorn of all his power, he has renounced the myth of his divinity and most of his wealth has been confiscated. Today he is a mere figurehead.

Japan's new constitution, which goes into effect May 3, relegates the Emperor to this position. It provides that he shall be the symbol of the state, deriving his position from the sovereign will of the people, that all of his acts in matters of state shall be subject to the approval of the Cabinet, and that he shall never have powers related to government.

There is an interesting story behind the drafting of this constitution. MacArthur ordered the Japanese Government to prepare such a document for submission to a vote of the people. But the government fumbled and stalled. The mental attitude of reverence toward the Emperor was so deeply instilled that no member of the Cabinet dared put down on paper any language which would deprive the Emperor of power.

Moroever, the Japanese were so accustomed to the practices of dictatorship, that whenever they drafted a phrase granting some right, they invariably qualified it by adding, "except as otherwise provided by law."

MAC ARTHUR WROTE ORIGINAL?

MacArthur finally became impatient. It is commonly supposed in Tokyo that he himself wrote the original draft of the constitution. The Emperor and the Cabinet promptly approved it. Then it went to the Diet, where 23 amendments were made, 1 section was deleted, and 4 were added. The final draft, which was approved by the voters, contains what is probably the most explicit and comprehensive statement of individual rights and liberties ever made in a similar document. It is far more advanced and up to date in this respect than our own Bill of Rights.

The 85-percent capital levy tax will strip the Emperor of most of his wealth. It is estimated this will leave him with only 3,000,000 to 4,000,000 yen. This would amount to approximately $266,000 under the artificial exchange rate of 15 yen to the dollar,[1] but only $40,000 if computed on the basis of the real value of the yen, which is about 100 to the dollar. In addition, he will be allowed to keep his clothes, art objects, books, and laboratory.

Hirohito himself renounced the myth of his divinity when he told his people in a radio address that the ties between them "are not predicated on the false conception that the Emperor is divine and that the Japanese people are superior to other races and fated to rule the world."

Address of Mr. Ramsey S. Black, State Treasurer of Pennsylvania

EXTENSION OF REMARKS
OF
HON. GEORGE A. SMATHERS
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES

Friday, May 23, 1947

Mr. SMATHERS. Mr. Speaker, I recently attended a meeting of the Democratic committee of Bucks County, Pa. I was surprised and impressed by the enthusiasm and size of the meeting. The chairman of the committee is a young man 31 years old named John T. Welsh. He is not only giving to that organization an outstanding job of leadership but is infusing it with enthusiasm and energy.

Mr. Ramsey S. Black, the State treasurer of Pennsylvania, delivered a speech on this occasion which I introduce into the RECORD:

My fellow Democrats, in the past few months we have witnessed an amazing—in fact almost unprecedented—reversal of public opinion.

Last November the Democratic Party was soundly beaten, all over the country. Only a few candidates survived the Republican landslide, most of them in traditional Democratic strongholds.

The size of the vote left no doubt that the people were dissatisfied. No candidate's personal popularity, no campaign strategy, no amount of political organization, could have changed the result.

The people wanted a change, and they got it. Election day of last year was low tide for the Democratic Party. Both the straw polls and the actual ballots demonstrated that it was weaker than it has ever been in the last 20 years.

Today, less than 6 months later, we are witnessing a revival, a resurgence, a rebirth of Democratic strength. Every index shows it, every straw poll confirms it. Steadily, month by month Democratic popularity is rising. From a low of 45 percent last fall, it has risen so rapidly in these few months that today it shows the majority of the American people again behind it.

Interpreters have attempted to find reasons for this rapid reversal of sentiment. Some of them attribute it to the position the President has taken on current issues. Some of them blame the confusion and demoralization of the Republican majorities in Congress. Every political analyst, every commentator, every columnist, has his own explanation.

This failure to identify the basic reasons for the trend back to the Democratic Party is significant. The lack of any clear and easily identified reason for the change dramatizes the most important fact of all—the fact that there was no deep-seated or basic reason behind the American people's sudden reversal of their party allegiance in the first place.

The trend to the Republican Party was not a movement, not a political development based upon changes in basic beliefs.

It was a stampede.

The reasons for it are fairly clear. America was just emerging from a great war. It had lost a great leader, and it had not yet assured itself of the stature of his successor. It was weary of war, tired of sacrifice and hardship, impatient of restraints and controls, starved for automobiles and electric refrigerators. War savings were burning a hole in its pockets, and the spending frenzy was reflected in an irresistible pressure to break down price controls. Yet the same people who smashed the anti-inflation line bitterly resented the strike wave that resulted. Many people looked upon the fight to raise prices as a crusade for free enterprise; at the same time they viewed the corresponding battle for higher wages as subversive, radical, Communist-inspired, un-American.

The shortages which were the end result of years of war production could not be remedied overnight, but the party in power had to take the political consequences. The Republican leadership, as we all remember, crystallized the public irritations in a simple slogan—"Had enough?" It appealed to those who wanted consumer goods at any price. It appealed equally to those who were already feeling the pinch of inflation. It appealed to the profiteers and black marketers, and it appealed to their customers as well. Even the workers, suffering from production cut-backs and industry's sit-down strikes against controls, felt that "a little inflation" might prime the pump for renewed high-level production.

The result was an extremely confused "mandate" to the Republican Party. The various Republican factions are still fighting about it, with the consequence that its congressional majority is paralyzed and its achievements to date have been microscopic.

Yet there was a mandate. The people wanted, and still want, more meat, more building materials, more automobiles, more of everything that they had to sacrifice during the war. The people wanted industrial strife ended, so that maximum production might bring them the goods and materials they needed. It is a reasonable assumption also that they wanted these articles at prices they could afford to pay.

It would be unreasonable to assume, however—as so many Old Guard conservatives immediately did assume—that the people who had overwhelmingly elected Franklin D. Roosevelt four times suddenly desired to sweep aside the reforms of the Roosevelt era.

It seems clear that they wanted production bottlenecks broken and strikes ended, and in their impatience and irritation turned the job over to the Republican Party when their Democratic administration did not seem to

[1] The official exchange rate has since been made 50 yen to the dollar.

be moving fast enough. There is no evidence that they intended either repudiation of the Roosevelt program or a punitive invasion of the hard-won rights of labor.

The straw polls now indicate that they have reconsidered their decision, made in irritation and impatience, to put their second team into the game. They have found that a confused and divided Republican leadership, lacking a program or even an agreement upon fundamental principles, has been a handicap rather than a stimulus to reconversion. They have seen for themselves that the Republicans, like the Democrats, have no magic formula to satisfy, overnight, a demand for automobiles and bathtubs that has been developing for 5 years.

As Democrats, we took the view that our National administration should be supported to the limit in its difficult task of guiding us safely through the immediate postwar era. The electorate, instead, has given the Republican Party the responsibility for shaping national policy. The Truman administration has been left with no responsibility except that of administering the policies prescribed by the Republican majority in Congress. This places the burden squarely upon the Republican leadership. It can no longer blame Roosevelt. It can no longer blame Truman. It must justify itself by positive, constructive action. For years it sat comfortably on the sidelines, criticizing, complaining, blockading. Now it must act. It must prove to the American people that it has principles and policies worthy of public support, capable of meeting the needs of the times.

Normally, the responsibility of leadership would not have been entrusted to it, if at all, before the next Presidential election. Instead, to its own surprise, that task has been thrust upon it prematurely. As a result, it is not safely entrenched behind a 4-year mandate, secure in control of the Presidency as well as the Congress. Instead it must give a preview performance. It must demonstrate, in these 2 years, that it is capable of handling the job. If it fails, its prospects for 1948 fail too.

The signs of that failure are evident even now. It is reflected in the rising popularity of the Truman administration. It is shown in the public dissatisfaction with the fumblings of Congress. It is implicit in Republican National Chairman Reece's desperate appeal for party unity.

Republican victory next year is no longer viewed as a foregone conclusion. Many experienced observers are gradually adopting the view, instead, that it is a forlorn hope. Possibly it is too early to judge. The Republican high command may yet develop, and demonstrate, unsuspected qualities of real leadership. It may, under pressure of urgent and compelling necessity, even emerge with a program, and possibly an agreement upon a few basic principles. But it is no longer leading an irresistible movement; it is no longer secure in public confidence and support. The honeymoon is over.

There are sound reasons for this sudden reversal of public sentiment. The public quickly realized that the Republican Party was a dead-end street. Progress passed it by long ago, yet its leadership still dreams of the good old days, the days of high tariffs, the days before labor unions, the days of isolationism. In an atomic age, the Republican leadership still puts its trust in the cavalry charge and the drawn saber. Rising young leaders within the party have fought against this inertia, but one by one they have been cast out by the dominant old guard.

Ironically, it becomes more evident every day that the one thing which assures a Democratic victory in 1948 is the Republican victory of 1946.

Yet the Democratic Party cannot sit back and wait for the people to throw out the Republicans next year, as they threw out the Democrats last year. The Democratic Party does not win its battles by default. It wins on its positive, constructive measures for the public welfare. Today, when the United States is waging a battle for the peace of the world, it has a solemn responsibility. It is the spokesman for the ideals of Thomas Jefferson and Andrew Jackson. It represents the America of Woodrow Wilson and Franklin D. Roosevelt. In a world where democracy is, in truth, the last, best hope of the world, it is the champion of the people. In or out of office, it bears that responsibility, in State and Nation, in borough and township, in city and county.

All of us, as Democrats, have a duty to organize for victory. We may find it there for the grasping, as a result of Republican failure, but we must be prepared and ready to grasp it. We know that Pennsylvania, basically, is Democratic ground. Its traditional Republicanism was not the result of Republican strength, but of Democratic weakness, a lack of organization capable of translating public sentiment into Democratic votes on election day. We have seen the myth of Republican impregnability exploded time after time, in election after election, when our people were aroused and conscious of the issues. The sentiment is there, but it must be marshaled and organized into effective voting strength. Otherwise, we lose by default.

The test of our basic strength will come this fall, when the major issues of national policy will be subordinated to the local problems of our municipal campaigns. We should be thinking now, and working now, to make those local campaigns successful. We should be preparing now to demonstrate, when fall comes, that the Democratic Party is alert, alive, aggressive, ready, and able to translate public sentiment into victory at the polls. In the old days, a Democratic vote was a vote of protest, a wasted vote for candidates who could not win. That day is over. There is hardly a community in Pennsylvania that has not been carried by the Democratic Party at some time in recent years. There is hardly a community that could not be carried again. But the groundwork must be done now. If we are to have a triumphant Democratic Party next year, we must have a vigorous, courageous, active Democratic Party contesting every office in this year's local elections.

Last year the Republican leadership, for a brief moment, captured the allegiance of the American people. The very brevity of that departure, even though its extent made possible an overwhelming Republican victory, is proof of the enduring nature of the Democratic Party's strength. It is proof that the next election can be as much of a Democratic landslide as the last was a Republican landslide. It's our job, by work, by organization, by carrying the issues to the people, to make that possibility an actuality. The opportunity is there. We have only to grasp it.

Interior Department Appropriations

EXTENSION OF REMARKS

OF

HON. WARREN G. MAGNUSON

OF WASHINGTON

IN THE SENATE OF THE UNITED STATES

Monday, May 26 (legislative day of Monday, April 21), 1947

Mr. MAGNUSON. Mr. President, I appeared this morning before the subcommittee of the Senate Committee on Appropriations considering the Interior Department appropriation bill, and spoke regarding reclamation and western projects. I ask unanimous consent that my statement be printed in the Appendix of the RECORD.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT BEFORE SENATE SUBCOMMITTEE ON INTERIOR APPROPRIATIONS OF HON. WARREN G. MAGNUSON, OF WASHINGTON

I appear before this committee today realizing full well the heavy responsibility you carry in finding some means of reducing Federal expenditures in line with the declared policy of the Senate. It certainly is no easy task to pare appropriations and at the same time avoid crippling programs and services vital to the welfare of the Nation.

I appear here today to urge upon you full restoration of certain funds cut by the House in the Department of the Interior budget. I will speak directly to specific items in that budget later in my remarks.

The fact that I concentrate on a few specific items does not indicate in any way that by silence I approve the cuts made by the House in comparable items in other States or in other parts of the Department budget.

First, may I make a few general observations. It has been asserted by some witnesses appearing before your committee that the cuts made by the House were not motivated by any East-West competition for industrial development, nor by any political considerations, nor as the result of pressures exerted upon the House committee and the Congress by the private power interests. I sincerely hope this is true—because, considered on the merits alone, considered on a purely economic and social basis, I am convinced this committee will reach a conclusion satisfactory to the Nation as a whole, and that your conclusion will be restoration of the funds cut by the House, particularly in the Bureau of Reclamation.

BUREAU OF RECLAMATION

The House administered a 40-percent cut in the funds requested by the Bureau of Reclamation for construction of projects in the West. In round numbers, the Bureau requested $175,000,000 of new funds; the House cut this to $105,000,000.

I gather the distinct impression from perusal of the House hearings, from the debate on the floor of the House, and from conversation with certain House Members, that the House committee intended to give the Bureau approximately $141,000,000 unencumbered funds for its 1948 program. On the floor about $5,000,000 was added. Because of the confusion, however, over unexpended and unobligated funds, the House actually provided only $105,000,000—$70,000,000 less than the budget request and $41,000,000 less than the House apparently thought it was providing.

Because this distinction between unexpended and unobligated funds is so important, I wish to dwell on the point for a moment.

The House adopted the attitude that, because a substantial part of the 1947 appropriation would be spent in 1948, the budget request for 1948 could logically be reduced by an amount equal to this expenditure. This, of course, is fallacious reasoning. It is always true of big construction jobs such as the Columbia Basin that obligations for materials and services created in the year 1947, for example, are actually spent in part in 1948, some in 1949, and perhaps even some in 1950. In this respect, Columbia Basin is like any going business concern. A going business is not able to close out all of its accounts receivable, accounts payable, and inventories on January 1. Accounts payable created in 1946 for merchandise to be delivered in 1947 represent a contractual obligation which the company must meet, and

to the extent of such obligations its funds are not available for new enterprises or activities. The mere fact that there will be an unexpended balance in the Bonneville and Coulee appropriations on July 1 does not mean that these funds are available to the Bureau of Reclamation or Bonneville Power Administration for new construction, purchase of equipment, or services. If the work on these projects is to go forward in a smooth and economic manner, the Congress must provide the appropriations sufficiently far in advance of the date the equipment is to be delivered, services are to be performed, and contracts are to be let to permit the agency in charge to carry forward on a planned basis. To do otherwise is to deny the agency in charge the opportunity to perform the efficient job we would expect of a going business concern. I am sure the committee realizes the fallacy in the House reasoning in this regard.

To summarize my testimony on this point: The House thought it was making $146,000,000 of unencumbered funds available to the Bureau for construction purposes in 1948. Because of the confusion over unexpended and unobligated balances, however, it actually provided only $105,000,000. To carry out the apparent intent of the House, therefore, inadequate as it is, your committee must raise the Bureau's over-all appropriation $41,000,000.

RATE OF PROGRESS ON RIVER PROJECTS

I would like now to discuss briefly the rate at which we, as a Nation, should proceed in reclaiming the lands and harnessing the rivers of the West. I regret, Mr. Chairman, that I haven't been able to attend all of these hearings personally—as I think them among the most important that will be held this session. I have adopted the next best alternative, however—having a member of my staff sit in for me From time to time throughout the hearings, the question of rate of progress has been raised.

I understand that on Wednesday this question received considerable attention, and that the chairman, referring to a wall chart, pointed out that up to 1934 approximately $200,000,000 had been spent by the Federal Government on western reclamation projects, whereas between 1934 and 1947 this was increased to about $1,000,000,000. The chairman and members of the committee were rightfully proud of this outstanding progress. I'm sure the committee will not accuse me of bringing politics into this discussion if I point out that this does represent an outstanding achievement—of the present minority in the Congress—ably assisted, of course, by the present majority.

Speaking specifically to the rate of progress—I think we can proceed too slowly with the construction of these western developments, just as we could proceed too fast. The great danger, however, is on the side of proceeding too slowly. Once a project is authorized by the Congress and construction begins, it is false economy to delay completion provided men, machines, and materials are available to do the work. It is false economy, first, because interest on the funds invested continues to accrue and must be paid by the Federal Government; second, repayment to the Federal Treasury of principal and interest is delayed; third, income to users of water and power is lost; fourth, the market for consumer and capital goods created by this income is not provided; and fifth, the additional taxes on the wealth created are lost to local, State, and Federal governments. In addition, there are hidden losses sustained on the jobs themselves through deterioration of work in progress and the loss of momentum if it becomes necessary, through inadequate appropriations, to slow down contractors or to cancel contracts entirely.

There is an optimum rate at which projects under construction should be carried forward. It seems to me that this committee must rely heavily upon the expert testimony of the Bureau of Reclamation in determining what that optimum rate is. These men know construction work, they know the sectional needs for power and water, and they are—and I think this important for us to remember—they are a part of the same Government of the United States in which you and I as Senators are privileged to serve.

Now, as to new projects authorized by the Congress but not yet under construction: In my mind these projects fall into two categories—those which are an integral part of a development already constructed or under construction and upon which the latter are immediately dependent for the realization of their full potential, and those which though a part of a broad-gage development are not immediately required to supplement existing works.

In the first category, I would place the Hungry Horse Dam in Montana. Immediate construction of that dam is essential not only to meet power demands in Montana but also to increase firm power at Grand Coulee and Bonneville dams. Here again, I think the committee must rely heavily upon experts in the Bureau of Reclamation, the Bonneville Power Administration, and experts it may employ, to get reliable answers to the question: "Is this power needed now?" and "Is this the best way to meet that need?" My own strong conviction is that the need for power in the Northwest is critical, that the Bureau's program, including construction of transmission lines and substations, is the best way to get it, and that the need must be met on schedule.

PAY-OUT PERIOD—FEASIBILITY OF PROJECTS

Many times during the course of your hearings the question has been raised: Shouldn't we postpone these projects because of the increase in construction costs which has occurred since 1940? To my mind the answer to this question is to be found in the answer to another question, namely: Even with these additional construction costs is the project still feasible? In other words, will the investment of the Federal Government be returned to the Federal Treasury by water and power users? To the best of my knowledge, present power rates charged by the Bonneville Power Administration and the payments allocated to water users will amortize the entire investment by the year 2017 and in addition will create a surplus of approximately $70,000,000—taking into account increased costs. This then should be the controlling factor in any question of postponing construction and installation of facilities.

The pay-out period on these projects extends over a span of 50 years. Some of those years will undoubtedly be lean, but it's the average level of prosperity that determines the final answer to financial feasibility.

Apropos of this argument, I think the committee and the Congress can obtain some useful comparisons by examining what businessmen in the Nation are doing by way of investment during this period of high prices. Business, like Government, must consider the financial feasibility of the projects it undertakes. May I give you a few figures which indicate that business is not postponing sound investments because of present costs. I can assure the committee that the figures I now quote are thoroughly reliable because they were cited in hearings on the tax bill by the distinguished chairman of the Senate Finance Committee—the gentleman from Colorado [Mr. MILLIKIN]. In 1938, earnings plowed back by businessmen totaled $11,000,000,000; in 1941, $19,000,000,000; in 1945, $9,100,000,000; but in 1946, $32,100,000,000. I do not know how much of this staggering total was invested in capital goods and construction, but certainly a substantial portion of it. The point is, this committee will not be too severely criticized if it follows that lead by investing adequate appropriations in western self-liquidating and wealth-creating projects.

FORCE ACCOUNT

Just a few words about funds for force account. Numerous witnesses have testified to the imperative nature of such funds. I merely wish to express the hope that this committee will remove the shackles placed upon the Bureau of Reclamation and upon Bonneville Power Administration by the House when it wrote into the bill prohibition against the use of funds for this purpose.

TRANSFER OF PROJECT APPROPRIATIONS FROM THE RECLAMATION TO THE GENERAL FUND

The House transferred the appropriations for numerous projects from the general to the reclamation fund. Your committee has already heard ample testimony on this point. I simply want to remind you again that there are not sufficient moneys in the reclamation fund to meet the obligations against it created by this appropriation bill—particularly will this be true in the light of the restorations which I'm sure this committee will insist upon making.

The West asks no preferential treatment in requesting that Federal investments be made in projects which create new wealth and pay their bills in full.

Recent analysis shows how much Federal public power is expanding the Nation's taxable wealth. For instance, power development on the Columbia River not only is paying its own way and subsidizing irrigation through power revenues, but already it had resulted in contributions in taxes in excess of the total power investment of $280,000,000 by the end of 1946.

Turn to water resources, and our history shows that the Federal Government has invested some $5,500,000,000 in projects across the Nation. Approximately 4,000,000,000 of this amount was invested in the States east of the Mississippi River, without interest and without obligation for repayment.

Western States have received about $1,500,000,000 in like funds, about one billion of which must be fully repaid, a substantial part of that with interest.

Definite time schedules have been set up on authorized projects. It is imperative that they be adhered to, unless investment is to be written off as waste.

The action of the administration in placing a freeze order on reclamation funds appropriated for the current fiscal year undoubtedly raised questions in the minds of members of the Appropriations Committee both in the House and Senate.

It could logically be asked whether this was not clear indication that more money had been approved for the work than it was necessary to spend. Your committee has gone into this exhaustively, as I think it properly should.

In consequence, two facts should be eminently clear. Insofar as the unobligated balance in the Reclamation Bureau's construction fund is concerned—and I am now speaking as it affects the State of Washington—the total unobligated balance is $1,084,000, as shown by the estimates at this time.

Secondly, it should be kept in mind that we now are confronted with the necessity of adequate appropriation for the fiscal year ahead. Any question whether administrative action will interrupt these calculations must have been aswered to your satisfaction by the Chief Executive. I refer to the letter from the President to the chairman of this subcommittee, giving assurance that there

would be no necessity for imposing restrictions on funds for reclamation projects during the fiscal year ahead.

Failure to appropriate funds sufficient to meet the minimum schedules means that the time lost in bringing projects into production cannot be recovered. Work which has been started, such as on canals in the Columbia Basin, must be continued to avoid deterioration. Should men and the heavy equipment committed to those projects be dispersed, they can be reassembled only at additional cost. Meanwhile, the products which would have been produced are lost, and the taxable wealth in the period of delay is lost.

I assume that the members of this committee know that we have a power shortage in the Pacific Northwest. The effect on industry already is manifest.

I believe there is no question but that industry fully realizes the implications, and an expression to that effect recently was attributed to Mr. Earl Bunting, president of the National Association of Manufacturers, who was quoted in one of our newspapers as stating there should be restoration of the drastic cuts in Bonneville and Grand Coulee power projects. Mr. Bunting was quoted as stating that, since Government financing of power plants has shut off development of similar projects by private enterprise, the least the Government now can do is to see that they are completed. He went on to say, and I quote, "While the National Association of Manufacturers is clamoring for economy in Government expenditures, we believe that best can be accomplished by cutting down on spending for things that have gone forever. We are not opposing funds for such things as these dams."

I do not believe it is lost upon responsible newspapers either. Somewhat apart from the NAM statement, but driving directly toward the same objective, was an editorial of recent date in a Seattle daily newspaper pointing out that shortly before it had quoted a publication called the Electrical World. The latter publication was quoted as suggesting that, if Congress starved Federal power developments, private power companies would then be in a good position to come forward and take over these operations.

The Seattle publication went on to cite a current issue of Public Utilities Fortnightly as giving an even more detailed explanation of current tactics. The public utilities paper had pointed out that the plan of the House provides that the functions of the Power Division of the Interior Department would be wiped out entirely, and added that objections were made that this was using an appropriations bill to make changes in legislative policy. The public utilities paper went on to say that House leadership justifies its tactics thus:

"Assuming that the economy cuts throw out certain bureaus or divisions, that is the only way the present popularly elected majority in Congress can enforce its will against a Presidential veto supported by a close division in the somewhat less popularly representative Senate. In other words, specific legislation to wipe out such bureaus or provisions, as the majority of Congress might view as unnecessary or unjustified, would get nowhere as long as it is faced with a White House veto. But the President cannot veto an appropriation bill."

The Seattle newspaper summed up by stating, "This doesn't require any diagrams to make the purpose clear. There is a word for the type of warfare that hides and skulks because it is afraid to risk coming out into the open. Its name is sabotage." The emphasis on the word sabotage was theirs. If there is any quarrel with this interpretation, it should be pointed out that they are inclined to speak in plain terms, not unconscious that public utility districts have some 57,000 users or connections.

Nor is western newspaper sentiment isolated. An editorial in the New York Times for May 11 expressed gratification that the Bonneville-Grand Coulee system has been a profitable investment. It said that whatever may happen elsewhere in the world, the Northwest and the Nation will rely on the Columbia River and its tributaries where a potential of some 25,000,000 kilowatts remains to be developed. "There is more gold in the water of the Columbia than there is in any of the hills of the far West."

I do not wish to dwell on any comparison between western and eastern investment, but I cannot neglect to remind you that the Federal investment in the northeastern section of the United States in war plants alone totaled more than $10,000,000,000.

Reverting once again to the West, I find it equally unnecessary to underline the significance of the Tacoma agreement expressing the mutual conviction of private enterprise and public power. You are fully familiar with that and the fact that we have come a long way in the West.

National security reasons in themselves would make it incumbent upon us to assure that there is at all times a sufficient power reserve to meet emergencies. There is no need to dwell on the situation at the time of Pearl Harbor, other than to say that without our reserve of power in the Northwest, the history of the war in the Pacific would have been far different. The planes, ships, plutonium, and other matériel made possible by that grid of hydroelectric power contributed to an extent which can never be fully assessed.

This committee has been advised that the proposed funds were carefully trimmed to the essence before the requests reached the Congress. There is no doubt in my mind that in exercising its vital responsibility in examining the requests, this committee will be fully cognizant of the impending effect of a 45-percent reduction on the immediate economy of the 17 Western States and the proportionately disastrous loss to the Nation in its long-range results.

This committee is interested in itemized expenditures. That is as it should be. In my remaining time, I wish to highlight some of these results as they affect one of those States; my State of Washington.

The Columbia Basin construction program is spread over a 9-year period. The project would take an additional 30 years under the rate imposed by the House reduction. It would be the longest extension of any project, in total years, with the single exception of the 32-unit program for the Missouri Basin, which affects the States of Montana, North and South Dakota, Nebraska, Kansas, and Wyoming.

The budget estimate for the project was $27,500,000. The amount approved by the House was $11,435,000. The reduction will bring the project to a halt. Hundreds of thousands of dollars will be completely wasted in expenditures for curtailing the work and making the necessary contractual adjustments. No irrigation water would be available and no new farms could be occupied by veteran-settlers for some 20 years. In addition, the reduced appropriations will delay the installation of generators at Grand Coulee Dam. Those generators are needed now to supply the existing market demand for power. Through delay, the Government will lose several millions of dollars in income from power revenues.

The estimate provided for planning work on seven projects in the State of Washington. The reduction in the item of general investigations would suspend all of these programs and would close the planning field office at Walla Walla. This would end the hopes of development of irrigated areas needed to balance the State's industrial growth and provide for an expanded population brought there by the war.

At Pullman, Wash., all of the pilot-plant activities of the Bureau of Mines would halt. Reduction in the experiment stations appropriation will reduce coal research at the Seattle experiment station to the small amount that can be done on $15,000 a year; an amount completely inadequate for research affecting the coal fields of the Pacific Northwest and Alaska.

We would be affected by funds insufficient to explore more than 25 of the 200 potential desposits of strategic metal ores now under consideration.

Extensive mapping programs in the Columbia and Missouri River basins would be curtailed to the point of ineffectiveness because of a cut of nearly 50 percent in geological survey.

In a period when more than 21,000,000 visitors are expected to visit the national parks, the park service would have one-half of the funds needed for trails and roads. It could not properly provide protection for parks and park monuments.

To withhold an item of $92,000 needed for determining the effect of impoundments on the salmon of the Columbia and Sacramento Rivers would endanger an industry with commercial value running into millions of dollars.

If the salmon are lost, there is grave danger that there may be no possible salvage from that destruction. I submit that this is a legacy that belongs to the Nation, and not to the State or region. This is one of the extractive industries we have leaned on so heavily in our Western progress.

Many sections of the Nation have exacted a tremendous toll from their extractive industries. We in the West have turned of necessity to these resources which are inexhaustible, and to the techniques necessary to develop them.

Reduction of $6,342,000 in funds for the Bonneville Power Administration would retard the construction program for 12 months at least, except for construction power for Federal dam sites.

This delay would hit homes, businesses, and industries on a wide area. Several millions of dollars already invested in equipment on order and planned for would remain dormant during the year which was to bring installation. This involves equipment for construction of major substations at Columbia, Snohomish, Chehalis, Olympia, Shelton, Port Angeles, and Cosmopolis, in the State of Washington.

The requirements of at least 30 priority and industrial customers could not be met because the funds were eliminated. This is in addition to substation equipment for some 10 preferred customers which could not be installed at all.

The time of the committee does not permit a more detailed accounting of the disruption in prospect under the terms of the curtailment of funds for the Department.

One section of our State proudly made payment—final and full payment—on a Federal loan that made possible the start of irrigation of 24,000 arid acres near Yakima. The project started 42 years ago and the final payment was made recently.

In little more than three decades that land produced an abundant crop worth $160,000,000, 44 times the amount of the loan for construction.

The West believes that is good business for all of the people of the Nation.

Since the committee is interested in specifics, I wish to conclude my statement by

enumerating specific appropriations for projects in the State of Washington which should be incorporated by your committee.

The figures I read to you now reflect the status of funds for Columbia Basin and Bonneville projects for 1947; the amount they spent last year, the amount provided by House action, the commitments under contract for 1948 and the amount which, in my judgment, the committee should restore.

The figures will also clarify some of the misunderstanding as to the availability of funds previously appropriated and carried over. (See estimates below.)

We believe the present request is justified as a business proposition. We shall be content if the committee views it solely in that light.

I have attempted to confine this to exact terms in the interests of brevity and your time. In conclusion, however, I wish to emphasize my conviction that we are dealing with more than an appropriation measure as such. By that, I mean that there is a broad issue at stake, and that it must be resolved by a determination of policy in shaping the economy of this Nation. I am impressed, as I think you must have been, by a letter written to Senator WHERRY by Dr. Wilson Compton, president of the State College of Washington, on May 15 of this year. He stated he is not in politics and that he has no financial interest in any public utility; that he is simply a university president with a background, as you know, of considerable business experience and a better-than-ordinary opportunity to appraise the regional and national significance of the West's reclamation development. I refer to him as an eminent American of whom we are proud. He put the issue in eloquent terms, and I wish to quote these words.

"You have been told," he wrote, "that the present power production on the Columbia River of about 1,500,000 kilowatts compares to the 3,000,000 kilowatts determined to be required by 1952 and about 25,000,000 kilowatts as the ultimate potential power, economically recoverable from the entire Columbia River system, a potential which, if realized, will eventually convert the Pacific Northwest into a gateway to the Orient comparable to our Northeastern and New England States as the familiar principal American gateway to Europe. This will happen probably 100 years after you and I are off the scene. But it will happen, and if you believe in the possibility or even the hope of permanent peace in the Pacific, you will want it to happen and will want to help it to happen.

"I am not taking your time or mine to recite the facts which from the standpoint of Federal finance warrant the statement that these power developments, with their corollaries of irrigation and inland navigation, will pay their own way. I am familiar with these facts, and I know that there is no way of impeaching the general assertion that these projects will 'pay out.' As to the extent of national public financial gain in the accompanying increase in industry, commerce, and employment, there is, of course, greater room for difference of opinion."

And Dr. Compton goes on to say, "My own opinion—and I am classed as a conservative optimist—is that under favorable circumstances, based on power development ahead of the need, not lagging behind it, the Pacific Northwest in my lifetime will have a population of between ten and fifteen million; and if you are in as good health as you were the last time I saw you, my guess is that you, too, will see it.

"But that depends on what Congress does, beginning now, and that depends a great deal more on what you do than on what I say. I hope you and your colleagues are able to take a long view as well as a short one."

Estimates of requirements for Bureau of Reclamation construction program (Columbia Basin project, State of Washington) for 1948, compared to amounts provided in House bill

Unexpended balance, June 30, 1947	$6,701,700
Accounts due and payable for work prior to June 30, 1947	5,617,700
Unobligated balance, July 1, 1947	1,084,000
President's request for fiscal 1948	27,500,000
House appropriation	11,435,000
Total available if House action stands	[1] 12,519,000
Commitments under contract for fiscal 1948	[2] 25,000,000
Spent last year	29,100,000
Total available if all funds restored	28,584,000

[1] House contends $17,052,700.

[2] This figure indicates that if the House figure prevails, the Bureau will lack $12,500,000 of being able to meet commitments for 1948 already made.

Estimates of construction requirements for 1948 (Bonneville Power Administration, State of Washington), compared to amounts provided in House bill

Total unexpended balance, June 30, 1947	$11,492,149
Total unobligated balance, June 30, 1947	None
House allowance	3,049,800
Amount spent, 1947	5,152,580
Amount needed, 1948 [1]	17,086,100
Amount recommended, 1948 [1]	17,086,100

[1] Budgeted on obligation basis, not on cash expenditure basis.

Jefferson Day Address by Harold E. Stassen

EXTENSION OF REMARKS

OF

HON. BOURKE B. HICKENLOOPER

OF IOWA

IN THE SENATE OF THE UNITED STATES

Tuesday, May 27 (legislative day of Monday, April 21), 1947

Mr. HICKENLOOPER. Mr. President, on May 21, 1947, at the city of Jefferson, Iowa, former Gov. Harold Stassen, of Minnesota, delivered an address at the annual community celebration, sponsored by the American Legion. The address was also broadcast over a Midwest radio network. I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Your Excellency Governor Blue, Commander Halden, fellow Legionnaires, friends of Iowa, it is a thrilling and invigorating experience to drive down through the green growing fields and neat farmsteads of Iowa in this month of May. I bring you a friendly salute from your Minnesota neighbors to the north. I also bring you warm personal greetings as a fellow mid-westerner who will never forget his boyhood on the farm.

My recent observations abroad move me to comment that we must be certain that the farms of America in the years ahead continue to be privately owned on a family-sized basis, privately owned by their actual operators to the greatest possible extent, and that we avoid both the evils of Government-ownership and the evils of huge, centralized private ownership of the agricultural territories of America.

I commend the American Legion of Jefferson and the people of this community for this outstanding annual community celebration and for your colorful emphasis upon the United Nations in your excellent parade. I respond with pleasure to your invitation to meet with you and to speak to you. Let us discuss very frankly some of the great issues of our time, the decisions on which will directly affect the future happiness and well-being of every farm in Iowa, of every home in America.

Our joint objectives in America are clear. We seek for ourselves and for our children future well-being, and individual liberty and peace. We recognize the dangers of economic crashes and the dangers of international conflict.

We want never again to experience the black days of agriculture of the 1930's with 18-cent corn, 3-cent hogs, 32-cent wheat, and with every courthouse step a stage for the sad scenes of mortgage foreclosures.

We want never again the long lines of unemployed shuffling to the relief windows for a subsistence grocery order.

We want never again a multitude of businessmen closing their doors dejectedly meeting their creditors in bankruptcy court.

And above all we want never again to see millions of our young men leave our farms and homes to face, and to fall before, the bullets and bombs of war.

Clearly on these objectives we are united in solid strength. But when we come to consider the measures and means by which we shall attain our united objectives, we hear many diverse proposals. We also note a considerable silence and evasion. But out of an open discussion constructively carried on before the people as a whole, I am confident that we will arrive at better answers than any one man or small group of men can propose. We will demonstrate once again the value of a representative government of free citizens.

It is in this spirit that I talk with you tonight. I do not say here are the final answers, but I submit some of my thinking upon the subject, that out of the differing and amending we might stimulate a fruitful search for the best course for America to follow in the years immediately ahead.

Everyone in America now realizes that we are not concerned with two separate sets of policies, the one foreign and the other domestic, that we do not have two compartmentalized problems, the one—our world relationships and the other our internal success—but rather that the two are completely interwoven and constitute one interrelated problem for decision. If anyone had any doubt of this it would certainly be dispelled if he went abroad and heard over there the persistent searchings and questions as to our internal American economic future by leaders in many countries of many different viewpoints and forms of government—from Russia's Stalin and from England's Churchill, from Czechoslovakia's Benes and from France's Ramadier. Equally is this interlocking of domestic and foreign policy clear when we confer with the business leadership in America and note the degree to which analysis hereof conditions abroad affects plans at home for production and employment, for building and investment.

In considering these future policy decisions of ours in America I believe we can best understand each other if we sharpen up our discussion on a basis most easily understood. There are two extremes advocated in

America as to all major phases of our interrelated foreign and domestic policy. And with reference to the foreign policy phases in particular, one extreme of policy is currently advocated with greatest attention by Mr. Henry Wallace, now the editor of the New Republic magazine. The other extreme is persistently presented most powerfully by Mr. Robert McCormick, publisher of the Chicago Tribune. One is a Democrat, the other a Republican. I refer to them specifically not to personally attack them, for they both have and must have the complete right to speak and publish their views and I give each of them and their supporters full credit for sincerity. But if we are to consider these questions of vital and far-reaching importance we must clearly characterize our positions in a manner that all may understand.

Thus, at this early stage of my address, I say distinctly and definitely that I reject for America both the Wallace doctrine and the McCormick doctrine. I reject both extremes.

As I see it, the Wallace doctrine would make of America a nation of fellow travelers going down the wrong road. It would place America hand in hand with those elements in Europe who would decrease individual economic freedom and would subsequently dim other human liberties. It would dissipate our domestic assets, centralize our economic authority in America, and bring about lower and lower production at home. It would repeat the errors of appeasement of the 1930's. It would discourage in other lands the stalwart believers in true liberty and take us away from the vigorous and dynamic quality of a people's capitalism. America should never adopt the Wallace doctrine.

The McCormick doctrine, on the other hand, would make of America a nation of cold-hearted misers passing by on the other side. It, too, in its isolation, would lead to tragic results for our country. It would make us hated around the globe. It would set the world against us. It would lead us to boom and to bust and finally to a defensive war. It would make us a temporary pleasure ship in the path of a storm of despair. America should never adopt the McCormick doctrine.

There is a natural attempt of those who follow either one of these two doctrines to attempt to throw all who disagree with them over in the extreme opposite camp under the opposing banner. But it is tremendously important that we realize that the choice is not between these extremes.

In between is a very broad area in which I am optimistic that we can find the course of a strong and wise and humanitarian world policy. It must be a policy that seeks peace and plenty and freedom for ourselves and for others. We must become a nation of courageous pioneers blazing the postwar world trail toward peace and plenty and freedom. We must recognize that these three—peace and plenty and freedom—are indivisible.

You cannot have lasting peace if you have shortages, scarcities, and want. You cannot have lasting peace when men are oppressed and subjugated and enslaved.

You cannot have plenty unless you have the very high production that stems from individual freedom—economic, social, and political—and from the resourcefulness that arises with personal initiative, and from broad practices of open trade.

You cannot have plenty when your resources and your production are dissipated by war.

And equally, you cannot have freedom—individual fredom—of men and women—economic, social, political, and religious—unless you have peace. You cannot have individual human freedom under conditions of war, or of destitution, or of want.

Some will say that if these three are tied together they constitute a hopeless circle and progress is impossible. These are the same people who repeat the insidious whispers that war is inevitable, that economic crashes are unavoidable. They are the distant descendants of those who said in 1620 that it was inevitable that the good ship *Mayflower* would never get across the Atlantic Ocean. They are the remote echoes of those who said in 1787 that the Thirteen American Colonies would never succeed as a United States. They are the disciples of gloom who are present in every generation and who always must be rebuked if there is to be progress in human welfare.

These three goals, far from being a hopeless circle, present the necessity and opportunity of a joint and balanced and constructive movement, admittedly against great obstacles, for a measure of achievement of all three.

I would not attempt to present a complete and final program of the immediate steps to be taken toward these three goals, and to avoid both of the extremes. The specifications of such a program, which our people can understand and will support in unity, should be established by an outstanding volunteer commission of men, representing both political parties, and including leaders of business and labor and agriculture and education and science, appointed by the President with the advice of the Senate, joining together in extensive discussion and analysis.

Above all our entire approach to the world-wide and domestic situation now after the war must be constructive and not negative. We must seek to build up and not merely to block or contain or oppose. We must also think in big terms for the winning of this postwar struggle for peace and plenty and freedom, in terms just as big as those in which we thought when we faced the task of winning a world war on the opposite sides of the two great oceans.

I believe that for the next 10 years we should devote 10 percent of our total national production of goods and food (not of our gross national product) to building for world-wide peace and plenty and freedom. It should not be a sharpster lending program. It should not be a light-headed, give-away program. It should be a practical, sound, long-visioned, businesslike approach to the situation that exists in the world today, and to what we can foresee in the years ahead.

We should request the views of the Economic Council of the United Nations as to the manner in which we conduct this production and should welcome their continuing advice. But we must ourselves, on a bipartisan basis actually administer the program and control the rate and type of production supplied, so as to safeguard against inflationary effects at home or diversion from our purposes abroad.

We should also require that each government that joins with us gives steady and unwavering support to the United Nations organization and its high objectives.

This production should not be scattered, or in fits and starts and hand-outs to those who cry "wolf" or "Communist" the loudest. It should be based on a careful, world-wide evaluation of the best long-term basis on which we can rebuild after the war. We should not expect repayment in dollars or in manufactured goods, because the rest of the world cannot repay in either one of them, and we do not need either one of them.

We should expect repayments of the kinds and types that the rest of the world is capable of giving and that we need. We should expect long-term agreements for the fair access to raw materials in other parts of the world and a current availability of major quantities of those minerals and other raw materials so that we do not further dissipate our own natural resources in this tremendous productive effort.

We should expect agreements that the governments with which we work will not move farther away from individual economic freedom and will not go down the sad trail of increasing nationalization or socialization or government ownership, which would result in lower production for them, would negative the constructive efforts we are making, and would make more difficult our own free economic future.

We should expect that our governmental representatives, our private citizens, and our press and radio without censorship, should be able to visit any area that is participating in our production for peace program.

We should expect that they will not discriminate in any way against our citizens and that they will not tax our private capital at a rate discriminatory in comparison to domestic capital and will not expropriate without just compensation.

We should expect that others in the program will not indulge in a practice of exploitation of dependent peoples that would run directly contra to our basic long-term objectives.

We will also need to develop a code of the standard of conduct for our own private capital when it is invested abroad, based upon the best records of American capital in past years. We must not follow the pattern of some of the old instances of grasping imperialism.

We must likewise make it clear that we do approve of the correction of the evils in a free economy and in private capitalism, of the initiation of land reforms where there are great concentrations of land, of restrictions against monopolies and trusts and cartels, of minimum wages for workers, of the rights of free workmen, and of the decentralization of power both private and governmental. We must also emphasize the need of stability in representative party government and of serious weakness of the fragmentation of political action in multiple parties with a government that precariously perches for its continuity on the day-to-day whim of a number of small minority groups.

We must not impose our programs upon others; it must not be what we say should be done but what both agree is for the sound economic future of their countries, and ours, and the world.

Such a program should not include under any circumstances arms or munitions for others. Any exceptional instances, and they should be rare, of limited supply of minimum arms for stability of other nations, should be separately considered with complete individual debate in Congress and should not be injected into the production-for-peace program.

Such a program should not be directed against anyone. Its whole emphasis should be positive and affirmative with the objectives of progress of all mankind and of our own future peace and prosperity.

Coupled with the maintenance of a modern American defense force, and with sound domestic measures, including a new national labor policy, economy in the domestic activities of government and encouragement to small new business at home, we can well afford such a program. In fact we cannot afford not to engage in such a program.

Properly carried out it would be one of the greatest single assurances against depression or economic crises in America. Properly carried out it would be one of the greatest safeguards against a descending spiral of regimented economy, lower production, want and misery and suffering around the globe.

It must have its priority list of projects carefully worked out. I believe that No. 1 on that priority list would need to be the redevelopment of the Ruhr area in Germany

to get more coal out of the ground so as to make it possible for the industries of the rest of Europe to get under way. Without coal, factories closed, schools closed, churches closed, and the people half froze throughout Europe this past desperate winter. This coal production is now inexcusably low, at only about 40 percent of prewar. It is a problem that is not caused by any failure to agree on the over-all peace treaty for all of Germany. It rests entirely within the scope of agreements between the British and ourselves and the proper use of our own productive resources. Ruhr coal is the keystone to a healthy Europe. The Ruhr should be redeveloped under private ownership without monopolies or cartels. It should not be socialized. Former Nazis should be barred from ownership. Provision must be made for incentives to produce for workers and managers and owners. Capital from other countries should be permitted, but strict limitations must be placed upon its extent and its terms. The long-term governmental supervision should be provided by the United Nations through its Economic and Social Council, which acts without vetoes, and without complete detachment from Germany.

Second in priority should be the encouragement of the Belgian, Netherlands, and Luxemburg customs and economic union to accelerate this determined and desirable development of a free economy for 18,000,000 industrious people.

Third in priority should be the agreement with England of the necessary steps and agreements for their long-term sound future as a free economy. We should not postpone a frank and friendly analysis with England of both the emergency and long-term aspects of their situation arising from the extreme sacrifices and losses in the war.

A dozen other projects should follow, the order determined by careful study by the outstanding men of our country on a bipartisan open basis.

These are sweeping proposals that I have made this evening. I have made them not as Republican proposals, but rather in a desire to see a truly American doctrine developed after this war that is worthy of the strength and inspiration of the dynamic ideas, the powerful position, and the great stake of America.

I am convinced that the people of our country know we are facing a situation that cannot be met by small programs, nor by extreme impractical measures, nor by drifting. The people want to know how their leadership appraises the world situation, and after frank discussion, the people will decide.

I welcome disagreement and criticism openly expressed. I suggest that it take the form of including definite counter proposals for the future long-term policy of America.

Let me make it crystal clear that I recognize in full the tremendous difficulties in the postwar world. I do not underestimate the clash of ideologies, the depth of misunderstandings, the thickness of suspicion, the bitterness of hatreds. I realize the size of the task of obtaining agreement and action on so broad a program in America. But what I propose is not vague or hazily idealistic or a dream. It is a practical, hardheaded, businesslike, sound approach to the situation in which we find ourselves. The long-term cost will be less than the alternative cost of the negative current patchwork and partially misdirected loan approach with huge armaments and unemployment and economic instability.

The obstacles are not grounds for dismay and inaction. This is not a time for timidity, or evasion, or delay. This is a time for courage, for frankness, for action.

I have great faith. I have great faith in the people of America. I have great faith that we can win a future of peace and of plenty and of freedom for America and for mankind.

In Memory of Hon. Fred Bradley

REMARKS
OF
HON. FRANKLIN J. MALONEY
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 26, 1947

Mr. MALONEY. Mr. Speaker, for the few months that I was privileged to know the Honorable FRED BRADLEY, as one of his committee members, I came in almost daily contact with him and soon learned that he had all the qualities of a great chairman. His intimate knowledge of the committee's problems appeared limitless. His entire life was devoted to the United States merchant marine, and his great desire was to see our merchant marine second to none. In spite of the long hours spent in the committee work, he was always willing to speak on merchant-marine subjects at any function. He supported his views courageously and with true sincerity, and all shipping men with whom he came in contact held him in the highest esteem.

His entire committee was devoted to him and was impressed with his fairness. He was more than a chairman of a committee; he was really a friend of each member. He was ready to listen to suggestions and often encouraged the members to follow through with their suggestions.

Words are inadequate to express my feelings on the passing of this real friend, and I shall ever cherish the memory of my happy associations with him.

The Disposition of Surplus Potatoes

EXTENSION OF REMARKS
OF
HON. W. R. POAGE
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 27, 1947

Mr. POAGE. Mr. Speaker, by strange coincidence just at the time the Congress began the consideration of the Agriculture appropriations bill there appeared a series of articles and pictures all over the country condemning the potato-disposal program. This publicity was so presented as to give the very definite impression that farmers were charging consumers unfair prices and that the Department of Agriculture was conniving with farmers to keep needed food away from hungry people. These implications simply are not true. The facts are that the American people at the beginning of 1947 spent only 19 percent of their income for food, whereas 20 years ago they spent 50 percent more of their income for the same food. The facts are that these potatoes are available to any charity or relief organization—absolutely free.

The facts are that American farmers are supplying more food for American urban dwellers, in return for less hours of work on the part of the urban citizens than was ever done in any country in all the history of the world.

Had it not been for the circumstance of timing and the continued repetition of these articles, I would have dismissed them as a part of the continuing program of abuse of farmers, but coming at the time they do I cannot but feel that they are intended to influence the action of the House on the pending appropriation bill. I have, therefore, sought to secure the facts about the potato program. I submit them for the record that all may know. I do not contend that the program is ideal. On the contrary, I hope they will be able to develop a better program but, until we do, I think it is but fair that we know all the facts before we criticize the present program.

I have today been advised by the Department of Agriculture that any citizen of the United States can buy potatoes similar to the ones that were destroyed in Alabama for the total price of $5 per carload f. o. b. if he will but give adequate assurance that the potatoes will be used for production of starch or alcohol.

If he will agree to export the potatoes he can have them at 4 cents per hundredweight. If he wants to use them for relief or for charitable purposes there will be absolutely no charge. The trouble is that the potatoes are actually not worth shipping either to the starving people of Europe or to the processing plants of the United States. The Department of Agriculture has tried to sell or give away these potatoes without success. To keep them longer but adds to the storage costs. To try to ship them to Europe now that the warm weather has set in will require refrigeration, and the cost per unit of food will be greater with free potatoes than it will with wheat at $3 per bushel.

I here and now offer these potatoes at the afore-mentioned price to all who are disposed to charge that they are being wasted.

Under what is known as the Steagall amendment, farmers are promised price support on many important agricultural commodities at not less than 90 percent of parity for two full calendar years after the formal declaration of the end of hostilities. Potatoes are one of the Steagall commodities.

Following 1945, when there was considerable difficulty in disposing of the third largest potato crop on record, the Department in 1946 ran into full-scale problems in handling an even larger crop, despite efforts to keep the crop within the bounds of effective demand. Disposal efforts—after all measures had been taken to handle the crop in regular distribution channels—included distribution through the school-lunch program, special export programs, diversion to livestock feed and industrial use. Even though every conceivable step was taken by the Department to find use for the surplus potatoes, the result of overproduction was waste of a portion of the crop and consequent cost to the Government. Following is a summary of the various steps taken to handle the 1946 crop.

Despite lowered production goals for 1946, a combination of many factors—the use of better seed, the employment of new and improved insecticides, and ideal growing conditions throughout the Nation—produced a record potato crop of nearly 475,000,000 bushels. This was estimated to be from nearly ninety to one hundred million bushels in excess of the 378,000,000-bushel production goal and 50,000,000 bushels above the large 1945 output of 425,000,000 bushels.

The Department of Agriculture recognized early in the year that a bumper crop would be harvested and made immediate preparations to assist all branches of the distributive food trades in moving these potatoes through normal channels of distribution into human consumption. From the outset of the problem in 1946, the Department cooperated fully with the food industry in moving potatoes. This industry-Government cooperation is estimated to have resulted in a substantial increase in consumption of potatoes during at least part of the year.

But as the potato harvest progressed northward from the early producing Southern States, it became impossible for normal food-distribution channels to handle the enormous potato supplies. The Department followed an aggressive and continuing program of moving potatoes into its school-lunch program and to charitable institutions. To these outlets potatoes were furnished free, as in past years. During the last year, nearly 3,000,000 bushels of potatoes were so utilized.

Every effort was made to get these potatoes to hungry people abroad. They were offered at nearly token prices—as low as 4 cents per 100 pounds—for relief feeding abroad. In addition, a subsidy program was set up under which private exporters were able to send potatoes to South America and the Philippines, as well as other countries. By May of 1947 about 10,500,000 bushels—which was more than 10 percent of the total surplus—had been exported to points as widely separated as Italy and Korea, Germany, and China.

When outlets to human consumption became clogged, the Department pressed a program of diverting surplus potatoes to livestock feed, so that the potatoes would eventually take their place in the form of meat and milk in the human diet. Potatoes for use as livestock feed, for feeding dairy cattle, and for fattening beef cattle and hogs were made available at prices that ranged from 20 cents per hundredweight f. o. b. at country shipping points to a penny a hundredweight. Through this program the Department moved approximately 11,000,000 bushels of potatoes.

The Department, in its efforts to find a practical utilization for the potatoes, also made another estimated 10,500,000 bushels available to starch mills manufacturing starch for use both in the United States and abroad.

The greatest diversion of potatoes that otherwise would have been completely wasted was to the distillers of beverage and industrial alcohol. Into these outlets the Department moved around 30,000,000 bushels of potatoes.

Thus, by exploiting diversion outlets to the fullest possible extent, the Department was able to find effective use for nearly 65,000,000 bushels of the approximately ninety-to-one-hundred-million-bushel surplus.

The Department believes, according to preliminary figures, that in the course of handling this all-time record crop of potatoes there was a resulting waste of something like 22,000,000 bushels. Roughly, this is about what Department officials had estimated earlier as a probable figure on waste and shrinkage. In view of the size of the crop, it was believed that no practical use could be found for some 20 percent of the surplus potatoes. Every effort was made, however, to keep this waste and shrinkage to a minimum and to confine it to low-grade and inferior-quality potatoes, which customarily would encounter difficulties in finding a market.

The over-all cost to the Government under the mandatory support program has been estimated at $100,000,000. Of this amount the Department will recover about $20,000,000, leaving a net cost to the Government of approximately $80,000,000.

Recognizing that a combination of better cultural practices and a pronounced shift of potato acreage from low- to high-producing areas promised continued high yields per acre, the Department tightened its potato program for 1947.

The program called for a reduction in national acreage from 2,669,800 to 2,517,000 acres and set up acreage quotas within which potato growers must remain in order to be eligible for price support. This was done after a study of data that revealed yields per acre has been increasing at a more rapid rate than had been earlier estimated—at a time when potato acreage has been declining nationally. The 1947 goal in production is 375,000,000 bushels.

Another significant factor is that per capita consumption of potatoes has been declining as national food habits turned from heavy breakfasts and the potato at other meals competed with other vegetables readily made available both through better transportation facilities and the avenue of processed foods.

The 1947 potato price-support program emphasizes further that removal of potatoes from food channels will be limited insofar as possible to the lower-grade and inferior quality potatoes which growers have historically found difficulty in marketing. This will be accomplished by Government purchase of lower grades, and through marketing agreements and orders, and will result in the consumer obtaining better quality potatoes.

As distribution in commercial channels fails to handle all marketable potatoes, the Department will continue, under the 1947 program, to make available for school lunch, for charitable institutions and organizations, all the potatoes these outlets can handle. These potatoes will be furnished free.

Export operations will also continue to the extent that supplies warrant such operations, as will diversion to stock feed and manufacturing plants.

Farmers generally seem to be staying within their 1947 acreage goals, according to reports up to this time. It is anticipated that there may be, however, some local surpluses in the early and intermediate potato-producing areas, due to adverse spring weather. Because of delaying weather, potato harvests in these areas may tend to "bunch up" and overlap this year, instead of coming on in an orderly area-by-area manner.

One such circumstance has been encountered this month in Alabama. There a supply of about 28,500 bushels of early potatoes beyond usual needs developed. Of this amount, 21,000 bushels were distributed to school lunch and institutions. For the others, No. 2 and B grade potatoes, every avenue of possible practical use was explored. It was determined that there were no dehydration facilities available and that farmers with good pasture did not wish to experiment with feeding these potatoes to their livestock. The potatoes are thin-skinned and of such high water content that export was not feasible. Freight charges precluded sending these potatoes north for use in starch plants. Alcohol plants were not interested in so small an amount of potatoes—their use of potatoes is predicated upon a continuing supply.

All avenues of practical disposition having been explored and no practical use being found for the 7,500 bushels of potatoes remaining, there was no recourse but to dump them. This ultimate, and seemingly wasteful, disposition of the smaller portion of the local surplus of Alabama potatoes is a practice historically followed by all potato producers. When the producer finds his market glutted, he ordinarily brings to market his best potatoes and abandons the lower grades, frequently leaving them in the ground to save the labor cost.

In other areas, as in Alabama, every effort will be made to get 1947 crop potatoes into human consumption. Following that, every avenue through which the potatoes may be put to some practical use, for stock feed or manufactured products, will be explored before a single bushel of potatoes is dumped. The only potatoes that will be so disposed of, if that is the only recourse, will be potatoes of low grade and inferior quality which would not ordinarily appear in food channels.

Of course, all of us wish that it were possible to hold the farmers' price up to a fair level and at the same time to let the consumer buy his potatoes at less than cost, but so far no one has been able to suggest any way of doing this except for the Government to take all the loss—in other words, for the Government to subsidize the consumers. Actually the consumer is today getting his potatoes for less than parity—the support price is only 90 percent of what has been recognized as a fair price. Surely, it will not be contended that the Government should subsidize the price to a lower level, or that the consumer is entitled to get his food at less than 90 percent of a fair price. But that is what would result if the price of potatoes were allowed to fall, and, of course, everyone knows

that without a further subsidy which this Congress is not going to pay, that is what would happen if these surplus potatoes were put into the channels of trade.

All farmers ask is a living wage. This program gives him 90 percent of a living wage. Even the most violent anti-labor partisans admit that a man has a right to quit work when he does not get a living wage. The farmer has already performed his labor. Now, if his product is not sold it has the same effect on our economy as does the refusal of the miners' union to dig coal, or the refusal of the automobile workers to make automobiles. None of us like strikes, but who would criticize if workers struck for the minimum wage fixed by law. These potato farmers are now only getting 90 percent of the living price of farmers' minimum wage fixed by the same Government.

By all means, let us try to work out a better plan for handling farm surpluses, but until we do let us at least carry out the promises Congress made when we passed the Steagall amendment. Let us make good our word, the word of our Government. Let us stop this weasel talk every time it comes to carrying out our promises to support farm prices. If you do not like the way the Department is supporting prices, change the law—you wrote the law under which the Department acts and you prescribed the method of supporting prices. I do not care how you do it—but I do want it done. I do not have a bushel of potatoes grown for marketing in my district, but the whole question of the good faith of our Government is at stake; and as for those who say that the Department should use these potatoes for various purposes, the opportunity is yours. If you really believe that somebody can use them, why do you not try? I repeat the offer—$5 per carload for industrial purposes.

I would like to respectfully suggest, as we would say in Texas, "Put up or shut up."

Feed Shortage in Dairy Districts

EXTENSION OF REMARKS

OF

HON. DANIEL A. REED

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 27, 1947

Mr. REED of New York. Mr. Speaker, I am receiving telegrams from dairymen in the district which I have the honor to represent, calling attention to the low price they are receiving for milk and the high price of feed for the dairy cattle.

It is obvious that the vast volume of grain which has already been shipped to foreign countries and the volume to be allocated for export is causing food for both cattle and humans to be reduced to the danger point. The high price paid by the Government for wheat became so scandalously high that the Government shifted to the purchased of flour to divert the attention of the public from the price paid for wheat.

There are more cattle on the hoof in France now than before the war. It is not to the hungry or starving to which much of our grain goes, but rather to feed foreign livestock and to supply the black markets abroad. Much of the food shipped supposedly to feed the civilian population overseas goes to fatten large foreign standing armies.

The time is long overdue for those who represent the United States to give thought to the welfare of our own people. It is high time to take an inventory of our own stock of foods, actual and potential, before making wild and reckless commitments to foreign countries. It was only a short time ago that the administration was selling powdered eggs at $30 a carload for fertilizer. Now, last year's crop of potatoes has been destroyed, and the early potato crop grown so far this year in the deep South is being put to the torch by Government agents. I shall not be surprised if the Agriculture Department should decide to burn this year's crop of grain in the field.

I am inserting, under leave to extend my remarks, the volume of grain shipments abroad.

These figures include shipments to Europe, Latin-American countries, and the Philippines, as well as the Pacific theater:

From July 1, 1946, through April 30, 1947—in long tons, 2,240 pounds: Corn, 1,566,000; wheat grain, 4,648,000; wheat flour, in terms of grain, 3,762,000; corn products, in terms of grain, 178,000; oat grain, 242,000; oat milled, in terms of grain, 47,000; barley grain, 155,000; barley malt, 70,000; grain sorghums, 320,000; rye, 5,000; total, 10,943,000. Flour milled in bond in the United States from Canadian wheat, 155,000 long tons. Grand total, 11,098,000.

Above are actual export figures through April 30, 1947.

Total allocations for the 12-month period starting July 1, 1946, through June 30, 1947, including everything shipped plus allocations to July 1, 1947—these are constantly changing, but present contemplated figures follow: Wheat as grain, 5,315,000 long tons; flour, in terms of grain, 5,380,000; corn, includes corn products, 3,038,000; oats, 346,000; barley, 349,000; grain sorghums, 434,000; rye, 5,000. Total, 14,867,000.

Grain exports from July 1, 1946, through April 30, 1947, for European countries, including occupied zones in Germany, in terms of long tons: Wheat, 3,091,000; flour, 2,076,000; corn, 1,256,000; corn grits and meal, 100,000; oats, 202,000; oatmeal 12,000; barley, 30,000; malt, 2,000; grain sorghums, 18,000; rye, 5,000. Total, 6,792,000. Canadian flour milled in bond, 7,000. Grand total, 6,799,000.

Through June 30, 1947: Wheat, 3,645,000; flour, 3,258,000; corn, 2,413,000; oats, 266,000; barley, 117,000; grain sorghums, 18,000; rye, 5,000. Total, 9,714,000.

News Censorship Shrouds Geneva Conference

EXTENSION OF REMARKS

OF

HON. BERTRAND W. GEARHART

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 22, 1947

Mr. GEARHART. Mr. Speaker, though the fortunes of 160,000,000 of American citizen may turn upon the outcome of the Geneva International Trade Conference, a news black-out has been clamped down on the deliberation of the conferees that finds no parallel in modern history. Anxious American businessmen, farmers, manufacturers, and labor representatives, a melancholy audience indeed, sit before the silken curtains, denied even the slightest inkling of that which is transpiring behind their folds, though financial destruction may be the consequence of it all.

But let that famed columnist and newspaper commentator, Mr. George Rothwell Brown, an accurate observer of wide experience, reveal the sordid story. That the American people may know where, if not how, their rights can be bartered away, I offer for inclusion in the CONGRESSIONAL RECORD two of his Geneva dispatches, both of which will be revealing to the Congress and the people, I am quite sure.

The articles, Mr. Speaker, to which I have just referred, are the following:

THE POLITICAL PARADE

(By George Rothwell Brown)

GENEVA, May 14.—There is something tragically ironical in the fact that in the palace of Woodrow Wilson's League of Nations, dedicated to pitiless publicity and open covenants of peace openly arrived at, the trade relations of the postwar world should be determined in secrecy behind the most complete news black-out in the history of international conferences.

The censorship that has been imposed here on the newspapers of the world is admittedly without a parallel.

One reason for this probably is that the two conferences of particular interest to American business and industry, and to the Congress in Washington, dealing with the adoption of new tariff schedules and the establishment of a new charter for international trade and world employment, are being conducted by bureaucratic subordinates.

ULTIMATE AUTHORITY

Bureaucracy tends to protective secretiveness when its vast powers are not coupled with authority. The ultimate authority is not in Geneva but in Washington, London, and Paris.

Restrictions have been placed on the press here that were undreamed of at the San Francisco Conference, at which the United Nations organization was created and established.

At San Francisco, news correspondents had daily official contacts with top-flight delegates of the highest rank, and daily unofficial and confidential contacts.

In Geneva the Conference delegates are surrounded with an exclusion such as former Secretary of State Byrnes, or Senator Vandenberg, or Senator Connally never sought at Lake Success or at the Hotel Waldorf-Astoria in New York.

PRESS NOT SOLE VICTIM

But the press is not the sole victim of the bureaucratic negotiations under way here which will affect American invested capital perhaps for years to come.

Keenly aware of the importance of the issues at stake, many representatives of American industry have come to Geneva. They have been denied all official or unofficial contacts with the conference.

Their presence in Geneva is not officially admitted, the official public relations representatives of the United Nations, under which all the negotiations here are proceeding, are not allowed to inform the press who these representatives of business and industry are.

FROM UNITED STATES CONTROL

The tariff-making power lodged by the American Constitution in the Congress of the United States, and delegated by Congress to the President, has passed from American control into the hands of an international organization.

No information is available as to the commodities upon which further American tariff concessions are to be made, and which are now under consideration.

The naive explanation is that to make this knowledge public would be to bring pressure groups to bear upon the deliberations.

In other words, publicity would enable industries that may be adversely affected, or even ruined, to defend and protect themselves before the deed is accomplished.

When Congress unwisely delegated the tariff-making power to the President, it had no such black-out as this in mind.

THE POLITICAL PARADE

(By George Rothwell Brown)

GENEVA, May 22.—The ground work has been laid at Lake Success for a World Congress on the Freedom of the Press, with Geneva or Prague among the cities suggested as the place of the meeting.

It would be interesting indeed if such a conference were to be held in Geneva at this time, for it would counter a restriction upon the liberty of the press through the suppression of news at the source that threatens to wreck the International Trade Conferference unless the censorship is lifted.

Even the drastic restrictions upon access to news sources cannot survive the inevitable clash of national interests that will become more and more acute as the tariff discussions reach the bargaining state. Disagreements will find their way into the press, perhaps with disastrous consequences that might have been avoided by adherence here in Geneva, the European capital of the United Nations, to the splendid, if as yet academic, principals enunciated at Lake Success.

This is proved by the fact that the wool crisis between the United States and the British Dominions, which all but wrecked the international conference and might do so yet, broke down the barriers of censorship as soon as it became advantageous to one party in the dispute to take its case to the public of its own country.

It is probable that the bill now before the House of Representatives in Washington, imposing a 50-percent import fee on foreign wool, would have caused Australia, New Zealand, and South Africa to bolt the conference but for the sympathetic understanding by the Dominions of Great Britain's acute position and their desire not to cause embarrassment to the government at London.

Failure of the State Department experts in Geneva to understand that this was a Truman administration bill, and attempts to bottle up the facts, must have caused Assistant Secretary of State Clayton extreme embarrassment.

British delegates here, failing to appreciate fully that President Truman is obliged to work with a Republican Congress elected in November in a revolt against New Deal policies, of which the Hull-Roosevelt reciprocal tariff policy is an important one, have been inclined privately to accuse the United States of bad faith.

This, of course, is not the case at all. The British are asking not only for the defeat of elimination of the proposed 50-percent import fee on wool but for a 50-percent cut in the existing wool tariff of 34 cents per pound. They will compromise, according to present indications, on the elimination of the fee and the acceptance of a lesser reduction in the tariff.

The fate of the conference depends on a compromise of substantial character, without which the Dominions will not abandon the Empire preference system, and the proposed international trade organization, which is the basis of the Truman economic policy, cannot be established outside the Empire preference system.

The situation is delicate and demands open covenants of world trade openly arrived at.

The Truth and America

EXTENSION OF REMARKS

OF

HON. MIKE MANSFIELD

OF MONTANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 27, 1947

Mr. MANSFIELD of Montana. Mr. Speaker, under unanimous consent, I am inserting in the Appendix of the RECORD an editorial entitled "The Truth and America" taken from my home town newspaper, the Daily Missoulian, of Thursday, May 22, 1947.

As you know the State Department information program has been unanimously reported out by the House Foreign Affairs Committee and is now before the Rules Committee, from which body I think a favorable report will be forthcoming soon. It is well to realize that this information program is tremendously important at the present time in conveying to the people of all the world just what America is—not in the form of distorted propaganda but in the form of truth, because truth is the best propaganda.

I wish also at this time to commend to the House the fine work by and large which has been done by the Assistant Secretary of State, William Benton, in carrying out this program under the most difficult circumstances. I feel that the importance of this project cannot be overestimated and I am extremely hopeful that when the measure is brought before this body, in the very near future, we will give it an overwhelming vote of confidence.

The editorial follows:

THE TRUTH AND AMERICA

The State Department's war-born information program, intended to convey the facts about American plan and purpose of all other nations, should be retained as a part of our national defense and of our campaign to protect ourselves—and much of the rest of the world—from the plague of communism. We can think of no more effective way to meet the "red" infiltration that threatens every country in the world not already in the Communist sphere, of no better means by which to bring understanding of America's benevolent purposes, to make clear our lack of imperialistic desire, to outline vividly our passion for peace. Call it propaganda if you will, it still is good for America and for all of the world.

Secretary of State Marshall argued cogently for continuing the program when he told Members of Congress that American aims are misrepresented "to a tremendous degree" in some foreign countries and that this Nation "must devise some method of spreading the truth. No Nation has been more generous than the United States and yet I rather believe that no nation has received less credit for that generosity. As long as propaganda is engaged in by other countries, we must take some action."

William Benton, Assistant Secretary of State and director of the program, also told the House Foreign Affairs Committee that the State Department intends to "mirror" American life to the world rather than to present a "showcase." "Mirror," he explained, "is presenting an actual picture of life in this country, while 'showcase' is turning out onesided and strictly favorable types of information." In other words, the program is intended to be honestly frank, in the logical belief that such procedure would win in the long run over the "showcase" style of Russia.

General Eisenhower, Chief of Staff, also expressed his approval of the plan to bring information about America to all of the world and thus foster general understanding of American democracy. And General Eisenhower also is for an utterly honest program, to be based "on truth and only truth, because anything else will recoil and bring defeat."

The Bible says, "The truth shall make you free." In a new application it might save the world from itself.

Air Power in the Navy

EXTENSION OF REMARKS

OF

HON. OLIN D. JOHNSTON

OF SOUTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Tuesday, May 27 (legislative day of Monday, April 21), 1947

Mr. JOHNSTON of South Carolina. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Navy Making Radical Changes by Conversion to Air Power," by Ansel E. Talbert, which appeared in the New York Herald Tribune of April 27, 1947.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

NAVY MAKING RADICAL CHANGES BY CONVERSION TO AIR POWER—BATTLESHIP ADMIRAL ADMITS FLEET NOW EXISTS ONLY TO SUPPORT AVIATION; ALL NEW PLANE DESIGNS CALL FOR PROPULSION BY JET OR ROCKET ENGINES

(By Ansel E. Talbert)

NORFOLK, VA., April 26.—The most radical step in American naval affairs since the days of John Paul Jones is under way today. This is the conversion to an air Navy employing

carrier-borne jet and rocket aircraft of speeds approaching that of sound.

The change-over stems directly from lessons of the recent war, which according to Rear Adm. Leslie C. Stevens and other naval strategists relegated the guns of warships to a distinctly secondary place. Rear Adm. Frank D. Wagner, who commanded the aircraft of the Seventh Fleet during a series of attacks executed in the Pacific, recently told this correspondent in Pensacola, Fla.: "The modern Navy is air power."

These men recall that even the last year of the war saw the Navy attain the status of a true air force at sea through the operation of large numbers of fast carriers and their auxiliaries. A few days ago John N. Brown, Assistant Secretary of the Navy for Air, was told by one of the Navy's most famous battleship admirals:

"The Navy doesn't exist now for support of the 16-inch guns of battleships, but to support aviation. We all realize that the rest of us are in effect backing up the Navy air."

TRAINING AT ANNAPOLIS

The United States Naval Academy in Annapolis, Md., is making it mandatory that every midshipman before graduation be completely indoctrinated in all aspects of naval aviation, Rear Adm. James L. Holloway, Jr., the Superintendent, revealed. When appropriations are available, the Navy plans to construct an air training base at Sandy Point which will be an integral part of the Academy.

No new naval plane designs have been laid down since the end of World War II which do not call for either jet or rocket power plants, it was learned here. The Navy's new Douglas D-558 Skystreak, a scarlet jet-propelled aircraft polished to mirror-like smoothness for flights in the transsonic region of around 760 miles an hours, is about to begin initial warm-up flights.

This aircraft's powerful turbojet engine built by General Electric has a thrust at high altitudes approximately equal to that of the four engines of a B-29 superfortress.

Another Navy jet aircraft, the McDonnell Phantom, completed extensive tests aboard Navy carriers, while still another, the Chance Vought Pirate, now is being test-flown at Muroc Lake, Calif. Martin has built a bomber employing jet propulsion for the Navy, and it is reported that chiefs of the Navy air arm may bring about the importation of several jet aircraft engine types from England, which has a lead on the United States in this field. These would be built here under license.

TO USE GERMAN WIND TUNNEL

A rocket engine developed by the Navy was turned over to the Army Air Forces for use in the Bell XS-1, with which it is hoped to break through the transsonic barrier this summer for the first time in history. To obtain knowledge regarding what may be expected when aircraft fly faster than sound, the Navy has assembled at White Oak, Md., a supersonic wind tunnel shipped from Peenemunde, Germany. At the Naval Air Experimental Station in Philadelphia, model airplanes which approach transsonic speeds during dives are being dropped daily from specially designed mother ships. Instruments inside record various data regarding aerodynamic characteristics under these conditions.

The Navy already has developed a pilot-ejection capsule for removing safely the pilot and crew of a supersonic airplane in the event of an accident. Air-cooling systems have been installed in cockpits to combat temperatures expected to climb precipitously at high speeds. Tests by Navy volunteers in a pressure chamber at Pensacola determined that men could be conditioned gradually to live in altitudes of higher than 29,000 feet.

All of the Navy's moves are for the purpose of implementing Fleet Admiral Ernest J. King's directive that the Navy should "establish an overseas line of defense thousands of miles from the American mainland." In the opinion of Naval strategists, this can be done through the medium of fast carriers and submarines capable of launching high-speed aircraft and guided missiles—probably containing atomic warheads—against points of danger.

The Navy's opinion is that the huge long-range bombing plane of World War II is virtually obsolete. In the future, it is believed, this type will not be a reliable means of delivering either explosives or atomic bombs against a strong and alert enemy.

It is felt that the big bomber is too vulnerable to guided missiles and rockets equipped with proximity fuses, as well as to the guns of jet and rocket propelled interceptors. Navy strategists point out that jet propulsion in its present stage of development requires large fuel consumption. It is adaptable to short-range interceptors but not to long-range bombers, which would have to carry fuel rather than bombs on long missions.

During the last few days the Navy's new 10-passenger tandem helicopter—the world's largest—lifted a jeep weighing more than a ton and also demonstrated an ability to ferry troops almost anywhere. The aircraft was built for the Navy, which wanted one capable of carrying considerable payloads, by the Piasecki Corp. at Sharon Hill, Pa. Gen. Jacob Devers, commanding the Army Ground Forces, who expressed great interest in the Navy aircraft, advanced the opinion that the helicopter may be the answer to the problem of transporting troops "with their firepower" where they are most needed.

Confusion and Insecurity Peril United States

EXTENSION OF REMARKS
OF

HON. ROBERT F. RICH

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 27, 1947

Mr. RICH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Joseph P. Kennedy:

[From the Detroit Sunday Times of May 25, 1947]

CONFUSION, INSECURITY PERIL UNITED STATES, SAYS KENNEDY

(By Joseph P. Kennedy, former United States Ambassador to Great Britain)

The American people, once described as "a magnificent spectacle of human happiness," are today confused and restless.

The cause of their discontent and the cure for it ought to be the chief consideration of everyone interested in preserving our standard of living and our way of life, for communism thrives upon discontent.

With savings of over $34,000,000,000 in 1945 reduced to $19,000,000,000 in 1946, people complain that they "haven't as many nickels to rub together as formerly." Yet nineteen billions of savings is a tremendous amount.

With 1946 corporate earnings at new high records, and earnings per share of many standard American business corporations 33 to 50 percent of their selling price, no one wants to buy stocks, and highest grade common stocks with long dividend records sell at prices to yield four times as much as bonds. Confidence is declining.

With a national income in excess of $175,000,000,000, over twice the income of the "boom" 1929 year, economists have regularly been forecasting depression each quarter since VJ-day, 20 months ago.

In what has been aptly termed "an era of economic idiocy," administration economists have become politicians, and statesmen pose as economists. The net result is a very sickening and discouraging political economic philosophy which has given the Nation a case of first-degree jitters.

And if a modicum of common sense isn't injected into the situation very quickly, I greatly fear the quack Cassandras will prove correct in their forebodings. Because troubles grow bigger by nursing; and with a babel of specialists diagnosing economic symptoms and no one prescribing for the over-all condition, I am afraid the patient will die of "successful operations" and local cures.

As an ordinary American businessman of more than ordinary experience in public life, I submit that nothing aggravates discontent among the people more than the dawdling of public officials; nothing foments insecurity among the masses of our people quicker than discontent, and nothing leads more certainly to totalitarianism, socialism, or communism than a feeling of insecurity among a people.

A recent survey revealed that whereas only 22 percent of our people fear actual war, 45 percent expect depression within 10 years, most of them looking for it by 1951.

In consequence of these worries concerning our foreign and domestic outlook 48 percent of our young men are rated as unwilling to take any chances in business, preferring security and low income to any risk. Only 23 percent were willing to take more than a 50–50 chance for the possibility of maximum reward.

Translating this discontent and yearning for security into economic trends, one of our leading industrialists, Gwilym Price, of Westinghouse, fears it has the earmarks of a definite drift toward communism; on the general theory, I assume, that communism breeds discontent and fear.

In pleading recently for the preservation of America as "the pinpoint of light shining for the individual," Mr. Price stated that recent surveys show that, in spite of all the blessings with which Americans are endowed, and in spite of a standard of living unobtainable elsewhere, "we do not appreciate our freedoms and are ready to throw them overboard."

Surveys reveal that 24 percent of our population believed they would get more for their money if all property were owned and operated by the Government, and 9 percent felt they would get just as much under Government ownership and control.

"That means," concluded Mr. Price, "that one-third of our population has swallowed the Communist line and doesn't know it."

PUBLIC UNDERSTANDING VITAL

I believe that the problem is so important there is no subject of pending legislation so sacred as to be above public discussion, including our Government's foreign policy.

We are supposed to be at peace—God save the mark—and it is only during times of war that criticism of our Government stops at the water's edge. For, as a well-known political and international newspaper correspondent, James Reston, of the New York Times, has said, "The economic peace is inseparable from the political peace and this country cannot be politically international and economically national."

It is because our recently proclaimed international politics—financing war upon communism abroad—is inseparable from our domestic problem that I feel free to discuss the so-called Truman doctrine of aid to Greece and Turkey.

At the outset, let me say that if it could be demonstrated that giving dollars to stop the spread of communism in the Balkans could accomplish that objective, I would make no

comment—especially if it can be shown that the United States can afford it. But it is obvious to anyone with even limited experience in world politics that a few hundred million dollars is but a beginning.

We may continue in the reckless spending to which our people have been accustomed in the past 15 years, during which the national debt—which was, by the way, $1,000,000,000 before World War I—doubled and then increased fivefold, from $55,000,000,000 to $270,000,000,000, in the war period.

But we just cannot go on increasing this national debt, the maintenance of which even now has imposed a bitter destiny on several entire generations of our people. Indeed, it has been competently estimated that total aid by United States capital to the rest of the world will amount to about $21,000,000,000 in the next 3 years, over $16,000,000,000 of which will be in the form of public loans and grants.

WHERE WILL MONEY COME FROM?

I insist that, when public officials advocate the policy of underwriting the salvation of the rest of the world from communism, they are morally bound to show the American people just where the money can come from—out of the pocket of the American taxpayer. Especially since such a policy may actually so weaken the economy of our country as to necessitate a degree of state control of the activities of our normal life not far removed from communism itself.

A year ago I ventured to outline (Life, March 18, 1946) the framework of a realistic foreign policy for the United States, insisting at that time upon a tough attitude toward Moscow that would dispose immediately of the perpetual United Nations debates and leave us free to concentrate upon domestic problems.

Today, bewildered as we are by the continuing subterfuges and obstructive tactics of diplomats, I venture to suggest a realistic domestic policy for the United States into which our Government's foreign policy must be made to fit.

I think we should recognize at once the inseparable relation between the State Department's foreign policy and our own domestic economy and permit nothing in foreign trade or foreign politics that will destroy our chance for domestic prosperity.

We have been doing things in the wrong order. Let us for once try to find foreign peace as the end purpose of domestic prosperity.

Up to now we have sought world peace first, expecting prosperity to follow. Unfortunately, we have neither.

Yet I am convinced that America with its matchless resources, its skills and abilities has merely to continue to be the land of free enterprise which our forefathers made it in order to attain a lasting prosperity inspiring to the dejected peoples of other nations who are striving to escape political serfdom and attain national independence.

FOUR HUNDRED MILLION DOLLARS MORE FOR BRITAIN

We have gone quite far along the road of an extravagant foreign policy which is bound to burden our domestic economy with additional crushing taxes.

The initial amount pledged by America to the Bretton Woods international bank is $6,000,000,000. More than $3,000,000,000 has been "loaned" to Great Britain (a "loan" which has already embittered England toward us).

The initial appropriation for Greece and Turkey so that England may shift its burden to us is $400,000,000.

Approximately $10,000,000,000 is thus the staggering price we are paying for the dubious privilege of taking up the "white man's burden" now that England has slipped from its prewar world stature.

Why? England followed this policy for years in order to build the empire—now England says she is broke. We have no imperialistic ambitions, but if, in an exuberance of good neighborliness, we essay the role of financing the ambitions of other nations, we can end up just where England is today—in economic misery.

Therefore I suggest that our statesmen read something of modern history before going all out for saving the world.

I shall not discuss the political propriety of this policy, or why America is called upon to take up where England has seen fit to leave off. It takes a good deal of imagination to find reasons why the Monroe Doctrine imposes any obligation on us to assume a police power in the rest of the world.

Jefferson, Madison, and Monroe argued that the reason we had the right to prevent others from meddling in the affairs of the Western Hemisphere was that America had no intention of meddling in the affairs of Europe.

THEY'LL STOP IT SOME DAY

I shall confine any discussion to the effect of this never-ending financial obligation upon our own economy because I am confident that sooner or later the American people will call a halt to such extravagance and the day they do you may expect that our dearly bought allies will turn from us and flock to the orbit of their oppressor.

With nations, as with individuals, the ally you have to buy will not stay bought.

Whether it is the socialism of Britain or the communism of Russia with which the individualism of America has to contend, all radical thinkers hate our system of society, and they will make this plain as soon as we—in self-defense—put an end to world spending to save our own economy.

These aspects of current problems are very grave, and to deal with them effectively something should be done to allay the unrest among our people.

I am not greatly concerned with the military or political aspects of aid to Greece or Turkey. I suspect that the Russian people resent that as our people would resent Russian aid to Mexican Pancho Villa or a Communist adventurer in Cuba. The dangers at home are far more real to me.

Concretely I regard as dangerous a public policy which rushes headlong into tax burdening expenditures abroad and does nothing to bring about tax relief at home, making no provision to sustain a rate of industrial activity essential to the collection of the increased revenue needed.

It is baseless optimism to expect that our economy will always be geared to a national income of one hundred and seventy-five billions. We must evolve an incentive tax policy to prepare for a more normal rate.

TOKEN REDUCTIONS NO ANSWER

No solution of the present problem is to be found in token price reductions. The portion of our economy in which prices can be substantially reduced is too small to cure the fundamental weakness. If you wrap a piece of band-aid around your wrist, expecting it to cure a broken arm, it won't.

When food costs and rent costs, still under Government control, are eliminated from the consumer's cost of living, only 30 percent of the expense remains. And these cannot be reduced sufficiently to affect materially the total cost of living.

Neither does a reduction in the profits of business contribute materially to a solution of our problems. Even in the record year 1946, profits amounted only to 6 percent of gross sales so that even if most of that margin of profit were eliminated, inflationary cost would still be with us.

I suggest that we look for a cure to the methods responsible for the growth and development of our economy to its present magnitude—the ways and means of obtaining increased production. That remedy, we have a right to believe from 100 years' experience, will relieve our people of their fears and doubts and restore their confidence in themselves and in their country.

WHERE PROSPERITY ORIGINATES

The output of America in 1944, reports the Twentieth Century Fund, was 27 times greater than that of 1850, turned out by a labor force only 9 times greater, which worked only 43 hours a week, as against 70 hours, the prevailing workweek in the 1850's. And during that period the income per person rose from $270 to $1,140, better than a fourfold increase.

What made that possible? The reinvestment of capital, of earnings of wealth, by the American businessman in the tools and machinery and mechanical power with which America backs up her workers. Today, when an American workman works 1 hour he produces more than a worker anywhere else on earth ever produced.

That vast production, the production of more wealth by the investment of existing wealth, is the only sure cure in sight today for the things which the politicians-turned-economists say are at the root of existing evils—high prices.

Encouraged in the future, as it always was encouraged prior to the confiscatory tax periods of the thirties, American business will, by capital expenditure, so expand the production of goods that competition will thrive, the small businessman will be able to compete in his industry, inflationary perils will disappear, and talk of depression cease.

INVESTMENTS SHARPLY REDUCED

But American businessmen have had to sizably reduce their capital investment per worker in recent years. Unless they reinvest in their employees, their technical superiority is endangered, which makes the American worker the best on earth and makes America the strongest Nation.

For instance, in 1937 the American workman had better tools than any other workman as shown by the figures of horsepower per worker: United States of America, 4.86; Germany, 2.61; Britain, 2.56; Canada, 2.17.

But whereas prior to 1932 (the beginning of the confiscatory period) American business invested $8,640 per employee (in order to buy tools, equipment, etc.), by 1941, even with a war-stimulated activity, the expenditure was $5,937.

The greatly reduced expenditure was plainly due to the fact that so large a proportion of the earnings of business is taken for taxes that the employer hasn't enough left to equip his plant as formerly.

When industrial progress is blocked by a tax system that limits production and the output of goods demanded by an ever-increasing population is choked, shortage and high pricing follow, the marginal manufacturer (the little fellow) cannot meet the ever-rising wage costs, monopoly privilege is developed for big business, and then come inflationary trends and reckless expansion with ever-recurring booms and depressions.

CAN AMERICA KEEP IT UP?

It is estimated that the needs of the American people by 1950 (based upon 1944 prices) will approximate $200,000,000,000—14 percent higher than anything demanded during the last war. The physical machinery necessary to meet that volume of production cannot be provided unless business is allowed to retain for reinvestment a larger share of earnings than is now left afte. wages and taxes.

If we aggravate our domestic needs by a perpetual subsidy of European needs, obviously the chance to provide security and prosperity for our own people—now disturbed by their economic prospects—is slight.

Another example.

When Henry Ford died, recently, most newspapers had editorials pointing out that in no other country in the world could Mr. Ford have developed his magnificent empire. But Mr. Ford could not do that **today** even

in this country under existing tax assessments. It is not possible for any individual to save enough of his total income after income-tax requirements to accumulate the capital necessary to finance expansion and growth in his business.

The Ford business was started with $28,000 of borrowed money. It grew by reinvestment in the business of a substantial portion of each year's earnings. Today most of the annual earnings go to the Government in tax payments.

To me that is the fatal defect in our present economy and is the chief reason for unrest and discontent. There can be no more Henry Fords.

Indeed, a young man in business today, even if a well-paid top executive, can hardly meet living costs, much less save anything for a rainy day. And it is impossible for him to save after taxes enough to provide an estate for his family. Only a life-insurance policy stands between his family and destitution in the event of his untimely death.

I hold no brief for the rich man as such. I am grateful for the opportunity that this country gave me to accumulate something of the world's goods. But unless we alter our tax laws and regulate our Government savings so that the incidence of taxes is lightened, the invaluable function which the rich man performs will cease—investing his accumulated savings in business to provide for expansion and increased production.

We will have not only inflation in this country, but also stagnation.

REAL ECONOMISTS NEEDED

As a partial remedy for these defects, I suggest the formation of a Council of Economic Advisers, quasi governmental in prestige, which would pass upon Government political policy as it affects our domestic and economic structure. I suggest that such a committee be authorized to study the various methods of relief suggested for our tax system, such as the elimination of double taxation, either by omitting excess-profits taxes or foregoing taxes of distributed dividends.

We need such advice to bring about comprehensive tax reforms. Above all, counsel is needed on expenditures abroad and foreign-trade commitments.

Men of experience acquired during the more fortunate years of American industrial life should contribute of that experience in an effort to find a way, not only to stop the spread of communism abroad—that is incidental—but to keep it away from our shores.

And especially counsel should be sought from such men in an effort to reform our economy and permit the restoration of the virtues of thrift, incentive, and enterprise.

Canada has seen fit to reduce income taxes substantially, and even a socialistic English Government has reformed taxes in the interest of encouraging spending for permanent benefits and limiting personal extravagance. Are Americans alone to be tax-ridden for the world's benefit?

I know that when one dares to ask proof that our dollars spent abroad can stop the spread of communism—even if we cannot afford it—the cry of isolationist is raised. If one asks for a fundamental change in our domestic economy—a tax system so revised that it would facilitate the financing of these foreign ambitions and the protection of American life—the charge of helping the rich comes instantly.

SMALL PROFIT IN MEDDLING

Bearing in mind the historical fact that meddling in European affairs has got us exactly nowhere, it is not difficult to understand the impatience of a man of no little public experience who recently asked:

"Well, what's the matter with isolationism? We have never really tried it. Intervention hasn't settled anything."

And in view of the remarkable strides in our economic life, the continuous betterment of the standards of living of all classes of our people during the last 50 years, due to the reinvestment of savings and capital by wealthy men in the expansion of their business (the function of the rich man), one can understand why many men ask: "What's the matter with advocating lower taxes?"

The highest tax rate in history finds us, in the opinion of the President, on the threshold of inflation and threatened with depression.

Forgetting name calling, let us isolate our people from contagious germs of communism by avoiding never-ending commitments abroad beyond capacity of a prudent government to finance.

Let us regulate our domestic economy by rescuing it from the dead hand of confiscatory taxes which keep our vitality so low we are constantly allergic to inflation, depression, and insecurity.

Make America once more a magnificent spectacle of human happiness.

The Truman Doctrine Proposes To Bribe Europe—Will They Stay "Bought"?

EXTENSION OF REMARKS

OF

HON. HOWARD H. BUFFETT

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

Friday, May 23, 1947

Mr. BUFFETT. Mr. Speaker, under leave to extend my remarks, I am including a letter to the Wall Street Journal by Sam Green, of Nashville, Tenn. The questions raised by Mr. Green are in many peoples' minds. Perhaps the most intriguing question he raises is concerning the habit-forming results of hand-outs.

Perhaps someone can furnish a satisfactory example of a nation that stayed bought by one hand-out or loan. If so, that illustration would be in order now. Mr. Green's complete letter follows:

BRIBING EUROPE

EDITOR, THE WALL STREET JOURNAL:

Those of us who have limited understanding for soulful politics probably should be quiet, but the desire for knowledge is as sharp as filed steel. If we admit we do not understand, we do not therefore say that we are too thickskulled for an idea to penetrate. And so could we make an observation on what seems to this writer a bit crass? It may be worse than that, but this writer is not expressing his opinion so much as he is crying for light.

The thing that is worrying us right now is the vague idea which is called the Truman doctrine. What is it, anyway? There is a widespread idea that we are alarmed over the prospective spread of communism—a virulent social poison. Any nation that quaffs a few quaffs of communism is a wreck. So we, with our superior understanding, are warning all of those mentally obtuse nations of ragged Europe that the Bolsheviks are all wrong. But we are not going to rely on simply telling these people not to jump off the bridge—we are going to bribe them with our bright glittering billions not to do it.

If we are compelled to give these benighted people our pants in order to persuade them not to commit suicide it might be interesting to know what the deluded Russians can offer them in return for this prospective trip to perdition. Is poverty, hunger, disease and ignorance so alluring to the bumble-wits of Europe that we Americans must suffer from malnutrition in order to save them from ruin? Suppose we do save them now? Then what? Will these Europeans say to themselves, "these uncouth, long-eared, blear-witted Americans can't get along without somebody to save so let's keep on threatening to jump off the bridge if we don't get bigger and bigger rewards"?

To me, our policy of bribing Europe sounds about as impressive as offering a prospective suicide the Empire State Building if he will just restrain his inclination to jump off the tower. If that policy were to be seriously undertaken every building on Manhattan Island would have a nit-wit on top of it threatening to jump to destruction unless he is given a title to the building for preserving his life. That's what the Truman policy is sure to mean. All countries will quickly decide that we are a rich Nation—a rich and gullible Nation. All the scheming Europeans need to do is to scream out, Hey, you Americans, how much are you going to pay me not to plunge into bolshevism? My idea is that we should resolutely reply—jump you so and so. See if we give a tinker's toot.

SAM GREEN.

NASHVILLE, TENN.

Definition of Agricultural Labor

EXTENSION OF REMARKS

OF

HON. WALT HORAN

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 27, 1947

Mr. HORAN. Mr. Speaker, under leave to extend my own remarks in the Appendix of the RECORD, I am pleased to include a memorandum dealing with the present conference on the House and Senate labor bills.

This specifically deals with the definition of agricultural labor, and I offer it as a contribution to a clarification of this troublesome fact when applied to agricultural labor.

DEFINITION OF AGRICULTURAL LABOR

Wenatchee-Beebe Orchard Co. and James M. Wade, two of the country's largest apple growers, are very much concerned about a relatively minor difference in the Senate and House drafts of the current labor bills (S. 1126 and H. R. 3020), which difference is believed to be of great significance to agriculture generally. The definition of "employee" as it relates to individuals employed in agriculture is the problem.

The House bill adopts at section 2 (3) the definition of agricultural labor employed at section 1426 (h) of the Internal Revenue Code. That is a definition with which all employers are required to be familiar for the purpose of tax withholding, social security, and other such purposes. The use of a different definition in other Federal legislation tends to confuse those who are required to comply with such legislation.

The Internal Revenue Code agricultural labor definition is explicit and well understood. It avoids, for example, the following type of anomalous situation actually existing now under current Federal labor legislation: A person engaged in wrapping fruit preparatory to shipment to market, if working in a building located on a farm, is an agricultural laborer; whereas one employed simultane-

ously in identical work at a warehouse or shipping station around the corner is not.

Furthermore, at present the same employee may be an agricultural worker under a Federal labor statute and not an agricultural worker under the Federal tax laws.

The definition of agriculture at section 2 (3) of the Senate bill adopts an artificial test, location, as the determinant of whether a given activity is agricultural, the test being in some instances whether or not the activity in question takes place on a farm. Where in the unbroken operation of growing, harvesting, and preparing fruit for market some fruit is wrapped on a farm and other fruit from the same crop, and as an incident to the same farming operation, is wrapped simultaneously at another point near a farm, logically each activity should be classified the same and each should be regarded as agricultural. That is the effect of the definition of agricultural labor proposed by the House.

The House definition should be adopted.

Hon. Fred Bradley

REMARKS
OF
HON. ROBERT HALE
OF MAINE
IN THE HOUSE OF REPRESENTATIVES
Monday, May 26, 1947

Mr. HALE. Mr. Speaker, I should like to speak a few words of tribute to my friend FRED BRADLEY. I served with him on the Committee on Merchant Marine and Fisheries through the Seventy-ninth Congress. He was a most conscientious member of that committee, though even then his health handicapped him.

When the chairmanship of the committee came to him at the beginning of the present Congress, he felt his responsibilities very keenly. Although I had left the committee, I talked with him a good deal about various matters in connection with the organization of the committee and the work of the session. No one who saw him during that period can doubt that he felt so keenly the weight of his responsibilities that he broke down under it. He gave his life to the performance of his duty, and, from things he said to his friends, I feel sure that he foresaw what was to come.

A few weeks ago FRED BRADLEY made some remarks about the social responsibilities of Members of Congress and the social demands upon them. In some quarters what he said was not taken seriously and in others it was misconstrued. But he said only what was true, and subsequent events have shown how strongly he must have felt the truth of what he said when he said it.

The death rate in this body bespeaks the tensions under which its Members work. Men like FRED BRADLEY and CHARLES GERLACH were far too young to die. They probably would not have died if they had not given their lives so devotedly to the public service. For their labors and their sacrifice they deserve all honor. I had come to have a strong affection for FRED BRADLEY and I shall miss him.

Radio Address to My Constituents

EXTENSION OF REMARKS
OF
HON. EDWIN ARTHUR HALL
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 27, 1947

Mr. EDWIN ARTHUR HALL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following radio address delivered by me over Station WNBF on May 24, 1947:

Dear friends of the triple cities and my congressional district, several days ago, I took the floor of the House and delivered the following speech: "Mr. Speaker, if we are to believe what we read in the papers we can come to but one conclusion, that the warehouses of this country are bulging with sugar, just as the granaries of the ancient Pharaohs were bursting with stored wheat, corn, and barley.

"This food should be made available to our housewives so that the American diet may be improved. Cakes, preserved fruits, pies, bread, and all the other edibles that have been common to the American table for a century before the recent war ought to be prepared once again in home ovens. People are unable to maintain our usually high standard of living unless more sugar is distributed per capita. You will remember how Joseph in the Bible opened the granaries of ancient Egypt when the people hungered. It is time a modern Joseph came forward and opened the warehouses of sugar so that the American family may have an adequate supply for which we have all hungered for so long."

The dangers besetting our economic front at the present time are many and hazardous. Whether we realize it or not, our whole system is on the spot and only an early solution to the problems of threatening inflation, lowering wages, unemployment, and related subjects will guarantee a permanent continuation of the status quo.

Those seeking to overthrow America and place anarchy where order has existed are itching for inflation, praying for hunger and want which invariably follow high prices, and hoping the country will be thrown into chaos by millions of citizens out of work.

The hue and cry against communism, being voiced exceedingly late, would prove more effective with the declaration by those who make the wheels go round of a studied policy to reduce the high prices we now pay for the necessities of life. Let's map a course of action that really solves forever the misery of the unemployed.

Some people listen to subversive propaganda which tells us communism has no unemployment. They are right.

There is no unemployment in Communist nations today because the people are forced at the point of the bayonet to work. The state pays them as much or as little as it sees fit. If they don't like it, they get the firing squad.

But unfortunately some Americans fall for that line of argument. We hear them say they are disgusted with unsavory conditions in America, not realizing that if they cast off our system of government they say goodbye to freedom and liberty which today exists only in the United States.

Nevertheless, those of us who want the American way of life to work must be willing to take whatever action is necessary to keep our standard of living the highest in the world. We can't do it by allowing prices to go higher, and jobs to become scarcer.

To offer a solution to the headaches of the future, one must immediately be challenged by the cynics who never believe in trying anything new and who scoff at everything different.

Personally, I think it is possible to prevent the depressions and inflationary periods our economic system has suffered from for so long. Many people laughed when I suggested we could attain a sound, stable economy, not for just a month or a year but permanently by making the American dollar inflation-proof and depression-proof. In other words, we could make our Nation and the world prosperous all the time by permitting ourselves the use of a dollar that is worth 100 cents instead of 59 cents.

We can obliterate communism, stop worrying about inflation, enjoy lucrative jobs, abolish unemployment by taking a few fundamental steps that are as simple as ABC. These steps are not revolutionary and call for no new financial set-up.

Give the American people a dollar that will buy a dollar's worth of the better things of life and you will keep happiness, satisfaction, and peace to the United States and the whole world.

Thank you.

Changes in Federal Security Law Overdue

EXTENSION OF REMARKS
OF
HON. CHARLES R. CLASON
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 27, 1947

Mr. CLASON. Mr. Speaker, at the start of this session of Congress H. R. 16 was introduced. This bill seeks to secure for the aged people of the United States a fair and adequate hearing on their request for an overhauling of the present inadequate and inequitable social-security program of the Federal Government. Today, when hundreds of millions of dollars of our people's money are being sent overseas as food, clothing, and shelter for war victims in foreign lands, tens of thousands of aged Americans are being neglected here at home. Too much ridicule and too little careful consideration of their welfare have been granted to our aged people in recent Congresses. I urge that the Ways and Means Committee provide adequate hearings for legislation in their behalf at the earliest possible date.

Chief of Police, Washington, D. C.

EXTENSION OF REMARKS
OF
HON. RAYMOND S. SPRINGER
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 27, 1947

Mr. SPRINGER. Mr. Speaker, because of an apparent confusion respecting the selection of a chief of police for the city of Washington, D. C., some very interesting newspaper articles and editorials have been published upon that subject. Herewith, I desire to insert in the Appendix of the RECORD two of those articles. Therefore I ask unanimous

consent to extend in the Appendix of the RECORD two of those published articles, one from the Washington Daily News and the other from the Washington Post, which are as follows:

[From the Washington Daily News of May 23, 1947]

NOW IT CAN BE TOLD—PRESIDENT ENTERS DISTRICT OF COLUMBIA POLICE FIGHT

(By John T. Burch)

Commissioner John Russell Young's mysterious April 9 summons to the White House was for the purpose of letting President Truman get his oar into the Washington battle over appointment of a new chief of police, the News learned today.

At the time of the visit, Mr. Young told reporters it was "just routine." At a press conference later, President Truman said he didn't want to discuss the visit.

This, however, is what happened.

The White House, disturbed by rumors that a new chief of police would be named and under pressure in behalf of a particular candidate, wanted to caution Mr. Young not to make any appointment not approved by the President.

HE ASSENTS

Dutifully, Mr. Young, who already had made up his mind about the successor to ailing Maj. Harvey Callahan, said he would make no appointment without clearing with the President.

Later, the White House told Mr. Young that he could appoint anyone he wanted—as long as it was a Police Department career man.

Mr. Young sighed with relief and went ahead with his plans to appoint Inspector Robert J. Barrett, now chief of detectives, to succeed Major Callahan, who is ill.

INDISCREET

Mr. Young made the mistake, however, of revealing to a number of people his intentions to appoint Mr. Barrett. A torrent of protest followed the announcement.

Yesterday Commissioner Young, in a move that would give the impending appointment the air of a considered decision, launched a "study" of the records of eight police officers eligible for the No. 1 job.

The eight are: Inspector Walter Thomas, acting chief; Inspector Oscar Letterman, former vice-squad chief; Inspector Clarence Talley, supervisor of the second district; Inspector Arthur E. Miller, traffic division; Inspector John Fowler, head of police school; Capt. John Fondahl, head of the eleventh precinct; Capt. Floyd Truscott, head of the thirteenth precinct and one of the department's outstanding detectives; and Inspector Barrett.

MR. BARRETT'S PAST

High spots of Inspector Barrett's career include four trial-board appearances for brutality toward prisoners—not guilty each time—and his conviction in 1931 of beating a prisoner. The conviction was reversed on a technicality and the second trial ended in a hung jury. The charge then was nolle prossed.

Last year, it was brought out that Lieutenant Barrett had become Captain Barrett without taking the customary civil-service examination. It was done by a White House Executive order at the request of Barrett's uncle, the late Col. Edward J. Kelly.

Wednesday evening, Detective Chief Barrett entered Providence Hospital for treatment for the grippe, in the official explanation—coincidental with charges in the Kelly murder case that defendants were beaten by detectives to obtain confessions.

[From the Washington Post of May 24, 1947]

POLICE HEAD

The Commissioners have not acted too soon in considering the selection of a new police superintendent. The long illness of Supt. Harvey G. Callahan has forced them to act, for they see that the Police Department is losing morale. Superintendent Callahan says that he has no intention to retire and expects to return to his desk no later than July 1. Undoubtedly the Commissioners as well as the public sincerely hope that he will be able to do so. But in case he is not, the Commissioners must be be prepared to act. No organization whose efficiency is peculiarly geared to its morale can long operate effectively without an authoritative chief whose position is unassailable.

A few days ago Commissioner J. Russell Young began studying the records of eight top-flight men in the Police Department. Yesterday he asked for the records of seven more. It is reasonable to assume that not all of these men are under consideration for the superintendency of police; some are doubtless under investigation for replacement of the man who may be advanced to the top job. The strong implication is, however, that if it becomes necessary to select a new head of the police, he will be picked from this group. This is good policy. There are a number of able men of long experience in the department—men who are fully capable of taking over the top position. We think the community will be relieved by this indication that the superintendent will continue to be a Police Department man.

By thus narrowing the range of their possible choice, however, the Commissioners have by no means solved their problem. While a good police force is likely to thrive on promotions from within, they cannot be routine promotions. Nor can the Commissioners afford to take any one particular officer merely because he pulls the most wires in his own behalf. What is needed is obviously a conscientious analysis of the record of each candidate, with the object of letting the best man come to the top. And this means the best man to head the department. A police officer may have a brilliant record in solving crimes and yet be completely unfitted for the executive position of police superintendent. First of all, the policeman shifted into this key position must have the full confidence and respect of his men. Second, he must have the confidence of the public. A brilliant record that is spotted with charges, suspicions, and controversies will not inspire such confidence, especially when those charges relate to the attitude of an officer toward the public. We hope that the Commissioners will feel their responsibility in this matter as keenly as if they had been elected by the people whom they serve.

Labor-Industry School

EXTENSION OF REMARKS

OF

HON. GORDON CANFIELD

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 27, 1947

Mr. CANFIELD. Mr. Speaker, under leave to extend my remarks, I submit the following newspaper story describing the labor-industry school of the Botany Worsted Mills, in Passaic, N. J., which today graduates its first class of 400 students. The account appeared in the New York Herald Tribune of Sunday, May 25, 1947:

LABOR-INDUSTRY SCHOOL IN JERSEY ENDS FIRST TERM—BOTANY PROJECT, STARTED IN SEPTEMBER, HELPS MILL'S ACTIVITY, BOTH SIDES AGREE

A school in labor-management relations in which union-shop stewards and supervisors study side by side with company foremen and with management officials will hold its first graduation exercises Tuesday at Botany Worsted Mills, Passaic, N. J.

Believed by its founder to be the first comprehensive plan of its kind in the country, the school is conducted jointly by the Textile Workers' Union of America, a Congress of Industrial Organizations affiliate, and Botany Mills, one of the country's largest textile manufacturers. Classes were begun last September to promote better mutual understanding between the labor and management officials who handle the company's labor problems.

In a course operated according to standard academic procedures, student foremen and stewards study the letter of their contract and of labor laws, the precedents of grievance procedures and the broader aims on which company and union agree. According to George Baldanzi, vice president of the national union, it offers to "labor a real opportunity to sit down and talk things over with management."

In the same vein, the president of the company, Charles F. H. Johnson, says he considers that one of the school's greatest assets is that it provides a chance "for all concerned to get to know one another and to know each other's problems."

The school was started within a year of the company's signing of its first union contract, in 1945, which provides for a union shop. The company had had several brushes with the National Labor Relations Board, but since the union has been recognized Mr. Johnson says he has come to believe that cooperation is the best way of achieving the "joint goal of continuous and efficient production."

In September 1946, Mr. Johnson; Mr. Baldanzi; C. F. H. Johnson, Jr., general manager; Maj. Gen. Irving M. Phillipson, United States Army (retired), director of industrial relations; and others discussed the need for the school. It was agreed that there was a lack of special training for those directly concerned with labor disputes—foremen are likely to be promoted for their industrial skill and union leaders elected for their activities outside of the shop, while neither is necessarily a specialist in human relationships.

To meet the situation the school was organized to help resolve complaints and grievances as closely as possible to the point of origin—directly between foremen and shop stewards when possible. Both sides are taught that the great majority of individual complaints arise from such human variables as health, temperament and social problems outside of the concern. The students are continually reminded that "workers don't leave their personalities behind when they punch the time clock."

The course consists of 20 1-hour classes, held on company time three times a day to accommodate different shifts. Less than 20 students make up an average class. The teachers are from the ranks of both labor and management and the curriculum is agreed upon by both parties.

Since there was no precedent for setting up the school, the procedure has had to develop as it goes along. There is as yet no textbook for the course, but the lectures and exercises given this winter have been consolidated and will soon be published, Mr. Johnson said.

About 400 students will be graduated from the first session on Tuesday, said Mr. Johnson, and a number of industrialists from several parts of the country, interested in adopting the plan, will attend the ceremony at 6:30 p. m. at the plant. Because of the large turn-over of labor in the mill—which, with 5,600 workers, is the largest single employer in Passaic—the course will be continuous and will train new foremen and stewards as they are appointed or elected.

So far Mr. Johnson and Mr. Baldanzi are enthusiastic about their plan. Since the school began the record shows a decrease in top-level disputes, a lower incidence of absenteeism, and increased production.

Agriculture Appropriation Bill

EXTENSION OF REMARKS
OF
HON. W. J. BRYAN DORN
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 27, 1947

Mr. DORN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following telegram:

WASHINGTON, D. C., *May 25, 1947.*
Hon. W. J. BRYAN DORN,
House of Representatives,
Washington, D. C.:

Farmers deeply shocked at several recommendations of House Appropriations Committee on Agriculture Appropriations. Our organization offered sincere aggressive support for real constructive economy by eliminating unnecessary personnel, excessive expenditures and duplication of services. But we asked committee not to cut heart out of farm program. Instead committee made most of savings at expense of farmers and vital farm program and failed to require reduction in many badly overstaffed agencies. Farmers are especially indignant over cut in 1947; $300,000,000 AAA conservation program specifically approved by Congress last year to $165,000,000, thereby breaking faith with millions of farmers and also complete elimination of program in 1948. Reduction of administrative expenses to $15,000,000 will make it impossible for State and county PMA officers to carry out this program successfully and to handle commodity loans and other price support functions vital to millions of farmers. Farmers in every section are alarmed over complete elimination of section 32 funds for surplus disposal which Congress has approved as permanent appropriations. Farmers also greatly concerned over failure to provide even first year's allotment of research funds approved under Hope-Flannagan Act which passed almost unanimously last year. We favor strict economy but strongly protest foregoing actions as false economy and breaking faith with farmers. These vital programs were adopted by bipartisan votes in Congress. Millions of farmers are looking to you to rectify these injustices and keep faith with farmers above party by providing these vitally needed funds.

AMERICAN FARM BUREAU FEDERATION,
EDWARD A. O'NEAL, *President.*

Labor Law Symposium

EXTENSION OF REMARKS
OF
HON. RICHARD M. NIXON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 27, 1947

Mr. NIXON. Mr. Speaker, the Duke University Law School, of which I am an alumnus, publishes a quarterly known as Law and Contemporary Problems. Each issue of this publication is devoted to a symposium presenting legal and other social-science aspects of a vital current problem. This journal, founded in 1933 by Prof. David F. Cavers, now of the Harvard Law School, has attained a position of distinction among legal periodicals—a unique distinction, since it is the only one which systematically correlates the legal approaches to the solution of problems with the enlightenment which can be gained by reference to the contributions of the other social sciences.

The spring 1947 issue of Law and Contemporary Problems is devoted to a symposium on labor-dispute settlement, edited by Prof. Brainerd Currie, editor of the journal, and Mr. Paul H. Sanders, formerly of the Duke Law School faculty and now of the Atlanta bar. The symposium consists of 11 articles by people of varying backgrounds and shades of opinions, discussing the problem of labor-dispute settlement from the legal standpoint, from the standpoint of the economist, from the standpoint of the psychological and sociological problems of personnel administration, and from the standpoint of the public interest. Some of the articles were prepared by labor leaders, some by representatives of management, and others by observers of industrial relations who have no affiliation with either side. The symposium as a whole is a balanced, well-rounded and sincere attempt to explore the problems of labor-dispute settlement in a scholarly manner.

The settlement of labor disputes is justly termed America's most serious postwar domestic problem. Because of the timeliness of this symposium, which presents a significant cross section of opinion at a time when the Congress has under consideration a major legislative program for labor, it seems to me that a copy should be placed on the desk of every Member of Congress. I have arranged with the publishers for a complimentary copy to be sent to each Member of the House and Senate. The Duke University Law School and the editors of Law and Contemporary Problems are glad to make this distribution as a public service; they are concerned only that there be no misinterpretation of their motives in doing so. Law and Contemporary Problems is a nonprofit professional publication. It is not a crusading journal, and has no propaganda objectives. The views expressed in the articles published in the periodical are to be attributed to their authors alone and not to the periodical, its editors, or Duke University. In making copies of this symposium available to Members of Congress the publishers have no intention of attempting to influence congressional action on labor legislation. Indeed, the opinions expressed by the various authors are so diverse and frequently conflicting that it would be impossible to reconcile them for the purpose of any partisan thesis.

The Congress has not permitted itself to be stampeded by industrial conflicts into the hasty enactment of unwise labor legislation. In spite of the pressure of developments, it has taken the time to consider the issues fully and dispassionately, and to consider the long-range implications of proposed remedies for the American way of life. It is in this same spirit, hoping to perform a public service, that the publishers of Law and Contemporary Problems have made available to the Members of Congress this important collection of studies of a problem with which we must be so deeply concerned.

British Plan New Empire

EXTENSION OF REMARKS
OF
HON. NORRIS POULSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 27, 1947

Mr. POULSON. Mr. Speaker, under permission to extend my remarks, I should like to include in the RECORD an editorial from the Washington Sunday Star of May 25, 1947, by Constantine Brown, entitled "British Plan New Empire." I sincerely hope that our Department of State is not oblivious to this situation.

The editorial follows:

BRITISH PLAN NEW EMPIRE—SOUTH AFRICA VITAL IN COME-BACK STRUGGLE

(By Constantine Brown)

Officially inspired reports from London that Great Britain will cease to be the policeman of the Mediterranean and that the United States is expected to assume that role come as no surprise to Washington official quarters.

Britain is now attempting to organize a new empire in Africa. It has been known since last October that the London government was preparing to abandon its military obligations in the Mediterranean and was hoping that America would assume them.

Ever since the British Government decided to abandon its empire in the Far East by giving India unconditional freedom, it has been obvious that she would no longer be interested in the eastern Mediterranean, which in the past she considered her lifeline. Last October the State Department received definite information that British troops would be withdrawn from Greece. Later Britain displayed slackening interest in the question of the Dardanelles.

UNITED STATES LACKS BASES

Whether the United States will be able to replace Britain as the Mediterranean policeman is a moot question. One of the most serious physical handicaps is the fact that we have neither naval nor air bases in that area, and it seems doubtful that we could avail ourselves of the important bases at Malta or Cyprus.

Britain cannot survive even as a second-rate power without a colonial empire. It is a poor country, lacking almost all kinds of raw materials, except coal. Her population is overwhelmingly industrial. The recent food shortages, 2 years after the end of the war in Europe, reveal that she still relies almost exclusively on imported food. Adequate food supplies cannot be brought to the United Kingdom without a favorable export balance.

The British workman suffers more than the capitalist from abandonment of the Asiatic empire. This is fully realized by the Labor government and by a majority of the House of Commons. The British need an empire, not for the sake of the capitalists, who can always find an outlet for their money elsewhere, but for the sake of millions of workers.

SOME SEE DEAL WITH FRANCE

The Government believes it has found the answer. It is planning to move the imperial activities to an area which can be more easily policed and which does not lend itself to international conflict—Africa, south of the Equator, with Kenya Province in the north as its chief base.

Some more ambitious Britishers, such as representatives of the Conservative Party, believe that some agreement might possibly be reached with France for joint exploitation of the entire African continent, which contains many little-developed raw materials. Except for North Africa, where the Arabs comprise a pretty solid block, the rich areas in Central Africa are populated by people who still lack any feeling of national unity. It is in such areas where imperialism can be developed and proven beneficial for those who dominate and are dominated.

Negotiations toward the creation of such an empire are being carried out at present by the governments of Britain and South Africa on the one hand and Belgium and France, which control the Congo and a portion of West Africa, on the other.

EMPIRE IS SHRINKING

The British decision to move out of Asia was taken after deliberate discussion and planning. The chief reason was that all the British politicians have become fully aware of the fact that Britain is no longer a world power. Her only hope of taking a more limited position as one of the world leaders rests in the possibility of organizing a new empire in Africa south of the Equator. This will require her to enter a partnership not only with France, Belgium, and Portugal, but also the Union of South Africa, which only last month received the royal family.

The British Government abandoned India and is ready to abandon all other possessions in the Indian Ocean, including Malaya. It has no longer the means to control them, particularly since Russia has emerged as a world power of the first order and has shown clearly that it does not intend to tolerate Britain in her backyard.

According to reports from reliable sources, the whole matter of Britain moving out of Asia politically and militarily was submitted last December to Prime Minister Stalin by Field Marshal Viscount Montgomery, chief of the British imperial staff. Lord Montgomery paid a visit to Moscow, where he was received with more pomp than any other western Allied military leader has been accorded.

MONTGOMERY OUTLINED POLICY

The abstemious Scot was dined and wined in true Russian fashion. He visited Russian military establishments and was presented with a sable-lined coat. But above everything else, he had a long conversation with Prime Minister Stalin, during which he is said to have expounded Britain's new policy of avoiding a clash with the U. S. S. R.

This policy is said, by those who later reported on it, to have included among other things the British plan to move politically out of Asia in order to avoid the age-old contest with Russia in that area. In exchange for that liquidation of Britain's entanglements in the Middle East and in the Indian Ocean, the chief of the British imperial staff wanted to know whether he could report to his superiors that the Soviet Government would be willing to respect British oil interests in the Middle East.

Lord Montgomery is said to have informed Stalin that Britain was sincere in her offer to abandon her political interests in the areas so dear to the Russian heart and that she contemplated establishing a new empire in Africa, south of Egypt. This, he said, could by no stretch of the imagination be construed as conflicting with Russia's policies. Prime Minister Stalin is said to have agreed.

NEW ALLIANCE REPORTED

The indorsement of the British plan was reported by Lord Montgomery on his return to London early last January. He called on King George VI immediately after his arrival. He also had a 2-hour session with the cabinet.

The immediate sequel of that conversation was the disclosure of a tripartite alliance between Britain, France, and Russia. For the present this alliance is not in effect. Such historic developments are subject to much bargaining and haggling. But the handful of American official observers who have followed the new trend believe they have now received at least partial confirmation of the reports of Britain's new orientation.

London has now admitted that it has sold Russia a number of jet planes. The price will be paid in Russian raw materials. But Washington has received definite information that besides these jet planes the British since January have been selling the Russians plexiglass, plastics essential in the mass production of jet planes, and a number of other inventions developed in the United Kingdom during the war.

Whatever atomic energy formula Russia possesses today came from the persons who betrayed secrets to the Soviets, as was made clear in the Canadian spy case. But the British Government's willingness to provide the Soviet Government with materials needed for modern warfare is regarded as an indication of trends in the United Kingdom.

Let's Not Civilize These Happy People

EXTENSION OF REMARKS

OF

HON. MIKE MANSFIELD

OF MONTANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 27, 1947

Mr. MANSFIELD of Montana. Mr. Speaker, it was with a great deal of pleasure that I read the honest, straightforward report of Rear Adm. Carleton H. Wright, United States Navy, concerning our new island possessions in the old Japanese mandates of the Marianas, Carolines, and Marshalls. This article appeared in the May 3, 1947, issue of the Saturday Evening Post and I recommend it wholeheartedly to the Members of Congress for a good understanding of the problem which confronts us and also for a good report of conditions as they actually exist in that part of the world.

I might say to the Members that Admiral Wright has visited practically every one of our new islands, sometimes under the greatest of difficulties, and he thoroughly knows and understands what he is talking about. I can attest personally to the fact that the natives in the islands think a great deal of Admiral Wright and that in return he is tolerant, understanding, and sympathetic towards their needs. I congratulate the Navy on having such a man as Admiral Wright as general inspector for the United States Navy of the Pacific Ocean area, and I want to congratulate him for the fine job he has done to keep alive the spirit of America in his understanding and sympathy for the people who comprise the population of the former mandated islands.

It is my impression, Mr. Speaker, that at the present time the Navy Department is the only qualified agency who can handle these new possessions and certainly it must be admitted that they are fully aware of the difficulties and complexities of the job of administering which has been thrust upon them. The Navy military government officials, who have been sent out to look after the needs of the natives in the former mandates, are doing a splendid job by and large and the course of training being given by the Navy school of military government at Stanford University is outstanding in every respect. The Navy students, volunteers all, who are undertaking the necessary courses before being sent to the Pacific Islands, are being intensively trained for their duties by an excellent staff and the results gained by my personal experience with them indicate that they are doing an extremely good job. I do think that sometime in the future it may be both wise and necessary that some sort of civilian control be inaugurated over these island possessions but I do not think on the basis of personal experience that at the present time there is an agency more capable or more interested in administering these new possessions of ours.

Mr. Speaker, under unanimous consent, I am inserting the article by Admiral Wright which appeared in the May 3 issue of the Saturday Evening Post:

LET'S NOT CIVILIZE THESE HAPPY PEOPLE

(By Rear Adm. Carleton H. Wright, United States Navy)

Twenty-eight years ago, with short-lived foresight, the United States protested Japan's acquisition of Yap. The Government's case was not helped any by the isolationist press, which thought that the Pacific island's name was just too funny, and made of Yap a symbol to ridicule the first fumbling American efforts for a system of exterior security.

Today Yap is ours. We hold it by right of conquest, together with some hundreds of other inhabited Pacific islands scattered over nearly 5,000,000 square miles of ocean. Our Government has asked the United Nations to confirm the United States as trustee, with sovereign rights, for these former Japanese mandates from the defunct League of Nations. It is tentatively proposed, subject to the ultimate authority of Congress, to develop a few of the most adaptable and strategically situated islands as defensive bases against aggression upon the peace of the United States, which is to say, of course, the peace of the world.

Meanwhile we are the guardians of some 50,000 native inhabitants of lands that come very close to realizing the ecstatic mythology of the ancient Greeks' Islands of the Blessed. A very important question we shall soon have to answer is, What shall we do with these people? What shall we do for them?

And I say, for mercy's sake let them alone in their happiness.

As general inspector for the United States Navy of the Pacific Ocean area I have visited every one of the hundreds of inhabited islands. I have sat for days with the island chiefs and the headmen of each community, discussing and studying their wants and needs, which are few and simple. And I have as industriously studied the sources of their tranquillity and good cheer for my own benefit, to arrive at the conviction that their serenity is derived from a minimum of gov-

ernment, a simple economy, and an environment that is as close to the Garden of Eden's as exists anywhere.

But heaven help them. What a temptation they offer to the brisk missionaries of modernism, the bureaucrats, the sentimentalists and the busybody do-gooders.

At present the government of the area is administered by naval personnel, volunteers all, and all intensively trained for their duties in the School of Military Government at Stanford University. It is government by the remotest possible system of control, which concerns itself almost exclusively with these responsibilities:

To restore property and facilities damaged in the war; to improve health and sanitation; to encourage the earliest establishment of self-governing communities regulated by local customs, not alien-imposed ideas; to initiate an educational program adapted to native capabilities and to local environments to these ends, and to teach the natives to achieve the maximum benefits offered by their environment. And all that that latter clause means is to teach these amiable, happy-go-lucky Micronesians how to help bountiful Mother Nature just a little bit, and that mainly is the easy art of conservation.

We cannot do much less, because most of that simple program is designed to remedy ills that the occidental races—directly or at second-hand through the Japanese—inflicted upon the islanders. The worst of their diseases were introduced by whalers, traders, missionaries, and military expeditions. German and Japanese conquerors and exploiters disrupted social and economic balances achieved through centuries of uncontaminated self-development. Since the white man—and yellow—came to the islands, the native population has declined as much as 90 percent, and whole nations have become extinct, their only monuments such awe-inspiring works of engineering as the Matalanin ruins in Ponape.

The lesson I have unforgettably learned is that the islanders' enviable happiness, contentment, and self-sufficiency are in inverse ratio to their exposure to occidental standards of civilization. If civilization means flush toilets, ice cubes, machine guns, and sewing machines, then these people are savages. If civilization means an economic system in which there is no relative poverty, but an adequacy of food, shelter, and security, and a social system in which all participate equally and actively in the material and the aesthetic aspects of community life, then they are civilized and we have much to learn from them.

But the impulse, of course, will be to uplift them, and may God help them—and forgive us—if the effort is made. The perimeter islands of the Pacific are studded with horrible examples of what happened when nineteenth-century European-American standards of economy, politics, and morality were imposed upon Polynesians and Micronesians. There you will find squalor, discontent, endemic diseases not only of the body but of mind and spirit, and at best only a poor imitation of the Anglo-Saxon and Hispanic civilizations we superior races, in our self-righteousness, forced upon peoples who had made a much more advantageous bargain with nature than we can hope to achieve.

Being contented and happy, the islanders will passively resist our attempts to make Iowans or Californians or Virginians out of them if we try it. Let me give you an example by returning this narrative to Yap, 5,000 miles southwesterly from San Francisco, 458 miles southwest of Guam, 800 miles east of the southern Philippines. Most of us, forgetting that the international agitation over the disposition of Yap in 1919 was because of its strategic position, do remember it as the island of stone money. Yap is a happy land where an hour's work a day is ample for a man to keep his family well fed and adequately sheltered, where the climate is kindly and grass skirts are still the mode. But at last it was ours.

So we went to Yap and told them so. We told them, also, that hereafter Japanese money was worthless. They took the news without blinking. We told them they would have to exchange their yen for dollars. They smilingly acquiesced. We told them how many yen they would have to give up for a dollar. They did not demur or haggle. They treated it as a big joke. That, I thought, was no way to regard the most powerful unit of currency on earth. In civilized Europe, I knew, people were parting with everything from precious heirlooms to their virtue for an American dollar to two.

Most powerful unit of currency on earth? Almighty dollar? The Yap chiefs strove politely to conceal their derision.

It took much patient inquiry to learn what they really thought—the most stable unit of currency on earth is the bead, shell, and stone money of Yap, and they could prove it.

A long time ago, I was told, the Spaniards came to Yap. They said the only good money was that of Spain. For so much work, so many sacks of copra, a certain number of Spanish reals would be paid, which could be exchanged for certain lengths of cotton cloth or a quantity of needles or tobacco.

The Yaplanders shrugged their shoulders. In the transactions with the Spaniards they used reals, but among themselves they remained true to their own currency—in ascending value, strings of glasslike native beads, longer strings of polished shell disks interspersed with polished red stone and finished off with toggles of sea-cow ivory, and, finally, the huge pierced disks of imported stone. These latter, some of which weigh several tons, are symbols of wealth rather than negotiable currency, for it takes 50 men to move one.

Anyhow, years later the Germans arrived and said thereafter marks, not reals, would be the standard currency. So the Yaplanders did business with the white man in marks, and among themselves with shell and stone. Thirty years passed, and the Japanese moved in. Now the mark was no good. Only yen were money. The people of Yap said whatever passes for O. K. in their dialect, and good-humoredly indulged the third set of foreigners in their financial whimsey.

"Now the Americans come," I was told. "You say now yen no good, only dollar, just like Japanese say mark no good, Germans say real no good. But all the time, all the time, Yap money always good. Yap money best in the world." And they were right—in their world.

Yap money, primitive as it seems to us whose economy is based on tons of gold buried in Fort Knox, represents a fairly sophisticated finance compared with most of the islands, where most property is communal and barter is the medium for such exchange as exists.

Let me say right here that it is dangerous to make generalizations about the people of the Marshall and Caroline archipelagoes. I shall, of inexorable necessity, be guilty of violating that rule myself in a narrative of this dimension. So I make no apology for the preceding generalization, or for this one: that, except where superficial respect is paid to alien forms of government, the internal administration of most of the islands is by hereditary chieftainship.

Now, I know, too, that by our standards the islands' economic and political systems are all wrong. The first smacks of communism and the latter of royalism. I can foresee, with no small horror, efforts undertaken to provide the islanders with a sound financial system, including mortgages, sight drafts, traveler's checks—for they are great travelers, these people—and compound interest. I can see, as in a nightmare, the paid apostles of democracy coming into the Pacific to educate the islanders in the privilege of the franchise and teaching them how to hold nominating primaries, party conventions, conduct electoral campaigns, and to exercise the initiative, referendum, and recall.

It will be about as practicable and progressive as to try to make dairymen out of them because they now have no cows, or to inaugurate a good-roads program because they must now travel on foot or in outrigger canoes. I still say, let them alone in their enviable simplicity. Keep out the do-gooders and the disciplinarians.

Island chiefs attain rule by a complicated system of heredity which traces descent through the female line.

In theory, the chief is all-powerful. In practice, any attempt at despotism or lesser malfeasance or misfeasance is a short cut to deposal, if not disposal. If ever governments derive their just rights from the consent of the governed, it is in the primitively organized islands. Theoretically, everything in the domain belongs to the chief; practicably, everything is equitably divided, be it a haul of fish or the use of the one sailmaker's needle on the atoll. By native standards it is right and proper that the chief should have the best of everything, for he has a full-time job, and no one else is thus burdened. But there is small difference between the best and the worst in an environment where the staple foods are fish, turtle, breadfruit, and taro, where the weather is so ideal that the need for clothing is reduced to something soft to sit on, and both food and clothing are to be had in surfeit for the taking, plus a few minutes of simple preparation.

The whole system of government is inextricably involved with the complicated—and sensible, withal—code of taboos, and that, in turn, is blended into religion. Again risking generalization, I find most of the islanders, even those who had not seen white men before the arrival of my Navy party, are at least nominally Christians. Some of the missionaries, especially the most recent ones, contributed marvelously to the welfare of their flocks with small disturbance to the ancient codes. The ethics of Christianity were easily adaptable to the indigenous philosophy of an inherently gentle and generous folk. They learned eagerly about, and believed readily in, the Christ who was Himself an artisan, whose greatest friend was Peter, a fisherman. From the same teachers they learned the rudiments of sanitation and husbandry. Most of the occidental missionaries were forced to leave during the Japanese regime, but their teachings were not only not forgotten, they were carried to the remoter islands by these natives who think nothing of 1,000-mile journeys in outrigger canoes. I was told almost everywhere that the islanders want those missionaries, or others like them, to return and live among them.

Unfortunately, some of the missionaries, especially the grimly puritanical kind that the nineteenth century produced, carried to the islands some of the hair-shirt brand of dogmatic theology widely accepted in American religious circles at the time.

When those ideas were brought to the islands by missionaries themselves willing to die in their defense, the results were, to say the least, not good.

The natives docilely donned clothing when they were told that their seminudity would be punished after death with eternal torment, and with the voluminous New England costumes they also acquired tuberculosis and other respiratory diseases and diseases of the skin. They did not die like flies; they died like the inhabitants of Hiroshima,

only a little more slowly. To a people who dance and sing much more naturally than you or I or our kind, whose songs are, in fact, an only means of perpetuating tribal history much in the manner of the old Icelandic sagas, the imported prohibition on any song except the dolorous and to them meaningless hymns not only killed their spirits but deprived us of much ancient lore that would go far toward satisfying our curiosity about the origins and ancestry of the island peoples.

When we recall how radically our own ideas of the essentials of Christian conduct have changed in a single generation, we should at least be aware of the possibility that many customs and procedures which we now accept as highly desirable and normal will appear absurd to our successors. That observation applies not only to religious conduct but to all social practices. The islanders, who are involuntary if however acquiescent wards of our Government, are entitled to protection from enthusiasts who would change their ways to those which at the moment seem good to us. And that means protection from the military autocrat and the ideology-ridden bureaucrat as well as from the theological dogmatist.

The ills which beset the islanders are mostly of foreign introduction, and one of the contributions we can sensibly make is access to modern medication and the education in sanitation and hygiene without which recourse to medicine is only a palliative. A disease called yaws is peculiarly prevalent. It causes great, shallow, disfiguring ulcers. Yaws is a tropical disease which girdles the earth. It is scientifically interesting because it is caused and transmitted by a spirochete, the same kind of germ that causes syphilis, and it responds to the same kind of medical treatment. But yaws is not a venereal disease. It is infectiously transmitted through any wound, cut or abrasion.

In the short time since the Navy assumed postwar guardianship of the islands, the physicians and pharmacists of the Medical Corps have made great progress in arresting the disease among the afflicted. A part of the program we have charted for the islands is to train native practitioners—a 4-year course in simple medical education, half that time for resident nurses—who will return to their home islands to maintain the public health under periodic visits of inspection by the Navy doctors.

The islanders possess no native metals. Their only lumber comes from the breadfruit tree, which also supplies them with a dietary staple. The timber is painfully felled and hewed by tedious chiseling, and the whittled planks are literally sewed together with cords of hand-twisted coconut fiber, to make canoes which, under sails of handwoven pandanus leaves—lahalla mats—can and do make voyages of thousands of miles. All interisland intercourse is by means of these frail-looking, hand-made vessels, and upon these fragile fleets the islanders depend also for their main article of diet, fish.

As I said, I am no sentimentalist intent upon preserving the picturesque for its own sake and at sacrifice of use and comfort, so I think we should enable the islanders to obtain carpenters' tools, lumber and nails, bolts, cordage, and sailcloth. In identical inspiration I believe they should be given access to corrugated sheet metal for roofing. I freely admit that an outrigger studded with nailheads standing out to sea under patched canvas will not be as pretty as the stitched and carved canoes with the rush sails. I confess without remorse that a native house with a corrugated-tin roof will be downright ugly compared with thatch. But the islanders won't think so, and, after all, they are the ones to be pleased. We shall see them only in newsreels and travelogues, but they have to risk their lives day after day in sewn boats with sails of dried leaves, and all the fresh water they have for drinking or cooking is the rain that drips from the eaves of their houses. A tin roof will keep the inside of their homes drier and give them more and cleaner water than the insect-ridden, musty thatching.

We should teach them, too, not to want radios and juke boxes or button shoes, but to make better use of the materials nature has made so richly available to them. I would teach them elementary tree surgery so the all-important breadfruit trees would bear more lavishly and suffer less from decay. I would teach them how to make their own soap from the abundant vegetable fats and wood-ash lye, instead of encouraging them to buy cheap, scented traders' soap at outrageous prices.

I would give them schools with native teachers, trained not to impose an alien culture upon their charges, but to perfect their own. And in these schools I would have basic English taught as a second language, for there are as many dialects as there are islands, and nine vocabularies so distinct from one another that a native who speaks one cannot understand the others. Some missionaries and mission-trained native teachers have reduced a few of the more widely spoken dialects to writing. But some languages are spoken by only 100 people or so, and all nine vary so much in island-to-island and village-to-village dialect that it would be a futile task to attempt standardization. But the 800 words or so of basic English could, and should, be introduced, if only to permit the people of Ponape to converse with voyagers from Yap or Ulithi. Thank goodness the hideous burlesque "pidgin English" has practically disappeared—one, and maybe the only, good effect of the Japanese occupation.

And that's about all. That sort of education will not disturb their social, economic, or aesthetic standards, which are adequate to them and in many ways enviable to us. Let them alone, I say. Keep out the amateur disciplinarians, do-gooders, and self-righteous reformers; and as for the professional apostles of discipline and virtue by the standards of Ohio or Vermont or the District of Columbia, we would be kinder to the islanders if we exposed them to smallpox instead.

As I said before, some of the most strategically placed and physically adaptable islands will be developed as bases, either in the scheme of world security against aggressive war or, more immediately, as way stations on the earth-girdling routes of aerial transportation. Discussion of that aspect of the Pacific islands is not my privilege or my province. It must seem reasonably certain to any casual observer that the United States, which acquired domain over the area at hideous cost in the war against Japan, will have at least a dominating influence in its administration, either as trustees with the rights of complete sovereignty under the aegis of the United Nations, or, eventually, as a member of a committee of international administrators. Whatever external influence is brought to bear on the islanders will almost certainly be predominantly American.

That influence can either be one of mild benevolence, as I have outlined and to the establishment of which I am dedicated, or it can be anything else from the fatuous to the despotic. We should put within the islanders' reach the tools and techniques of self-help and self-development, to employ according to their needs and abilities. That, I believe, is the beginning and the end of our contribution. Additionally, I believe, it is our duty to protect the islanders from the evils we have been too prone to visit upon indigenous peoples in our past, beginning with the American Indian—subjection to the iron whim and idiosyncrasy of the casually appointed military governor, the pork-barrel political bureaucrat, or the grinning do-gooder for a salary.

The islanders are, for how little or how long I can't foretell, our responsibility. We have acquired, with small deliberation on our part and none at all on their own, control over 50,000 well-fed, happy, cheerful, amiable people, and our responsibility should be so discharged as to leave them at least as happy and amiable as we found them, even after 35 years of Japanese rule. Who knows but what, if the dire predictions of intercontinental atomic warfare we read about come true, these people may be the meek who, as the Bible prophesied, shall inherit the earth?

Stilling the Voice of America

EXTENSION OF REMARKS

OF

HON. WALTER H. JUDD

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 27, 1947

Mr. JUDD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Washington Post of May 10, 1947:

STILLING THE VOICE OF AMERICA

(By Barnet Nover)

In the course of a week recently, a not untypical week, the people of Europe and Asia were fed the following facts about the United States:

That the aim of the United States is to capture key political and strategic positions in Europe.

That the United States is launching a race in armaments.

That the Turkish Army is secretly being run by American and British agents.

That General Marshall, in his recent radio address, did not tell the truth about the Moscow Conference.

And also that the United States is making a colony out of the Philippines.

That the income of American workers has declined by 50 percent and that thousands of American families are "dwelling in old wagons and deserted military billets."

That "American policy in the Far East is one of world conquest."

That the United States is heading directly into a severe depression.

That the presence of American warships in the Mediterranean means that "the United States has decided to resort to threats of violence."

That the great majority of Americans are strongly opposed to the Truman policy with respect to Greece and Turkey.

That American policy in Germany aims to bring about "an imperialist peace based on the enslavement of nations."

This is the picture of America which the people of Europe and Asia got if they listened to radio broadcasts from Russia and Russian-dominated areas in eastern Europe in the course of 1 week.

It is the picture, with variations, which they have been getting of America over a period of many months. The purpose, obviously, is to denigrate the United States, arouse suspicion as to this country's motives, create fears as to its aims.

Can we afford to be complacent about this anti-American propagandist campaign, sit back and assume that the untruths, half truths, and exaggerations will do no harm since we know they are so wide of the mark?

That seems to be the attitude of a large number in the House of Representatives, judging by the action that has been taken in wiping out the appropriation needed to continue the State Department's overseas information program.

We have spent billions in relief for foreign countries. The House itself has just approved, as the Senate did earlier, an appropriation of $400,000,000 to aid Greece and Turkey.

It is in defiance of all logic and common sense to appropriate that money and at the same time cut out the small appropriation needed to present to the world a true picture of America.

Such an information program is needed not merely to combat the vicious anti-American propaganda with which so many ears are being assailed in so many countries of the world. It is even more needed to hold up to the world an undistorted mirror of American events, American thought, American policies.

To some slight extent this essential task is being done by private agencies and individuals. But there is a vast area which private enterprise cannot and does not reach in this battle for men's minds. It is at this point that the Government must step in and do the job that so badly needs being done, a job which, incidentally, the State Department, despite its critics, has done extremely well.

Throughout the world there is a great hunger for news of America, for facts about our institutions, our history, our culture.

This eagerness to know more about the United States does not primarily arise out of sentimental inclinations toward this country. It is the product of a very intense realization of the vastly important role the United States is playing in world affairs.

If this country does not itself explain what it is doing, it will be done by somebody else and neither to our liking nor to our interest. Indeed, the distorted picture the world would then get of America's role might seriously undermine the great efforts we are making on behalf of the democratic ideal and the peaceful way of life.

The best antidote for the kind of anti-American propaganda which is filling the air waves of Europe and Asia is the simple and unadulterated truth.

To cut off the State Department's information program, including the Voice of America broadcasts, would give this country's rivals and enemies a free field. No policy could be more stupid and self-destructive.

Resolution of New York Republican Club

EXTENSION OF REMARKS
OF
HON. JACOB K. JAVITS
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 27, 1947

Mr. JAVITS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following resolution:

NEW YORK YOUNG REPUBLICAN CLUB,
New York, N. Y., May 23, 1947.

Hon. JACOB K. JAVITS,
House Office Building,
Washington, D.C.

DEAR CONGRESSMAN JAVITS: The following resolution was submitted by the foreign affairs committee of the New York Young Republican Club and unanimously adopted by the board of governors of the club at its meeting on May 20. It is submitted to you herewith for your serious consideration.

"Whereas the conduct by the United States Government of broadcasts to the world explaining the position of the American people in matters of domestic and foreign affairs is a vital adjunct of United States foreign policy: Now, therefore, be it

"*Resolved*, That the board of governors of the New York Young Republican Club strongly endorse the appropriation by Congress of adequate funds for the continuation of such broadcasts."

Sincerely yours,

ALVIN E. HEUTCHY, *President.*

United States Policy Must Be Clarified

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 27, 1947

Mr. SMITH of Wisconsin. Mr. Speaker, the Honorable Joseph P. Kennedy, former Ambassador to Great Britain, recently stated that if domestic and foreign problems were to be approached satisfactorily it would be necessary for our Government to arrive at a policy where business could expand. He is opposed to piecemeal solution of the problem. Under leave to extend my remarks, I include this article which appeared recently in the New York Times, written by Thomas F. Conroy:

UNITED STATES POLICY MUST BE CLARIFIED
(By Thomas F. Conroy)

American business vitally needs a clear-cut statement by Government of its plans to meet domestic and world difficulties and should get it as soon as possible, Joseph P. Kennedy, former Ambassador to Great Britain, declared in an interview here yesterday.

Attempts at piecemeal solutions of international and domestic problems are serving only to confuse industry and trade and may well result in bringing about greater unsettlement than now exists, he warned.

Mr. Kennedy, who has just returned from a Midwest business trip, said the thing which impressed him most was the bewildered reaction of businessmen to current economic and political developments. His family owns the Merchandise Mart in Chicago, which houses the largest cross section of business anywhere in the world.

SEES GREAT DISLOCATION

Describing present business conditions in the United States as involving " a great dislocation rather than an over-all recession," Mr. Kennedy said that uncertainty caused by lack of a clear-cut Government program is undoubtedly a major contributing factor. He noted that business in soft goods lines is slow, while activity continues strong in the durable goods field.

"One must admit," he said, "that the businessman still looks at the stock market and when he sees the ratio of earnings to selling prices so high, he begins to exaggerate his own difficulties and unsettlement results.

"But it is now clear that the Government must honestly tell the people pretty soon what the over-all cost of stopping communism abroad is likely to be. As long as that is uncertain, businessmen will instinctively believe the worst.

"Moreover, the Government should formulate and make public in specific terms as soon as possible what plans it has to cure inflation, maintain good business and keep employment at high wages.

"If business can see these two over-all plans, it will know what it has to do, what the plans will cost, and people generally will be able to make intelligent decisions.

"Today, I find the businessman worrying about the attitude of the buying public, which is setting itself to wait, not until the $7 white shirt is marked down to $5, but until it is marked down to a level it just isn't ever going to reach.

"I find the businessman reading the columnist and listening to the commentator and trying to figure out just how the unholy mess the world is in can be straightened out so business can be normal again. The problems are so great and so involved that it is no wonder that their confidence is shaken.

"I remember talking once with Montagu Norman in England when he was head of the Bank of England. He had just dropped into the Embassy in London one morning and said: 'I see that you folks in the United States are contemplating industrial mobilization. Who's going to run it? God Almighty?'

"That's about the way the businessmen I met feel about the many problems of today. He need a blueprint of action, so that he may chart his course. He is accustomed to getting specifications in business. That's what he wants to be rid of, his uncertainties. The little businessman wants to know whether he can survive price cuts, high taxes, and competition from the big fellow with his large resources.

EFFORTS TO STEM COMMUNISM

"The American public, through development of the great power of advertising, has come to be strongly influenced by words. The big words today are: Communism and what that will do to us; depression, and its effect upon us; and prices, what they will do to our economy.

"Personally, as I have said before, I believe our efforts to stem communism in Europe with dollars will eventually prove an overwhelming tax on our resources that will seriously affect the economic well-being of our country.

"Each businessman appears to have his own ideas of the solution for each of these economic questions, depending upon whether his interests lie in home trade or the foreign market.

"It can be said that the American businessman is getting ready to face competition and is sharpening his pencil with one eye on the Government and the other on his competition."

Commenting on current economic dislocations, Mr. Kennedy said that the Government campaign urging lower prices has made consumers conscious that prices appear very high and has resulted in increased sales resistance, whether justified or not.

"All this means is that the customer has decided to wait a while before buying, and the volume of trade that should be done at legitimate prices is not being done," Mr. Kennedy said. "Producers do not know yet how far they can afford to cut prices because of the uncertainty of basic material quotations, and consumers do not know at what prices they can buy satisfactorily.

"As an instance in point, a leading Midwest store had marked difficulty in obtaining a certain home appliance it wished to sell in one of its annual events. The store wanted 2,000 of the appliances. Its jobber source, having orders from all over the country for 50,000, could only supply 900. Yet the public only bought 200 of the appliances, which were priced most attractively. In other words, there was consumer sales resistance

to a legitimately priced article in the belief that prices would go lower.

"Many businessmen made money in the years just past and they realize they will now have to become competitive if they are to stay in business. This, I believe, will take care of the price situation, as it always has. But because of the present confusion a longer time may be required for establishment of a sound competitive basis. Some may become panicky if goods do not move. If this happens, it will be further evidence that a piecemeal solution of economic problems does more harm than good."

Mr. Kennedy said that the fall market week to be held in July at the Merchandise Mart will afford an index of what is going to happen in buying for the second half of this year.

"Business lines showing there are among the foremost in this country," he said. "They have survived business difficulties before and have made America the envy of the world. I believe they can do so again."

Public Welfare Act of 1947

EXTENSION OF REMARKS
OF

HON. AIME J. FORAND

OF RHODE ISLAND

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 27, 1947

Mr. FORAND. Mr. Speaker, I have today introduced a bill, known as the Public Welfare Act of 1947, which, like a similar bill I introduced in the last Congress, provides for the development of the welfare aspects of the Social Security Act along the lines recommended by those who administer assistance and other welfare programs at all levels of government. An identical bill is being introduced in the other body by a Republican. This proposal is nonpartisan and represents the cooperative thinking of the State and local public-welfare agencies and workers of all sections of the country acting through their own organization, the American Public Welfare Association. At the same time it incorporates the welfare recommendations of the Social Security Administration, including the Children's Bureau, and of the National Commission on Children and Youth on which are represented both public and nongovernmental leaders in the field of children's services.

I am pleased once again to present to the Congress a bill which incorporates the recommendations of those best qualified by experience and knowledge to advise us in this important area of public service. In this present bill I have made some technical modifications and clarifications to meet certain questions raised last year but in its general provisions and objectives this bill is similar to that which enlisted such broad support in hearings before the Ways and Means Committee last year.

No governmental achievement of the past 12 years has received more universal acceptance than the social-security program. People have faith in their ability to achieve protection against the risks and complexities of modern economic life through governmental action. But if that faith is to be justified we cannot afford to sit back in complacent pride for our achievements to date. We must now, acting on the experience of twelve years' operation, move forward. We have had notable success in achieving an increasing measure of security on a piecemeal basis. But now the time has come when we should move on to security for all our people, not just those favored groups in certain occupations and age brackets, through universal insurance coverage against the average predictable hazards of modern life and a comprehensive welfare program to provide for those particular needs which must be met through more individualized programs.

The bill which I have today introduced deals with the second phase of the social-security program. It deals with an area in which administrative responsibility rests with the States and localities, namely assistance on an individual basis to the needy and welfare services, including child-welfare services. But the fact that these highly individualized services are quite properly administered by State and local governments in no way relieves the Federal Government of its responsibility to extend the leadership of a Nation-wide program supported by Federal financial aid. We are one Nation, one economy, and one people. We must find, through measures like this one, the means to meet the needs of all our people without loss of the values of decentralized administration.

We must, moreover, show the good judgment and foresight to act in behalf of universal social-security provisions in time of comparative prosperity in order that we may at once minimize the possibility of any economic recession and preclude the necessity of hasty emergency measures should such a decline occur. Real social security, both in terms of universal social insurance and a comprehensive welfare program, safeguard not only the individual and his family but also the successful functioning of our social and economic life.

It is imperative that we act now when a high level of national income and employment give us both the time and the means to develop a constructive well-thought-out program. Last year the Congress extended temporary aid to meet, in part, the problem created for assistance recipients by the rising cost of living. This year, on the basis of the overwhelming evidence before it in terms of studies, recommendations from expert sources, platform commitments of both parties, and popular interest expressed through a wide variety of organizational channels, the Congress should be prepared to act on a long-time comprehensive basis.

I am glad to put before you this proposal for a comprehensive program of grants-in-aid to the State public-welfare departments for assistance to the needy and welfare services. This bill recognizes the fact that the need for assistance should decline as insurance protection, full employment, and expanding programs of medical care, mental hygiene, and the like serve to reduce dependency to a minimum. The role of public welfare should itself be increasingly preventive, and public-welfare departments throughout the country are emphasizing this phase of their work. Public welfare is the means through which an increasingly complex and frequently impersonal government approaches the special needs of particular adults, families, and children on an individual basis. Assistance places a floor under need, and welfare services help to prevent need, assist people to meet their own problems, and extend protection and aid to children. This bill proposes a comprehensive program of assistance and welfare service with equalizing Federal aid proportionate to the fiscal ability of the State. Specifically, it proposes a new title XIV to the Social Security Act which would replace the present assistance and child-welfare provisions with the following:

First. Federal financial aid would be available not only for the aged, blind, and dependent children as at present but for all needy persons.

Second. Welfare services for adults, families, and children could be included in the public-welfare program, and child-welfare services could include foster care, temporary institutional care, and services needed to supplement home care.

Third. Federal financial aid would be extended to the States on a basis ranging from 50 to 75 percent of total costs, depending on the relative per capita income of the States.

Fourth. Standards of assistance would be determined by the State on a basis of individual need and resources but in such a way as to assure equitable treatment to persons in similar circumstances throughout the State. Standards of assistance would be left to the States without maximum limitations specified in the Federal act.

Fifth. Persons requiring medical care would be able voluntarily to enter public medical institutions, other than those for tuberculosis or mental illness, without loss of assistance if the institutions met standards established by the State.

Sixth. Welfare agencies would be authorized to make payment for medical care rendered assistance recipients and other needy persons, directly to the individual or institution furnishing such care.

Seventh. Residence requirements and required transfer of property to the State during the lifetime of an assistance recipient would be prohibited.

Eighth. Administration through a single agency at each level of government would be required.

The bill follows:

A bill to amend the Social Security Act to enable States to establish more adequate public-welfare programs, and for other purposes

Be it enacted, etc.—

SECTION 1. This act may be cited as the "Public Welfare Act of 1947."

SEC. 2. Effective July 1, 1947, the Social Security Act, as amended, is amended by adding at the end thereof the following new title:

"TITLE XIV—COMPREHENSIVE PUBLIC WELFARE PROGRAM

"PURPOSE

"SEC. 1401. (a) The Congress finds and declares that a public-welfare program is an essential part of the social-security system in promoting the security and welfare of the people of the United States.

"(b) The purpose of this title is to enable each State, as far as practicable under the conditions in such State, to develop a comprehensive public-welfare program of assistance and welfare services for families, adults, and children; to make assistance available to all needy individuals in the State whose resources are not sufficient to enable them to maintain a minimum standard of economic security, with due recognition given to the special needs of the aged, the blind, the children, and handicapped individuals; and to make welfare services available in order to promote personal well-being and a maximum degree of self-help.

"APPROPRIATION

"SEC. 1402. There is hereby authorized to be appropriated for the fiscal year ending June 30, 1948, and for each fiscal year thereafter, sums sufficient (a) for making payments to each State which has submitted a State public-welfare plan and had it approved by the Federal Security Agency, hereinafter referred to as the Agency; and (b) for expenditure directly by the Agency for the training of personnel for public-welfare work and for demonstration projects in cooperation with State agencies administering approved public-welfare plans.

"DEFINITIONS

"SEC. 1403. As used in this title—

"(a) the term 'public welfare' means assistance and, where the State plan so provides, welfare services.

"(b) The term 'assistance' means—

"(1) money payments to needy individuals who have attained the age of 18 years and are not living in a public institution except as patients in a medical institution, and, with respect to needy individuals under the age of 18 years, money payments to parents, or to relatives or other individuals assuming responsibility for parental care and support of such children, who maintain a family home for them; provided, that such needy individuals are not patients in an institution for tuberculosis or mental diseases, or in any medical institution following diagnosis of tuberculosis or psychosis; and

"(2) where the State plan so provides, and where not otherwise available, medical services for needy individuals, provided through payments to persons, agencies, or institutions furnishing or procuring such services, but does not include medical services for individuals living in a public institution except as patients in a medical institution, or for patients in an institution for tuberculosis or mental diseases, or in a medical institution following a diagnosis of tuberculosis or psychosis.

"(c) the term 'welfare services' means family and adult welfare services and child welfare services, including (1), with respect to family and adult welfare services, social services designed to help families and individuals to become self-supporting, to meet individual or family social problems, and to make use of community resources and to contribute to community life; and (2) with respect to child welfare services, social services designed to assure the welfare of children and to help them overcome problems resulting from parental neglect or other circumstances likely to result in dependency, neglect, or juvenile delinquency, and care necessary to provide for children without parental care and supervision and children requiring temporary care outside their own homes, such care to be given in foster family homes, temporary homes, or other facilities needed to supplement home care.

"STATE PUBLIC WELFARE FUNDS

"SEC. 1404. (a) A State public-welfare plan must—

"(1) provide for the establishment or designation of (A) a single State agency to administer or to supervise the administration of the plan, and (B) not more than one agency of a local subdivision of the State to administer the plan within such subdivision;

"(2) provide, (A), with respect to assistance, that the plan shall be in effect in all political subdivisions of the State, and if administered by them, be mandatory on them, and (B) with respect to welfare services, for the progressive development of a State-wide program as rapidly as trained personnel can be secured to administer it;

"(3) provide for financial participation by the State in all parts of the State plan, and for such distribution of funds for assistance and its administration as to assure equitable treatment of needy individuals in similar circumstances, wherever they may live in the State;

"(4) provide for the establishment and application through the State of standards necessary to the operation of the plan, including standards directed toward enabling each recipient to secure the essentials of living through assistance and his other income and resources, which standards shall include provision that the State agency shall, in determining need, take into consideration any income and resources of an individual claiming assistance;

"(5) if assistance is administered by categories, provide for a reasonable basis for establishing such categories, such as age or blindness;

"(6) provide that all individuals wishing to make application for assistance shall have opportunity to do so, and that assistance shall be furnished promptly to all eligible individuals;

"(7) provide for granting an opportunity for a fair hearing before the State agency to any individual, whose claim for assistance or welfare services included in the State plan is denied or is not acted upon;

"(8) provide that the assistance and welfare services included in the State plan shall be available without discrimination because of race, creed, or color;

"(9) provide such methods of administration as are found by the Agency to be necessary for the proper and efficient operation of the plan, including (A) methods relating to the establishment and maintenance of personal standards on a merit basis, except that the Agency shall exercise no authority with respect to the selection, tenure of office, and compensation of any individual employed in accordance with such methods; and (B) a training program for the personnel necessary to the administration of the plan;

"(10) provide safeguards which restrict the use or disclosure of information concerning applicants and recipients to purposes directly connected with the administration of the plan;

"(11) provide, after July 1, 1951, if the plan includes assistance to individuals in private or public institutions, for the establishment or designation of a State authority or authorities which shall be responsible for establishing and maintaining standards for such types of institutions; and

"(12) provide that the State agency shall make such reports, in such form and containing such information, as the Agency may from time to time require, and comply with such provisions as the Agency may from time to time find necessary to assure the correctness and verification of such reports.

"(b) The Federal Security Administrator or head of the appropriate constituent unit or units of the Agency, duly authorized by him to do so, shall approve any public welfare plan which fulfills the conditions specified in subsection (a), except that he shall not approve any plan which imposes as a condition of eligibility for assistance or welfare services (1) any citizenship or residence requirement, (2) any requirement that individuals must accept any other assistance or welfare services under the plan, or (3) any requirement that an applicant or recipient must, during his lifetime, transfer to the State title or control to any property which such individual may own.

"PAYMENTS TO STATES

"SEC. 1405. (a) From the sums appropriated therefor, the Secretary of the Treasury shall pay to each State which has an approved public-welfare plan, for each period after June 30, 1947, an amount, which shall be used exclusively for carrying out the State plan, equal to the Federal percentage for such State, as determined in accordance with section 1405, of the total of the sums expended during such period under the State plan, not counting so much of such total expenditures by the State as are included in any other State plan aided by Federal funds.

"(b) The method of computing and paying such amounts shall be as follows:

"(1) The agency shall, prior to the beginning of each period for which a payment is to be made to the State under subsection (a), estimate the amount to be paid to such State for such period under the provisions of subsection (a), such estimate to be based on (A) a report filed by the State containing its estimate of the total sum to be expended in such period in accordance with the provisions of such subsection, and stating the amount appropriated or made available by the State and its political subdivisions for such expenditures in such period, and if the sum of such amount and the estimated Federal grant to be paid the State under subsection (a) is less than the total sum of such estimated expenditures, the source from which the difference is expected to be derived, and (B) such other data as to such estimated expenditures and such other investigation as the agency may find necessary.

"(2) The Agency shall then certify to the Secretary of the Treasury the amount so estimated by the Agency, (A) reduced or increased, as the case may be, by any sum by which it finds that its estimate for any prior period was greater or less than the amount which should have been paid to the State under subsection (a) for such period; and (B) reduced by a sum equivalent to the pro rata share to which the United States is equitably entitled, as determined by the Agency, of the net amount recovered during any prior period by the State or any political subdivision thereof under the State plan; except that such increases or reductions shall not be made to the extent that such sums have been applied to make the amount certified for any prior period greater or less than the amount estimated by the Agency for such prior period; *Provided:* That any part of the amount recovered from the estate of a deceased recipient which is not in excess of the amount expended by the State or any political subdivision thereof for the funeral expenses of the deceased shall not be considered as a basis for reduction under clause (B) of this paragraph.

"(3) The Secretary of the Treasury shall, prior to audit or settlement by the General Accounting Office, pay to the State, at the time or times fixed by the Agency, the amount so certified.

"(4) The period for which estimates and certifications are made under this section shall be a calendar quarter, except that, upon application by a State, the Agency may extend the period for such State to not more than four calendar quarters.

"FEDERAL GRANT PERCENTAGES

"SEC. 1406. (a) The Federal percentage for any State shall not be less than 50 per centum and not more than 75 per centum. The Federal percentage for the District of Columbia, Alaska, and Hawaii, and for each State whose per capita income is greater than or equal

to the per capita income of the continental United States, shall be 50 per centum. The Federal percentage for each State, whose per capita income is less than the per capita income of the continental United States, shall be 50 per centum plus one-half of the percentage by which the per capita income of the State is below the per capita income of the continental United States, except that such percentage for each such State shall not exceed 75 per centum and shall be rounded to the nearest whole per centum: provided, that the Federal percentage for Puerto Rico and the Virgin Islands shall be 75 per centum.

"(b) The Federal percentage for each State shall be promulgated by the Agency between July 1 and August 31 of each even-numbered year, on the basis of the average per capita income of each State and of the continental United States for the three most recent consecutive years for which satisfactory data are available from the Department of Commerce. Such promulgation shall for purposes of this section be conclusive for each of the eight quarters in the period beginning July 1 next succeeding such promulgation: provided, that the Agency shall promulgate such percentages as soon as possible after the enactment of this Act, which promulgation shall be conclusive for the purposes of this section for each of the eight quarters in the period beginning July 1, 1947, and ending June 30, 1949.

"OPERATION OF STATE PLANS

"SEC. 1407. In the case of any State public-welfare plan which has been approved by the Agency, if the Agency, after reasonable notice and opportunity for hearing to the State agency administering or supervising the administration of such plan, finds—

"(a) that the plan has been so changed as to impose any requirement prohibited by section 1404 (b), or that in the administration of the plan any such prohibited requirement is imposed, with the knowledge of such State agency, in a substantial number of cases; or

"(b) that in the administration of the plan there is a failure to comply substantially with any provision required by section 1404 (a) to be included in the plan;

the Agency shall notify such State agency that further payments will not be made to the State under such plan or, in its discretion, that further payments will not be made to the State for activities in which there is such failure, until the Agency is satisfied that such prohibited requirement is no longer imposed or that there is no longer any such failure to comply. Until it is so satisfied, it shall make no further certification to the Secretary of the Treasury with respect to such State, or shall limit payment to activities in which there is no such failure."

SEC. 3. Section 1101 (a) (1) of the Social Security Act is amended to read, as follows:

"(1) The term 'State' includes Alaska, Hawaii, and the District of Columbia, and when used in titles V and XIV of such act, includes Puerto Rico and the Virgin Islands."

SEC. 4. No payment shall be made to a State under title I, IV, or X of the Social Security Act for any period for which funds are made available to such State under title XIV of such Act and for any period thereafter, or under part 3 of title V of such Act, for any period for which funds for child welfare services are made available to such State under title XIV of such Act; and in any event, for any period after June 30, 1949.

SEC. 5. In the case of a State which has a plan approved under title XIV of the Social Security Act, adjustments, which have not previously been made with respect to overpayments or underpayments under titles I, IV, or X, or under part 3 of title V of such Act, shall be made in connection with payments to such State under title XIV of such Act.

National Defense Establishments

EXTENSION OF REMARKS
OF
HON. KENNETH B. KEATING
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 27, 1947

Mr. KEATING. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Walter Lippmann:

TODAY AND TOMORROW—FOR BETTER COMMANDERS IN CHIEF

(By Walter Lippmann)

Of the bill (S. 758) for a national-defense establishment, it may be said that this is now the best possible bill because it has been agreed to by the civilians, the soldiers, sailors, and airmen who will have to live under it and make it work. This is no shotgun marriage. Nor is it a marriage arranged by the fond parents who may think they know better than the bride and groom. It is no scheme which is to be imposed upon the armed forces by outside efficiency experts or blueprint makers. Nor is it a scheme invented by the military politicians of one branch of the armed forces.

It is the product of prolonged debate by our proven military leaders. The debate has ended in an agreement. The fact that the War Department and the Navy Department, that Patterson and Forrestal, Eisenhower and Nimitz and Spaatz are agreed that this is the bill they want is a compelling reason for favoring this bill. There is no use passing another bill, even if someone prefers it, that they do not all agree to. For the whole object of the legislation is to increase the harmony of the various arms. The fact that they have harmonized themselves and are agreed on this bill is the best practical reason for believing that the bill will promote harmony.

The reason that they have been brought to agreement is that they succeeded in thinking out clearly what is the real issue. It is that in peace and in war the President, as Commander in Chief, must of necessity unify the armed forces. The question is not whether they shall be unified. It is whether the President is to be enabled to know what he is doing when he acts as Commander in Chief.

This bill is in essence a bill to make the President a more effective Commander in Chief. It is not a bill about how the Navy, the Marine Corps, the Air Corps, the infantry, the armored divisions, the medical services, and what not, are to be composed, equipped, recruited, trained, officered, paid, fed, clothed. It is in the last analysis a bill about how the President in the White House is to make the decisions which as President and Commander in Chief he must make about the whole complicated business of national defense.

The bill creates a Secretary of National Defense, who is in substance the President's deputy in the whole field of military affairs. Below the deputy there are a Secretary of the Army, Secretary of the Navy, and a Secretary of the Air Force. The President's deputy does what the President now has to do—he promotes agreements and decides differences among the various branches. He gives his whole time to this task whereas the President can, of course, give only a little of his time to it. He is supposed to be a man of eminence in his own right. Probably he will be. For this particular appointment will be scrutinized very carefully by Congress, the armed forces, the veterans, and the general public.

Yet the decisions of the deputy are not final. The three Secretaries under him, each normally the special advocate and guardian of his own service, have the right to appeal from the decisions of the deputy to the President. But in deciding the appeal the President will be, so to speak, the supreme court and not the court of first instance. Thus the appeals will reach him in a form where the real issues have been elucidated.

The bill does not, therefore, as some may think or fear, merge into one featureless mass all the fighting men whose traditions are distinct because they have become distinguished in glorious actions over so long a time. That kind of merger would in the name of economic efficiency destroy that military efficiency which depends finally in the martial spirit of a fighting organization.

Nor does the bill submerge any of the branches and the specialties, each of which has, of course, its own pleaders, its zealots, and even its fanatics. On the contrary, this bill is designed to enable the President to judge as wisely as systematic combined advice makes possible, how the demands of each service and branch can be balanced against the national supply of money and materials and men, and made to fit the political and strategic interests of the Nation.

The President now has to make all these decisions anyway. The Constitution requires him to make them. The practical administration of Government compels him to make them.

But as things are now he has no systematic and orderly way of knowing whether he has heard all the facts, has interpreted and weighed them fairly and wisely. So his decisions are spasmodic, are improvised, are casual, are guesswork, and may be amateurish.

It is this weakness at the very top of the chain of command that the bill is meant to correct. It might therefore be described not as a merger, which it certainly is not, or as a unification bill, a term which begs the question, but as a bill to equip the Commander in Chief to do his job.

Resolution of the Independent Petroleum Association of America

EXTENSION OF REMARKS
OF
HON. LEON H. GAVIN
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 27, 1947

Mr. GAVIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following resolution adopted at the seventeenth annual meeting of the Independent Petroleum Association of America at Fort Worth, Tex., October 28, 29, and 30, 1946:

Whereas at the annual meeting of the Independent Petroleum Association of America on October 11, 1944, held at Dallas, Tex., a resolution was adopted opposing the ratification of the Anglo-American oil agreement then pending before the Senate of the United States; and

Whereas at the annual meeting of the Independent Petroleum Association of America held in October 1945, at Tulsa, Okla., a resolution was adopted endorsing a renegotiated proposed Anglo-American Oil Treaty, signed by representatives of the United States and of Great Britain on the 25th day of September 1945; and

Whereas members of the Independent Petroleum Association of America who aided in the negotiation of said treaty of September 25, 1945, are not satisfied with the construction placed upon the provisions of said

treaty by representatives of the State Department and the Government of the United States; and

Whereas because of the interpretation placed upon the provisions of said proposed treaty by Government representatives of both signatory nations, in recent expressions of said representatives, it is apparent that the representatives of the oil industry and those of said Governments, as to the meaning of said treaty, are at complete variance; and

Whereas it is now the considered opinion of this association that there is no necessity or justification for any treaty between the United States and any foreign nation relating to the production and distribution of crude petroleum and/or its derivatives; and

Whereas it is the considered opinion of this association that the proposed treaty will provide the means and vehicle for the control and regulation of the oil industry by the Federal Government and by an international commission: Now, therefore, be it

Resolved, That the Independent Petroleum Association of America, at its annual meeting in Fort Worth, Tex., on October 30, 1946, desires to place itself of record as opposing the provisions of said proposed Anglo-American Oil Treaty and as opposing the ratification of said treaty by the Senate of the United States; and be it further

Resolved, That copies of this resolution be forwarded to each Member of the House of Representatives and to each Member of the Senate of the United States.

Acheson and the Truman Doctrine

EXTENSION OF REMARKS

OF

HON. LAWRENCE H. SMITH

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 27, 1947

Mr. SMITH of Wisconsin. Mr. Speaker, under leave to extend my remarks, I include an interesting article which appeared in the Chicago Journal of Commerce, by Mr. Wilbur J. Brons:

THE ROUND TABLE

(By Wilbur J. Brons)

MR. ACHESON SHEDS REVEALING LIGHT ON TRUMAN DOCTRINE

The Truman doctrine about which we hear so much these days is based on the administration's conviction that if we don't help the European nations now in distress, they will turn to Russia. We are told that if aid is not forthcoming in substantial amounts, a large part of the world will collapse within the next few months with disastrous consequences to the United States.

Thus far, however, no one seems to have any very clear idea of how much this assistance will cost or how much of the cost may be recovered. Secretary of State Marshall has ordered a study of foreign needs to see if some sort of an answer can be given for the guidance of Congress and the public to which it is responsible. That some such study is needed is clear enough. What isn't clear is why it wasn't begun before the Truman doctrine was given to the world.

The reaction of the average businessman to the Truman program is fairly simple. He just doesn't believe that loans and credits for guns and tanks will stop the advance of Russian ideology and he doesn't believe that gifts of food will be more than a stopgap.

In short, it's hard to convince businessmen, especially in the Central West, that catch-as-catch-can relief is going to keep Europeans from going Communist. To put the average conviction in a few words, it is simply that aid to Europe which doesn't help her to help herself is no aid at all.

While Secretary Marshall's men are making their survey, there are some Department of Commerce figures which suggest what they are likely to find. Under Secretary Dean Acheson used some of these figures in the statements he made recently at Cleveland, Miss.

For the current calendar year, according to the Commerce Department, we will supply about $16,200,000,000 of goods and services to the rest of the world. Where will these dollars come from? The Department estimates that imports will account for some $6,700,000,000, which will be a gain of $1,600,000,000 over last year.

The gap of $9,500,000,000 will be narrowed by gold shipments from abroad. These, the Department's statisticians believe, probably will run to $1,400,000,000. Private gifts and remittances by Americans may amount to $500,000,000. Outright Government gifts will come to $1,900,000,000 and Government loans, most of which probably will turn out to be gifts, will total $3,400,000,000.

From these figures, Mr. Acheson concludes that this year we will export about $5,300,000,000 of goods and services for which we will receive no commercially balancing return. He apparently wonders how long we can continue giving and lending money to Europe to take care of annual balances of that size. Many businessmen and bankers who understand that trade must be a two-way street share his curiosity.

Destruction of Potatoes

EXTENSION OF REMARKS

OF

HON. GEORGE M. GRANT

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 27, 1947

Mr. GRANT of Alabama. Mr. Speaker, we are hearing much over the radio, and reading a great deal in the press, concerning what is represented to be the wanton destruction of valuable food in Baldwin County, Ala. News pictures have appeared in the press showing a pile of Irish potatoes being destroyed by kerosene drenching. This is most unfortunate. I regret that the destroying of surplus low-grade potatoes has become accepted as the least of the evils involved in disposing of them.

The potatoes destroyed were those for which no useful outlet could be found. They represent, at this time, approximately 10 percent of the Alabama crop. The top-grade potatoes are selling fairly well. The Government, through its support program, has been purchasing a large part of the low-grade potatoes. Some of these potatoes are finding their way into commercial channels properly and satisfactorily. Some of those that the Government is buying are being given to eleemosynary institutions in various sections of the country. They are also being given free of charge to the schools for use in connection with the school-lunch program. These two outlets have been supplied to the point of saturation, yet the supply of these small size low-grade potatoes increases from day to day. The problem is one which has existed since the development of transportation facilities has permitted the movement of perishable crops to distant markets. Only in exceptional years have these low-grade potatoes found a satisfactory market.

When I protested the drenching with kerosene of these potatoes to the Government officials, I learned that it had been done by a person in the field on his own initiative. It has been the practice of the Department of Agriculture to render these dumped potatoes unsalable by discoloring them with dye. The man handling the program in Baldwin County happened not to have any dye and he used kerosene instead. Orders have been issued that it not be done again.

It has been found advisable, in order to protect all parties involved, including the consumer, to take steps to prevent the salvage and dubious sale of these dumped potatoes in competition with established channels of trade. Some cases of theft and cut-throat sale of potatoes have occurred in the past. The Department of Agriculture endeavors to prevent that. Thus the discoloration, or otherwise rendering them unfit for sale. The dye is harmless to man or beast.

Merchandising practices and consumer preferences work against the marketing of low-grade potatoes. Their value for export is of small importance because they do not ship well, being a perishable product, and statistics show that the small quantity that is exported is about offset by the importation of potatoes for seed and other purposes from other countries.

The value of potatoes in the manufacturing industry is of slight importance comparatively. They go into starch and alcohol to some extent. The distilleries use potatoes only when grains that they can handle more advantageously are not available. The demand for Irish potatoes in industry is very limited. Some efforts have been made to find an outlet for these low-grade potatoes in connection with the cattle industry. Cows will eat them, but cattle owners, for some reason, have not taken to the use of potatoes to any extent for cow feed. Hogs will eat them if cooked. They are being offered to cattle owners by the Government now at 20 cents per hundred pounds.

In 1946, there were no acreage or yield controls on Irish potatoes. As one result of this, we had the greatest yield of all time in the United States. There were produced, roughly, 475,000,000 bushels. The latest compiled average production, based on a 5-year period, is 370,000,000 bushels annually. The 1946 production caused a very large carry-over, which has interfered with the successful marketing of the low-grade potatoes this year, to even a greater extent than usual. All of these things have conspired to build up this annual problem, a problem which increases daily: What shall be done with these surplus low-grade potatoes?

In endeavoring to find useful outlets and thus avoid destroying them, we sought to interest the Canadian Government. Canada has an embargo against our small potatoes. We tried to get this embargo lifted, but the Canadian Government refused to modify its embargo at this time.

It might be of interest to know that the human consumption of Irish potatoes in this country has been progressively and substantially reduced. Figures show that along about 1910 there was an annual consumption of approximately 192 pounds of potatoes per person. The latest figures on this made in 1945 show a per capita consumption of only 127 pounds.

Every possible effort has been made to dispose of these potatoes in useful ways.

It is easy to calculate from the information and figures given above that it is natural to expect an annual surplus. Of last year's crop it was found necessary to dispose of, by other than useful means, 22,000,000 bushels. The recent destruction of potatoes which caused the present Nation-wide interest in the subject, totalled about 40,000 bushels.

Special efforts are continuing to find useful outlets for all potatoes produced. It is one of the best basic foods grown.

I know that I echo the sentiment of all men when I say that a way should be found to put to constructive use every ounce of food that we can produce in this country. Special efforts are continuing to be made to that end.

American Policy Statement

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 27, 1947

Mr. SMITH of Wisconsin. Mr. Speaker, as part of my remarks, I include the following article which appeared in the Christian Science Monitor entitled "Wanted: American Policy Statement":

WANTED: AMERICAN POLICY STATEMENT

(By Erwin D. Canham)

Today President Truman, in Kansas City, signed the bill for aid to Greece and Turkey and the machinery for putting the program into action rolled into high gear.

But it is not clear just how far American policy is going. Conflicting statements have come from high State Department officials. Secretary Marshall recently said that no new demands for aid were coming in the near future. And yet, the Secretary himself also recently pointed out the desperate condition of most of Europe.

The need to bolster up Korea as another bulwark against Communist penetration is well known. Dean Acheson said in his last official speech that something like $5,000,000,000 would be needed in each of the next 2 years.

The American people need to know just where we stand. We need to have assurances and guaranties that our money—especially the $400,000,000 in the bill the President signed today—is not going down the drain. Money is not enough. It must be put to uses that will be constructive, and that will end, in time, the need for more money.

President Truman took note of this underlying feeling of the people when he said: "We intend to make sure that the aid we extend will benefit all the peoples of Greece and Turkey, not any particular group or faction." It will not be easy for him to make good on that intention. The Nation needs to know more about the Greek Government, and the Turkish Government. Americans would like to see these nations start more effectively on the road to real democracy.

There is no assurance at all that the American missions which have left for Greece and Turkey in the last few days are in any way capable of seeing that our money is well spent. The United States will feel better when an administrator is named for the Greek program. The President has not yet been able to secure the right man.

Here we meet one of the hardest phases of postwar government. It is not easy to get good men to go into public service.

It is well known that any major American Ambassador—in fact, almost any top American administrator—must have large private funds he is willing to spend during his time on the Government job. That is a terrible situation for a democracy to face. We cannot get and keep the best men in the jobs which need doing in peacetime just as badly as they did in war.

There are only two remedies: To pay higher Government salaries and make sure we get our money's worth in really able men, or to persuade these men that they must make a patriotic sacrifice.

For weeks now it has been impossible for the President to persuade the men he wanted for this vital Greek job to make the sacrifice. I don't have to tell you that good men are of highest importance in carrying out all these policies. So the Greek program marks time, to a degree, while the President of the United States shops around and tries to do a selling job on various Americans.

In Britain this week, on the eve of the annual convention of the Labor Party, where a number of rebels are waiting to attack the Attlee-Bevin policies of firmness to Russia and dependence upon the United States, a realistic and frank explanation has been issued. It is the kind of statement that should be prepared in Washington on American policy.

The British document says Russia, in its effort to get postwar security, turned down the offer of an alliance with Great Britain, and chose instead a drive to eliminate Britain as a European and Middle Eastern power.

In the face of what it calls this "sustained, violent offensive against Britain by her Russian ally," the Labor leadership says it held firm, patiently refused to be driven back, but never swung over to implacable hostility to Russia as a result. Thus, if Russia behaves any better in the future, Britain will at once respond. The international purpose of this pamphlet is, therefore, a bid to Russia to give up its anti-British drive.

The British paper gets down to brass tacks in these outstanding points: "We have resisted every temptation to regard Russian policy as final. In particular, where the Tories have continually pressed us to recognize a permanent incompatibility of the Communist and Democratic systems, to make final decisions about the frontiers of each and to build up an entirely independent Western bloc, we have fought doggedly to prevent the crystallization of zones of influence behind rigid ideological barriers."

And then come these significant words: "The aim of Anglo-American understanding is to prevent war by proving to Russia that an aggressive anti-British policy is doomed to frustration. Every historical precedent suggests that no government will continue to pursue a policy whose failure is known to be certain. Our hope is that sooner or later the Russians will realize that the policy they have pursued since 1945 is both impracticable and unnecessary."

With how much of that does Washington agree? In many ways, it seems to be a fair statement of American policy, but let's have from Washington our own independent, realistic declaration of up-to-date policy. It's about time.

Reduction of the National Debt

EXTENSION OF REMARKS
OF
HON. ALBERT M. COLE
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 27, 1947

Mr. COLE of Kansas. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Chicago Journal of Commerce of May 20, 1947:

TEN BILLION A YEAR

Representative ALBERT M. COLE, Kansas, Republican, has proposed a statute reserving $10,000,000,000 of income each year to the payment of the interest and principal of our national debt. He computes that the $257,728,056,541 owed by Uncle Sam could thus be cut in half in 20 years.

The idea is basically sound. Whether it is practical to enact the policy into law and whether $10,000,000,000 is the optimum figure is a matter for fiscal experts to ponder. But there is good sense in an announced resolve to earmark $10,000,000,000 a year for debt servicing and reduction.

There is no essential conflict between debt reduction and tax relief. More than once, reduced tax rates have brought about increased revenues, resulting from the stimulus to enterprise which the removal of incentive-deadening taxation brings about.

If our national income continues at last year's level of $164,000,000,000, or better, and if Uncle Sam can learn to live on $25,000,000,000 per annum, as many businessmen feel he can do without impairment of essential service, then the Cole proposal may prove feasible even with appreciably lower tax rates.

There is a school of thought that believes the national debt is just a harmless jumble of digits that may be disregarded—except for the little matter of $5,000,000,000 a year interest. These gentry blandly neglect the depressive effect this huge sum has upon commercial inferest rates and the inflationary impact upon the economy.

A huge national debt is not a piece of old furniture to be stored in the attic and forgotten. It is an everpresent, strength-sapping burden, which must be reduced and swiftly. That is the challenge before Congress today and every day.

United States Loan Fails To Ease Fears of Greek People

EXTENSION OF REMARKS
OF
HON. WALTER E. BREHM
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 27, 1947

Mr. BREHM. Mr. Speaker, Mr. E. R. Noderer, correspondent for CTPS, writing from Bern, Switzerland, sets forth most clearly and concisely the thoughts and arguments which some of us had and expressed during the debate on the Greek-Turkish military aid bill.

Mr. Noderer is writing from on the spot and expressing the facts as they actually exist, and in my opinion, offers concrete evidence that those of us who opposed this legislation were not so far

afield as some of the proponents tried to make out. Mr. Noderer says:

The $300,000,000 Truman loan to Greece, far from laying the groundwork for a peaceful settlement of that unhappy country's problems, has added fuel to the flames of terror and anarchy which are sweeping the land.

The primary emotion of the people today is fear—fear of the ruthless bands of red raiders killing and looting in the north, the south, and in islands; fear of imprisonment, deportation, or death at the hands of the government authorities, and fear of being plundered and murdered by right-wing bands operating outside of, but safe from, the law.

BEATEN BY BOTH SIDES

The merciless lust for power by leaders of the left and right leaves room for no middle ground and the hapless peasant frequently finds himself beaten up by both sides.

American intervention, welcomed by the 3,000 ruling families in Athens who hope to profit from it, has added another worry to the country's ordinary people.

They are afraid they will again become involved in the quarrels of the big powers and that their country will once more become a battlefield. "We don't want to become the agents of an offensive policy directed against another people, particularly if we are to be used as a paid military striking force," a Greek explained to this correspondent.

TERRORISM INCREASES

Meanwhile, terrorism by both sides has increased since President Truman's speech of March 12 asking for financial aid to Greece and Turkey. The government right-wing coalition took the speech as an indorsement of its policies and stepped up its emergency measures against the left.

Every day between midnight and 5 a. m., people are snatched from their homes and deported to barren Aegean islands, jailed, or executed after being court-martialed. Often the charge is being related to known guerrillas, recruiting for the guerrillas, or being suspected of leftist tendencies. Civil rights have virtually been suspended except in such larger centers as Athens and Salonika, the "show windows of Greece."

REDS BURN VILLAGES

Meanwhile, in the name of self-defense, the Communist-led bands burn villages, blow up bridges, shoot up trains, cut telegraph and telephone wires, and commit highway robbery on a grand scale.

This explains the fear psychosis which grips Greek public opinion.

In the face of this confusion farmers are leaving the land and whole villages are being abandoned, with a consequent decrease in food production.

Many Greeks believe their problem is an internal one but that it is being exploited by outsiders—the United States, Britain and the Soviet Union.

Wool Tariff Versus Foreign Trade

EXTENSION OF REMARKS

OF

HON. JOHN W. McCORMACK

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 27, 1947

Mr. McCORMACK. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Mark Sullivan from the Washington Post of May 26, 1947:

WOOL TARIFF VERSUS FOREIGN TRADE

(By Mark Sullivan)

WHAT IS OUR POLICY?

The House last week passed a measure which does two things, both about wool. It provides for an import fee on wool from abroad under certain conditions, in effect the same as a tariff increase. And it provides that the Government shall support the price of wool in America, that whenever the price falls below 41½ cents a pound the Government shall buy wool. That is, the price of wool is to be supported in the same way that the prices of potatoes, eggs, and some other farm products are already supported.

Rarely were the incongruities of coincidence so many and so glaring as those which accompanied the House passage of this two-timed bill. There were separate sets of incongruities for each time.

About Government support of the prices of farm products and food, there was an uproar of condemnation in Congress and the country. There had emerged during the week news that the Government, in order to keep up the price of potatoes, was buying quantities of them and making them inedible—the current Time contained a photograph of a pile of potatoes in Alabama upon which kerosene had been poured. About this, indignation had been expressed by Members of Congress and others, in the press and over the radio. Yet here was the House adding wool to the list of farm products the prices of which are to be supported by Government purchases.

As another incongruity, the House Committee on Agriculture had made a cut of some 32 percent in the appropriation for the Agriculture Department. The purpose of this cut, in addition to the broad purpose of reducing Government expenditures, was a frankly expressed determination to limit what the House committee described as a paternalistic policy of the Department of Agriculture. A main feature of this policy is regulation of the size of crops, and support of the prices of some farm products by Government purchase of them or in other ways. Yet on the same day that the House Committee on Agriculture took this step, the House as a whole added wool to the list of farm products the prices of which are to be supported by Government purchases.

Broadest of all was the incongruity between a bill providing that the Government shall keep up the price of wool, and the frequent pleas of President Truman that prices gennerally be reduced. The President's exhortations have already been made vulnerable by the fact that the Government itself prevents reduction of prices of some farm products. And now the House proposes that the area of Government support of prices be increased by addition of wool.

A separate set of incongruities accompanies the provision in the House bill which calls for an increased tariff on wool under certain conditions. At this moment the administration is earnest, almost to the point of being justifiably frantic, in the purpose of making it possible for other countries to sell more goods to us. Only by this can we carry out policies of indispensable importance—the policies of selling more goods abroad, of granting funds and credits for the restoration of European countries, of restoring international trade in order to prevent both European collapse and world-wide collapse. These purposes are indispensably inherent in the highest level of the administration's foreign policy as a whole. As Mr. Dean Acheson said just before he retired recently as Under Secretary of State: "There can never be any stability of security in the world for any of us until foreign countries are able to pay in commodities * * * for what they need to import."

In this condition the House bill serves notice on the world that it cannot rely on us to facilitate sales of goods to us. Little wonder if the State Department is almost in despair.

Why did the House do it? One reason was preoccupation with the many other matters that press upon Congress, less than half the members voted. As earnest Representative HAROLD D. COOLEY, of North Carolina, said after he grasped the bill and opposed it, "Frankly I must confess that I did not appreciate fully the importance of the subject." There was some politics, deference to Western States in which wool growing is an important industry. There is some surmise that President Truman may veto the bill.

Control of Production of Dangerously Flammable Textiles

EXTENSION OF REMARKS

OF

HON. GORDON CANFIELD

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 27, 1947

Mr. CANFIELD. Mr. Speaker, that injury and death caused by flammable fabrics are increasing is emphasized in the following letter I have just received from Mr. John C. Hazen, of the National Retail Dry Goods Association, Washington, D. C., an organization seeking remedial action by the Congress:

NATIONAL RETAIL DRY GOODS ASSOCIATION,
Washington, D. C., May 23, 1947.

Congressman GORDON CANFIELD,
House Office Building,
Washington, D. C.

DEAR CONGRESSMAN CANFIELD: I was glad to see in Wednesday's CONGRESSIONAL RECORD that you are still concerned over the fact that legislation to control the production of dangerous flammable textiles has not been acted upon.

As you know, the hearings held in March before the House Committee on Interstate and Foreign Commerce indicated that certain interests opposed any legislation on this subject in the belief that correction of this problem could be secured through voluntary action. Although this problem has been with us for several years, nothing has been done to date voluntarily, and the needless killing and maiming of our citizens by flammable textiles continues. One of the bills introduced on this subject provided for certain standards to be set up under established procedures of the Bureau of Standards. In order for these standards to become effective it is necessary for them to be accepted by some 60 percent of those affected by the standards, such as producers, finishers, cutters up, and retailers. I have learned that because of the opposition of some groups these standards are now stymied, and the House committee has withheld action until an acceptable standard is produced. So, you see, we are at an impasse and unless something is done, and frankly I am at a loss to know what it would be, I do not think we are going to get any action from the committee.

You have certainly done your part, having sounded the warning early, and repeated it on occasions. The problem is not lessening, but growing worse. We are now subscribing to a Nation-wide press clipping service, and during the month of April the record of clothing fires that resulted in either serious injury or death ran to better than one a day. I agree with you most heartily, we have taken care of the starving and suffering, we assist the Greeks and Turks, while at the same time several thousand Americans die each year, most of them needlessly, because they are innocent purchasers of flammable garments.

With kindest personal regards, I am,

Sincerely yours,

JOHN C. HAZEN.

Mr. Hazen also submits the following press clippings:

[From the Atlantic City (N. J.) Press of April 6, 1947]

CHILD BADLY SEARED PLAYING NEAR STOVE

A 5-year-old Pleasantville girl was badly burned early yesterday afternoon as she played near a stove and her clothing caught fire.

She is Deborah Everett, of 601 Park Avenue, suffering second degree burns of the body and legs and reported in fair condition at the Atlantic City Hospital where she was taken in the Pleasantville police ambulance.

[From the Denver (Colo.) Register of April 13, 1947]

SKIN OF FATALLY BURNED TWIN SAVES LIFE OF PHOENIX GIRL

PHOENIX, ARIZ.—The made-to-order circumstances of identical twins was credited by the Rev. Emmett McLoughlin, O. F. M., superintendent of St. Monica's Hospital, with saving the life of 2-year-old Nancy Irene Robles, a victim of horrible burns.

Nancy is romping and playing just like any other healthy youngster, but only because her twin sister, Mary, died a week after both suffered extensive burns December 11.

The little girls were critically burned when their clothing caught fire from a smoldering stump of wood that tumbled from a stove in their Phoenix home.

Mary's death provided the one thing needed to save Nancy's life—skin. Not even skin from the mother would have saved Mary's life, since it must be of identical tissue structure to "hold."

[From the Bemidji (Minn.) Pioneer of April 14, 1947]

BEMIDJI CHILD FATALLY BURNED WHEN CLOTHING IS IGNITED BY WOOD FIRE

Tragedy struck with lightning swiftness at the home of Mr. and Mrs. Elmer Smith, 514 Fourth Street, Bemidji, Saturday, when clothing worn by Carol, the 2½-year-old daughter of the couple, caught fire to engulf the child in flames, causing her death several hours later.

According to her own account of the accident, Mrs. Smith stepped out of the family residence to get a bucket of water, leaving Carol and an 8-month-old baby alone in the 2-room home.

Although she was gone but a few moments, she returned to find the child's clothing burning fiercely and the youngster screaming with pain. Mrs. Smith tore the clothing from her daughter, then rushed to a neighbor's home for aid. The child was taken to Lutheran Hospital, where she was treated for third degree burns. More than 85 percent of her body was badly burned and she died at 4:30 p. m.

Mrs. Smith told the Daily Pioneer Monday that the child evidently brushed against a wood heater and ignited her clothing.

[From the Council Bluffs (Iowa) Nonpareil of April 10, 1947]

GAS FUMES FATAL

BAGLEY.—Mrs. Vinal Prescott, 40, farm housewife near here, died of gas fumes and burns Wednesday when her clothing blazed up, County Coroner Harold Hill said. Her husband and four children were in town at the time.

[From the New Orleans (La.) Informer of April 5, 1947]

BURNS TO DEATH

NEW ORLEANS.—When she attempted to light a fire in her room last Sunday evening, Miss Daisy Mae Lee, 28, 714 Dryades Street, was burned to death as flames engulfed her clothing, police reported.

[From the Paris (Tex.) News of April 4, 1947]

CHILD FATALLY BURNED

LLANO.—Two-year-old Caroline Haynes, daughter of Mr. and Mrs. Howard Haynes, died Thursday of burns received Wednesday after matches, with which she was playing, ignited her clothing.

[From the Roseburg (Oreg.) News-Review of March 31, 1947]

TEACHER, SON SINGED BY FIRE FROM GAS STOVE

MEDFORD, OREG.—Mrs. James Mullins, high-school teacher, and her 5-year-old son, James, were singed today and their clothes burned by a sudden flare-up of a gas stove in their home, but both escaped serious injury.

[From the Cincinnati (Ohio) Post of April 2, 1947]

CHILD, 2, BURNED AS DRESS IGNITES

Barbara Gore, 2, of 950 Carr Street, was in serious condition Tuesday at General Hospital from body and arm burns. Police said her dress was ignited while she was stuffing paper into a stove at her home Monday night.

[From the Cohoes (N. Y.) American of April 4, 1947]

MOTHER'S KISS FOR DYING CHILD

Just before she died of burns received when her clothing caught fire from a bonfire, 6-year-old Patsy Ann Sye is kissed by her mother at San Pedro, Calif., hospital.

[From the Denver (Colo.) Rocky Mountain News of April 6, 1947]

HAPPY LOS ANGELES GIRL CAN WALK AGAIN—WINS OVER BURNS

LOS ANGELES, April 5.—Little Donna Slack, 4 years old, was the happiest girl in Los Angeles today because she walked, all by herself. Ten months ago her clothing caught fire while she was playing in the back yard of her home in Hawthorne, and more than half her body was burned. Dr. Barbara Dittman, of Children's Hospital, said Donna's was the worst burn case on record there for a recovery.

[From the Des Moines (Iowa) Tribune of April 2, 1947]

DANCER

HOLLYWOOD, April 2.—Ballet Dancer Milada Miadova Wednesday was treating minor burns suffered when her flimsy costume caught fire on a movie set in Hollywood. Actor Dennis O'Keefe beat out the flames with a piece of drapery after an electric fan sent fire from a flame pot shooting across the Atlantis set.

[From the Columbus (Ohio) Dispatch of April 5, 1947]

BURNS ARE FATAL TO HOUSEWIFE, 41

Funeral arrangements were completed Saturday for Mrs. Catherine Thomas, 41, of 81½ South Garfield Avenue, who died Friday in St. Francis Hospital of burns suffered when her clothing caught fire from a stove in her home as she was preparing breakfast Friday morning.

Public Lobbies

EXTENSION OF REMARKS

OF

HON. HERBERT A. MEYER

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 27, 1947

Mr. MEYER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an editorial from the Parsons (Kans.) Sun. This hits the nail on the head in condemning the pernicious activity of bureaucracy in its effort to block legislation for the elimination of waste and nonessential spending by Government agencies.

The editorial follows:

PUBLIC LOBBIES

Activities of various departments of the Government in lobbying for their own interests before Congress have become universal, particularly in recent weeks when Congress has been engaged in an economy campaign.

A widely known political writer takes cognizance of the situation and says "never in all congressional history has there been such a concerted effort by persons in the executive departments to block legislation."

He goes on to declare that "President Truman has sat idly by while lobbies of his own personnel in the Government departments have used funds unlawfully to try to defeat economy measures.

"When the whole story comes out, Mr. Truman's record will be vulnerable, for it was within his power to stop the intrigue and lobbying that was carried on in an attempt to hold appropriations at high levels."

It is significant of something or other that the most active lobbies attempting to defeat congressional economy moves have been those of various agencies who are working in a wholly selfish purpose.

It is the old story of a highly organized minority getting what it wants, while the slow-moving, unorganized majority watches helplessly from the sidelines. The people of this country presumably want economy in Government. At least most of them have expressed themselves in favor of lower taxes, and only through economy can lower taxes be brought about. It looks like it's time for the public at large to move on the economy question, eliminating those whose only interests are in jobs on the public payroll.

Address of Hon. John Davis Lodge, of Connecticut

EXTENSION OF REMARKS

OF

HON. KATHARINE ST. GEORGE

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 27, 1947

Mrs. St. GEORGE. Mr. Speaker, under leave to extend my remarks, I include a speech delivered in my district,

at Middletown, N. Y., by the Honorable JOHN DAVIS LODGE:

Ladies and gentlemen, it is a great pleasure to be with you here this evening in this beautiful spot. I am grateful to my brilliant, distinguished, and attractive colleague, Mrs. ST. GEORGE, who is giving you such exceptional representation in Congress, for including me in this gathering as a guest speaker. I welcome this opportunity also because during these difficult days I think it important that you should know what is going on in your Congress and because I know that it is vital for us in Congress to have your support and assistance.

American women will, as in the past, shoulder their full share of civic responsibility in meeting the great and continuing challenge which confronts the Congress and the Nation. The women of America play a dual role in politics. In the first place it is to them that we all look to maintain the home. Now the home is the most important political unit of all It was so regarded by the Greeks and the Romans, and we know that it was so regarded by the Russians after the Revolution in 1917. One of the first measures passed by the new Communist government was to attempt to abolish the family. It was realized that political groups of all kinds, and particularly the political unit of the family, were a menace to the sovereignty of the Communist Party. Nothing that we can do in Washington will matter if the American home disintegrates. The laws that we pass and the treaties that we sign will avail us little if America is destroyed from behind through our children—the men and women of the future. In fact, I would go further and say that the influence of the home has a greater educational significance than any other single factor, and while the men of America must do what they can, the burden of domesticity falls primarily on the women.

The second aspect of this duality of which I speak is best illustrated by the gathering here tonight. In my first campaign for public office last fall I came to appreciate what a vital part the women of my district play in politics. In the first place, women are apt to be more patient with details than men. Accustomed to the never-ending work of maintaining a home, they are willing to undertake all manner of political chores which are as essential to victory as they are lacking in glamor.

In the second place women bring into politics a much-needed idealism. They bring it not only in their own status as politicians, but also through their influence with men. The very qualities of sympathy and tenderness which make for a happy home make also for a more rounded and better balanced national political life.

And lastly, ladies and gentlemen, may I remind you that in the United States today there are 1,172,000 more women of voting age than there are men, and that approximately 80 percent of the wealth of this Nation is controlled by women. Accordingly, you not only hold the balance of voting power, you are the power. Already in hundreds of communities from coast to coast women have taken the lead in throwing cynical political machines out of office. You are in a position to protect the great heritage of America not only in the home but with the ballot.

That is why I am going to talk to you tonight straight from the shoulder. I maintained throughout my campaign that the challenge to the American electorate last November was essentially a nonpartisan challenge but that this challenge could be met only through the Republican Party. If this appears to you to be a paradox, let me explain. We have two major parties in this country. If we had less than two, we would have a dictatorship, and our Constitution and Bill of Rights would vanish. If we had more than two major parties, we would probably have confusion such as was the case notably in France prior to the war. Accordingly, I favor the two-party system, and I believe that this system offers the most practical means of expressing the will of the people in a constitutional democracy such as ours. Now I do not pretend that the Republican Party possesses the final answers to the complex questions which trouble us today. I do not always agree with many of my Republican friends in the Congress. But the fact remains that the essential challenge, both domestic and foreign, as it affects the American people, can best be met by the Republican Party. The Democratic Party is tired, torn, and tattered. It has become the party of reaction. The Republican Party, with all its imperfections, is the only vehicle we have with which to release the unparalleled productive power of our free system, provide a better life for all, and work effectively for a more lasting peace.

Since I am a member of the House Committee on Foreign Affairs, I should like to discuss this problem of partisanship in connection with the determination of an American foreign policy.

We have for some time now had what is commonly referred to as a bipartisan foreign policy. Indeed, it could be pointed out that the Republican Party has shown commendable statesmanship in its unwillingness to treat our foreign relations as a political football. Surely partisanship should stop at the water's edge. But I want to suggest to you tonight that nonpartisanship in our foreign affairs has not always meant bipartisanship, has tended to oversimplify the basic problems, and has, in certain instances, drawn a curtain over these portentous issues before they have been properly examined and discussed. Certainly there is no reason why, simply because I am a Republican, I should be denied the privilege of disagreeing with some phases of the administration's foreign policy. Many Democrats have been known to disagree and still disagree with the foreign policy of the administration. Assuredly if it is in our best interests not to inject partisanship into foreign affairs, it is also to our advantage that foreign affairs should be freely ventilated and exposed to the salutary and purifying winds of public opinion. This cannot be done if the Republicans decide that it is their obligation, nay, their duty, to follow the administration's policy without a murmur. Nonpartisan we can always strive to be. But bipartisan we can be only if we are consulted, only if we are included in the formulation of foreign policy. The Republican Party must stop emulating the husband who said: "My marriage is based on compromise; we compromise by doing what my wife pleases." Bipartisanship must be more than nonpartisanship; it must be a two-way street.

Moreover the administration does not even follow its own foreign policy. At one time it was the administration's foreign policy to support the principles of the Atlantic Charter and the Charter of the United Nations. I still believe in that policy in spite of the betrayal of Poland at Yalta, the betrayal of Mihailovich in Yugoslavia, and the appeasement of Russia through UNRRA and other Government agencies. I adhere to the administration's policy in spite of the President's insistence that the Italian and Hungarian peace treaties should be ratified. I am opposed to the ratification of these treaties for many reasons, not the least of which is that they run counter to the administration's declared foreign policy as proclaimed in the Atlantic Charter and more recently as expounded by the President of the United States to the joint session of Congress on March 12 of this year. The Italian peace treaty provides, among other things, for the defortification of the Italian frontiers, the dispersal of the Italian Navy, the reduction of the Italian Army to 165,000 men, and the withdrawal of the American and British troops. Thus, in demanding Senate ratification of the Italian treaty, the administration proposes to assist Yugoslav agression in Italy while demanding $300,000,000 to resist Yugoslav aggression in Greece. I suggest to you that a successful foreign policy cannot be predicated upon a plan which calls for running with the hare in Italy while we are hunting with the hounds in Greece. And I say to you further that, at the risk of being accused of partisanship, I will not support such an attitude. Rather will I endeavor to persuade the administration to hew to its own policy which, as I understand it, is no longer the policy of appeasement.

I shall use my best efforts to hold the feet of the administration to the fire of its own policy in the patient and determined hope that we may bring the elements of our power and the details of our plans in line with our foreign policy and provide the vigorous consistency and forthright leadership which is so sorely needed. This, I submit, is the type of nonpartisan contribution which the Republican Party must make in order to participate effectively in the creation of a bipartisan foreign policy. If we who are in control of Congress abdicate our prerogatives, if we fail to discharge these responsibilities, America may soon become an island of freedom in a sea of tyranny.

We must not seek refuge from these troublesome problems in a bipartisanship which consists of an apathetic acceptance of a foreign policy which, on those rare occasions when its outlines are at all discernible, seems confused and dangerously inconsistent. We must shoulder the burden and give to these grave issues the mental travail and noble purpose which alone can lead to a happy solution. For it remains wonderfully true that in spite of recent spectacular developments in the scientific machinery of war and peace, the motive power of human conflicts resides, as always, in the mind of man. As we think, so shall we act. Our equipment is manmade; it came from the mind of man as the Goddess Athena sprang from the brow of Jupiter. Man can control his own creations if he wills it. Even the atom bomb, ladies and gentlemen, will move to the measure of men's thoughts. Even the atom bomb is but an extension of yesterday's weapons and of today's conflicts. Even the atom bomb cannot alter or diminish the validity of those timeless truths on which our Nation was founded. The atom bomb does not change the challenge; it merely punctuates and underlines it and gives it a terrible urgency which before it did not seem to have. We are still faced with the problem of self-control rather than atomic control, and we can develop our self-control far better under our free system than under the imposed disciplines of stateism. The challenge is still ineluctably a moral challenge, and in that challenge the women of America can and will play a predominant part. It is still a challenge to us to give a vigorous demonstration that our private-property, competitive economy can continue to bring a higher standard of living and more freedom to more people than any other system yet devised by man.

This brings me to the challenge on the domestic front. Here the choice is not between an absolutely planned economy and the laissez faire philosophy of many years ago. We are no longer an agricultural community—there are many accommodations which Government can and must make to our modern industrial needs. We must not raise our hands in horror at the mere mention of social legislation. We have had social legislation for years in one form or

another, social legislation such as child labor laws, workmen's compensation laws, and others. We must be alert and progressive in making these changes within the pattern of our system. The Government should take action where our private property system does not reach. Having admitted this, however, the fact remains that there is a running fight all over the world between those who believe in the Government and those who believe in the people as the source of a more abundant life. We in the Republican Party believe in the people.

The Republican Party was founded in 1854 to fight intolerance and slavery. The greatest American of us all was its greatest statesman and prime inspiration. We can assume, I think, that he would be opposed, as we are, to the Bilbo influence in the Democratic Party. Abraham Lincoln believed profoundly in the dignity of the individual man, in the brotherhood of man under the fatherhood of God, in the freedom not merely of workers, or farmers, or managers, but in the freedom of the individual. He believed that the individual was the complex heart of society.

To that individual must be given two things: The greatest possible degree of political and economic freedom consistent with the freedoms of other individuals and equality of opportunity for every individual before fate and before law. Lincoln believed in the human soul.

Those are the principles upon which the Republican Party was founded, and those are the principles upon which it has always acted in its moments of greatness. Under Lincoln it fought and saved the Nation and gave a new birth of freedom to an enslaved people. Under the rallying cry of freedom, it made the Nation a kindly refuge for the hunted peoples of many foreign lands. Under Theodore Roosevelt it curbed the excesses of powerful men who threatened to destroy the freedom of the people. Under its great Chief Justices it evolved a system of law designed to safeguard those freedoms. We in the Eightieth Congress are attempting to provide legislation which will protect the people against other excesses which have arisen during the past 14 years. The problem of government is to safeguard minority interests while protecting the majority from minority control.

It has been the fashion for some years now to forget these achievements of the Republican Party. It is fashionable to picture the elephant as a corpulent old gentleman with a cigar in his mouth and a roll of bills protruding from his hip pocket. Actually the Republican Party, being the party of freedom, has been, and is today, the party of the people.

It is not an easy fight. The individual, being without spokesman, often seems at a loss in the face of the howling propaganda enthusiastically hurled by the proprietors of vested interest. It is difficult to fight the battle for the individual. It is even difficult, sometimes, to see wherein his freedom lies. It is often easier to listen to the blandishments of the propaganda Lorelei.

That is where I believe sometimes the Republicans in the past have failed. Sometimes through ignorance, pompousness, and lack of integrity—ah, yes, Republicans have been guilty of all that—they have failed to penetrate through the web of vested interests to the freedom of the individual. Wherever you find failure written on the record of the Republican Party, you will find that for the moment it has deserted the principles of Lincoln. It has lost contact with the human soul.

The Republican Party must have no room for anyone who will put the welfare of any organized group, no matter how large or powerful, ahead of the welfare of the people. The Republican Party has no place for complacent reactionaries, for purveyors of intolerance, for sowers of confusion and discord. The Republican Party is the party of true liberalism; it is the party of progress, of intellectual ferment—the party of freedom. We are the young Turks, the insurgents, and we must understand the enormous implications of the challenge which we face at this time.

The only true definition of a liberal that I know of is that a liberal believes with Lincoln in freedom for the individual. That, I know, is what the Republican Party should, and will, stand for.

One result of being a liberal is that you must be constantly on guard against tyranny and authoritarianism wherever they show their heads. There is no compromise in the age-old struggle against tyranny and human freedom. That is why we liberals in the Republican Party hated fascism and nazism. Though we sought and strove for peace, we knew that an evil peace was not to be preferred to a good war. That is why we fought and won World War II.

And that, my friends, is also why we Liberals in the Republican Party hate communism. How much freedom for the individual, may I ask, is there in a political system which keeps 18 million out of 180 million people in concentration camps, which depends for its security on secret police, firing squads, mock trials, and the obliteration of all minorities with bullets? How much freedom for the individual will there be if Russian communism, as seems to be its intent and goal, is able to spread its bloody wings over all the world. How much freedom for the individual is there in the tragic lands behind the iron curtain—in Poland, Yugoslavia, Hungary?

To state the fact of our hatred for communism is not synonymous with our saying that war is inevitable. Just the opposite. I firmly believe that it is the only way to keep the peace. The way of the appeasers, their lack of faith, their essential isolationism, is the sure way to national and international disaster. We saw that before. We remember Munich. In disunity and moral weakness, there is no defense against tyranny. The only protection is an insistence upon our beliefs in freedom, a carrying-out of the pledges we have given to the small nations of the world, an application of wise statesmanship based on morality which can and will distinguish between international right and international wrong, and above all a highly developed sense of individual responsibility.

The American people are still willing and eager to assume the risks of being free. That is why they voted overwhelmingly for the Republican candidates last November. That is why this Republican Congress is laboring steadfastly and successfully in an attempt to correct the many evils which have arisen during the past few years. That is why we Republicans must be relentless in our efforts to restore America to the free institutions under which Americans can continue to strive for the real security of individual accomplishment instead of bending under the bogus security of Government hand-outs. This is a difficult job in which many obstacles are recklessly thrown across our path by those who have lost faith not only in the American system but in the American people.

There are many suffering peoples in the world who also are willing to assume the risks of being free. We cannot turn our backs on their yearnings. Just as the Republican Party is the best hope of America, so is America the best hope of the world. That is why I say that we can no longer be partisan in our thinking. We must think in terms of our obligations as well as our rights; we must appreciate our duties more than our privileges; we must discharge our responsibilities in order to retain our liberties. We must somehow distill out of our dilemma the high moral tone without which we cannot stem the onward tide of barbarism.

If we fail to meet this vibrant challenge, the magnitude of our failure will be commensurate with the greatness of our opportunity. We 140,000,000 Americans are the happy few who can now shape the course of world history for many years to come. The survival of western civilization depends upon the wisdom and the courage which we can muster in this trembling hour. That is the real challenge of the peace; that is the challenge to the Republican Party; that is the challenge to America.

Resolution of Assyrian Central Committee of Chicago

EXTENSION OF REMARKS
OF
HON. ROBERT J. TWYMAN
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 27, 1947

Mr. TWYMAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I submit a letter from Rev. Paul S. Newey, president of the Assyrian Central Committee of Chicago. This letter calls attention to the atrocious treatment of Christian Assyrians in Iran. I have submitted a copy of this letter to the chairman of the House Committee on Foreign Affairs. It follows:

ASSYRIAN CENTRAL COMMITTEE
OF CHICAGO,
Chicago, Ill., May 23, 1947.

Hon. ROBERT TWYMAN,
House of Representatives,
Washington, D. C.

DEAR SIR: We have authoritative proof that 24 Assyrian villages were looted and burned, many men tortured and killed in cold blood, and countless numbers of women, young girls, and children assaulted and raped under the very eyes of the Iran military forces in the Azerbaijan district of Iran, December 1946–February 1947.

We, the Assyrian Central Committee of Chicago, Ill., composed of church units and organizations and societies of American citizens of Assyrian ancestry—in support of the petition in behalf of the Assyrians in Iran dated March 13, 1947, filed with the United Nations by his Holiness Mar Eshai Shimun XXIII Catholicos patriarch of the east and of the Assyrians CXIX and the temporal head of the Assyrian Nation, do urge your honor to bring this matter to the immediate attention of our Government and our delegates to the United Nations, with a view of bringing pressure upon the Iranian Government to stop such atrocities against Christian Assyrians in Iran and to provide temporary relief measures until a final solution is found to their problem by the United Nations, and that an impartial commission be appointed to investigate the matter on the spot.

Respectfully yours,
Rev. PAUL S. NEWEY,
President.

Federal Tort Claims Act

EXTENSION OF REMARKS
OF
HON. BERTRAND W. GEARHART
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 22, 1947

Mr. GEARHART. Mr. Speaker, the adoption during the closing days of the Seventy-ninth Congress—1946—consti-

tuted, as Mr. Harold Aron, eminent advocate and legal scholar of the New York bar, points out in a very interesting article which he recently contributed to the American Bar Association Journal, a stupendous break with a very ancient past, one which in its implications may lead to startling and completely unanticipated results.

Because of the myriad questions which this unprecedented legislation forces upon the attention of the bar, the Congress, and the country, the unforeseen complications which may flow from its administration. I am sure that that which that eminent lawyer and publicist has had to say on this involved subject should find its place in the CONGRESSIONAL RECORD, in the columns of which contemporary events of historical importance are recorded.

Mr. Speaker, Mr. Harold Aron's most interesting and very able article, the article to which I have just referred, is the following:

FEDERAL TORT CLAIMS ACT: COMMENTS AND QUESTIONS FOR PRACTICING LAWYERS

(By Harold G. Aron)

Professor Borchard's paper seems to me to make a valiant attempt to cover a broad field of subjects which are not cognate in origin, theory or practice. To treat them together seems to me to leave a blurred picture where his outstanding legal scholarship would have been of great value in etching what is a dramatically far-reaching development in Anglo-Saxon Law—comparable in significance, in the light of the trend of political economy, with the abandonment of trial by ordeal.

The barrier which precludes treating together the subjects of "tort claims against * * * municipal, State and Federal Governments" is the varying type of political sovereignty, if it may be so called, which is involved when one deals with wrongs wrought by the United States of America, by the several States of the Union, and by municipal corporations. Under our Constitution, the United States is a sovereign in an extremely limited sense, as far as municipal law is concerned; and none of its Courts have any inherent jurisdiction. The States, on the other hand, subject only to specific limitations of their own acceptance under the Federal Constitution, are truly sovereign in their domains; and their Courts possess inherently all of the judicial powers which have accumulated and vested over the centuries of Anglo-Saxon jurisprudence. Municipal corporations, as mere creatures of the State, have of course no sovereignty; they possess only such arbitrary powers as the State may again within its own constitutional limitations, delegate. The transitions and developments with which Professor Borchard deals stem from the hardships which grew out of the concept, expressed in the maxim, "The King can do no wrong," but their rationale is quite independent and different.

The enactment by the Seventy-ninth Congress of the Federal Tort Claims Act (Public Law 601), coupled with the very recent official statement by the Lord Chancelor of England that the Crown is about to give up its legal immunity from suits in tort and contract, marks a historic milestone in the Anglo-Saxon law and reveals again the graceful flexibility of Our Lady of the Common Law in meeting changed conditions through the centuries. Withal, it is a strange compound which lies behind this far-reaching change in the two countries; and the fact that they are contemporaneous is not a historical accident, if such there ever be. To the Lord Chancelor, the doctrine that "The King can do no wrong" is a "survival that should be swept away"; and the Senate committee which reported the Federal tort claims bill said, cogently and succinctly and more to the point (S. Rept. 1400), as to the Government's exemption from actions "with respect to any common law tort," that "its only justification seems historical."

HISTORY OF PRIVATE LAWS AS TO CLAIMS

Some future historian, if he digs deep enough, may opine that the proximate cause of the Federal Tort Claims Act was the long-existing and troublesome practice of private laws, relief bills, and committees on claims, which the act abolishes, although in practice this abolition has merely resulted thus far, that relief measures are routed to the Judiciary Committee of the House and to the Finance and other standing committees of the Senate which have survived the Reorganization Act. A careful reading of the Federal Tort Claims Act will reveal adequate escape clauses to preserve, when needed, all the prior prerogatives of the Congress as to relief bills, private laws, and claims against the United States, and that what Congress really did, and wisely, was to dump a load of troubles on the Federal courts, without surrendering any of the powers it had when the first relief bill was introduced and became a private law in 1790.

Presidents since the days of Adams and statesmen since the time of Senator Brodhead have railed against the practice of relief bills and private laws; but it was not until 1855 that the Court of Claims was created, with its powers somewhat broadened 20 years later. At no time until President Truman affixed his signature last August 2 to the act to reorganize the Congress could an American citizen sue his Government for its wrongdoing, if it went beyond a breach of contract or some specific act of Congress. Yet as long ago as 1884, the United States Supreme Court, in *Langford* v. *United States* (101 U. S. 342), had said, as to the doctrine that "The King can do no wrong" and was immune from suit, that "neither in reference to the Government of the United States or the several States, or any of their officers, the English maxim has an existence in this country."

Nevertheless every Congress, before and since that decision, has been burdened and cursed—as many conscientious members have felt, and there have been many—with thousands of relief bills seeking sanction as private laws, because the United States could not be sued for its wrongdoing, even when a negligently driven mail truck permanently injured an innocent child or killed the breadwinner of a household. In the last 12 Congresses, approximately 16,000 relief bills on behalf of such private claims have been introduced, of which about 1 in 10 has been enacted into a private law. Not a few of them have been extremely private.

NEW STATUTE MEANS A VAST VOLUME OF LITIGATION

The sheer volume of new litigation which the Federal Tort Claims Act will generate and force upon the Courts of the United States, their judges, and the law officers of Government, puts a duty squarely upon the shoulders of the legal profession; and it seems to me regrettable that the New York State Bar Association should have seen fit to publish an attack on its provisions limiting the fees of attorneys, under the caption "Enchaining the Lawyer" (letter No. 113; October 30, 1946). In debates on the floor of the House of Representatives, when previous attempts were made to pass this salutary legislation, bitter things have been said against the bar, as, for example, that:

"We must remember that the American Bar Association is composed of lawyers and that lawyers are prosecuting claims, and that lawyers want to get the law into the position where they can most readily and practically represent their clients. It is urged as a conclusive argument in favor of it, that the bar associations of the United States are behind this bill. Of course they are. The bill opens up a tremendous new field of litigation. When the bill passes, the actions against the Federal Government will be multiplied by tens of thousands. The bill ought to be labeled a bill for the relief of lawyers in general and ambulance-chasing lawyers in particular. Everyone who stumbles on the post-office steps or who slips or falls in this Capitol Building or who is injured, in any way, in the national parks or the national forests, is going to run to his lawyer and bring an action against the Government. I make a prediction that in addition to its being an invitation to ambulance-chasing lawyers, it will be a direct invitation to district attorneys and their deputy district attorneys to make easy settlements in favor of those whom they owe some political obligation." [1]

MANY NEW PROBLEMS ARE CREATED FOR PRACTITIONERS

Whenever the law breaks with the past by positive legislative action, no resulting statute springs "full-armed from the brain of Jove." The Federal Tort Claims Act has flaws, ineptitudes, and ambiguities which can be troublesome. It is to be hoped that the bar will show a degree of self-discipline which will negate and stultify such accusations as those I have quoted.

The new law is a stupendous break with a very ancient past, due, chiefly and realistically, to the fact that, as was said by the Senate committee which reported it (supra): "With the expansion of Government activities in recent years, it becomes especially important to grant private individuals the right to sue the Government in respect of such torts as negligence in the operation of vehicles." This is a classic of understatement, of oversimplification, and of using language to conceal thought. It would have been more disingenuous to have said: "On account of Marxian socialism, the New Deal and the results of incipient communism," and to have recognized the fact that the range of the new statute is as wide as the substantive law; that the procedural questions which it raises are as far-flung as the adjective law, and that the problems of proof as intricate as any aspect of the probative law.

For example, practitioners are already wandering in terra incognita, not even certain as to how to designate the United States as a defendant. One action already begun describes the defendant as a sovereign corporation, a combination of only two words that will excite the mind of any legal scholar and perhaps prompt dozens of law-review contributions.

PRACTICAL QUESTIONS UNDER THE NEW ACT

To mention a few of the problems already being faced in litigation begun or about to be begun under this new Federal Tort Claims Act are admissions against interest by Presidents, generals of the armies, members of the Cabinet, and lesser Government officials, competent evidence in proving a claim where the rights of the inventor of the long-distance telephone was sold to France by the United States Government, without his knowledge or consent or compensation to him? Are statements of Secretaries of State, Ambassadors, and other foreign envoys admissible, where an American exporter was swindled by the Imperial German Government and the negligence of the Government of the United States? Are statements made by official American agents before mixed claims tribunals eligible as evidence, where an old lady lost her all by failing to leave attached to her German bonds the coupons, when she presented her

[1] CONGRESSIONAL RECORD for September 12, 1940; pp. 12016–12027.

claim against Germany under the Settlement of War Claims Act after the last war?

Au contraire, are the self-serving declarations of officials and bureaucrats of the United States Government admissible against a plaintiff who sues under the Federal Tort Claims Act? Can there be, as against the United States, an examination before trial or its equivalent? Has any district court jurisdiction under the act, where it is proper or necessary to join a Cabinet officer or other public official, or does the old rule apply that all such actions must be brought in the District of Columbia? Then too, there is this magnificent question which arises in litigation already on its way to the courts: Does a breach of trust, express or constructive, such as arose on the part of the United States under the Settlement of the War Claims Act, as to unpaid holders of awards of the Mixed Claims Commission (United States and Germany), sound in tort under the new law as it does basically and philosophically?

IS THE REMEDY UNDER THE NEW ACT EXCLUSIVE?

Again: Is the remedy under this act exclusive, despite its language, where the wrong sued for emanates from the operative effect of an act of Congress, or is there also a remedy in the Court of Claims under the Tucker Act, despite the fact that the action originates ex delicto? When does the statute of limitations prescribed in the Federal Tort Claims Act begin to run, where the tort is, as it may be and is in some pending litigation, conversion and fraud? Does the doctine of res ipsa loquitur apply, under this new law, and to what extent does the settled substantive law of principal and agent apply to a defendant (the United States) with 2,000,000 employees? Naturally, as in any initial legislation, covering so broad a field, the language of the new act is inadequate, when it comes to its saving clauses and exceptions.

YEARS OF LITIGATION TO DEFINE MAJOR QUESTIONS

There are major questions raised by the language of the act which can be delimited and defined only after years of litigation and judicial decision. What, in the sweeping language of the act, are the rights of a citizen in the United States court sitting without a jury and with power to adjudicate "any claim against the United States, for money only * * * on account of damages to or loss of property or on account of personal injury or death caused by the negligent or wrongful act or omission of any employee of the Government while acting within the scope of his office under circumstances where the United States if a private person would be liable to the claimant for such damage, loss or injury or death in accordance with the law of the place where the act or omission occurred" (sec. 410, Public Law 601). If the distinguished editor in chief of the Journal runs out of material in the next 5 or 10 years, he will find plenty of "copy" in seeking to bring within accepted legal meanings this pregnant recital of the scope of the Federal Tort Claims Act and the phrases used in connection therewith or contained therein, such as "common law tort" (are there others?), "fiscal operations of the Treasury," "regulation of the monetary system," "interference with contract rights," "combatant activities of the military and naval forces," "claims arising in a foreign country," etc.

Some years ago the Chancelor of what then was Hungary, speaking in this country, said of the administration of the law in general: "I say we are trying. We are having great difficulty, either not fully comprehending what justice, equity, and established law mean, or in shaping a course of public and private action in accord with them and the ideals they express." Mutatis mutandis, much the same may be said of the new Federal Tort Claims Act.

We shall better understand this new law, if we look back a few hundred years. For, as Matthew Arnold said: "The largest part of that history which we commonly call ancient is practically modern, as it describes society in a stage analogous to that which it now is, while, on the other hand, most of what is called modern is practically ancient, as it relates to a state of things that has passed away."

The maxim that "the King can do no wrong" has passed away. History is stubborn, yields slowly and painfully, as one is aware in looking over the scores of volumes of learned dissertations in the Congressional Library on the subject of the divine right of kings, from which this maxim emanates. The implications of the abandonment of this doctrine in the United States and England are too great to deal with adequately within the confines of a monthly journal, however outstanding the writer may be, as is Professor Borchard, for the subject goes back a very long way.

Shortly after James I came to the throne of England in 1603, he announced that "the state of monarchy is the supremest thing on earth"; and his royalist followers, while some of our ancestors were planning to make the great pilgrimage to Plymouth, agreed that "monarchs are divinely sanctioned to rule, deriving all authority from the Deity and none from the governed." Consonant with this doctrine was the generally accepted view that the King was the fountainhead of all justice, and out of that grew what we now call courts of equity, as distinguished from courts of law, and a quite independent system of jurisprudence which put the King's conscience above the law and gave rise to the great powers of what is today the highest judicial position in the world, the Lord Chancelorship of England. With these concepts of royal and indisputable power and righteousness, there developed the maxim that "the King can do no wrong."

HOW FAR HAS THE UNITED STATES GONE?

And now we of the bar and our austere and distinguished brethren on the bench must ask ourselves whether, in the Federal Tort Claims Act, the United States has gone, to the extent of its sovereignty, the full distance of agreeing to shed its imperial robes, step down off its throne, and submit itself to the normal processes of the administration of Anglo-Saxon justice? One would think that the framers of the Federal Tort Claims Act had never heard of the time when the throne of England called in its janitor, for such is the origin of the word "chancelor," and told him to lessen the hardships of the law courts and thus created equity jurisprudence. Law in its generic sense consists of more than actions ex contractu and ex delicto. Does the Federal Tort Claims Act cover such cases, of which there are many, where the Federal Government, in its old- and new-sprung powers, has caused loss and ruin, but within the technical mandates of the law; or does the new statute mean what was pretty well said in the Illinois statute, accepting its liability for wrongdoing to its citizens 30 years ago by establishing a court of claims with jurisdiction to hear all claims, both legal and equitable, "which the State as a sovereign Commonwealth should in equity and good conscience discharge"?

It is not a simple thing to activate accurately and justly this new Federal Tort Claims Act and radiate its rationale to State and municipal government. It seems to me to need a John Marshall to construe and interpret it, with the sympathetic aid of a bar that has not forgotten that ancient legal ethic of Anglo-Saxon jurisprudence, quoted by Gilbert in these words:

"But a counselor cannot have this or any other action (against his client) to obtain pecuniary consideration for his advice; the law of England concurring on this point with the delicacy of the Roman law, in not permitting a price to be affixed to the performance of this honorable duty in which so many and arduous questions must arise, where the spontaneous acknowledgment of the client can alone be adequate."

History of Terminal Leave Legislation

EXTENSION OF REMARKS
OF
HON. DWIGHT L. ROGERS
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 27, 1947

Mr. ROGERS of Florida. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following history of terminal leave legislation:

Mr. Speaker, on September 13, 1945, I introduced H. R. 4051, providing for lump-sum cash payment for unused terminal leave for the enlisted men of the armed forces. The bill gives enlisted men of World War II the same benefits, privileges, and rights that had been given the officers serving in World War II.

This bill unanimously passed the House on June 11, 1946, by a vote of 379 to 0. When the bill reached the Senate, it was amended by providing 5-year bonds bearing interest at 2½ percent per annum in lieu of a lump-sum cash payment, and further provided that "such bonds are to be nonnegotiable and shall not be transferable by sale, exchange, assignment, pledge, hypothecation, or otherwise." In the conference between the two Houses right at the end of the Seventy-ninth Congress, the House was forced to accept the bond-payment plan or pass no legislation at all along this line, and rather than pass no legislation at all the House adopted the report of the conferees accepting the 5-year bond payment. However, at the time of the adoption of the conference report, both myself and various Members of the House insisted that the enlisted men should be paid in cash in the same way and manner that the officers had been paid in cash, and I think that it is fair to say that the conference report, accepting the bonds, was agreed to upon condition that at the Eightieth Congress a bill would be passed providing that the bonds should be redeemable in cash. As author of H. R. 4051, I made the statement on the floor of the House, in the discussion of the conference report, that the first bill that I would introduce during the Eightieth Congress would be one providing for the redemption of the terminal-leave bonds in cash.

Upon the convening of the Eightieth Congress on January 3, 1947, I did, in compliance with the statement made on the floor of the House during the Seventy-ninth Congress, introduce H. R. 3, which provides that bonds issued under the Armed Forces Leave Act of 1946 shall be redeemable in cash at the option of the holder of said bonds upon application being duly made therefor.

My bill, H. R. 3, was referred to the Committee on Armed Services on January 3, 1947, and on January 22, 1947, I addressed a letter to the chairman and

each member of said committee, requesting that they hold a hearing on this bill and that the same be reported out for the consideration of the House. A copy of this letter is as follows:

JANUARY 22, 1947.

Hon. WALTER G. ANDREWS,
Chairman, Armed Services Committee,
House of Representatives,
Washington, D. C.

DEAR CONGRESSMAN ANDREWS: On September 13, 1945, I introduced H. R. 4051, providing for terminal-leave pay to the enlisted personnel of the armed forces. After much delay and circuitous route this bill was passed by the House on June 11, 1946. When the bill was sent to the Senate, that body amended it by providing that 5-year bonds be used as payment for terminal leave instead of a lump-sum cash payment which my bill, 4051 provided. It appeared that the House had to accept the Senate amendment in order to pass this legislation during the Seventy-ninth Congress.

As author of the bill, when the conference report was discussed, I stated on the floor of the House on July 31, 1946, that the first bill that I would introduce in the Eightieth Congress would be one to make the bonds payable or redeemable in cash. (See CONGRESSIONAL RECORD of the House, July 31, 1946, p. 10588.) I immediately got in touch with Hon. South Trimble, the then Clerk of the House, and requested bill No. 1 of the Eightieth Congress. Mr. Trimble had already promised bill No. 1, but he assigned to me bill No. 2, which he confirmed by a letter.

When the Eightieth Congress convened I endeavored to get bill No. 2 assigned to me, but Mr. Andrews, the new Clerk, said he had promised bill No. 2 to some other party but would give me bill No. 3; therefore, my bill No. 3 providing for cash payment on these bonds was introduced in the Eightieth Congress. There have been a number of bills introduced providing for redemption in cash of these terminal-leave pay bonds. I am, therefore, writing the members of the Armed Services Committee that in view of my previous work and interest in connection with the original bill, H. R. 4051, that the members of the committee give my bill, H. R. 3, the right-of-way. I do not think I am asking anything that is not fair and just in making this request. Some of the members of your committee know the persistent work that I did in getting H. R. 4051 passed.

I would like to have the honor of completing the work of the bill which I originally started and I respectfully ask the members of your committee to give consideration to my bill, H. R. 3, and to recommend it for passage.

Most respectfully,

DWIGHT L. ROGERS.

The committee having taken no action on this bill, I did, on March 4, 1947, file a petition with the Clerk of the House of Representatives to discharge the committee from the further consideration of H. R. 3, under the rule of the House which provides that should a committee fail to act on a bill within 30 legislative days, then the introducer of said bill had the right and privilege to file such a petition—this is the identical procedure that was used in getting H. R. 4051, providing for terminal-leave pay, on the floor of the House for consideration during the Seventy-ninth Congress.

This petition, which is known as petition No. 1, has been on the Clerk's desk since March 4, 1947, and it appears that the petition is getting nowhere fast. It seems to be difficult to get a committee report on this bill or to get 218 Members to sign the petition which is to bring the bill before the House for consideration.

Whereupon, in order to get some relief for the holders of bonds who are in dire need of cash for assisting in building homes, buying furniture, and other necessary needs, I did, on May 19, 1947, introduce a bill providing that bonds issued under the Armed Forces Leave Act of 1946 shall be negotiable.

The text of H. R. 3521 follows:

A bill to provide that bonds issued under the Armed Forces Leave Act of 1946 shall be negotiable, and for other purposes

Be it enacted, etc., That, notwithstanding any other provision of law, bonds issued under the Armed Forces Leave Act of 1946 prior to, on, or after the date of the enactment of this act shall be negotiable in the same manner and to the same extent as negotiable instruments payable to bearer; but no person in possession of such a bond shall be considered to be a holder for valuable consideration unless he took it in consideration of the payment of an amount not less than the sum of the principal of such bond plus the interest accrued on such bond to the last day of the month in which the bond was delivered to him.

SEC. 2. Section 6 (a) (2) of the Armed Forces Leave Act of 1946 is amended by striking out "except as provided in subsection (d), such bonds shall be nonnegotiable and shall not be transferable by sale, exchange, assignment, pledge, hypothecation, or otherwise."

Mr. Speaker, the provisions of this bill would only make it possible that these bonds be negotiable so that the holder of the terminal-leave-pay bond can sell it, transfer it, and obtain the cash, and the purchaser of the bond would be a holder for valuable consideration by paying the full amount of the bond plus accrued interest to the last day of the month in which the bond was delivered to the said purchaser.

This would not in any way cost the Government a single penny, nor would it disturb the cash position of the Treasury.

As a matter of fact, the terminal-leave bondholder would make a little since the bonds are such good investment that they probably will sell at a premium as the Treasury bonds are now doing bearing only 2 percent interest. There are many banks and other investors anxious to acquire such sound securities at 2½ percent interest. This will not make any difference financially to the Government since it has to pay the bonds together with accrued interest at the expiration of 5 years anyhow.

H. R. 3521 repeals that harsh section in H. R. 4051 which provides that "such bonds shall not be negotiable and shall not be transferred by sale, exchange, assignment, pledge, hypothecation, or otherwise," thus making the holder of the terminal-leave-pay bonds powerless to use these bonds for 5 years which is like giving a soldier a gun without ammunition, or an old rusty musket whose trigger will not work. This prohibition against the use of the bonds for a period of 5 years is a distinct and flagrant discrimination against the veteran holding terminal-leave-pay bonds for the reason that there is no other bond issued by the Government that the owner cannot obtain cash on within 60 days to 6 months. I can see no valid reason why the terminal-leave-pay bonds cannot be used by the holder thereof. The withholding of the cash on these bonds from the veteran is a continuation of that discrimination which H. R. 4051 was intended to correct, and H. R. 3521 will wipe out and destroy this discrimination. Let us hope that the Members of this Congress will give their cooperation in the passage of this measure.

A Generous, Uniform, American Pension for Our Senior Citizens

EXTENSION OF REMARKS
OF
HON. JOHN R. MURDOCK
OF ARIZONA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 27, 1947

Mr. MURDOCK. Mr. Speaker, under leave to print granted today, I hereby extend a speech I made before pension clubs in Chicago on Sunday, May 25. The speech was as follows:

Mr. Eakins, to the State representatives, officers, and members, and guests of the American Pension Clubs of Illinois and Indiana, and especially to this worthy veteran, William Dick, of Naperville, I extend greetings. I have been greatly impressed with the words of our gray-haired veteran here on the platform who has worked so long in this cause. As I listened to him and saw so many others like him in this hall who have been leaders in this movement, I thought of the words of Daniel Webster at the laying of the cornerstone of the Bunker Hill Monument in 1825. A statement used by Webster then seems almost appropriate now.

There had gathered in that ceremony on the brow of Bunker Hill, in 1825, exactly 50 years after the battle of Bunker Hill, a little band of gray-haired veterans of the Revolutionary War—among them being the French patriot, Lafayette. It was only a handful of the veterans who had survived the battle and the 50 years following it to be present on that occasion. Mr. Webster said, "Venerable men, you have come down to us from a former generation. Heaven has bounteously lengthened out your lives that you might behold this joyous day." It was indeed a joyous day for that little band of survivors who had offered their lives in battle and had lived to see their country freed and a Republic established. Especially was it a joyous day for them when they remembered that some of their gallant leaders, like Dr. Warren, had died on that battle day, as Webster said, "Pouring out his blood like water before he knew whether it would enrich a land of freedom or of bondage."

As I listened to the venerable Mr. Dick, and looked about the audience where I see other men and women with hair as white as snow, I thought of Webster's words. You are venerable men and women who have survived many vicissitudes and have come now to the possibility of a glorious day. No; it is not yet a glorious day, but it approaches a glorious day in possibility. Webster said to the veterans of Bunker Hill, "Late may you arrive in heaven." So I say to you, "Late may you arrive in Heaven," but not until you have seen substantial justice provided by generous government for all who have helped to build in this marvelous land and create this goodly country.

I am most happy to be with you in Chicago today. I have been in this great metropolis of the heart of America on many occasions. I always marvel at the magnificence of this, which is, in so many respects,

the leader of all cities. I am glad, too, for this occasion, as it permits me again to express myself on a matter that has been dear to my heart for many years. A generous, uniform, American pension for all our senior citizens constitutes one of the most important legislative objectives that confronts the American Congress. I am aware of the great number and the magnitude of our national and international problems, and do not minimize them. These, many of them, affect our national life, and must have priority of consideration by Congress. The gravity of many of these problems cannot be overestimated. The Congress has faced, and is facing, these problems. We are happy that, even though many times the way does appear dark, and it is difficult to be sure just what is right and what is wrong, in due time we do surmount our obstacles and the ship of state plows through the troublous waters and we emerge into the serenity of an open sea again.

I think you probably would like to know something about me, myself, and what has been my relation to various proposals for old-age benefits and pensions. I came to Congress in the Seventy-fifth and began service in January 1937. That means I was a candidate for election to Congress in 1936. During the campaign of 1936 several elderly men, prominent in the Townsend movement, came to me and urged that I support the Townsend cause. They pointed out their numerical strength in Arizona and said they had sufficient votes to guarantee my election. I explained to them that day I did not know too much about the Townsend movement; that I thought a pension of $200 a month was fantastic and that for the sake of gaining votes I would not promise even to attempt to pass a bill guaranteeing such payments. These were neighbors of mine and they knew me. My life in that community had been an open book, and they knew that I meant it when I said to them, "I believe in pensions for our worthy senior citizens, and I shall work for something like the Townsend bill or any other pension proposal which seems to deal justly by such elderly citizens."

On coming to Congress, especially in the Seventy-fifth and the Seventy-sixth Congresses, I found various versions of the Townsend bill introduced. Early in the Seventy-sixth Congress, when the Ways and Means Committee did not report out the Townsend bill, a discharge petition was placed on the Speaker's desk to bring the bill to the floor of the House without committee action. Such a discharge petition requires 218 names, and I signed it along with 217 other Members of the House. I did not sign it merely as a political gesture with any thought that there probably would never be 218 signatures obtained, for I signed it that the bill might be brought out for free and full discussion so all could examine its merit.

On June 1, 1939, the bill was brought to the House and the first and last and only roll call vote on the direct issue of considering that Townsend bill was had that day in the House of Representatives. On roll call vote, 97 present voted "yea" and more than 300 voted "nay." It happens that 4 absent Members were paired to vote "yea." The 97 voting "yea" and the 4 absent who would have voted "yea" brings the total to 101 who dared to stand up and be counted, and some of you will remember that the Townsend organization honored these by calling them the 101 immortals. I got a certificate to the effect that I am one of the 101 immortals, and I also got plenty of adverse criticism from the State of Arizona because I had sincerely wished to have the merits of this general proposition fully debated and considered, at least in the Senate even if too little consideration had been given it in the House.

That vote occurred before the recent terrible war. Have I now deserted the Townsend organization? I feel that there is now little hope of getting any of the so-called Townsend bills enacted into law under the changed conditions of today. There are three similar bills before Congress now, two having been introduced by Republicans and one by a Democrat, which may be referred to as the Townsend bill. It is because I feel that there is so little hope of any of these elaborate measures being successfully passed that I have joined with Congressman LANDIS, of Indiana, and others, in sponsoring a simple, direct, and reasonable pension bill such as H. R. 781. A group of us met in Congressman LANDIS' office and talked the matter over before this bill was introduced. Since the Eigthieth Congress is Republican in control in both Houses, I felt that Congressman LANDIS should introduce the bill, and since the rules of the House do not permit two or more names on a single bill, although that is permitted in the Senate, we should call this the Landis bill and the rest of us supporters of it.

Some explanation should be made why I give preference to this particular legislative proposal over the various other proposals relating to the same subject matter. In general I believe that some such bill as H. R. 781 has a better chance of enactment now than some of the more elaborate proposals of preceding Congresses, or even of the present Congress. We must be practical and realistic and try in this good cause to approach fairness and justice for all in doing the best we can.

During recent years various Townsend bills have been introduced, and as I have already indicated I favored them in principle and have worked and hoped to get at least one of them to the floor of the House or Senate for full debate that it might have its day in court and be shaped in its terms according to the best judgment that Congress could bring to bear on it. All legislation in which there is controversy involved must be a matter of compromise and I naturally expect H. R. 781 or the Townsend bill or any other proposal, if passed, to be modified in the give and take of legislative formulation.

This bill which I shall call the Landis bill does not repeal all the social-security legislation but simply amends it by this one provision concerning old-age benefits. Now, I favor the general social-security legislation as far as it goes but it doesn't go far enough. It was enacted 2 years before I reached Congress in 1937 and I can see certain shortcomings, but as a Democrat I am proud that my party wrote the legislation on the statute books in the beginning and set up a goal of humanitarian legislation toward which we ought to work. I recognize that my party, while in power, will be jealous of its initial social-security legislation and will be cautious about amending it, although we want to broaden it and improve it. The party of Franklin D. Roosevelt will naturally resist any and all efforts to repeal the legislation or to destroy it. Our H. R. 781 has a view of improving the legislation—and I favor broadening it and bettering it in other respects as well—so I favor this special old-age provision represented in the Landis bill.

How do I regard the special features of the Landis bill and why do I favor it? First, it provides for a uniform national pension. If we are going to have any old-age benefit payments, which I certainly indorse, I can see great merit and justice in having such payments uniform throughout the Nation. Under the present social-security plan of Federal and State joint participation there is a great deal of difficulty in administering the law and the possibility of delay and injustice where the fault cannot be accurately placed. At this moment thousands of old-age pensioners in my State are very uneasy and have suffered inconvenience because of a misunderstanding on somebody's part at Phoenix or Washington, and it appears likely that my State may have to have a special session of the legislature to straighten out the matter. Of course, it is also true that thousands of these old-age pensioners in my State suffered embarrassment and delay because their checks were held up a few weeks ago because the Congress was slow in passing an appropriation measure. A uniform national pension might not avoid this second difficulty but I believe that such a uniform Federal system would cut the possibility of delay and the expense of administration by at least 50 percent. What we want in addition to adequacy and justice in such a law is simplicity and economy of administration.

One fault with the general social-security set-up is the cost of overhead. I want to work in the direction of simplicity and economy. I think we could write this pension law with such simple terms of eligibility—and I want those terms to be as nearly just as the human mind can conceive—but simple and clear so that once an individual is eligible that individual remains eligible and receives payment without question. I would eliminate inspectors and examiners and get it down on a basis that there can be little possibility of chiseling or fraud, and such could be handled by the ordinary courts of the land. I would do away with the "pauper's oath" or the "means test" or any measure of a person's need or financial condition other than official records, for I want those payments made not as a matter of charity but as a matter of right.

Parenthetically, while the Landis bill provides as a point of eligibility that one must not have paid an income tax the preceding year, I don't know but that it would be just as well to make the pension payment to the eligible individual, even if his income was great enough to be taxed. To my mind, such payments might just as well be made on application and determining of eligibility whether the individual be a millionaire or a day laborer.

The Landis bill provides that to be eligible at 60 for this pension a man or woman must be an American citizen and must have resided continuously in the United States for 10 years preceding the application. For my own part I would be willing to double that residence requirement. There may be, too, other requirements which should be written in. While it probably is too much to require applicants to prove a pension "earned," we do not propose this benefit as a "hand-out" to throngs of foreigners who might flock to this country to enjoy old-age benefits. The whole philosophy of this proposal is based on the assumption that a man or woman having reached the age of 60 and spent a substantial period of years of mature life as a good citizen productively in this country has helped to build the national wealth, and is therefore entitled to what might be called a special dividend in declining years.

Naturally I wish that we might have a more searching and accurate measure of an individual's contribution to the Nation's present wealth and prosperity more than a mere 10 or 20 years of residence in this country. However, I fear an attempt to set up an elaborate program and complex schedule of eligibility would make the whole plan unworkable and would open the way for what could amount to misjudgments and injustices.

Why did the authors write $60 per month as the amount? Well, that's something to aim at, and since my own State by joint plan with the Federal Government under social security now has a maximum of $50 per month, in counsel with Mr. Landis and others I agreed to make it tentatively somewhat larger than presently prevails in some of the more liberal States. What circumstances ought to be considered in determining what the amount shall be in such a bill? Several things must be carefully considered. What amount can the economy of the Nation provide for such payment? This is a deep and involved economic problem calling for profound study by broad-minded statesmen.

Another question. How would $60 a month to oldsters compare relatively with pensions and other benefit payments to other classes of citizens? For instance, we now have many millions of former members of the armed services and their dependents who are either receiving pensions or some form of Federal payments because of their past services. Of course, this cannot be measured accurately by what the country owes them. The soldier fought to preserve our country and he is properly rewarded for having done so. The elderly citizen should be pensioned because he or she helped to create our country, and a delicate question is raised as to relative contributions. I wish we knew which is the greater service, to help create America or to help preserve America? Of course, that cannot be adequately answered by finite minds, but benefit payments of one class must not be out of line or manifestly unjust in comparison with benefit payments to the other class. Neither can be paid what their services were worth.

Again, what limit in morality or justice, as well as economic feasibility, should enter into consideration of the amount of old-age benefits? If citizens retire at 60 and—I would not have compulsory retirement written into the law—if they retire from active work, the burden of economic support falls upon the remaining population. No one could ever justify throwing a large group of elderly citizens, living in comparative ease and luxury, as a burden upon the backs of the younger generation to the extent of lowering the latter's standard of living. This system of old-age-benefit payments must not be a crushing burden upon the oncoming generation. It need not be. If properly enacted, the legislation could be a blessing to the younger generation of workers, second only to the older generation who are the recipients.

Is it possible for our economic system to bear the burden of paying such pensions suggested in any of the bills now before the Congress? I haven't the least doubt but that it is possible for American economy to support the program of the Landis bill. In the closing hours of the Seventy-ninth Congress we passed what has usually been called the full employment bill, but which ought rightfully and legally to be called the Maximum Employment Act. The politico-economic die-hards said that idea was fantastic and could never be carried out. If they seize and hold political power, nothing may ever come of it. But some of the best brains of America feel that that is a good law and that it is capable of being implemented by government and carried out in effect by agriculture, business, industry, and labor.

For 2 years I sat on the special House Committee on Postwar Economic Policy and Planning during the war, and we had before us the greatest leaders in industry, Government, and labor. The voluminous hearings were held during the period of the war, indicating what America could have and ought to have after the war. They occupy thousands of pages in print and we heard the greatest minds in Government, in industry, in business, and in labor picture our economic possibilities. Unfortunately we have not yet seen any of these pictures coming true, but surely so many, many practical men could not be wrong. America can do it when motivated for peace as she was motivated for war.

Many textbooks have been written on economics, while libraries embody the thought of our economists, but in all this study the major share of the thought has been given in more recent years to the phase of production—that is, the production of wealth. Now the production of wealth is only one of the fields or the divisions of the science of economics. Too little thought has been paid to an equally important part of economics and that is the consumption of wealth. Production and consumption are really opposite sides of the same thing, but this significant fact apparently has not dawned fully enough upon American businessmen. Our economic society has arrived now, through the use of power, and with the technology and American know-how, to a point so that we can vastly increase the output of material things enough to satisfy to a greater degree than ever before most human wants. However, our economic machine often comes to a slow down, if not a dead stop, because there periodically occurs too little purchasing power to take our abundant production.

How to create that purchasing power to keep our industry and productive equipment working to capacity is our modern problem. We go to great extremes to create markets abroad—and I am not minimizing the importance of foreign trade—but meanwhile we overlook the basic fact that the greatest of all markets is our American home market, with purchasing power in the hands of the masses of our people. I believe that this measure, H. R. 781, enacted into law would go a long way toward providing that purchasing power and at the same time it would deal justly by a class of our citizens who deserve to share in the benefits of that which they have helped to create.

Farmers Will Suffer Unless Soil Conservation Appropriation Is Restored

EXTENSION OF REMARKS
OF
HON. JAMES H. MORRISON
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 27, 1947

Mr. MORRISON. Mr. Speaker, I wish to enter my protest against the cut made by the Appropriations Committee from the Department of Agriculture's request for $301,720,000 for soil-conservation benefits and the elimination of the authorization for the $200,000,000 program for the 1948 crops.

Benefits from soil conservation are many. First, our productive soil is kept from washing away. It is kept permanently productive for our children's children—in fact, under scientific, acre-by-acre treatment of the farm conservation plan, the fertility of a farm actually increases over the years. This is the kind of soil and water conservation which Louisiana farmers are putting into effect in their own voted and managed soil conservation districts over the greater part of the State. In addition, our whole State and society benefits—business, professions, schools, and churches; local, State, and National Governments—through increased farm incomes and taxable wealth and higher revenues.

The bankers of Louisiana give us a good example here in our own State of how business groups recognize the importance of a productive agriculture for the economic stability of our State. They know from actual experience with their customers that fertile topsoil is the basis for agricultural productivity and that once the topsoil is gone, only the inferior subsoil is left. For this reason, the bankers have encouraged the widespread use of soil- and water-conservation practices. Last fall, for example, they requested the Soil Conservation Service of the United States Department of Agriculture to conduct a forum in their behalf. Representatives from 28 banking institutions attended the conference at Alexandria, La., on November 18 and 19, 1946.

Of this forum, an editorial in a Louisiana newspaper read:

> Here is realization of the interdependence of farmer and banker. When Louisiana farmers prosper so do most Louisiana communities. * * * For promoting farming and soil conservation in the State the Louisiana Bankers' Association has been cited three times in as many years by the American Bankers' Association. Financiers have charted a course many another business group could wisely follow.

More than 90 percent of the entire State is now in the 24 farmer-voted and farmer-managed soil-conservation districts. That is an outstanding accomplishment in the less than 10 years since the Louisiana district enabling act was passed.

Working through their supervisors and with the help of Soil Conservation Service technicians, these farmers have planned the acre-by-acre conservation treatment for more than 2,320,000 acres. Of this, more than 1,248,000 acres have received conservation treatment. This conservation application includes such items as 394,000 acres of contour cultivation, 94,000 acres of strip cropping, nearly 81,000 acres of farm drainage, 630,000 acres of properly stocked range, and nearly 149,000 acres of range and pasture seeding. This is an excellent beginning in conserving our soil resources.

There still remains a tremendous job ahead. A conservation-needs survey made by the Soil Conservation Service in 1945 shows that Louisiana's farms need more conservation work, including 1,731,000 acres of contour planting, 1,822,000 acres of strip cropping, 1,088,000 acres of farm drainage improvement work, 1,469,000 acres of terracing, and about 2,349,000 acres of pasture seeding.

After careful consideration of the cuts made by the Committee on Appropriations from the Department of Agriculture's budget request, it is my unalterable conviction that the farmers would suffer a great burden if this proposal were carried out which would eventually lead to destruction of the entire farm program. As a Representative of the State of Louisiana, with its vast specialized agricultural interests, I am vitally interested in a program that would help our farmers. Louisiana is a great producer of strawberries, Irish potatoes, sweetpotatoes, sugar, rice, peaches, peanuts, cotton, and commercial spring vegetables.

Agriculture is a basic industry in Louisiana. The State's 130,669 farms cover over 10,000,000 acres. Its 853,949 farm people make up 36.1 percent of its population. Including people in small towns, whose welfare depends a good deal on agriculture, the rural population is 1,383,441, or 58.6 percent of the total. Twenty-two commercial fruit and vegetable canneries operated in the State in 1946, seven of them established in 1945 and 1946. Their output amounts to about a million cases a year. Okra, snap

beans, sweetpotatoes, spinach, beans, beets, and other vegetables are canned. Sweetpotatoes make up about 60.5 percent of the pack, according to an economic study by the university, and the canning of sweetpotatoes gained over 83 percent in 5 years. One of the methods recommended for increasing the output of canned goods is to draw products from a wider area.

Dehydration of sweetpotatoes, developed by the agricultural engineers, has resulted in production of $1,450,000 worth of stock feed, on a basis of comparison with corn. Thirty new dehydrators were installed in 1946. Improved sweetpotato-digging machinery last year saved the farmers 3,000,000 bushels, worth a million and a half dollars. The cost of land drainage can be greatly reduced by use of machinery developed by the Soil Conservation Service of the United States Department of Agriculture and the experiment station.

I cannot vote against the agricultural interests of the State of Louisiana and the Congress should realize that the farmers must get the help and consideration to which they are justly entitled.

I urge that the soil-conservation item in the Agriculture appropriation bill be restored to the amount recommended by the Bureau of the Budget and the President.

Address by Senator Chavez Before Society of Natives of the District of Columbia

EXTENSION OF REMARKS

OF

HON. DENNIS CHAVEZ

OF NEW MEXICO

IN THE SENATE OF THE UNITED STATES

Wednesday, May 28 (legislative day of Monday, April 21), 1947

Mr. CHAVEZ. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address delivered by me in Washington on Saturday, May 24, 1947, before the Society of Natives of the District of Columbia.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Mr. President and members of the Society of Natives of the District of Columbia, I wish to thank the members of the society for the opportunity of addressing you this evening. It is always a great pleasure to appear before persons who are interested in the place of their origin. We feel the same way in New Mexico.

This gathering brings to mind the people from whom most of you spring, the founders of this Nation, the pioneers who contributed so much towards its greatness. To the pioneers of America I dedicate my brief talk this evening.

It is unnecessary for me to recount the history of the United States. You have all been familiar with it since childhood—the coming of the Pilgrims to Massachusetts; the settlement at Jamestown, in Virginia; the colony on the Savannah River; the Dutch settlements in New York and New Jersey; the Huguenots of the Carolinas. This story is a familiar one. The people who accomplished all this were magnificent and visionary, but practical hard workers and realistic. They left their abode in Europe for many reasons. Generally it was to escape political or religious persecutions or to seek better economic conditions for their families. They left their homes and broke forever their family ties, and we who are the beneficiaries of their ambitions and efforts must always be grateful.

The colonization of our eastern coast constitutes one of the greatest migrations in the annals of the human race. Our history books tell us of the various settlements by white Europeans and the relentless drive of their descendents to the west. These pioneers carried with them many precious personal belongings, but more valuable than any personal property was their heritage of liberty, freedom, and their desire for an economic security for their children.

Thousands upon thousands pushed west from the New England States, from Pennsylvania, and from Virginia. Countless families crossed the Cumberland Pass and went on into what is now Kentucky and Tennessee, then a part of the Virginia Colony.

These pioneers were noted for their integrity, for their frugality, for their courage, and for their devotion to religion. They had all of the qualities we now hold dear, but above all they possessed one trait in common for which their descendants owe them much. They never forgot education. The instruction of their children went hand in hand with the improvement of the family lot.

A family reached a clearing in what is now Kentucky or Louisiana. The husband built a home by cutting logs, hewing them into shape, and making a cabin; but as he built his home he joined with others who had come west with him and built a schoolhouse. When the first log schoolhouse was constructed the initial step was taken toward establishing what is now our American public school system.

While this was taking place, 2,000 miles away in what is now the southwestern part of the United States, a different pioneering effort had long since been underway. Many years before the English colonist reached America another group of Europeans were living in what is now continental United States. The Spanish had firmly established towns, ranches, schools, and missions in New Mexico.

These were the followers of Isabela la Catolica and Ferdinand of Spain, the sovereigns under whom Spain had conquered the last Moorish territory, the kingdom of Boabdil, Granada. Under their leadership the fierce energy of a restless and warlike people was canalized and directed toward the last of the crusades against the Mussulmans, and when the crescent had been expelled forever from Spain, Isabela turned her thoughts to the oceans of the west and provided the means by which Columbus opened up two vast continents for Christendom.

It is only natural that in America where the basic language is English and whose principal colonizers were English that our history books should concentrate on those things done by the English settlers. Our children in the classrooms hear of William Penn, of Lord Calvert, and of Captain Smith and Pocahontas. But I will warrant you that they seldom hear that 85 years before Plymouth Rock white Europeans had reached New Mexico.

I would like to dwell a few moments on the European pioneers in New Mexico where my ancestors have lived for hundreds of years. Visualize please the geographical location of the State I represent. New Mexico is thousands of miles from the ocean and before the advent of the airplane and the automobile travel was either on foot, on horseback, or by wagons. To reach New Mexico in those days one had to travel overland the vast distance from Old Mexico.

It seems particularly fitting that the Society of Natives of the District of Columbia, an organization which takes pride in the fact that its members and their ancestors originated in Washington, should be familiar with the fact that elsewhere in our great country in New Mexico live a people whose pride of lineage and love of their homeland matches that of your society. And though their history and culture is different from yours, still in the great amalgum of America they also are good Americans and their patriotism is second to none. I mention this because I am convinced that much can be done toward overcoming racial and religious intolerance which we all admit should form no part in American life. Bigotry is based on ignorance and tends to disappear with knowledge. Understanding and appreciating the role played by various peoples in the settling, the founding, and preserving our race will further this end. I bring this up with the hope that out of knowledge and understanding will come mutual respect and tolerance—in one word a step toward a better America.

The first knowledge of New Mexico came about in a strange and romantic way. In 1526 Panfilo de Narvaez was the Spanish Governor of Cuba, and having been authorized by the King of Spain to explore what is now the State of Florida, he outfitted an expedition which set sail in 1527. It reached Florida in 1528 and after numerous disasters the expedition was shipwrecked off the coast of Florida, and a mere handful reached the mainland. Six hundred men started out with that expedition and of these only four survived to tell the story.

The treasurer of the expedition was one of these. His name was Alvar Nuñez Cabeza de Vaca, a native of Alcala de Los Henares in Spain. Incidently, this little village was also the birthplace of Cervantes, the contemporary of Shakespeare, and the author of that monumental work of European letters Don Quixote. I might add here that 1947 marks the four-hundredth anniversary of the death of both Cervantes and Shakespeare.

The four survivors of the expedition were 6 years in reaching their fellowmen in Mexico during which time they had visited what is now Florida, Alabama, Mississippi, and after being shipwrecked through Texas, New Mexico, Arizona, and down to the Spanish colony of Culiacan on the western coast of Mexico. The survivors were Alvar Nuñez Cabeza de Vaca, Del Castillo, Dorantes, and a Barbary Negro named Estevan. Imagine the surprise of that Spanish colony in 1535 when these four strange men with long beards arrived with their fantastic tales of vast continents and strange peoples to the north.

Their stories spread like wildfire through Mexico, and it was largely due to this that lead to a series of expeditions into what is now the State of New Mexico.

Today it is no small feat to drive from Washington to Albuquerque or from Mexico City to Santa Fe. The distance is about 2,000 miles either way; but what would such a trip have meant if made 406 years ago, when Coronado came to New Mexico?

In 1940 we celebrated the fourth centennial of Coronado's entry into New Mexico. His men discovered the Grand Canyon of the Colorado, and he himself went as far as Kansas and Nebraska. These were real men—travelers possessing patience, energy, and courage unequaled in any era. How different from those of us today who become annoyed when an airplane is grounded for a few hours.

In New Mexico, near Gallup, some 150 miles west of Albuquerque, we have a famous national monument called El Morro. In English it is referred to as Inscription Rock. It is a huge flat-faced monolith rising some 200 feet above the surrounding plain. On its face is carved the following inscription: "Paso por aqui" and other words, which translated into English mean "Passed by here the Adelantado Don Juan de Oñate, from the

discovery of the Sea of the South, the 16th of April of 1605."

The history of New Mexico is inscribed on El Morro. Oñate's inscription, dated 1605, is the oldest on El Morro. General De Vargas, who reconquered New Mexico after the Pueblo uprising, left an inscription in 1692. Various Governors of New Mexico have left their names. In 1849 Lt. J. H. Simpson, of the United States Army, visited El Morro and left his name, as did Archbishop Lamy, whom Willa Cather immortalized in her novel, Death Comes to the Archbishop. Perhaps one day some of you will be planning a trip abroad. If you do so, give some thought to first seeing the wonders and beauties of our own country. I recommend that you see El Morro National Monument in New Mexico.

To return to the pioneers, New Mexico was settled in the latter part of the sixteenth century and was colonized by men and women from Spain who brought cattle, horses, sheep, poultry, swine, and seedlings of apples, figs, and olives, but along with that they brought their coats of mail and their swords and lances, for theirs was to be unrelenting warfare with the predatory Indians of the West. For 300 years, in fact, until the last of the Apache chiefs were subdued by the United States Army and the New Mexico volunteers in 1898, the settlers in New Mexico were constantly engaged in warfare and in defense of their homes and properties.

New Mexico remained under Spanish and Mexican rule until 1846, when pioneers of another race appeared on the scene.

Last year on October 16 the Post Office Department issued a special stamp commemorating the one-hundredth anniversary of the raising of the American flag over the Governor's Palace at Santa Fe. Gen. Philip Watts Kearny commanded the Army of the West, composed of Missouri troops, which had marched from Independence, Mo., the home of President Truman, overland to Santa Fe. From the balcony of the ancient Palace of Governors at Santa Fe Kearny read the proclamation by which New Mexico formally became a part of the United States.

Since 1846 New Mexico, with its varied population, ancient cultures, and amazing history, has been an integral part of this country.

Three peoples live there in peace and harmony. Each group is justly proud of its culture and lineage, but each is even more vehemently proud of the heritage they share in common as Americans. The Indians, the oldest of the three peoples and the original possessors of the land, are found there enjoying their lands and preserving their customs and language as their ancestors did hundreds of years ago, but with opportunities of learning all that American education can furnish today; the descendants of the Spanish living on lands inherited from their ancestors and speaking the same language as their forefathers did in a manner which philologist tells us is reminiscent of the sixteenth century; and the third group, the English-speaking Americans, who have come there since 1846.

Each group strives to live in harmony with the other and to respect American ideals and traditions. Each group accepts the duties and responsibilities of citizenship in times of peace and in times of war. The record of each group in volunteer enlistments during this past war is something that any similar group in other parts of the Nation could envy. They are Americans all.

Our problems in New Mexico are basically the same as those in Washington, D. C. We want you to understand and appreciate our situation and we share with you the firm conviction that the United States is the best place in the world to live, and we seek with you to make it an even better place.

Address by Edward Keating Before Colorado Mining Association

EXTENSION OF REMARKS

OF

HON. PAT McCARRAN

OF NEVADA

IN THE SENATE OF THE UNITED STATES

Wednesday, May 28 (legislative day of Monday, April 21), 1947

Mr. McCARRAN. Mr. President, some time ago in the city of Denver, Colo., there was delivered before the Colorado Mining Association a most interesting address entitled "Have We a Labor Problem?" The address was delivered by Edward Keating, editor of Labor. I deemed it proper to insert this address in the RECORD, because many who are interested in this great subject should have access to it. I therefore ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

HAVE WE A LABOR PROBLEM?

It is most unusual for a group of more or less militant employers to ask the editor of a more or less militant labor paper to address them on the highly controversial labor problem.

I think it is a good idea. Why not have more of it? Why shouldn't labor unions invite spokesmen for the employers to appear before their conventions, let down their back hair and state their grievances against the way the unions are conducted? Why shouldn't the unions return the compliment, and at the invitation of the leaders of industry, send their spokesmen to business men's conventions to frankly present their side of the story as emphatically as the occasion warrants?

The result would probably be some extremely explosive debates, but they might clear the atmosphere. At least the men who spoke for each side would understand the business at hand, and the situation would not be messed up by a lot of outsiders—politicians and experts—who frequently know precious little about the realities of the workaday world.

In discussing the theme assigned me, I hope I will exercise the fine tolerance you displayed when you invited me to talk to you.

I went to work on the Denver Republican in this city when I was 14 years old. I joined a union before I was old enough to vote. I have been a union man ever since, but, strangely enough, most of the time I have been on the employer's side of the table.

In this city, on the old Rocky Mountain News, I had a chance to see the labor problem from the employer's point of view. When I owned a daily paper, I had many an argument with union representatives.

As manager and editor of the railroad workers' national weekly in Washington, Labor—and, by the way, it has the largest paid circulation of any labor weekly fn this country, reaching into every city, town, and hamlet in the United States and Canada—I am constantly dealing with six or seven unions.

We don't always agree the moment we sit down. That isn't the way to conduct genuine collective bargaining. We have even found it necessary to submit certain points to arbitration. That's the logical thing to do when employer and employee can't reach an understanding. But we always get together and we have never had anything resembling a strike.

To me, there is nothing mysterious or sinister about the labor movement. It's the most natural thing in the world for workers in the same craft to organize unions for the purpose of dealing with their employers. In 99 percent of the cases, it is a good thing for the employer, as well as for the worker.

Farmers have their cooperatives; lawyers have their bar associations; businessmen have their trade associations; doctors have their medical societies. Why not labor unions for workers?

But, you say, bar associations, medical societies, trade associations, farm cooperatives, are quite different from labor unions. Not as much as some people may imagine.

The closed shop will supply an example of what I have in mind.

There are many States where, if a lawyer doesn't pay his dues to the State bar association, he can't practice law. (No labor union, so far as I have been able to ascertain, has ever asked a legislature to pass a law compelling members of a particular craft to pay their dues or cease practicing their skill.)

I am not criticizing this lawyers' union. I am just calling attention to it, so the next time you hear a lawyer talking about the restrictive practices of trade unions, you may ask him about what the lawyers call the integrated bar, which is being pushed right now before a number of legislatures and which has already been adopted and enforced in Michigan and many other States. It isn't so very long ago that 200 or 300 lawyers were disbarred in 1 day in Michigan for failure to pay their dues to the bar association.

It is true we have closed shops in the labor movement. Every newspaper in the city of Denver has had the closed shop in all branches of its mechanical department for the last 60 years. The arrangement means that in the mechanical departments of those newspaper offices only union men may be employed, but it doesn't mean that nonunion printers and stereotypers and pressmen cannot practice at their trade. All they have to do is to go and find a nonunion shop, and there are a good many of them, perhaps not in Denver, but throughout the country. So, you see, we haven't gone as far as the lawyers propose in their integrated bar.

All unions do not demand the closed shop. For example, the standard railroad labor organizations, with which I have the honor to be associated, have hundreds of contracts on the railroads in this country and Canada. Not one of those contracts provides for the closed shop, and yet at least 95 percent of the railroad workers of the United States and Canada are loyal members of these great unions.

On the other hand, the printing trades and the building trades operated on the closed-shop principle from the beginning. The coal miners and other unions have gone a step further. They not only ask the closed shop, but the employer, under the check-off system, collects the union dues.

The differences within the unions on this one issue of the closed shop reveal what a great many people overlook—that trade-unionism in this country has been an evolutionary movement. Practically every union has its own peculiar technique, involving practices and customs not found in other unions.

To discard these practices and to insist that every industry shall proceed according to some plan evolved by a politician in Washington or an expert somewhere else would create chaos. This is recognized even by some of the gentlemen who have been introducing antilabor bills in Congress. One of

these antilabor Senators said the other day that the adoption of his proposals would probably cause a certain amount of chaos, but that the experiment was worth the cost.

From the point of view of one who has had some experience in labor matters, this particular legislator has some quaint ideas. He is like a small boy playing with matches. He may set fire to the house. For example, he is constantly talking about jurisdictional disputes and their devastating effect on industry. However, the Labor Department comes along and points out that of the time lost because of strikes during the first year following VJ-day, only four-tenths of 1 percent was traceable to jurisdictional disputes.

At this moment, in the House and Senate of the Congress of the United States, jurisdictional disputes are causing all kinds of trouble. These jurisdictional disputes are not caused by labor unions. They are caused by clashes between various committees of the House and Senate. Just a few months ago Congress passed a reorganization bill, cut down the number of committees, and rearranged the duties of the committees that were retained. Now some of the eminent gentlemen who passed that legislation are battling each other in the fiercest fashion because they can't agree as to what the law means.

And just a short distance from Washington the authorities of the State of Maryland and of the State of Virginia are actually shooting at each other. The issue is a jurisdictional squabble over the oyster beds of Chesapeake Bay.

Now, if the Congress of the United States and the two great Commonwealths of Maryland and Virginia—Commonwealths which have produced some of our most eminent statesmen—can't avoid jurisdictional disputes, why in heaven's name should we be so disturbed when two labor unions get into an occasional squabble over who shall do this or that job?

No labor leader likes jurisdictional disputes. They are extremely vexatious, but you can't dispose of them by passing a law. More of these antilabor lawmakers are talking about abolishing industry-wide collective bargaining. A more absurd proposal was never advanced by sane men. If it goes through, and a serious attempt is made to enforce it, the resultant trouble will be incalculable.

Take your own case right here in Colorado. You wish to put new life into the mining industry. I think most of you will agree with me that one of the first steps in that direction should be the establishment of decent labor relations. If the leaders of the labor unions and the leaders of the mining industry are sensible, they will go into a room, lock the door, and sit down around a table to figure out how the problem of resuscitating mining may be solved. If possible, they will do it on an industry-wide basis—at least on a State-wide basis. If you don't do that you will have a squabble on every property because of varying wage schedules and working conditions. In transportation and other industries Nation-wide negotiations have proven most beneficial all around. Why wreck a good system just to experiment with something new?

I don't like labor wars. Frequently they are precipitated by stubborn men who magnify the importance of some trivial matter.

I have seen three State-wide, devastating strikes in this State. All were in the mining industry. The first was when I was just a boy. It centered at Cripple Creek, but spread to other camps. The mine owners had an army, privately paid and privately equipped. The miners were camped on Bull Hill. Gov. Davis H. Waite sent in the militia, with instructions to get in between the conflicting forces and head off any hostile clash.

What happened? The mine owners entered the Antlers Hotel in Colorado Springs, seized the adjutant general of the State, and subjected him to a coat of tar and feathers. What did they gain by that? Not a thing in the world. The controversy finally petered out and Cripple Creek became a roaring union camp.

Then came the great strikes of 1903 and 1904, during the administration of Governor Peabody. This time the militia went in on the side of the mine owners. The miners were loaded on boxcars, taken to the Kansas border, and literally driven into the wilderness. Nonunion men were brought in by the hundreds to take the miners' places, but I think I am safe in saying that Cripple Creek never recovered from that blow.

In 1913 and 1914, when I had the honor to represent this State in Congress, we had the bloodiest of all our strikes in the Rockefeller properties in southern Colorado. No man knows how many were killed on both sides during that conflict.

At my request, President Woodrow Wilson pleaded with the Rockefellers to meet with the representatives of their men. The proposal was turned down. Then followed what has come to be known as the Massacre of Ludlow. To head off civil war in this State, Federal troops were sent in. When the smoke of battle cleared away, practically every man in Rockefeller mines belonged to the union, although the Rockefellers didn't recognize the union. But they didn't antagonize the union because they didn't desire another strike.

The loss to Colorado, caused by these terrible conflicts, was very great and, of course, affected almost every citizen. With the greatest candor, I say to you that the issues involved in those three strikes could have been settled over a conference table within 48 hours. What were those issues? They were very simple. The right of men to join the union of their choice and an inconsequential increase in wages.

Please do not imagine that I am arguing that the labor union is always right and that the employers are always wrong. I wouldn't insult your intelligence by pressing such an argument.

There are 15,000,000 trade-unionists in the United States. With the members of their families and close relatives, they undoubtedly represent at least a fifth, and possibly a fourth, of our population. Of course, there are many short-sighted, selfish, even dishonest, men among them. If that were not true, then the labor movement of America would constitute the greatest miracle witnessed by human beings since our Lord left His sepulchre on the third day and gave His disciples concrete evidence of His divinity.

But, my friends, the last time I visited a Federal penitentiary, I found that some of the inmates were bankers. I have known realtors whose word was not always good, and at this moment, the paper I have the honor to edit is conducting a little crusade to head off the sale of worthless Canadian mining stock in this country. Furthermore, I know two distinguished newspaper publishers who were sent to prison for cheating Uncle Sam.

Because some go wrong, shall we condemn all bankers, all newspaper publishers, all realtors, all mining promoters? It all supports the contention of the poet that there is so much good in the worst of us and so much bad in the best of us that it ill becomes any of us to be throwing rocks at the rest of us.

This labor movement of ours is as American as the Washington Monument or the Lincoln Memorial. Of course, it is constantly fighting to improve the condition of its members, and it will continue to do so; but it is not led by thieves and grafters, but by honorable men, whose records in private and public life will bear comparison with the records of the leaders of any other group in American life.

For almost 25 years I have been associated with the standard railroad labor organizations. As I have said, they represent 1,500,000 men on the railroads of this country and Canada, and they represent almost 1,000,000 more outside the railroad industry.

During all those years, I have known the leaders of those unions so intimately that none of them could be even accused of a dishonest act without the accusation coming to my knowledge. In only one instance, were any of the leaders of any of these unions accused of wrongdoing. That had nothing to do with the labor movement. Two or three of them had become mixed up with businessmen and bankers and had become directors of a bank. The authorities proceeded against all the directors because of some irregularity. Everyone concerned was acquitted, so I take it for granted that all were innocent.

However, the fact remains that the only time any of our chiefs found themselves in serious trouble was when they got tangled up with bankers. Furthermore, these railroad unions have thousands of contracts. During the 25 years I have been associated with them, they have not broken a single one of those contracts. You can't beat that record.

But, someone says, the railroad boys are different. Well, I think they are pretty fine, but how about the other unions? If you go over the attacks on labor unions, you will find that only a handful of unions are charged directly with improper practice but, on the strength of their alleged misdeeds, an effort is made to smear all the others.

A distinguished Senator some time ago told me about his sweet, old grandmother who, in her youth, walked more than a thousand miles from the Missouri River to her husband's western claim. There wasn't sufficient room in the covered wagon for all their belongings, so some of the more precious were placed in a two-wheeled cart, and this gentle girl pushed the cart a third of the way across the continent, sustained by hope and love and faith in God. In the evening of life, when her children and her children's children gathered about her and related their triumphs and disasters, sometimes placing great emphasis on the disasters, the dear old lady would smilingly admonish: "Don't forget to count your blessings."

Today those of us who are fortunate enough to be Americans should count our blessings and ignore those who are telling us that our country is "going to hell in a hand basket."

I am a member of the National Press Club in Washington. Once a year the club arranges a dinner for the President of the United States. A few weeks ago the 1947 dinner was held. There was only one speech, and that was short and off the record. There was much entertainment. There was a scene from Duffy's Tavern. Perhaps some of you are familiar with that classic. The barkeeper had the floor, and he said at least one thing worth remembering. It ran something like this:

"They say that America is a melting pot. Perhaps it is. But there isn't another nation in all the world which wouldn't give everything it possesses to get just one leg of that pot."

In other words, this America of ours is the most fortunate country in all the world. It you don't believe that, try to persuade those who do not agree with the barkeeper in Duffy's Tavern to go to the country or countries they favor most.

We have just won the greatest war in the history of mankind. Our boys, on the land, on the sea, and in the air, did that job, but they had to have weapons, and ships and airplanes, and food and clothes and 10,000 other things. How were those supplies produced? By men and women on

the home front—farmers and industrial workers. Once in a while there was a strike, but the fact remains that, from the beginning to the end of the war, there was never a single occasion when our men on a battle front were deprived of something vital because of something the workers did on the home front. No one can challenge that statement. It is sustained by every official report.

Judge Charles M. Hay, who was chief counsel for the War Mobilization Board, once said at a congressional hearing, that time lost by strikes during the war was so inconsequential that it might be said not to exceed the time required by war workers to blow their noses an extra time each day.

No responsible labor leader condoned wartime strikes, however inconsequential they might be. However, the workers were not entirely to blame. You will perhaps recall that at the very beginning of the war big business refused to budge until tax laws were adjusted to its satisfaction and it was assured other valuable privileges.

I have no desire to resurrect the dead past, but when anyone endeavors to disparage the work of trade-unionists during the war, trade-unionists may reply with the greatest assurance: "We are quite willing to compare our record with that of any other group."

What about the industrial conflicts which developed after the shooting was over? There are at least two answers to that question. One is that you can't expect to wage a global war for years and then return to a peacetime status in a few days. Naturally, the workers were apprehensive. Hundreds of thousands were being separated from their jobs. Prices were soaring. Those who remained on the job were losing overtime pay. Tens of thousands were groping their way back to their old homes from shipyards and munitions plants.

Many observers believed we were drifting toward another world depression. Trade-union leaders said the only solution was to sustain buying power by raising "take-home" pay.

Naturally, some employers didn't like that. Negotiations dragged on for months, largely because Congress had so arranged the tax laws that many of the big employers could secure tax refunds to cover strike losses. Fortunately, that situation is behind us. It was never as bad as it was painted. At the peak of postwar labor troubles, we never had more than 4 out of 100 on strike, and then for only a brief period.

Today we have 57,000,000 men and women employed and the number out on strike is scarcely worth mentioning. So we are in comparatively placid waters and should be able to view the future without hysteria and above all we should refuse to listen to demagogs who urge us to rock the boat.

My friends, we have another blessing to count. Only in this country and in Canada can you find a labor movement which is not tainted by some "ism" which threatens the safety of the kind of democracy we have known. Ninety-nine percent of American trade-unionists are not Socialists or Communists or Fascists.

The Communists, in particular. have made desperate efforts to secure a foothold in the American labor movement. Up to date they have failed utterly. They have never succeeded in penetrating the standard railroad labor organizations. They have been practically eliminated from the American Federation of Labor. They are making their last stand in a few so-called independents and in some CIO unions, but the hand of American labor is against them and will continue to be against them.

Of course, that doesn't mean that American labor feels that every phase of our political and economic system is perfect. American labor is too intelligent for that. But American trade-unionism is not a revolutionary movement. I like to think of it as an evolutionary movement—constantly progressing and always holding the ground it has won.

I am not apprehensive concerning the future of the American labor movement. I do not believe the efforts now being made to cripple or destroy it will succeed. I feel that such efforts are unwise, but I am also convinced they will be futile.

All I am seeking to do today is to say to you, as employers of labor: "Extend the hand of fellowship to your workers. Recognize their right to organize unions which suit their needs. Don't be shocked when differences develop. Devise machinery to handle those differences, with a minimum of governmental or other outside interference."

If you do that in good faith, you will find that American trade-unionists will meet you at least half way. That's all you have a right to expect, and that is all the trade-union movement should concede.

I think there is a trinity in economics, as there is in religion. The trinity in economics is made up of agriculture, labor, business. They are so closely affiliated that if one is injured, the others are bound to suffer.

Impoverish the farmer, and the industrial worker will find himself without a job, and the businessman will look in vain for a market for his wares. Treat business unfairly, and labor and farmer will discover the door of opportunity is closing. Deny a just wage to the worker, and business and agriculture cannot escape the disastrous consequences.

So, my friends, we are all in the same boat. In heaven's name, let's develop sense enough to pull together.

Wool and Reciprocity

EXTENSION OF REMARKS
OF
HON. CARL A. HATCH
OF NEW MEXICO
IN THE SENATE OF THE UNITED STATES
Wednesday, May 28 (legislative day of Monday, April 21), 1947

Mr. HATCH. Mr. President, in yesterday's Washington Evening Star there appeared an excellent editorial entitled "Wool and Reciprocity." The editorial relates to some of the problems with which the wool growers are confronted. I ask unanimous consent that the editorial may be printed in the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

WOOL AND RECIPROCITY

If the Senate accepts the House version of the wool support bill, President Truman will have good reason to resort to a veto. As originally passed by the Senate, the measure—though designed to keep prices up—could be defended as an expedient to save the Nation's sheep raisers from serious losses. But the House has attached to it what amounts to a tariff-boosting amendment—an action that has stymied progress at the Geneva Trade Conference and cast grave doubt on the whole American-led effort to promote freer world commerce as one of the pillars of peace.

The situation has come to a head largely as a result of the huge stock pile of wool—a critical war material—built up in this country since 1943. It was built up through purchases by the Commodity Credit Corporation at about 42 cents a pound. If this were now unloaded on the market without measures protecting sheep raisers, the sheep raisers would suffer severely from a price nose dive. Accordingly, under the Senate bill, the Department of Agriculture would continue to support the 42-cent level for domestic wool, and the CCC would be authorized to sell the stock pile at a figure competitive with foreign-raised wool. Carrying the protection to an extreme, however, the House has added to this a provision that would have the effect of obliging the President to raise the tariff on the commodity.

Since our domestic production has never been enough to meet our needs, we have been importing foreign wool—particularly in recent years—in very large quantities. At present, although the tariff on it is 34 cents a pound, it sells in the United States at approximately 38 cents a pound. It represents 95 percent of Australia's dutiable exports to us, and it figures largely in our trade with New Zealand and South Africa as well. To place an even higher tariff on it now would be to strike a hard economic blow to these important members of the British Commonwealth at a time when the Commonwealth is in need of dollars to pay for imports from us. Moreover, according to the State Department, the House bill would run counter to our existing agreements with other countries, and reports from Geneva make clear that its approval could wreck current efforts to promote world peace by promoting reciprocal trade. Certainly, should the measure become effective, governments abroad would be justified in fearing it as the forerunner of similar measures to give high protection to numerous other American commodities. Against such fear, little progress could be expected toward a mutual lowering of tariff barriers in general.

The United States has taken the initiative in driving for a freer flow of international commerce to create economic conditions essential to sound peace. But now, as Under Secretary of State Clayton has warned, the House wool-support bill would raise new trade barriers making a mockery of our leadership in this respect. The Senate ought not to concur. If it does, a Presidential veto will be in order. We can hardly expect the rest of the world to pay serious attention to our reciprocity views if we violate them even as we preach them.

Small Business Needs Reconstruction Finance Corporation More Than Ever Before—RFC Doing Excellent Job for Small Business in Cooperation With Local Banks—Failure To Extend RFC or To Cripple Its Small Business Activities Would Be Devastating Blow to Our Private Enterprise System and a Boon to Monopoly

EXTENSION OF REMARKS
OF
HON. WRIGHT PATMAN
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 27, 1947

Mr. PATMAN. Mr. Speaker, the Reconstruction Finance Corporation has done a wonderful job for small business which has been very helpful to the entire national economy.

Since VJ-day the RFC has been engaged in liquidating its wartime activities and once more turning to normal

peacetime operations. During such a period of national reconversion, increased attention must be paid to the maintenance of a stable economy that provides maximum earning power for the maximum number of persons that can be gainfully occupied. With the public debt approximating $260,000,000,000, this phase of the peacetime objective assumes unprecedented importance since national income must be maintained at the highest possible level to provide an adequate tax base.

Impartial observers agree that the single most important element in a successful stable economy in the United States is a strong, healthy segment of small business. This is based on two fundamental measurable facts: First, small business enterprises number in excess of 3,000,000 scattered throughout the Nation; and second, they provide a source of income for roughly 60 percent of all persons gainfully occupied in the United States.

Small business must be accepted as an important stabilizing element in the national economy if for no other reasons than size, diversity of type, diversity of geographic location, and the readiness with which newcomers step in with their capital and their skills to fill the empty places that occur. The latter reason is by far the most important, viewed from the standpoint of national interest. Nothing should be permitted to stifle that typically American readiness to assume the risks of modern business enterprise.

Readily available credit, when needed and in the amounts needed, on reasonable terms and conditions is the inevitable required concomitant of a strong, healty small business segment in the national economy. The record clearly indicates that the RFC has not neglected the credit needs of small business. In 1946 the Corporation made 11,148 loans to small business which was 91 percent of the 12,247 loans made to business enterprises of all sizes in that year. From 1932 through April 30, 1947, 40,118 loans totaling $3,776,954,848 were made to business enterprises of which 36,174 involving $337,915,021 were for $100,000 or less—typical business loans. In other words, since its inception, 90.2 of all loans made by the Corporation to business enterprises were made to small businessmen.

The RFC cannot make loans of this nature unless the applicants can demonstrate that the credits sought were not available from private sources. It is therefore a relatively safe assumption that few, if any, of the above enumerated loans would have been made at all if the applicants had been forced to depend solely on private sources of credit. Later, some very significant figures will be presented showing what these loans meant in terms of gainful occupation of labor.

The record also shows that the small borrower is accorded liberal consideration by the RFC. Recently, the Corporation made a study of 1,039 representative borrowers to determine the relationship between assets owned by them and the loans made to them. The results are shown in the table below comparing for seven groups of borrowers the size of their assets with the average amount of loan obtained:

Size groups of assets	Number of borrowers	Average assets per borrower	Average size of loan	Dollars of loan per dollar of assets
$5,000 or less	21	$3,725	$4,421	$1.19
$5,001 to $10,000	55	7,764	11,601	1.40
$10,001 to $25,000	179	17,519	13,476	.77
$25,001 to $50,000	231	36,079	22,893	.63
$50,001 to $100,000	213	69,177	36,943	.53
$100,001 to $200,000	155	137,654	53,719	.39
Over $200,000	185	506,909	120,949	.24
All borrowers	1,039	136,502	45,238	.33

This does not mean that the smaller borrowers were granted loans in excess of the collateral values they had to offer. It does mean, however, that the Corporation recognized and used collateral values which the banks could not or would not recognize since in all instances they had the first opportunity to make these 1,039 loans. Again, these loans would not have been made at all if the borrowers had had to rely exclusively on the banks.

In another recent study of 1,156 representative loans to business enterprises, it was found that the number of dollars of loan required per man-year of employment thereby afforded did not vary unduly as between small business generally and large business. This is set forth in the following table which compares man-years of employment afforded with the total authorized amounts of the loans granted for seven size groups of loans, of which the first five comprise all loans up to $100,000, commonly regarded as small business loans:

Size groups of loans	Number studied	Man-years of employment	Amount of loans authorized	Dollars of loan per man-year
$5,000 or less	572	3,048	$1,459,675	$478.89
$5,001 to $10,000	184	2,442	1,383,089	566.38
$10,001 to $25,000	125	8,066	2,096,810	259.96
$25,001 to $50,000	70	7,713	2,734,147	354.53
$50,001 to $100,000	36	6,971	2,448,900	351.29
Average for small business loans	987	28,240	10,122,621	358.45
$100,001 to $1,000,000	72	159,045	19,336,704	121.58
Over $1,000,000	97	886,661	341,686,221	385.36
Average for large business loans	169	1,045,706	361,022,925	345.24
Average for all business loans	1,156	1,073,946	371,145,546	345.59

The RFC's operations through the years illustrate three fundamental facts in attempting to maintain a stable economy, namely: First, small business loans require less dollars per man-year of employment afforded than do other methods; second, the public eventually gets its money back without loss; and third, a more nearly proper ratio between small business and large business is maintained, which ameliorates the extreme centralization of population, productive facilities, and capital ownership that always accompany the growth of large business at the expense of small business, none of which running unchecked are good for the economic body as a whole.

In all of the foregoing the RFC stands revealed as a substantial source of credit for small business, both directly and in participation with banks. The blanket participation agreement with banks was an important factor in the greatly increased number of loans made to small business enterprises in 1946. Through December 31, 1946, the Corporation had entered into agreements with 5,216 banks, or 36 percent of all the banks in the United States. Of these 5,216, 49.5 percent were located in towns of less than 5,000 population, 76.7 percent were in towns of less than 25,000. In the future, this type of loan will be continued in effect in somewhat modified form designated as small-loan participations to accommodate fully and rapidly the greatly increased volume of applications for loans, including those from veterans.

This type of loan fills a long-felt need not heretofore satisfied by private credit sources.

The Panama Canal

EXTENSION OF REMARKS
OF

HON. DAVID M. POTTS

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 28, 1947

Mr. POTTS. Mr. Speaker, a great deal of public interest is manifesting itself in connection with the Panama Canal, which comes within the jurisdiction of the Subcommittee on the Panama Canal, of which I am chairman, of the Merchant Marine and Fisheries Committee of the House. I submit herewith for inclusion in the Appendix of the RECORD the following article which appeared in the Wall Street Journal under date of May 27, 1947, giving a good picture of the problems which the Congress will in the near future be called upon to deal with:

BIG DITCH DEBATE—NAVY FAVORS THIRD LOCK AT PANAMA; BUT ARMY WANTS SEA-LEVEL CANAL—LATTER PROJECT HELD DEFENSE AID; BUT $2,700,000,000 COST; ATOM THREAT MAY DEFEAT IT—SECOND CANAL IS SIDETRACKED

(By S. H. Scheibla)

WASHINGTON.—A multi-million-dollar ditch-digging program is being drawn up in secret parleys here.

Rival plans for expanding and improving the Panama Canal are under discussion in these sessions. Participants include Washington's top military, atomic, naval, and congressional authorities.

The Canal was taxed to the limit during the late war. Army-Navy officials are joining with private shipping interests in asking that the big ditch be modernized. Three

possibilities have been considered: (1) Building new locks; (2) dredging a sea-level canal without locks or dams; (3) digging an entirely new canal, perhaps in Nicaragua, Mexico or some other Central-American country.

The last of these possibilities has been discarded as being impractical at this time, though 20 possible routes were studied. The other 2 suggestions are being hotly debated.

The military governor of the Canal, Brig. Gen. J. C. Mehaffey, and a board of 6 consulting engineers are expected to ask Congress to approve a mammoth dredging project to make the Canal a sea-level channel. The cost is estimated at $2,700,000,000. Engineers say such an undertaking would require from 12 to 2 years. The Army favors this plan because a sea-level canal would be the easiest kind to defend; there would be no mechanical gadgets which could be put out of operation by a single bomb explosion.

A sea-level canal across the Isthmus is not a new idea. A company of private French nationals tackled such a project in 1879. About the same time, American interests started digging a lock canal in Nicaragua. Both efforts failed. Finally, the American Government in 1904 started a lock-type canal in Panama along the same route which the French had started. By 1913, the United States had 57,000 workers in the Canal Zone. After spending $506,000,000, the Government opened the Canal to the first steamer in 1914. Today 6,000 American and 18,000 natives of Panama work for the United States in the Canal Zone.

NAVY FAVORS THIRD SET OF LOCKS

Naval experts oppose a sea-level canal. They are more concerned with the canal's operational problems, and favor the building of a third set of locks to supplement the two sets now in existence.

The Navy plan also calls for a new terminal lake where ships could drop anchor while waiting for fogs to clear. The man-made lake would cost a mere $500,000,000, and the new locks, $554,000,000.

Congress took its first step toward dealing with the inadequacy of the Panama Canal back in 1939, when it authorized $277,000,000 for construction of a third set of locks. This project had to be abandoned in 1942 because of wartime shortages of labor and materials. Since the project got no further than excavation, it gave the United States nothing more that a $77,000,000 hole in the ground. Construction costs have doubled since 1939, and the experts figure the new locks would now cost $554,000,000

The matter bobbed up again in 1945. Legislators in the Seventy-ninth Congress, noting a record of 1,036 Canal accidents in the 20-year period that ended in July of 1942, passed Public Law No. 280. This measure authorized the Governor of the Canal "to make a comprehensive review * * * of the means for increasing the capacity and security of the Panama Canal to meet future needs of interoceanic commerce and national defense, including restudy of the construction of additional facilities for the Panama Canal authorized by the act approved August 11, 1939." The 1945 legislation also directed the Governor to look into the possibility of building an entirely new canal at another location.

General Mehaffey and his staff are now in Washington and have been holding confidential conferences with members of the Atomic Energy Commission, the Panama Canal Subcommittee of the House Merchant Marine Committee, and with Capt. Miles P. Duval, whom the Navy Department has appointed to assemble its ideas on canal improvements.

The Navy is running special tests of a sea-level canal at the Taylor Model Testing Basin at Carderock, Md., just outside the Capital. Congressional subcommittee members recently came back from a trip to the Canal Zone where they got a first-hand view of the problems involved.

DISAGREES ON DEFENSE FACTOR

Army and Navy authorities are at odds over how to tackle the Canal's modernization because they see the problem from opposing points of view. The Navy is interested chiefly in the technical difficulties of getting ships across the Isthmus of Panama. It brushes aside questions of protection and defense with the pessimistic argument that no kind of canal, whether with locks or a sea-level channel, could be adequately defended in atomic warfare.

The Army contends, however, that it must at least make an attempt to defend the waterway, and that a sea-level canal would make the job easier.

General Mehaffey and his consultants have now decided to go to the Joint Chiefs of Staff for an opinion on the relative vulnerability of the sea-level and lock types of canal. The ultimate decision will be up to Congress.

Congressmen say they can't make up their minds until they see the general's completed study. One influential legislator comments, however, "It's going to take an awful lot of facts to justify a $2,700,000,000 expenditure." He's concerned that an atomic-bomb attack would make the Canal waters so radio-active that they'd no longer be navigable. Unless General Mehaffey can prove otherwise, this Congressman and several of his fellow legislators favor the Navy plan.

When the Mehaffey study is completed, the congressional subcommittee plans another trip to the Canal Zone. Members will start hearings on the report as soon as they return. Though the Congressmen say they expect to get the report by November 1, General Mehaffey says it will not be ready until the end of December. The law requires its completion by that date.

Regardless of what the Mehaffey board recommends, Captain Duval and other Navy Department spokesmen are prepared to fight for their third set of locks and a terminal lake. If we can win their battle for the locks, the board probably will go along with the terminal-lake proposal. Rear Adm. John J. Manning, a member of the Mehaffey board, who is said to favor the Army plan, told a Navy Department meeting, "Should the study of the board indicate a lock canal best satisfied the requirements, * * * any development of a new canal or alterations of the existing lock canal would incorporate terminal lakes at both Atlantic and Pacific sides of the canal."

No man-made terminal lake would be needed on the Atlantic side, since Gatun Lake already exists there. Creation of a sea-level canal would call for draining Gatun Lake, however.

BONANZA FOR DREDGING COMPANIES

Adoption of the sea-level plan would be good news for United States dredging companies. Experts say they would advocate a combine of about 25 companies to handle the job. According to Admiral Manning, "there would have to be special equipment developed for the deep dredging * * * we are planning on 30-cubic-yard dippers on these shovels—electric-driven shovels."

Tides would be one of the big problems in making a sea-level canal. There is a tidal range of 20 feet on the Pacific side and 2 feet on the Atlantic side. This would cause alternating current running as high as 4.5 knots (5 miles per hour).

According to Captain Duval, "the tidal current makes it necessary to consider the sea-level canal problem under two headings—one is an open strait or lockless canal in which you would get heavy currents and the other is a canal with tidal locks in which there would be controlled currents. In the canal without tidal locks * * * there would still be accidents and vessels would have to anchor in emergencies. * * * When vessels anchor in a current, they have to swing, and they have to swing clear of the banks. Stern anchors, in the opinion of the Chief of Naval Operations, would not be satisfactory." Captain Duval estimated that there must be a width of 1,200 to 1,500 feet for unrestricted two-way traffic, but he added that "the definitive answer will depend upon the results of the marine experience, accident records, and the Carderock tests."

The third-locks and terminal-lakes plan would make use of the excavation at the Canal which was stopped in 1942. These proposed new locks would be large enough to accommodate the United States aircraft carriers—the *Midway, Coral Sea,* and the *Franklin D. Roosevelt*—which now are too large to go through the Canal. New locks also would mean that the Canal could handle more ships in a given time.

Marshal Tito May Be Preparing To Penetrate Italy After Treaty

EXTENSION OF REMARKS
OF
HON. JOHN DAVIS LODGE
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 28, 1947

Mr. LODGE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Constantine Brown from the Washington Evening Star of May 26, 1947:

MARSHAL TITO MAY BE PREPARING TO PENETRATE ITALY AFTER TREATY

(By Constantine Brown)

Suspicions of some American observers that Marshal Tito, of Yugoslavia, may decide to penetrate into Italy under some pretext, when and if the Italian Peace Treaty is ratified by the Senate and American troops withdrawn, were increased last week.

On May 20 the Italian press received a strongly worded statement issued by a Yugoslav diplomat attacking the United States and Great Britain for their failure to surrender to Marshal Tito "Yugoslav traitors and war criminals whose escape has been facilitated by the authorities and who are now living undisturbed in various places in Italy."

The statement, which caused considerable anxiety in Italian political quarters and is said to have contributed to the difficulties of forming a new Italian Government ends with this ominous sentence: "It is clear that this situation is in contradition with the fundamental principles of justice and humanity and in contradiction with the decisions of the United Nations."

THIRTY THOUSAND YUGOSLAVS INVOLVED

The leaders of Italian political parties—except for the Communists—fear that soon after ratification of the peace treaty Marshal Tito will demand officially that some 30,000 Yugoslavs, who escaped into Italy after the collapse of Gen. Draja Mihailovich's resistance to Tito, be handed over to the Yugoslav Government.

For the present Marshal Tito has no right to ask the Italian Government for the surrender of these victims. He has asked the American and British representatives who are sifting the evidence against alleged war criminals in Italy to turn over to Yugoslavia those named in a list prepared by his government. However, only 50 persons who actually cooperated with the Germans have been extradited in the last 4 months.

The attitude adopted by Washington and London is that those who opposed Tito and escaped from Yugoslavia cannot be described as war criminals, in accordance with the rules laid down in London which guided the trial at Nuremberg and elsewhere.

Article 44 of the peace treaty provides, however, that the signatories are entitled to

demand from Italy all persons directly accused by any of the victorious governments as war criminals, as well as the material witnesses involved. Some 30,000 Yugoslav refugees fall into this category.

MANY REFUGEES ARE HIDING

There is little reason to believe that the Italian Government would hesitate to comply with Marshal Tito's demands after the peace treaty has been signed. But there are many refugees in Italy who entered without papers and are hiding throughout the country. There are no records on these aliens and it is unlikely that the Italian police could comply in full with Yugoslav demands made directly to the Italian Government.

Those who have followed this situation fear that as soon as Italy is bound by the peace treaty the Belgrade government will demand the immediate surrender of every Yugoslav who is wanted by the OZNA, the Yugoslav secret police, and any delay in complying with this request will impel the Yugoslav Government to send a police force to enforce its demands.

This may be the signal for Palmiro Togliatti, chief of the Italian Communist Party and Marshal Tito's former colleague in the Comintern, to make himself head of the Italian Government, thus establishing a physical link between Moscow and Paris by way of northern Italy.

Been to Heaven Lately?

EXTENSION OF REMARKS

OF

HON. WALTER H. JUDD

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 28, 1947

Mr. JUDD. Mr. Speaker, under leave to extend my remarks, I include an advertisement being run in a national magazine by the Minneapolis Star-Journal and Tribune on the merits and delights of living in Minnesota:

BEEN TO HEAVEN LATELY?

It's just down the road and over the hill from home. There's a pine-fringed stream where you tread carefully over mossy rocks while the fast, cold water lashes around your ankles. Under that rock is a trout who hates you—and he'll fight you every inch of the way, from the first lunge at the fly to the last flop in the creel.

At least a million Minnesotans are dreaming about that trout and his big brothers. These lucky people are now heading for their own fisherman's heaven which may be as close as next door, or as far as you'd drive for a Sunday picnic. That's what makes this Minnesota way of life so appealing. You live in a fine city or a lovely small town with every convenience and cultural advantage you'd want. And yet, only minutes away from home and work you find the unspoiled wilderness your greatgrandfathers knew.

What does all this mean to you, in terms of your life and your interests? Our Minnesota way of life has attracted and held an unusual race of people, high in intelligence and literacy, in skill and stability. Perhaps Minnesota is where you belong, too.

Especially if you are a manufacturer. Because Minnesota breeds a race of workers who are smart and able and industrious. They know how to make everything from massive locomotive cranes, like those manufactured by the American Hoist and Derrick Co. of St. Paul, to famous household products like Soilax, Lan-O-Sheen and Mrs. Stewart's Bluing. One well-known engineering firm says, "The great asset of Minnesota is the unique skill and intelligence of its people."

More than a million of these surprising Minnesotans live in the Twin Cities and Duluth. New industries thrive in towns and villages all over the State, because people like to work where they like to live.

Want to know more about Minnesota? Then drop a line to that trout. * * * He's waiting, and he's fighting mad.

Labor Legislation

EXTENSION OF REMARKS

OF

HON. JOSEPH P. O'HARA

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 28, 1947

Mr. O'HARA. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following opening remarks of Ivan Bowen, Minneapolis, Minn., chairman of the labor relations committee, given at the labor relations session of the annual meeting of the National Association of Motor Bus Operators in Chicago on Wednesday, May 21, 1947:

The present widespread demand for reform in labor laws of this country, which is evidenced by the activities of Congress and State legislatures, comes as no surprise to those who have witnessed the administration of the National Labor Relations Act, commonly called the Wagner Act, since its enactment July 5, 1935.

It was class legislation, whose purpose was to force workers of the United States into national and international unions and destroy the independence of employees. Any student of civics could have foreseen that such a program, backed by administrative power, was bound to create a political dictatorship which ultimately would be in a position to defy governmental authority. When any single group in a republic obtains commanding power, Government is so weakened, it loses its authority and its administrators become puppets.

It took a decade for the Wagner Act to demonstrate its possibilities of destruction of our form of government and to permit development of labor organizations and rise of leaders to positions where they felt politically safe in defying constituted authority.

However, one thing that the American citizen has repeatedly demonstrated is that he wants no political boss or dictator. He has been taught that he is boss—at least at election time. Let anyone try to demonstrate otherwise, and he comes out of his corner swinging. Witness the recent activities in Washington and the State capitols in connection with labor legislation.

Permit me shortly to trace the trend of developments under the Wagner Act from the annual reports of our own association. The first reference to repercussions of the Wagner Act was in our 1937 legislative report. It was there said:

"There has been widespread demand in industry for extensive amendments to the so-called Wagner law. It is contended that the law is 'lopsided' and that there is no protection to the employee or employer against unfair labor practices by labor organizations. * * * However, if amendment of the act should come it will be because of the failure of the law to protect the rights of the individual worker given in section 7, and because of the demand of the public generally to be relieved from the burdens of labor strife which have grown in violence and economic distress during the period the law has been in operation."

In the 1939 report it was stated:

"A special House committee was authorized for the purpose of investigating the National Labor Relations Board. This investigation promises to be thorough and with a view to not only correcting inequities in the act but also the unfair and partisan policy of its administration. * * * There is well-grounded sentiment in this country that the act should be amended and the administrative policy changed, especially the latter. If the act is to accomplish its purpose, the fairness of its administration will have to be established by public confidence."

In 1943, we said:

"The enactment of the War Labor Disputes Act over the President's veto marked the first success of legislative attempts to regulate organized labor by the Federal Government. That there has been a growing resentment on the part of the public, including rank and file of organized labor, against the misuse of their power by labor officials, is indicated by increase in the number of States which have set up administrative machinery to deal with strikes and labor disputes. It, however, required the grim reality of war to arouse Congress sufficiently to overcome the reluctance of the administration to deal with a situation which threatened the very life of industry, and the Nation. * * * While the provisions of the War Labor Disputes Act are operative for the term of the war emergency only, it is the initial legislative recognition of the necessity for governmental regulation of uncontrolled use of the power of organized labor officials to deprive workers and management of constitutional protection of their rights in industry that is significant. That the provisions of the law afford but slight protection to such rights does not argue against the temper of the public sentiment which forced its enactment."

In 1946 the following observation was made:

"It would be superfluous for me to orate on the break-down in industry which has progressively become worse during the past year. It is apparent to anyone who listens or reads that a revolution is going on in our industrial economy. * * * Prior to the passage of the Wagner Act, I know of no organized strikes interfering with the service to the public of an intercity bus company. The object of that law as stated in its preamble was 'to eliminate the causes of substantial obstruction to the free flow of commerce * * * by encouraging the practice and procedure of collective bargaining and by protecting the exercise by workers of full freedom of association.' I need not quote the statistics of the Department of Labor to prove that the objective has been and is a failure. The reading of any daily newspaper or the news broadcast of radio demonstrates the fact. * * *

"Modern industry and society is so organized and developed today that upon the throwing of a switch, the turning of a petcock or the setting of an air-brake, thousands—yes millions—of citizens can be frozen, starved, and marooned without the means wherewith to sustain life and health. That is no idle figure of speech. Such action has been initiated in the past year and it lay within the discretion of a single or several labor leaders to squeeze tighter on the blood stream of the people and make them bow to the dictatorial will.

"It is not only the employer and the citizen at large who is the victim of organized strikes in public utilities. The millions of unorganized and organized workers, having no interest in the particular labor dispute, have their livelihood shut off without a voice in the issues when a union calls a strike in the public utility service."

Finally, the American voter said in unmistakable terms: "This thing has gone far enough."

Then, the administration and the courts came to life and it was declared by the highest judicial tribunal in the land that "the course taken by the union carried with it such a serious threat to orderly constitutional government, and to the economic and social welfare of the Nation, that a fine of substantial size is required in order to emphasize the gravity of the offense of which the union was found guilty. * * * Loyalty in responding to the orders of their leader may, in some minds, minimize the gravity of the miners' conduct; but we cannot ignore the effect of their action upon the rights of other citizens, or the effect of their action upon our system of government. The gains, social and economic, which the miners and other citizens have realized in the past, are ultimately due to the fact that they enjoy the rights of freemen under our system of government. Upon the maintenance of that system depends all future progress to which they may justly aspire. In our complex society, there is a great variety of limited loyalties, but the overriding loyalty of all is to our country and to the institutions under which a particular interest may be pursued." *U. S. v. United Mine Workers of America*, Supreme Court, March 6, 1947.

Only recognition of an aroused public opinion registered at the polls in the last election could have nurtured a congressional report such as accompanied the labor-management bill of 1947 from the House committee. It recited:

"During the 6 years preceding the enactment of the National Industrial Recovery Act of 1933, the United States had an average of 753 strikes a year, involving an average of 297,000 workers; during the next 6 years, 2,541 strikes per year involving an average of 1,181,000 workers; and during the next 5 years—that is, through 1944—3,514 strikes a year involving an average of 1,508,000 workers.

"In 1945 approximately 38,000,000 man-days of labor were lost as a result of strikes. And that total was trebled in 1946, when there were 116,000,000 man-days lost and the number of strikes hit a new high of 4,985. The resulting loss in national wealth is staggering.

"The above figures do not take into account the man-days lost as a result of the indirect effects of these strikes."

The committee report pointed its accusing finger at the Wagner Act and the National Labor Relations Board in the following shameful recital:

"For the last 14 years, as a result of labor laws, ill-conceived and disastrously executed, the American workingman has been deprived of his dignity as an individual. He has been cajoled, coerced, intimidated, and on many occasions beaten up, in the name of the splendid aims set forth in section 1 of the National Labor Relations Act. His whole economic life has been subject to the complete domination and control of unregulated monopolists. He has on many occasions had to pay them tribute to get a job. He has been forced into labor organizations against his will. At other times when he has desired to join a particular labor organization he has been prevented from doing so and forced to join another one. He has been compelled to contribute to causes and candidates for public office to which he was opposed. He has been prohibited from expressing his own mind on public issues. He has been denied any voice in arranging the terms of his own employment. He has frequently, against his will, been called out on strikes which have resulted in wage losses representing years of his savings. In many cases his economic life has been ruled by Communists and other subversive influences. In short, his mind, his soul, and his very life have been subject to a tyranny more despotic than one could think possible in a free country.

"The employer's plight has likewise not been happy. He has witnessed the productive efficiency in his plants sink to alarmingly low levels. He has been required to employ or reinstate individuals who have destroyed his property and assaulted other employees. When he has tried to discharge Communists he has been prevented from doing so by a board which called this valid reason for the discharge a mere pretext. He has seen the loyalty of his supervisors undermined by the compulsory unionism imposed upon them by the National Labor Relations Board. He has been required by law to bargain over matters to which it was economically impossible for him to accede, and when he refused to accede, has been accused of failing to bargain in good faith. He has been compelled to bargain with the same union that bargains with his competitors and thus to reveal to his competitors the secrets of his business. He has had to stand helplessly by while employees desiring to enter his plant to work have been obstructed by violence, mass picketing, and general rowdyism. He has had to stand mute while irresponsible detractors slandered, abused, and vilified him.

"His business on occasions has been virtually brought to a standstill by disputes to which he himself was not a party and in which he himself had no interest. And finally, he has been compelled by the laws of the greatest democratic country in the world—or at least by their administrators—to treat his employees as if they belonged to a different class or caste of society.

"This sordid story was unfolded before the committee in its hearings."

I shall not attempt to analyze the bill reported and passed, as it is covered in the legislative report to this convention; but I do wish to point out that the National Labor Relations Board was the first object of the congressional committee's righteous indignation, when it indicated:

"It (the bill) abolishes the existing discredited National Labor Relations Board and creates in lieu thereof a new board of fair-minded members to exercise quasi-judicial functions only."

Those of us who have been treated by the Board under its autocratic power as deprived of constitutional rights, alike the depressed minorities in Europe by their late unlamented rulers, can be excused from observing—

"Though the mills of God grind slowly, yet they grind exceeding small."

One other reference to labor legislation by Congress: In our 1942 and subsequent reports attention was called to the partisanship of the United States Conciliation Service under the law creating the Department of Labor, which provides:

"The purpose of the Department of Labor shall be to foster, promote, and develop the welfare of the wage earners of the United States * * *."

Both the Senate and the House were in accord in correcting the inequitable situation which prevailed through having the United States Conciliation Service within the Department of Labor. Both recommended that the Conciliation Service be set up independently of the Department.

The new congressional labor enactments do not correct all of the evils created by the Wagner Act, but they go a long way toward removing some of the legal obstacles to sound collective bargaining. However, so long as Federal laws restrict the police powers of the States in a field primarily of a local nature, such as labor disputes, without affording governmental protection to property and the unmolested pursuit of industry by both labor and management, we will still have organized interference with the lawful right to work and carry on private business. There is no more reason why a citizen should not have entry to the courts to enjoin violation of law in a labor dispute than he should be deprived of that protection in his domestic relations.

Consolidation of United States International Air Transport Operations

EXTENSION OF REMARKS

OF

HON. JOSEPH P. O'HARA

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 28, 1947

Mr. O'HARA. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorials from the following newspapers on the subject of consolidating the United States International Air Transport Operations: Wenatchee (Wash.) World of May 7, 1947; The Spokesman-Review, Spokane, Wash., of May 8, 1947; Chicago Daily Tribune of May 13, 1947; St. Paul Pioneer Press of May 17, 1947; Chicago Daily News of May 19, 1947:

[From the Wenatchee (Wash.) World of May 7, 1947]

THE NEW MONOPOLY AVIATION BILL

A new monopoly aviation bill was introduced recently in Washington which, if passed, would jeopardize development of new international routes by domestic air carriers, such as Northwest Airlines, which have been granted certificates to operate in the foreign field.

The so-called flag-line bill—also referred to as the Pan-American bill or chosen-instrument bill—was introduced in the House by Representative CHARLES A. WOLVERTON, Republican, of New Jersey, and in the Senate by Senator OWEN BREWSTER, Republican, of Maine. Hearings have just been started in Washington, D. C., by the House Committee on Interstate and Foreign Commerce.

Sponsors of the measure make their proposal on the grounds that it is necessary to avoid destructive rivalries between American companies abroad and to present a united American front against the competition of foreign air monopoly.

On the other hand, opponents of the bill, the domestic air lines with international certificates, such as Northwest Airlines holds, are pointing out, in leading their opposition, that the bill would mean a death blow to the plans for the future which mean so much to cities and areas such as Seattle, Tacoma, Portland, Spokane, Wenatchee, and the entire Pacific Northwest.

The President's air-coordinating committee, composed of officials of the Departments of State, War, Navy, Commerce, and the Post Office and the Civil Aeronautics Board, has recommended against the bill.

They contend that the present system of multiline competition in international air transportation should be continued.

Croll Hunter, president and general manager of Northwest Airlines and one of the leaders of the committee representing 17 air lines which led the fight 2 or 3 years ago against the so-called chosen-instrument aviation program, will appear as a witness before the committee in Washington and will oppose the measure.

Wenatchee has an important stake in this fight. The bill's passage, according to Northwest Airlines officials, would rob the community of the new international service proposed by Northwest Airlines.

[From the Spokesman-Review (Spokane, Wash.) of May 8, 1947]

AIR LINE MONOPOLY IS NO SOLUTION

To consolidate all United States international air transport operations by law into a

single "chosen instrument" of the Government, as is now proposed in a bill before Congress, we believe is highly undesirable.

The bill provides for the creation of a single corporation to carry on all of our international air commerce. It provides for four major subsidies to be paid out of the Federal Treasury to maintain that single air line in its global operations. It requires the withdrawal of present lines from international routes.

We cannot see that our private operators have not rendered excellent service in the international field. We cannot see why the stimulus of competition should not continue to be a spur to progress in pioneering new routes, furnishing better service, and developing modern equipment. We cannot, therefore, see that the enforced surrender of independently developed routes and services to a single, monopolistic creation of the Federal Government, conceived on the basis of its being a continuing charge against public funds, is in the national interest.

Many foreign countries subsidize their air lines in order that they may compete with the service rendered by private American operators in international air commerce. To the extent that we are familiar with those operations, they are far from satisfactory to the nations that maintain them. They are expensive luxuries, supported for prestige purposes. We seem to be inviting ourselves into a subsidy race with foreign countries when we have many well-equipped air lines willing and eager to take part in international air trade at their own hazard.

[From the Chicago Daily Tribune of May 13, 1947]

GLOBAL AIR LINE

The Socialist Government of Britain confessed its inability to operate any nationalized service at a profit when it proposed to the International Civil Aviation Organization at Montreal that all of the nations agree to joint ownership of main line air routes throughout the world. British overseas aviation is in the hands of the Government. It is getting competition from American overseas carriers, and will get a great deal more of it. It has no stomach for competition with our privately-owned lines.

The British propose, therefore, that competition be abandoned. This amounts to a proposal, first, that American carriers supply the managerial and technical brains for world aviation while Britain dips in for a generous share of the profits; and, second, that the United States take the first step in abandoning the free enterprise system in order to conform to the sterile pattern of collectivism which the Socialist politicians presently ascendant in Britain have saddled upon that country. They can't climb up to our level of economic well-being, but, if we can be induced to adopt their dead-end methods, we can easily lower ourselves into their company.

Britain has never been deterred from advancing any self-serving proposal with a straight face and unabashed composure. There is always the chance, considering the preponderance of mental flyweights in official position among us, that a fast one can be slipped over. This time, however, the British have exceeded themselves. The answer is "No, thanks."

[From the St. Paul Pioneer Press of May 17, 1947]

CROIL HUNTER'S QUESTION

The House Committee on Foreign Commerce is being told that the United States must imitate foreign governments as a means of meeting their competition in civil aviation. The proposition is to create a monopolistic "chosen instrument," supported by a variety of heavy government subsidies, to carry the American flag on the international air routes.

Croil Hunter, president of Northwest Airlines, testified this week against the proposal. There are a number of objections. But one seems fundamental. It should go without saying that America ought to proceed on the usual basis of private competition unless there is overwhelming proof that this principle is a practical failure for international air commerce. Mr. Hunter asked, "Where in the entire world—in any phase of air transportation—is a United States flag carrier not putting up effective competition against all foreign carriers?"

Unless the answer to that question is unfavorable to the American lines, the answer to this proposal for a Government-subsidized monopoly must be unfavorable to it.

Mr. Hunter's answer is, "There is not one route, one schedule, one type of equipment, one operating procedure, one safety record, one comfort or service in the whole world where the United States carrier today isn't superior to its foreign competitor."

That would seem conclusive.

[From the Chicago Daily News of May 19, 1947]

NO AIR MONOPOLY

Congress is considering legislation to combine international air carriers into a single company. This is a revival of the earlier "chosen instrument" monopoly advanced by Pan American Airways. It should be defeated.

The case made by sponsors of the bills is that foreign carriers, aided by subsidies from their governments, are building strong international lines against which independent United States carriers cannot compete successfully.

The supreme importance of having efficient United States air routes to every part of the world is too obvious to need argument. We require them as an instrument to bolster our trade; to stimulate aircraft development; as an aid to our diplomacy and our prestige; to add to our backlog of ships available in war, should the need come; to insure that our pilots are familiar with world flying conditions.

The only question, therefore, is whether the United States air lines can prosper without the subsidies envisioned in the monopoly legislation and meet the competition of each other and foreign lines.

The air lines in the field, with the notable exception of Pan American, believe they can. It is their money that they want to risk, and we believe they should be encouraged to do so.

Every interested agency of the Government has expressed opposition to the "chosen instrument" policy. In prewar days this policy prevailed with respect to South American routes, and many dissatisfactions developed.

It does appear that foreign carriers made appreciable inroads into the supremacy which United States lines have enjoyed in trans-Atlantic travel. CAA figures indicate that in the last 6 months of 1946 foreign lines carried 22 percent of the passengers as against 5 percent in the first 6 months.

But the air-line executives should be the best judges of their ability to stem this trend. Neither TWA, Chicago & Southern, nor American Overseas Airlines has expressed discouragement over the initial losses sustained in their international operations. The fact remains that of the 44 Atlantic flights a week, 33 are operated by three American lines, 11 by the 5 foreign lines.

Historically, we have found that competition spurs technical development and exerts constant pressure for lower costs and better service. There is no reason at this stage to believe that experience would be otherwise in international aviation. If competition should fail, we can turn to Government-sponsored monopoly. If the monopoly were voted now and failed, it would be considerably more difficult to reinstate a competitive system.

The complaint that low wages and cheaper foreign aircraft will place American lines at a disadvantage is not convincing. American planes are still standard on foreign lines, and lower costs achieved at the price of lower safety standards will send more travelers to American lines than they will drive away.

In advocating free competition, we extend this principle to the steamship companies, which have long been fighting for the right to operate scheduled air service in connection with their ship lines. They have the organization, the know-how, and the resources to add greatly to American air service, and they should not be denied the opportunity.

The incentive of competition has worked well in the development of domestic airways system. It has given us preeminence in international routes. There is no reason to change.

Irving H. Saypol

EXTENSION OF REMARKS

OF

HON. EUGENE J. KEOGH

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 28, 1947

Mr. KEOGH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following citation for certificate of commendation to Irving H. Saypol, chief assistant to the United States attorney for the southern district of New York received from the New York City director of the Selective Service System. Mr. Saypol is a distinguished member of the New York bar and has been serving most creditably in his present capacity in the United States attorney's office under John F. X. McGohey of the southern district of New York.

SELECTIVE SERVICE,
NEW YORK CITY HEADQUARTERS,
New York City, May 7, 1947.

CITATION FOR CERTIFICATE OF COMMENDATION TO IRVING H. SAYPOL

Irving H. Saypol, chief assistant to the United States attorney for the southern district of New York, supervised and conducted investigation on matters concerning reemployment rights as well as delinquency of registrants under the jurisdiction of this headquarters. Whenever these cases warranted such step, he presented them to the courts. In the handling of these matters he at all times demonstrated a remarkable ability to interpret and apply the provisions of the Selective Training and Service Act. His ability and understanding of the problems together with his energetic and enthusiastic giving of advice to the New York City headquarters have, to a large extent, contributed to the successful operation and the prestige of the selective service system in no wise limited to this community.

NEW YORK CITY DIRECTOR.

Arfa Girls Chorus of Passaic, N. J.

EXTENSION OF REMARKS
OF
HON. GORDON CANFIELD
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 28, 1947

Mr. CANFIELD. Mr. Speaker, the Arfa Girls Chorus, of Passaic, N. J., a group of Polish descent, who came to Washington on May 3, Polish Constitution Day, to sing the songs of America and Poland, will long be remembered on Capitol Hill.

Led by their director, Mr. Edmund Sennert, the chorus, accompanied by a number of members of the Polish American Congress, were my guests in the Speaker's dining room in the House wing of the Capitol. In the presence of Speaker MARTIN, Representatives SADLAK, GORSKI, and OWENS, and Mr. Andrews, Clerk of the House, and others, the girls' harmony was piped through the corridors of the Capitol, and attracted the attention of scores of Members, clerks, and attachés. Today, 3 weeks later, the presentation is still a subject of conversation.

After a visit to the White House, following the breakfast, the chorus visited the General Pulaski shrine at Thirteenth and E Streets NW., and sang before a throng composed of Government workers, sightseeing visitors, and members of the Washington Polish Club. A national parks guard commented on the neat and attractive appearance of the group and added, "I have never heard a finer program."

Representative GORDON, of Illinois, who had to miss the event, said he had read an account of the day's program of the chorus in Chicago papers. The girls, he said, "had won national renown." Their record over a period of years, topped by this year's May 3 celebration, bear out this statement.

Passaic and sister communities have cause to be proud of the Arfa girls.

Members of the chorus are as follows: Sophie Wacyra, president, 115 Tenth street, Passaic; Julia Wojcik, vice president, 25 Louise Street, Garfield; Blanche Szewczyk, secretary, 49 Fifth Street, Passaic; Helena Sudol, corresponding secretary, 136 Maple Street, Wallington; Bertha Kobylarz, 280 Carlton Avenue, East Rutherford; Regina Jacukiewicz, 240 Van Houten Avenue, Passaic; Veronica Kobylarz, 280 Carlton Avenue, East Rutherford; Josephine Malecki, 1087 East Twenty-fourth Street, Paterson; Henrietta Jacukiewicz, 240 Van Houten Avenue, Passaic; Bernice Taras, 56 Jackson Street, Passaic; Clementine Pokrywka, 62 Passaic Street, Passaic; Helen Pojanowski, 370 Howe Avenue, Passaic; Anne Potoczak, 78 Pacific Avenue, Garfield; Claire Wiatrak, 96 Wood Street, Garfield; Irene Wojcik, 25 Louise Street, Garfield; Janet Sadowski, 914 York Street, East Rutherford; Proxeda Kwasniewska, 194 Ninth Street, Passaic; Sophie Tecza, 189 Ninth Street, Passaic; Jean Ziemska, 184 Harrison Street, Passaic; Stasia Waksmundzki, 226 Fourth Street, Passaic; Stella Kaczmarski, 134 Fifth Avenue, Paterson; Casimira Olender, 42 Reservoir Avenue, Wallington; Lottie Olender, 42 Reservoir Avenue, Wallington; Anne Wolak, 106 Trimble Avenue, Clifton; Ruth Ankiewicz, 21 Market Street, Passaic; and Natalie Rycharski, 426 Graham Avenue, Paterson.

Understanding Russia

EXTENSION OF REMARKS
OF
HON. PHILIP J. PHILBIN
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 28, 1947

Mr. PHILBIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter from the New York Times of April 22, 1947:

UNDERSTANDING RUSSIA—EDUCATOR ADVOCATES ITS FURTHERANCE IN EXPLAINING RECENT STATEMENTS

To the EDITOR OF THE NEW YORK TIMES:

The Times of April 9 carried a report of an address I gave before the American Catholic Educational Association in Boston. The account is on the whole factual, but I regret that the headline attributed to me a degree of bellicosity which on this occasion at least I lacked.

Perhaps you will permit me to say that what I recommended was not an endeavor to "hit communism" but rather to arrive at some kind of understanding with Russia. The situation is, of course, very bad. But I am still sanguine enough to believe that if one repeated, with every means at one's disposal, that war is abhorrent to all of us, that the integrity of the Russian state will be guaranteed by the United Nations, that the world needs the vitality, loyalty, and creative ability of the Russian people, and that, on the other hand, Russia could derive immense benefit from cultural association with the West, provided only that it assented to a measure of freedom of discussion as well as of religious practice and really cut off the existing Communist Parties to fend for themselves as independent radical leftist parties operating inside a democratic pattern, one might eventually convince the Russians that all these things make sense.

I recommended at Boston that Catholics take the initiative in creating an organization which would say these things constantly, at every level of the European population and with every available means, even while strengthening their own leadership in terms of a free Christian culture. I believe (or rather I hope) that such an organization has a chance to succeed, and thus to open the way for cordial participation by the Russians in the work of UNESCO. It would not be a combat organization but rather one on the offensive, having drive, zeal, and intelligence.

I think everybody in the Western World who is anxious to do everything possible to prevent our race from slipping into endless night might find this program worthy of support. It is a Catholic program because in western Europe there is no other group which could conceivably take the lead. Before us who advocate is the example of the Jesuits of the seventeenth century. And before us also is the fear of what must inevitably occur if the fateful difference between the East and West cannot be mitigated through debate and a sort of treaty of intellectual and moral peace.

GEORGE N. SHUSTER.

NEW YORK, *April 10, 1947.*

Conservation, a Necessary National Investment

EXTENSION OF REMARKS
OF
HON. HOMER D. ANGELL
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 28, 1947

Mr. ANGELL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement by David C. Warner, water conservation consultant in the Ohio Department of Public Works:

CONSERVATION, A NECESSARY NATIONAL INVESTMENT

Nature has a way of intervention with man's plans and set customs which at times seems almost providential for impressing people with the necessity for mass action by creating natural phenomena, as acts of God, that destroy property and lives. These catastrophes arouse and educate the people; and our leaders try to provide the proper remedies, that will prevent the recurrence of these disasters which can be eliminated.

Floods are one of those purely local disasters and those who do not live in communities that are menaced by the constant danger of being flooded every time it rains on the watershed, do not comprehend or share the responsibility of doing something to help prevent the recurrence of such catastrophes.

If one has never seen a major flood, has never tried to help rescue the victims of a great raging torrent of muddy water, it is perfectly natural that one would not feel any responsibility to help prevent such a disaster in distant parts of the country. But when it happens in his own home community and State then his sympathies and understandings change, and he becomes the solicitor for help and demands the cooperation of his fellow citizens and lawmakers to bring to pass the remedies that will mitigate the menacing disasters.

Such has been the repeated history of flood control and water conservation in the United States Congress and certain State legislatures. The Members of Congress who live in the valleys of our great rivers understand and are alert and active in trying to develop the necessary investment of public works capital for the prevention of loss by floods and droughts.

For over 100 years the Mississippi River has been the cause of greatest attention, because of the magnitude of the annual floods that keep that section of the country active to develop methods to prevent the regular occurrence of destruction of property.

April 5 to 8, 1947, in the State of Michigan the rains came and the grand old man of Detroit (Henry Ford) died in the midst of the greatest flood that ever struck many Michigan cities.

When the new Congress was reorganized in January 1947, the new Public Works Committee acquired a chairman in the person of Hon. GEORGE A. DONDERO, from Detroit, who has now become personally acquainted with destructive floods in his own State and cities.

It is strange how events have a way of happening to educate humanity and especially the right man in high places to prepare one to understand the needs and desires of the other fellow, who has troubles too, and wants cooperation for help to create a national investment that will save billions of dollars from further loss by floods.

It is a marvelous coincidence that the end came for one of the world's richest men in an isolated, unheated, coal-oil lamplighted home. There was no telephone in

service at the Ford estate, Farelane, cut off from the outside world by the flooding of River Rouge, when he had worked all day to prevent some of the disaster.

The high waters of the flooding River Rouge had extinguished the fires of his powerhouse, toppled the telephone poles, and torn electric power from his home, so that old-fashioned kerosene lamps filled the bedroom with the same odor and the same uncertain light that was in his mother's room, on a farm not far distant, when he was born on July 30, 1863.

It reminds us of another coincidence that happened away back in 1913, when Hon. Ross Reed was chairman of the first conservation committee of the Ohio House of Representatives. In January 1913, he desired to introduce a bill we had helped him prepare for the organization of conservation districts in accordance with article 2, section 36 of the new Ohio constitution, adopted September 3, 1912.

We took the bill to Gov. James M. Cox for his support, and he said to Mr. REED, "Now Ross, conservation of water and flood control are all right and one of the progressive ideas of the new constitution, but it is not on my program this time, so I can't support you."

But, the flood came on March 23 that same year (1913) and Governor Cox lost over $100,000 in his printing plant at Dayton, Ohio, and he let it be known that he was going to call a special session of the Ohio Assembly and pass a law that would prevent floods in Dayton. The result was that he signed the Ohio Conservancy District Law February 17, 1914.

Great men do change their minds, when disaster strikes at home. They then understand what the other fellow is talking about, when he asks for an investment of community funds for insurance against further loss.

With these Michigan floods, a coincidental act of God, and the United States Army Engineers' criteria for the how to help prevent future floods in the Nation, it is to be hoped that Congressman DONDERO will comprehend better now why there is a great need for a real conservation investment in all parts of the Nation for natural resources public works rehabilitation, like flood control, reforestation, reclamation, navigation, and soil conservation.

Teddy Roosevelt, Pinchot, Newlands, George Maxwell, and Hoover pioneered this frugal idea of the conservation and the reclamation of our natural resources.

A properly distributed investment of just $2,000,000,000 a year for the next 20 years will pay great dividends to this and coming generations and help to liquidate the great war debt.

Such a Federal investment, when spent in cooperation with a coordinated plan of local community and State improvements, which will participate to the limit of their ability to develop, protect, and save their natural resources, will go a long way to redeem, prevent or rebuild the losses sustained by the floods, war, and other common recurring disasters.

Knowledge comes from hearing and reading about calamities in the news, but wisdom is acquired only by actual personal experiences.

While we are donating billions for the rehabilitation and protection of foreign countries, we ought to make a few investments at home to prevent known losses in lives and property.

We call them grants-in-aid; no, these investments of taxpayers' money are the peoples' investment in hard-earned dollars to conserve that part of our natural resources which can be saved and will pay dividends to both the present and future generations.

We of this generation cannot afford to neglect our duty to save our own property and keep it in proper repair and usefulness. We must maintain our high standard of existence so that we can help other nations.

While we are spending billions of dollars in foreign lands, we must keep our home capital investment intact and invest a few billions of real capital on known necessary improvements and developments that will keep this "bread basket" in shape to feed ourselves, so that we can afford to be charitable, when charity is needed anywhere.

If we neglect our national investments at home we will soon cease to be able to feed the needy at home or abroad, who are counting on our bountiful charity.

America knows how to fight in a world war when necessary, so why not use some of that wisdom and intestinal fortitude to fight the battle of our natural uncontrolled elements of waste and destruction at home?

Our renewable natural resources, like flood control, soil conservation, reclamation, reforestation, rehabilitation, pollution prevention, groundwater restoration, industrial and domestic water supplies, with recreation and navigation as by-products of multiple-purpose reservoirs, are included in a proper national conservation investment, as our necessary maintenance obligations of this God-given inheritance.

These natural resources have made this country great and have characterized our people as the most generous nation on earth. But we dare not waste our inheritance by neglecting to maintain every part of it in proper repair by wise development.

"We are our brother's keeper." We can help "that other fellow" and at the same time help ourselves only by cooperating with our neighbor states to maintain that which belongs to all of us in general, so that we can be fully prepared when the emergency arises.

We congratulate our statesmen for their attempt and success in trying to stop some of our national extravagant, wartime organized, bureaucratic waste in spending for spending's sake. But this same wartime waste and neglect is causing losses by our profligacy and procrastination in the conservation of our renewable natural resources, that must be conserved not as charity to our citizens, but as self-liquidating investments of that part of our income, that must be spent for the future prosperity of the Nation, and necessary preparedness for any emergency.

Respectfully submitted.

DAVID C. WARNER,
Water Conservation Consultant in the Ohio Department of Public Works.

The Labor Bill

EXTENSION OF REMARKS
OF
HON. JAY LeFEVRE
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 28, 1947

Mr. LEFEVRE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a letter appearing in the May 27 issue of the New York Herald Tribune.

I believe the author of this letter is absolutely correct when he refers to the last Republican landslide being accounted for by the support from the rank and file of union labor and aroused citizenry in all walks of life. Our party has shown its willingness to sit down and work out compromises which result in sound, constructive programs for the benefit of the great majority. Our leadership respects the views of others and therefore the Republican party should appeal to those who love our institutions of free government. We are not involved in bargaining public offices for the support of minority groups which lead to the betrayal of the majority.

The letter follows:

THE LABOR BILL—IT IS SEEN AS NEITHER UNFAIR NOR DRASTIC

To the NEW YORK HERALD TRIBUNE:

There would seem to be considerable fear that President Truman, under the urging of Secretary Schwellenbach and others, may veto the new labor bill which Congress is now in the throes of enacting. Let us hope that, before he allows himself to be so persuaded, the President will consider the matter from several important angles:

(1) The so-called drastic House bill actually contains no less than 18 clauses specifically designed to reestablish the rights of individual union members as against dictatorial union bosses. Many of these rights of workers were lost under the Wagner Act and its interpretation by the labor administration.

(2) The bill which will reach the President will not be in the least drastic, as hysterical labor leaders are claiming, but actually will be designed simply to undo the gross unfairness—to employers, to white-collar workers and to individual union members themselves—of the Wagner Act, which has actually done far more to cause strikes, management-labor troubles and business dislocations than any other law ever enacted in this country.

(3) Such figures as those cited by Secretary Schwellenbach in his speech last week before the National Textile Seminar on the record-breaking profits of corporations actually, when analyzed, show nothing of the sort. Thus he stated: "In 1946 profits, after taxes, were 33 percent higher than in 1945," while calmly ignoring the fact that 38 percent of corporations filing returns showed net losses in 1945.

(4) The 1946 Republican landslide could not possibly have happened without tremendous Republican support from the rank and file of union labor, as well as from an aroused citizenry in all walks of life. Thus it was, in effect, an actual mandate for a fair deal in labor relations to supplant the radically labor-slanted laws of the New Deal.

Whether the President considers the labor bill from the viewpoint of the good of the country, from a purely political angle, or from both points of view, he can surely realize that to veto Congress's carefully evolved labor bill would be most unwise. It would, in fact, be tantamount to writing finis on Democratic hopes for 1948 as well as to be actually betraying labor in favor of labor bosses.

HOWARD R. MULFORD.

CRANFORD, N. J., *May 18, 1947.*

St. Lawrence Seaway

EXTENSION OF REMARKS
OF
HON. JOHN C. BUTLER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 28, 1947

Mr. BUTLER. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include a letter from Mr. Henry W. Woolley, legislative representative of the Brotherhood of

Railway and Steamship Clerks, R. S. Beatty Lodge, No. 910, Buffalo, N. Y., expressing opposition to the proposed St. Lawrence seaway project:

BROTHERHOOD OF RAILWAY AND STEAMSHIP CLERKS, FREIGHT HANDLERS, EXPRESS AND STATION EMPLOYEES, R. S. BEATTY LODGE, No. 910,
Buffalo, N. Y., May 1947.

Hon. JOHN C. BUTLER,
United States Congressman.

SIR: Considering the fact of the high cost of living and the unbearable taxes which have been foisted upon the people since the close of the war, it is inconceivable that Congress would consider for one moment saddling the huge additional monstrous tax emanating from the construction of the impractical seaway project. That it is not a practical venture is demonstrated by the fact that it would be out of commission 6 months every year and that in case of another war a few bombs placed advantageously by an enemy country could destroy in a short space of time this project which it would take years to construct and which would cost, as at present estimated, $400,000,000, which I believe is a conservative estimate when you take into consideration that dredging of harbors to accommodate the huge oceangoing steamships would swell the amount to a billion dollars. The tax rate on real estate would be again increased to pay the cost of government and our local economy would be disturbed, and it is reliably estimated that upward of 15,000 marine workers would be thrown out of employment in the Buffalo area alone, and the diversion of lake traffic and grain reshipment would play havoc with the railroads whereby Buffalo became great commercially through the huge trunk lines, attracted to center in our great city in order to secure the handling of the immense grain, flour, and merchandise traffic coming through our lake port. Summing up the dire calamity resulting from the passage by Congress of the infernal St. Lawrence seaway project and the resultant economical misery following in its wake, let me picture the disastrous results ensuing as a consequence of its passage.

The St. Lawrence project is not only inimical to the best interests of Buffalo but also to the railroads and their employees, to the longshoremen, and the vast network of huge elevators and warehouses which have made Buffalo famous as the greatest inland seaport in the world. No greater calamity could occur, no greater blow could be directed at the commercial supremacy of Buffalo, than this contemplated measure which is gathering headway in Washington, as indicated through constant press dispatches of attempts of early action in Congress urging passage of this nefarious measure. Dry rot and stagnation will result, our lake trade will be diverted to the Canadian Welland Canal, our huge elevators and warehouses will disappear from the lake front, leaving consternation, despair, misery, and want in its wake, through the loss of work by thousands of dock workers and railway employees, and the net loss in tonnage and revenue by the railways, tugs, elevators, and warehouses will be stupendous. We are depending on your assistance as our Representatives in Congress to do everything humanly possible to avert this dreadful nightmare hanging over our heads threatening a catastrophe of portentous evil, ominous, and foreshadowing dire calamity to our beautiful city. Violent opposition to passage of this measure has poured in from all quarters of the Nation, not only from New York City and Buffalo but as far south as New Orleans. The New Orleans Record said, and I quote, "It would create additional economic problems in the South, which is already the national problem No. 1. The Great Lakes-St. Lawrence Treaty is hostile in every way to the economic needs of the Mississippi Valley and does not assure full development of the economic value of the Great Lakes to either Canada or the United States. Endorsement of this legislation would throttle the very life of the South, which would create a national crisis. We can't afford it. The whole country is staggering under the enormous national burden and can ill afford additional costly experiments."

When this damnable seaway bill was before the Senate in 1934 the hearings before the House Rivers and Harbors Committee in 1941 demonstrated that opposition is Nation-wide, and, notwithstanding, proponents of passage still persist in bringing it before the House and Senate year in and year out. The Niagara Frontier and 59 Buffalo organizations representing business, labor, and civic groups, have given their unqualified disapproval of this uneconomic measure. The officers and members of the above organizations will anxiously await your reply as they are vitally interested in the defeat of this measure. If you wish the abiding friendship of your constituents in Buffalo, Erie County, and the State of New York, vote and work against the passage of this offensive, unpopular, proposed bill.

Sincerely yours,
HENRY W. WOOLLEY,
Legislative Representative.

Terminal-Leave-Pay Legislation

EXTENSION OF REMARKS
OF
HON. DWIGHT L. ROGERS
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 28, 1947

Mr. ROGERS of Florida. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial which appeared in the Fort Lauderdale Daily News, Fort Lauderdale, Fla., on Monday, May 19, 1947, under the column, Pass in Review:

PASS IN REVIEW—CONGRESSMAN ROGERS' NEW GI BILL

Representative DWIGHT ROGERS' bill to make terminal pay bonds, issued to former enlisted men, negotiable instruments, appears to be an excellent way to provide veterans with the cash they are entitled to without disturbing the plans of Republican leaders for balancing the budget and putting through a tax cut program.

Representative ROGERS declared Saturday he would introduce his new bill in the House today and that he was confident enough support would be forthcoming to insure its early passage.

Basically, ROGERS' bill would do this: It would enable veterans to sell their bonds to any purchaser willing to pay the face value of the bonds plus the accrued interest at 2½ percent. The purchasers would buy the bonds strictly as an investment, since under the bill's provisions the 5-year maturity date on the bonds would remain unchanged.

Under this bill the Government would not be forced to pay a single penny until the bonds matured. Veterans, however, many of whom are badly in need of cash, would be able to realize their equity in the bonds now instead of waiting the full 5-year period.

Since it would cost the Government nothing, Representative ROGERS believes the bill has an excellent chance of passage. He declared Saturday that the Budget Bureau had objected to his earlier plan for making the bonds immediately payable in cash and because of this there was little chance that Congress would take action on this score at an earlier date.

The new bill, said ROGERS, should not draw any opposition from the Budget Bureau. "As I see it," he said, "everybody will gain. The GI who needs his cash will be able to get it, plus whatever interest is due; the new purchaser will receive a gilt-edged security at interest better than can be obtained anywhere else, and the Government doesn't lose anything."

To safeguard the veterans from being forced to take a loss to turn their bonds into cash a clause in ROGERS' proposed bill provides that anyone purchasing a bond before maturity must pay the interest accrued up to the last day of the month in which it is sold. The new purchaser then draws the regular interest rate for the remaining time.

"In this manner," the Broward representative explained, "the man selling his bond won't lose anything. As a matter of fact, he probably will make a little, since the bonds are such good investments that they probably will sell at a premium. There are many banks and other investors anxious to acquire such securities at 2½ percent interest. It won't make any difference to the Government, since it has to pay the interest anyhow."

ROGERS' plan is a sensible solution to the terminal pay problem. Thousands of veterans are now in acute need of the money represented by these bonds. As it stands now they are useless except for paying premiums on Government life insurance.

To make these bonds immediately payable in cash might conceivably put too much of a load on the Treasury now. ROGERS' plan would get around this by transferring the load to private investors who would be only too glad to put up the necessary cash at the interest rates the bonds draw.

It sounds like an excellent suggestion and one in full keeping with the clear thinking and broad-minded attitude our Broward representative has constantly displayed in representing the veterans' and our own interests in Washington.

Who Owns Alaska?

EXTENSION OF REMARKS
OF
HON. E. L. BARTLETT
DELEGATE FROM ALASKA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 28, 1947

Mr. BARTLETT. Mr. Speaker, under leave to extend my remarks I desire to call attention of the Congress to a thoughtful editorial written by my friend, Bob Atwood, editor and publisher of the Anchorage (Alaska) Daily Times. The editorial, Who Owns Alaska? appeared in the Times for May 22:

WHO OWNS ALASKA?

Concern over the designs that Russia may have on Alaska is widespread. It is expressed in the Halls of Congress from time to time. It is discussed privately among officials and citizens alike.

Just yesterday, Representative LAWRENCE H. SMITH, of Wisconsin, called the Nation's attention to this problem when he cited on the floor of the lower House the need for military defense, greater population and local autonomy in Alaska.

It is well known that Russia has cast aspersions on the legality of the sale of "Russian America" to the United States in 1867, contending the "sale" was executed by a corrupt and unscrupulous czar who exceeded his powers in disposing of part of the nation.

It is also well-known that Russia is speeding colonization and development of eastern

Siberia, opposite the western tip of Alaska. Population of this peninsula has been reported as high as 2,000,000 with the largest city of 150,000 souls.

Meanwhile, the United States sits complacent in the belief that it holds secure title to this strategic area. This title is based upon a treaty, signed by Edouard de Stoecki, that says, "His Majesty the Emperor of all the Russias agrees to cede to the United States * * * all the territory and dominion now possessed by his said Majesty on the continent of America and in the adjacent islands."

Whether this complacency is well-founded is a matter of conjecture. The world has come to know that treaties with live governments are not often worth the paper they are written on. The value of an 80-year-old treaty with the government of a dead czar may be highly speculative.

Russia has raised the question: Who owns Alaska? It is a timely question for discussion. The answer is vital to the United States, Russia, and perhaps other nations.

History shows that Spain laid first claims to the northwest coast of America through explorations, and at one time claimed sole right to navigate the waters of the North Pacific. But these claims were not pressed, perhaps due to disputes on her hands in other parts of the world.

Russia made claims on the area now known as Alaska as a result of explorations by Girosdeff, Bering, and Chirikov. In 1821 Russia attempted by ukase to exclude navigators from the Bering Sea and Pacific coast of her possessions. This brought a protest from the United States and Great Britain, with the result that a treaty was made defining the boundaries of the Russian possessions in the north.

Russia found the governing of a territory 5,000 miles from the seat of her government no small problem. Excesses committed by private traders and companies, who robbed, massacred, and hideously abused the native Indians, caused the Russian Government in 1799 to adopt a policy of monopoly. The Russian American Company for about 60 years held the exclusive right to exploit what was to become Alaska, and during that time furnished whatever government the area was to have.

This was the condition that prevailed when the sale was made to the United States. The Russians had developed little or nothing in the vast northland. Exploitation had marked the era of Russian rule—ruthless exploitation that did not bring any permanent development.

The first 80 years of American ownership of Alaska has been marked by neglect on the part of the Federal Government. Instead of having the seat of government 5,000 miles away, Washington was only 3,000 miles from Alaska. The problem of distance was changed but little from the time of Russian ownership.

Not knowing what to do with Alaska, and not understanding the problems unique to the northland, the Congress has been consistent only in its policy of neglect. Only once have the problems of Alaska been properly aired before the only body of authority to handle them. That was in connection with the enactment of the Organic Act of 1912, granting Alaska the only measure of self-government in its history.

In essence, no nation can really own a territory that it does not actually occupy, develop and improve. Real ownership is not a legal concept, to be based on a treaty with a czar who is not only dead but his regime is banished and his authority challenged. Real ownership is based on fruit of use. There is no permanency in it without the element of full use.

The United States Government recognizes this in its homestead laws. It requires that a man to acquire title to the land must not only occupy it but develop and use it. He must build a habitable house and cultivate an acre.

Applying the same yardstick to Alaska, the United States has failed to homestead the territory. After 80 years, more than 99 percent of it is still undeveloped, unused. There has been no great in-rush of people to settle here. Restrictions laid over the abundant resources of the territory in ignorance and misunderstanding, have impeded, delayed and even precluded the development and use that would eliminate all question of ownership.

The San Francisco Chronicle, in an editorial accounting for American ownership of California despite conflicting claims of Spaniards, Mexicans, and British, commented:

"California is essentially an American land. For it was the Americans who developed it, made her deserts bloom, opened its roads, dredged its harbors, erected its factories, founded its schools, libraries, parks and in effect created it as an economic and cultural region.

"And that form of ownership is ours until we shall have forfeited it through the inertia of disuse, the complacency of illusory security, or, most dangerous of all, failure to protect the rights and liberties which, regulated justly among ourselves, made possible our peace and prosperity."

All in all, it appears that the United States has a long road to follow to any ownership beyond the legal concept that comes with the signing of a treaty and mere occupancy. The inertia of disuse, which has set in so solidly during 80 years of neglect, must be replaced by the constructive activity that will build it into the economic and cultural region that comes with development and full use.

United States Sales Methods Can Boost Imports

EXTENSION OF REMARKS
OF
HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 28, 1947

Mr. JUDD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Harold W. Sweatt, from the Minneapolis Star of May 20, 1947:

[From the Minneapolis Star of May 20, 1947]

UNITED STATES SALES METHODS CAN BOOST IMPORTS

(By Harold W. Sweatt, president, Minneapolis-Honeywell Regulator Co.)

World trade is a two-way street; it needs a flow of traffic both ways or it will fail.

Trading with foreign nations is like tilling the soil. We can plant seeds and reap harvests for just so long, and then the fields become exhausted. But if we continually replenish the soil, we can take from it harvests year after year in an increasing bounty of strong, premium grain.

This is World Trade Week. Here in our country we are apt to think of foreign trade only in terms of exporting, not importing.

All over the world the products of American industry and labor are so desirable that we have no problem in expanding our exports, except one—how can our customers overseas make payment?

Ideally, foreign trade transactions should balance out. The people of foreign countries should send us goods that are desirable and salable here and receive, in return, cash with which to pay for American-made goods they want.

But it has been a long time since such an ideal state of affairs was possible, due largely to the rapid development of American industry which made our products more desirable not only abroad, but here at home too.

Even before markets abroad were hit by the aftermath of World War II, American export trade had been stimulated to an increasing extent by loans of American money to foreign nations. Today this expedient is again being used and the sums are vastly greater. But we cannot ignore the fact that this practice is essentially artificial stimulation of our export trade.

The need for a more practical and more permanent underpinning for two-way foreign trade is universally recognized. In what direction can we look for a solution to this world-wide problem which not only will affect the economic health of all nations, but will also exert powerful influence upon political conditions and the peace?

American business has realized the importance of sending abroad the best people available to develop the opportunities for sales of American products in foreign countries.

If it is now to show the same interest in developing in this country profitable sales of certain foreign-made products, the first and most important step is to send forth a corps of equally able merchandising experts. Their job would be to comb foreign countries for goods which could be sold profitably here under prevailing conditions.

Their companies would then create sales plans for these foreign products and put behind them all the selling drive they have used so long and so successfully in marketing their own products.

Such an importing effort would certainly receive the full cooperation of foreign nations. The dollar balances thus created abroad would be available to purchase American products. Foreign trade would thus be on its way to becoming a broad thoroughfare with room for ample traffic in both directions.

In the decade before the war, the United States exported $2,500,000,000 worth of goods a year and imported $2,000,000,000. In recent years, American farmers have been exporting about $3,000,000,000 worth of food alone, which represents an average of $500 added to the income of every farm family.

Today, we are contemplating an export trade of between $10,000,000,000 and $15,000,000,000 a year which must be matched by a comparable flow of imports. In such an undertaking, the new approach suggested would mean little if undertaken by only one American company or a handful. Yet if several hundred importing operations were inaugurated within the next few years, the gross business would have a positive effect on foreign trade.

If we are able to import at the same profit rate that we export—and there is no reason why we cannot if the energy and knowledge available is put to the task—we can go a long way toward eliminating a festering cancer which time and again has broken out into war.

Reduction of Appropriations

EXTENSION OF REMARKS
OF
HON. RAYMOND S. SPRINGER
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 28, 1947

Mr. SPRINGER. Mr. Speaker, the people throughout our country are de-

manding that the cost and expense of our Government be reduced in every possible manner, and this demand comes from a great majority of the people. The Eightieth Congress has set about to comply with the wish and the will of the people. The people know, of course, that it is far easier to increase personnel and to increase costs, and to give some special privilege to some particular group, than it is to reduce personnel and costs, and to take away some special privilege which has been enjoyed for some period of time. When the day of reckoning comes, and when some particular activity is abolished and the personnel in that agency have to leave the Federal pay roll, there is always a loud clamor against that action. Those affected take exceptions to any reduction in their agency—but it is all right to make a reduction in any other agency. That same result is found to exist in every group in our country. Many of our people want to reduce the cost and expense of our Government, and they want cuts made in the appropriations for every activity, except that which might affect them either directly or remotely.

Mr. Speaker, it has been fully ascertained that when the Congress reduces the cost and expense of our Government, and when reductions are made in the appropriation bills, there can be no favorites—in other words, the reductions must be made all of the way across the board. May I say that it is frightful to behold, that before the present administration came into power, in 1932, we were operating our government upon an annual outlay of approximately $3,500,000,000. This cost and expense has skyrocketed to the point at which reductions are necessary. The people cannot withstand the tremendous outlays demanded from them, and they cannot pay the tremendously high taxes which are imposed to maintain our Government. The present budget, for the fiscal year 1948—which begins on July 1, 1947, and ends on June 30, 1948—calls for the enormous sum for $37,500,000,000. That is far beyond the essential cost of our Government, and that large and excessive sum, contained in the budget, must be reduced. We are at peace—the war is over. The people must realize, in the end, that we must keep our Nation sound and strong—we must be kept strong financially—in order to take our proper place in this reconversion era, and in order to go forward as a great nation into the future.

Mr. Speaker, the days of excessive and unnecessary Federal spending must come to an end. Our duty as American citizens demands that we terminate that spending policy, and make a firm resolve to again operate our government upon a businesslike basis, for the benefit of all of our people.

Mr. Speaker, a very sound and timely editorial appeared in the Indianapolis Star, of Indianapolis, Ind., of very recent date—which analyzes the present situation quite well—for which I ask unanimous consent of the members that the same may be printed in the Appendix of the RECORD that all may read it; the editorial follows:

KEEP CUTTING, CONGRESSMEN

Republican Congressmen are deservedly irritated by the anguished howls of Government agency heads over cuts in their appropriations. A quick look at some comparative figures might strengthen their resolve to disregard the dire predictions of these calamity howlers and keep right on cutting them down.

They might compare Government expenses today with those of 1938, the last year before the war and the highest Federal budget year in peacetime history, until then. Government payrolls in 1938 cost the taxpayers $1,570,283,000. In 1947 they are costing more than $7,500,000,000. We have on Government pay rolls now more than twice as many as we had in 1938, and they are costing us nearly five times as much. Are these agencies performing any more essential services now than they did in 1938?

The Bureau of Labor Statistics in 1938 provided us with competent service for $784,000. During the war it expanded and its budget ran as high as $5,500,000. The House cut this to a fat $2,300,000—almost three times as much as in 1938. Yet these bureaucrats cry that they must abandon basic services unless they get more.

The Customs Bureau asked for $53,000,000 in President Truman's tight budget. The House trimmed it to $47,000,000. Customs officials waved the distress signal and almost at once 1,500 people were fired. In one locality 400 were fired and rehired a few days later. Obviously this was propaganda to convince Congressmen that they were ruining the Customs Bureau. And the strange thing is that the $47,000,000 to which the House trimmed the Customs budget is exactly the same amount as last year. It was not even cut at all.

There is hardly a department, bureau, agency or board among the 1,100 now in existence that couldn't stand a substantial cut and still operate efficiently. There are probably many of them that could be eliminated. There are nine housing agencies regulating housing right now.

This country cannot afford to continue the extravagant waste of the people's money now going on in the Federal Government. Not only does it contribute to inflation, it also keeps our taxes up and prevents us from paying off our debt. We have enough expenses that must be met—veterans' benefits, military costs, interest on the public debt, and foreign loans—without adding to the burden we now bear with wasteful and unnecessary appropriations. Republicans in Congress will do well to keep up the good work.

Remarks by Congressman Lane in Lawrence, Mass.

EXTENSION OF REMARKS

OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 28, 1947

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include herein a speech I delivered during memorial services for sailor dead conducted by the Daughters of Union Veterans of the Civil War, O'Leary Bridge, Lawrence, Mass., on Sunday, May 25, 1947:

We in New England are a seafaring breed. It is this courageous spirit of adventure that has made us great. From the days when the Pilgrims set forth in their frail vessels, daring the dangers of the unknown to make a free beginning in a new land, the young men of New England have heard the call of the sea. They have left the farms and the factories to roam the seven seas, before settling down to the humdrum tasks of life.

In times of peace they have ventured forth in clipper ships or oil-burning freighters to bring commerce to, and from, the most distant ports on earth. They have helped to feed our industries with the raw materials that build wealth. And, in the process, they have brought back knowledge of other peoples and other lands, that has helped us toward that understanding of one another that must come if the human race is to go forward in peace.

There are times, however, when the way of life we are building here is challenged from outside by those who would seize our riches without trying to earn them in the manner that we have done. It is then that our men go down to the sea with grim purpose in their hearts, and in the fight for survival some never return.

In World War II, 37,000 American sailors lost their lives, and some of them came from greater Lawrence.

They died to protect us. Conscious of our never-ending debt to them, we come together in this memorial service by the banks of the river they knew so well, to bow our heads in prayer and in tribute.

We strive in spirit to come closer to these men and to the hopes and ideals which inspired them, so that we may be worthy, in their name, to go forward toward that goal for which they sacrificed all the possibilities of their young lives. May we go from this memorial service aware of the great responsibility which these dead have left with us. For we are the trustees of the new world for which they fought and died. With unswerving purpose we must dedicate ourselves to the building of a better way of life. Only in this way can we measure up to their sacrifice and feel that we have carried some part of the load.

This is a solemn occasion. The world sorely needs the new vision and the high courage which was lost with these men. In many homes there are mothers and wives and children who will miss their affection. their comradeship, and their strength.

These are the Nation's wounds which we, the unbereaved, must tend with merciful care. Let this great country of ours never forget that the immediate families of those who died also gave. In every material way, let us ease the burden of their loss. There is room for economy in Government, but never at the expense of those to whom we are indebted. On this day of memory, let us pledge ourselves anew to the service of the gold-star mothers, and wives, and children, who gave beyond all financial reckoning. May God grant that we never lose sight of our obligation to them. A grateful Nation must make certain that they never suffer from material want.

Though grief casts a reverent spell over this day of memorial service, it is mixed with a sober pride in the dead who have set before us such a high standard of devotion to duty.

These men belonged to a great navy, without which the liberties which we enjoy might have perished from the earth. Our men did not glory in war, but they knew that, in the present imperfect stage of human development, with no system of international law and no agency to enforce it, gangster nations become aggressive, and war is the only recourse to stop them.

We were fortunate that we had a good Navy, and good men to man the fighting ships, for it was the biggest naval and maritime war in which fleets ever have engaged. From India to the Arctic Circle, from the Mediterranean to the China Seas, our Navy fought to open and extend the routes of supply, so that the huge numbers of men and the vast quantities of material needed to win might reach their objectives. With the help of the Navy, our armies made numerous landings which the enemy considered impossible, and they did this with a minimum of loss, and the war was brought to an early and successful conclusion.

Our men fought so well because they wanted a world fit for human beings and not a world of slaves. They fought for the dignity of the individual and for the freedom of their homes. Near every bunk and hammock, on every ship, in all the far corners of the world, you saw the clean and hopeful pictures of the mothers, wives, and sweethearts of American sailors, the individual shrines from which they drew that supreme courage to face the deadly tasks ahead.

In the houses of old Salem and Newburyport you will see glassed-in rooms built above the roofs, where the women watched for weeks and months on end—looking out over the ocean for some sign of a returning ship with a precious cargo of loved ones, coming back after a long and dangerous voyage to the Orient.

Sometimes the ships did not return.

That was in the old days.

But the women of 1941–45 also sent their men down to the sea in ships, knowing the loneliness of waiting for news from them—knowing the cost that must be paid for a job that must be done.

Our enemies thought that our young men and women were spoiled, and that they would crack under the brutal assault of war. But our men fought and our women worked in the war factories, and the bond of faith and love that each had in the other helped both of them.

This was the pioneering womanhood of America. The primitive things that were in them had returned to them in their hour of need, and it helped their men to win through. Many ships and many men went down—carrying with them the pictures of mothers, wives, and sweethearts—spiritual partners even in death.

On this day which is consecrated to the memory of the Navy dead of all wars, we become aware of the human fellowship which is the core of our American life. This is the value which we must cherish and develop, in peace as well as war. Unfortunately, it comes to its finest expression only when danger threatens us. Would that we could experience it through the days of our lives.

This day brings to mind the torpedoing and sinking of an American ship during the recent war. Three clergymen stood on the deck, giving their lifebelts to others. One of these clergymen was a Protestant chaplain, another was a Catholic chaplain, another was a Jewish chaplain. They stood and prayed as one, and went down with the ship.

As we think of our Navy dead, we sense the beginnings of that brotherhood of man under the fatherhood of God which the world must come to learn and practice. The strong ties which sent love and strength from American homes to our men on the ships, the unselfish comradeship of men in battle, and their belief that we who inherit their hopes will work for a better world, from these we the living derive strength and purpose for the job that lies ahead.

By the waters of this river they played as boys. At the old swimming holes they learned to love the water which finally claimed them. A few miles from here the Merrimack empties into the sea, there to join with ocean currents which girdle the earth. Perhaps some particle of this home river was near them as the ocean covered them with sleep.

As we spread these tender flowers of memory over the current of the Merrimack, may they merge with the water and some day reach the unmarked graves of those who rest in the bosom of the ocean—the mystic communion of the living with the dead. And as the sun draws vapor from the ocean's surface, forming clouds that move and join and break in gentle rain, may the circuit be complete, from them to us, may we be nourished to give to the needs of peace and, in doing so, find ourselves, and them.

From the heroic dead may we draw inspiration to work for the common welfare of humanity.

The naval dead, of all wars, have done more than their share of the community effort to save those values from which a greater civilization must develop.

The other, and unfinished part of the job, is up to us.

With their lives they have given us, the living, another chance.

May we be worthy of their faith in us, and go forward from this ceremony clear in mind and strong in heart to redeem the sacrifices which they have made.

Let us be their living memorial.

A Constructive Editorial on Pending Labor Legislation

EXTENSION OF REMARKS

OF

HON. ALBERT L. REEVES, JR.

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 28, 1947

Mr. REEVES. Mr. Speaker, one of the great weekly newspapers in America is the Kansas City Call. While it is circulated principally among the Negro citizens of the Midwest, it is widely read and universally respected for its influence and for its forthright editorial policy and intelligent presentation of the news. Not long ago when Kansas City was without a daily newspaper because of an outlaw strike, lasting for 17 days, the Call marshaled all of its resources and facilities and published a daily newspaper during this period as a service to the people of Kansas City. It has been very generally commended, and properly so, for its acceptance of public responsibility in this critical situation.

I have said that its editorial policy is forthright. More than that, it has demonstrated that it is intelligent and constructive with respect to the difficult problems confronting the country in these trying days of readjustment. In its issue of May 16 appeared an editorial on the reaction to labor legislation pending in the Congress, which was so cogent and keenly analytical that I commend it to the thoughtful reading of all Members of the House. It was as follows:

MUCH NOISE, LITTLE LIGHT ON LABOR LEGISLATION

The will of the people being the highest law in this land, the minority no less than the majority is duty bound to help make the legislation which the public wants. Labor will do well to remember that.

There is no denying that the 1946 election was a clear-cut mandate to the opposition party to take over Congress and amend the National Labor Relations Act. As it then stood, it was deemed too one-sided. Labor had had its way. The laws it made had been given extended test. A change was ordered.

The common sense of the situation is for labor to obey the mandate and cooperate in formulating the new law. Instead of that, it has condemned legislators and declared proposed changes outrageous attacks on labor's rights. Its intemperate speech has lost it all chance of convincing the public that it wants only a square deal.

It is a waste of time to restate the facts and logic which led to the Republicans being mandated to amend the Wagner Act. The problem now is to get that done which the election ordered, the same problem that faced a Congress in 1935. Then in doing what it thought best, a new deal was set up that imposed new taxes and forced extra expense. Management went along. Labor, the minority now, should do likewise, especially since there is a disposition on the part of this Congress to keep whatever good there is in the Wagner Act.

To labor the Wagner Act is the one law so perfect that any change in it is resisted. That's neither good thinking nor sound practice. It could have told Congress that a ban on utility, jurisdictional, and sympathy strikes, that penalties for unauthorized strikes and for Communist union officials, and that reports on union finances would be acceptable. No; drunk with power, labor dares Congress to carry out the people's mandate. That threat violates the democratic principle. As a result, no progress in labor relations, and industry is handicapped.

This country has been different from others, because over here social changes have been by evolution, rather than by revolution. The minority has accepted election results. For labor now to defend all it has done and condemn all changes proposed especially when its talk is surcharged with bitterness, is not playing the game. Others dance when it is chosen to call the tune. So must it. If the sector of the American people for whom this paper speaks can go along with the majority, as the faster way to its objective, labor certainly can.

Mr. C. A. Franklin, editor and publisher of the Call, and Mrs. Lucille Bluford, its managing editor, and the members of their staff are to be congratulated and complimented upon the courageous position which they have taken, and upon the position and recognition achieved by the Call in the newspaper world.

H. R. 99—A Simple, Effective Plan To Reduce the Public Debt, Strengthen the Free-Enterprise System, and Get Government Out of Business

EXTENSION OF REMARKS

OF

HON. EVERETT M. DIRKSEN

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 27, 1947

Mr. DIRKSEN. Mr. Speaker, in the Seventy-ninth Congress and again in the Eightieth Congress, I introduced H. R. 99, the text of which is hereinafter set forth.

It is short and simple in procedure.

It authorizes Government agencies to offerer for sale, the notes, debentures, and obligations which they own, to any private person or firm who tenders the amount invested therein by the Government.

Reasonable public notice shall be given from time to time as well as reasonable information with respect to the notes and obligations which are held by Government.

All rights of the person who is obligated to the Government under such notes and obligations is fully protected.

Recently, I appeared before the Committee on Ways and Means of the House of Representatives and testified on this proposal.

First let me set out at length the text of H. R. 99.

[H. R. 99, 80th Cong., 1st sess.]

A bill to authorize and direct the sale of certain United States notes and obligations to private persons, firms, associations, or corporations

Be it enacted, etc., That in order to encourage and promote private enterprise and remove the Government from business where its intervention or continued participation is not necessary, each officer of the United States and each corporation owned and controlled by the United States is authorized and directed to sell any notes or other obligations, or evidence of indebtedness held by such officer or corporation, and transfer the same to any private person, firm, association, or corporation tendering the full amount invested therein for such note, obligation, or other evidence of indebtedness.

SEC. 2. Each such officer or corporation is authorized and directed to give reasonable public notice from time to time of the holding of notes, obligations, and other evidences of indebtedness, and to supply reasonable information with respect to them to prospective purchasers, and to make reasonable regulations for the sale of such assets.

SEC. 3. When, as, and if such notes, obligations, and other evidences of indebtedness are sold, the same shall be transferred in a manner so that the obligor shall be fully protected in his contract rights in accordance with the note, obligation, and other evidence of indebtedness held by the Government or Government corporation.

SEC. 4. Each officer of the Government and each corporation owned or controlled by the Government holding such notes, obligations, or evidences of indebtedness shall report to the Congress at least annually, or incorporate in their annual report to Congress a statement of the amount of such obligations held, a statement of the regulations made for the sale of such assets, and a statement with respect to negotiations for the sale of the same, and for the amount sold.

AMENDMENT

I would suggest the following amendment to H. R. 99.

Its immediate effect would be a reduction of the public debt.

As obligations held by the Reconstruction Finance Corporation, Farmer's Home Administration, and other agencies and corporations are sold, the proceeds would be deposited in the Treasury to the credit of the public debt.

During the last 15 years, Government became the greatest lender in the world. It ventured deeply in the lending field to meet an emergency. It has remained in that field. The emergency is over and many of these lending operations are now definitely commercial in character.

It is time to reverse the process, to bail Government out of this field, to diminish its holdings of securities and apply the proceeds to the public debt. Thus, the contingent obligations of the Government on this paper as well as the public debt would be reduced.

Page 2, line 16, after the period insert the following sentence:

All proceeds from the sale of notes or other obligations, or evidences of indebtedness, pursuant to this act shall be deposited and covered into the Treasury to the credit of a special fund which shall be used exclusively for the reduction of the public debt.

TESTIMONY

The testimony presented to the Committee on Ways and Means may be of interest and it is therefore reproduced in full.

Mr. DIRKSEN. Mr. Chairman, H. R. 99 was introduced in the Seventy-ninth Congress and it has been reintroduced in the Eightieth Congress. While it is a very short bill and very simple, I think its significance is out of all proportion to its brevity.

As you will note from a reading of the bill, what it provides is simply this: That in the case of all agencies of Government that are holding notes and obligations and debentures today, those shall be made available to any person or any firm or any corporation who comes in and tenders the Government the amount that it has invested, if they agree to continue the obligations that are contrived under such a note or such a debenture.

This bill, represents a very definite effort to get the Government out of business and at the same time implement private enterprise and give it an opportunity to do the job that it is expected to do.

We have a lot of money invested in all forms of notes which might very well be handled by private enterprise today. For instance, we have the so-called rural electrification set-up under which Federal funds are advanced to cooperatives; and at the present time there is invested in the notes that are given by the cooperatives to the Rural Electrification Administration in turn for money that is borrowed from the RFC and from the Treasury, about $74,000,000 as of the most current reporting date.

We have a program, for advancing money to prospective farm-tenant purchasers and our investment here at the present time is about $250,000,000.

For a long time, under the Farm Credit Administration, we had been carrying on a program of advancing money for feed, seed, and general emergency farm operation purposes. That has finally been transferred from the Farm Credit Administration to the Farmers Home Administration and there is involved there at the present time about $120,000,000 of which, oddly enough, over $114,000,000 of which is delinquent, because it was a long-term program, particularly in the distressed areas.

The CHAIRMAN. Did you use the word "delinquent"?

Mr. DIRKSEN. That is correct.

Mr. JENKINS. How delinquent is it?

Mr. DIRKSEN. Some of those are delinquent for years, and a great many of those items are marked distinctly uncollectable right now.

The CHAIRMAN. Those were feed and seed loans, for instance.

Mr. DIRKSEN. Now we have a rural rehabilitation program which has been carried on under the old Farm Security Administration and which has now been transferred under the Farmers Home Administration Act to the new Farmers Home Administration. Those so-called rehabilitation loans, as of the last reporting date, aggregated about $200,000,000.

There is the Federal Land Bank System, and the aggregate of balances now through the 12 regional Federal land banks is about $1,000,000,000. You will remember that some years ago we also authorized the Federal Land Bank System to make make loans on both first and second mortgages where they could not get enough money under the regular Federal land bank establishment. So we set up what are known as commissioner loans and as of the last reporting date we had invested there some $309,000,000.

Then we set up still another organization, known as the Production Credit Corporations and the Production Credit Associations. They make loans to farmers for a variety of production purposes and the investment as of now is about $266,000,000.

In addition thereto we set up 12 intermediate credit banks to make loans to cooperatives and their investment as of the last reporting date is about $346,000,000.

Now, in addition thereto—and I do not have the figures for the RFC—but the RFC has made very extensive loans and in addition has served as a sort of a rediscount bank for the old Federal Works Agency and the old Public Works Administration, whereby advances were made to cities to install sewers and light plants and that sort of thing. The paper was in many cases held by the RFC.

Then, in addition thereto, we have the Home Owners' Loan Corporation. You may recall that I made a determined effort to secure its liquidation some years ago, and I partially succeeded in the House, but, unfortunately, I could not persuade the Senate committee to go along in its entirety with the proposal that I had in mind.

But here you had an agency of the Government which was created in an emergency period and which finally made 1,000,000 loans aggregating about $3,375,000,000. They borrowed money from the Treasury at 1 percent and reloaned it at 4½ percent. In addition thereto, of course, they could put levies and impositions upon home owners to whom they made these loans, and this thing has been going on now for more than 12 years. They have not made any new loans for 6 or 7 years.

But here you have a great aggregate of Federal agencies that are in the business of making a type of loan that is essentially commercial, and now it seems to me that sort of thing ought to be turned back to private enterprise, wherever it can be done.

Here are some reasons why I think it could be done and should be done. In the first place, you gentlemen know so well that there is an available bank credit in the country today; the banks are fairly bursting with money.

The second reason is that in proportion as those are turned back to private enterprise it is going to siphon off to a good deal of the inflationary pressure as a result of the tremendous deposits in the banks.

The third reason is that it would simply take the Government out of what I regard as a type of commercial business.

The fourth reason is that it would siphon that money back and replenish the Treasury to the extent of hundreds of millions of dollars, and it could aggregate several billion dollars.

The fifth reason is that it would reduce the contingent debt of the country.

The sixth reason is that the borrower would not be disadvantaged by this action, because the bill provides that when, for instance, a Federal agency, like the Farmers' Home Administration, sells to a bank in X town, in Y State, somewhere, one of these loans, the obligation must be preserved as to its maturity, its terms, etc., so that the borrower is not in any worse circumstance than if he were a direct borrower and a continuing borrower from the Federal Government.

The seventh reason is that it would diminish heavy administrative costs for collections and servicing and regulation. We are putting

out millions and millions of dollars today to service these loans, and to collect them, to run after the delinquents. Of course, we have got thousands of people on the Federal pay roll who are doing this kind of work, so that there would be a very definite reduction in the number of Federal personnel.

The next reason is that, in my judgment, it would reenergize the whole private credit system of the country. The fact of the matter is that we have had a good deal of testimony on it in years gone by before the Subcommittee on Agricultural Appropriations that Federal agencies, through their personnel, go out and solicit loans in competition with private enterprise—banks in small towns, who would only too gladly make these loans at an appropriate rate of interest if they had a chance, but with the Federal Government in the field, and bearing down, the Government becomes a direct competitor, and obviously it is going to get a very good share of this business.

The next reason is that it would diminish competition with private enterprise from the Government. And then probably—and more important than all else—it would reverse this very paternal trend under which we set up so many agencies to make loans of all character and description to people in all walks of life and for all purposes. Sooner or later that trend is going to have to be reversed if we are not going to head in the direction of complete paternalism.

Finally, it seems to me that this is purely a local function. If a farmer wants money for production on his farm, if some prospective farm-tenant purchaser wants money with which to buy a farm, first he ought to go to a local source of credit. Of course, the Government is in this business now and the only thing I see as an out at the moment is simply to say to Government agencies: "Now, look. You give reasonable notice to anybody who may be interested as to the number and amount of loans that you have and then you make available on some given day an opportunity for any person, any thrift institution, any bank, any private enterprise set-up, to come in and say, 'Look! You have got so much invested in so many loans, to buy farms, or to rural electrical cooperatives, or for some other purpose. We will buy them. We will buy them at what you have invested in them and we will agree in writing to carry out the terms that are set forth in the note or in the debenture. We will preserve the maturity; we will preserve the interest rate.'"

And so it becomes possible then to siphon off some of this great well of money and credit that is existing in the banks and the thrift institutions of the country today.

The fact of the matter is, when you set up Government in so many lines of business and lend billions and billions of dollars for local purposes, the very natural thing that is going to happen is that Government is going to get the best loans and you are going to leave private enterprise, the little banks in the country towns and elsewhere, hold the sack. Manifestly it is unfair and if we are going to give something more than lip service to this so-called free enterprise system, that is expected to provide jobs and to reduce prices, and hike up production, and that sort of thing, then let us give them a fair break.

In an emergency period, of course, one can see the reason for the Government going into this line of business. But we have got to make a distinction between where the emergency ends and where strictly commercial operation begins. And I think this bill to supplement what we have already done in the Byrd-Butler Act in developing budgetary and accounting procedures by every Government corporation before the Appropriations Committee, is going to go a long way toward restoring this country to the sound road of the dependable free enterprise system.

The CHAIRMAN. The chair has read the bill, but is rather apprehensive that unless very complete safeguards are thrown about any transactions for the protection of the Government, it may very easily lead to collusion and a scandal that would rock the Republic from coast to coast. I think the gentleman understands my point?

Mr. DIRKSEN. I do not believe I do.

The CHAIRMAN. You are proposing that these securities and obligations held by the Government be disposed of whenever you or someone else makes application to buy them. You mentioned the REA, the RFC, the Home Owners' Loan Corporation, and others. It could conceivably lead to a riot of corruption and connivance.

Mr. DIRKSEN. In what respect, Mr. Chairman?

The CHAIRMAN. That could be done very easily. You know, when they liquidated banks, invariably someone got the inside track and bought up the odds and ends. I have in mind a transaction in the old Capital National Bank of St. Paul, where a man made over a million dollars buying the odds and ends of that bank which closed back in the early thirties.

Mr. DIRKSEN. I can see no opportunity here for any process of that kind.

The CHAIRMAN. Well, I am not a lawyer; I do not want to get into an argument. But it did seem to me that proper safeguards should be thrown around this. I am in thorough sympathy with your objective.

Mr. DIRKSEN. I should point out this: For instance, in section 2, where, for instance, an agency has these loans, it must give reasonable public notice from time to time. In other words, it publishes the fact to all the wide world that we have so much Federal money invested in so many loans, aggregating so many dollars and if anybody is interested, all right; you come in. And in addition thereto, they must give reasonable information. Then in addition thereto, section 4 requires that a report be made to Congress—that is an annual report. As a matter of fact, it could be made a quarterly report, if that is desirable. But it would be conducted entirely in the open. That is the purport of the bill.

The CHAIRMAN. It would seem to me that there should be some supervisory body set up to see that the Government receives somewhere near what these things are worth; not merely what the Government has invested in them necessarily, but simply what they are worth. If the note is not worth anything, that is one thing. But we should see to it that the Government gets every penny possible out of it.

Mr. DIRKSEN. To that I agree. And, Mr. Chairman, there would be no objection, in consideration of this measure, to so modify it or put in such safeguards and such administrative directions as may be necessary to give it effect.

Now, I see what you have in mind. I remember, when Mr. Jones, of the RFC, told me that when the Chicago school district was trying to float an issue of bonds out there and could not find a market in Chicago, he finally bought them and a few weeks later he sold them to a bank in Chicago and made a profit of $258,000. Those were worth a premium. And if any of this paper is worth a premium, nobody would quarrel with the Government getting just as much as it can possibly get. If some additional language is necessary in order to effectuate that objective, there would be no objection to that.

The CHAIRMAN. The committee will call for a report from the Treasury. Of course, this is something to which we would probably have to give a whole day or more. We would have to have the Secretary of the Treasury up and perhaps some representative from the RFC and others.

Mr. COOPER. The RFC was the first venture of this sort and it was urged and recommended by our friend and distinguished former President, Mr. Hoover. I recall the conversation I had with my good friend and our former distinguished colleague, John Garner. He was not very keen on the idea and in the discussion of the matter the point came up about 30 years, and he said, "My God Almighty, I thought this was a temporary measure." That got us into this swell.

Mr. DIRKSEN. Your observation gives point to what I think is the crux of this matter. There has to be a distinction between the Government embracing an emergency, and moving in this way in an emergency period, and a situation where it goes on year after year and year after year until finally it fans out into the whole field of commercial operations. Once these emergency operations are established, of course, they can go on and on, as they are doing today. And we have not bothered to make that distinction.

Mr. COOPER. Practically all of these agencies did come into existence during an emergency?

Mr. DIRKSEN. That is right. And now it is high time that either we take the Government out of that kind of business, give the enterprise system a chance to move in, and get rid of these accumulated funds to the banks and the thrift institutions, because it does involve that general inflationary pressure that is at the bottom, and that might threaten to blow the lid off sometime.

Mr. JENKINS. You appreciate, Mr. DIRKSEN, of course, that this committee had no jurisdiction over the legislation that set up any of these institutions.

Mr. DIRKSEN. That is correct.

Mr. JENKINS. And that is a very significant fact, I think. We did not set up any of them through our committee. And still this bill is brought to us now. Of course, the basis of our jurisdiction over this bill is that this paper now belongs to the Government.

Mr. DIRKSEN. That is right.

Mr. JENKINS. So, of course, we do have jurisdiction.

Mr. DIRKSEN. That is right.

Mr. JENKINS. Do you not think, instead of compelling these people to sell their best paper and have left a lot of ragtags, it would be better to go back to the committee that set up these institutions and ask them to terminate their authority and to liquidate them some way under the Treasury? In that way they could be liquidated in a more orderly fashion.

But if you compel any institution to sell its best stuff, you are bound to have left only the ragtags, and you would have the same old personnel with the same old expense, necessary to carry on.

I agree with you about these activities. Practically all of these organizations ought to go out of business.

Mr. DIRKSEN. Mr. JENKINS, I would make three responses to that. The first one is, no matter whether the Government keeps the so-called tail ends and bad loans or not, its losses will be exactly the same. In other words, it does not make any difference whether the bad paper shows up 20 years after or not.

Mr. JENKINS. But there is this situation. The people who set up an organization, if they are honest and sincere, can liquidate it more advantageously than someone else, because if you take out the best paper and leave the worst, you still have the personnel and the overhead to take care of, the rent, and so forth, and it will not work out as well

Mr. DIRKSEN. In response to that, this does not propose to liquidate these corporations. That would be a tremendous task and might require years. And with respect to the personnel I might point out that at the peak, the Home Owners' Loan Corporation had about 30,000. Then, of course, that number came down progressively as the number of loans diminished and the numbr of properties were sold. So, when you diminish the number of loans obviously you are going to diminish the necessity for servicing and col-

lection and supervisory charges and you are going to diminish the total number of your Federal personnel in proportion.

Mr. JENKINS. It is more difficult to get rid of personnel than anything else.

Mr. DIRKSEN. The Home Owners' Loan Corporation reduced from 30,000 to about 3,700 as I remember the figure. The number came down progressively and it would in this case, also.

The CHAIRMAN. I do not think we should be concerned about the ragtag ends of these investments, because they are bad, anyhow. I am interested to see that we get what we should for the good loans. In this case at St. Paul that I was telling you about, our State bank examiner resigned and his successor turned around and sold him the assets from this bank. They made over a million dollars. That is the sort of thing we want to guard against here, that sort of collusion.

Mr. REED. Mr. Chairman, I was going to say that as I understand it, under this bill, the Government would sell the obligations not at a loss.

Mr. DIRKSEN. Oh, definitely not.

Mr. REED. The Government is not going to lose anything by this sale.

Mr. DIRKSEN. That is right. The Government inevitably will come out whole.

Mr. REED. It is safeguarded every step of the way.

Mr. HOLMES. May I ask, Mr. Dirksen, who would buy these obligations?

Mr. DIRKSEN. Thrift institutions, banks, building and loan companies, trust companies.

Mr. HOLMES. Would they qualify? Would the paper qualify to come under the program of these various institutions?

Mr. DIRKSEN. The best answer I can give to that, Mr. Holmes, is that when I had in view the liquidation of the Home Owners' Loan Corporation, people came to Washington from all over the United States to buy these obligations, or get their order in. In the case of Ohio, for instance, a number of trust companies pooled their resources and said, "We are ready to buy $50,000,000 worth right now." And in every section of the country that I visited there was a tremendous interest, because that paper does qualify under the regulations, and the constitution and the bylaws and the State requirements under which they operate.

Mr. HOLMES. Then my next question is, Would it be advisable to unload this paper on that kind of an institution, could it be done without experiencing an impact on the economy of the country if something should happen to the character of the paper?

Mr. DIRKSEN. Funds are available in such quantities that it would be absorbed almost like a snowflake falling into a lake.

Mr. REED. Many of these obligations are more or less tax exempt, which would make them attractive; is not that true?

Mr. DIRKSEN. That is right.

Mr. REED. That is why they would be anxious to get them.

Mr. HOLMES. I should not think that any of them would be tax exempt.

Japs Get 7 Centuries' Progress in 16 Months

EXTENSION OF REMARKS

OF

HON. GEORGE H. BENDER

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 14, 1947

Mr. BENDER. Mr. Speaker, under leave granted me to extend my remarks in the RECORD, I include herewith the following article by Mr. Ralph J. Donaldson, of the Cleveland Plain Dealer:

JAPS GET 7 CENTURIES' PROGRESS IN 16 MONTHS

(Article 7)

Talk about your new deals. The New Deal of Franklin Roosevelt fades into insignificance when compared with the political, social, and economic revolution that has taken place in Japan under the occupation.

Women have been granted the right to vote. Political parties have been freed from state domination. Labor has been granted the right to organize and to strike. Tenant farmers have been granted the right to buy the land they till. Police surveillance of the individual from birth until death has been abolished. State support of any religion has been prohibited.

Freedom of speech, of thought, of assembly, of religion, of the press, and of communication has been decreed by law. Discrimination on account of sex, color, race, or creed has been banned by law. Hereditary titles and emoluments have been abolished.

The fact is that virtually all the progress made by the English-speaking people in the establishment of the rights of the individual from the time the English forced King John to accept Magna Carta until the American Congress passed the Wagner Act has been enacted into law in Japan in the short space of 16 months.

General of the Army Douglas MacArthur was not exaggerating when he said that, since the occupation, the Japanese Government has a record for instituting reforms which has never been surpassed in any comparable period of history.

This does not mean that all the reforms are understood or accepted by the Japanese people. The feudal system has been abolished by law, but the habits of feudalism cannot be uprooted overnight. A Japanese woman may be told that she has been emancipated, but she will not eat until her husband has been served and she will still walk four or five paces respectfully behind him. The constitution may say that child labor is prohibited, but parents will continue to sell their children into industrial bondage.

Our party of visiting newspapermen inspected a silk factory near Kobe which now employees several hundred boys and girls. They live in a compound on the factory grounds and work about 10 hours a day.

The company takes great pride in the fact that it maintains a school for its employees and that it gives them religious instruction to attain "perfection of their characters" each morning and evening and even on the four holidays a month they are allowed to have.

Obviously it will take considerable education and instruction, if not prosecution, before the system of child labor and industrial slavery is abolished in Japan.

SHINTO PRESSURE PERSISTS

Likewise, the withdrawal of state support of Shintoism does not mean that the Shinto religion has been abolished. The Japanese language newspapers contain frequent appeals from the Shinto priests for financial aid from the public.

An individual may be reluctant to contribute, but if the sentiment in his neighborhood association[1] is strongly in favor of it, he does not dare to refuse, because if he did refuse to contribute his neighbors would "talk about him" and he would "lose face." This may be coercion of a kind, but it is in accordance with the freedom of religion.

In spite of these and other obstacles, the legal framework for the reform program is a fact. The task now is to educate the Japanese to an appreciation of their new rights and responsibilities in a democratic form of government.

[1] Since this was written neighborhood associations have been ordered abolished, but apparently they still continue to function for the distribution of rationed food.

Navy Worries About Officer Resignations

EXTENSION OF REMARKS

OF

HON. EDITH NOURSE ROGERS

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 28, 1947

Mrs. ROGERS of Massachusetts. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by John G. Norris from the Washington Post:

NAVY WORRIES ABOUT OFFICER RESIGNATIONS

(By John G. Norris)

A recent heavy surge of resignations among the "cream" of young officers of the fleet has aroused deep concern among Navy leaders.

Vice Adm. W. M. Fechteler, Deputy Chief of Naval Operations for Personnel, disclosed that resignations of Regular Navy officers have been running 200 a month.

While a crop of resignations has followed every past war, this time the losses have cut far deeper than expected, Fechteler told the Post.

BEST ONES LEAVING

They have totaled 1,627 in the past 8 months.

"I'm afraid we are heading for a Navy of second-raters," he stated. "If it were the duds that are quitting, we wouldn't care. But ship captain after ship captain has come in to complain that his best young officers are getting out.

"It is not a question of the next decade or so. We've got plenty of good people in the middle ranks now. But if war comes in 15 to 20 years, we're going to find ourselves with a lower standard of officers than we have today."

About half of those quitting are line officers, Fechteler said, with the remainder largely doctors and dentists. Loss of the latter is causing a serious shortage. This situation already has been called to the attention of Congress, and legislation is pending to help correct it.

Two-thirds of the line officers resigning, Fechteler said, are young Naval Academy graduates with less than 5 years' service—war-tested youngsters of ability.

"I had an analysis made of the reasons given for their resignations," the Navy personnel official said. "Few of them kicked about their present pay. They believed their future prospects were better on the outside."

He attributed the latter to two factors:

1. The congressional drive to cut down the "top brass," causing young officers to feel there would be too few openings at the top.

2. The comparatively low pay of such top jobs compared with industry. A rear admiral's pay has been increased only 11 percent in 40 years, Fechteler said, during which time civilian pay and the scale in the lower ranks of the Navy has been boosted many times.

POLL SHOWS TREND

Chiefs of the Atlantic Fleet expressed the same concern over the increasing number of resignations. A poll recently taken by mail among members of the Naval Academy class of 1942 showed that 58 percent plan to resign.

Already, 112 members of the class of 1946—which was graduated in 1945 before the end of the war—have resigned, the Navy said. They have just become eligible to leave the Navy.

Present policy is to accept resignations after 2 years of commissioned service, unless an officer has been given some highly specialized graduate training.

Address of Hon. W. Kingsland Macy, of New York, Before the National Republican Club, in New York City, May 27

EXTENSION OF REMARKS
OF
HON. W. KINGSLAND MACY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 28, 1947

Mr. MACY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address that I made last evening in New York City upon the occasion of my reelection as president of the National Republican Club:

Officers and members of the National Republican Club, I wish to express my gratitude this evening to the members who returned me to office as president of the National Republican Club, for their recent demonstration of loyalty to the club, and exhibition of extreme activity in its best and highest interests. In spite of minor differences within the recent past, I am sure we will enjoy functional harmony in this, our sixty-eighth year, and can look forward to a fruitful period of continued activity and accomplishment. Our ever-growing membership rolls bespeak widening influence which will, I am confident, further guarantee the full performance of our traditional role on the Republican scene. Our efforts must equal our interest. Never before have men in public life had greater need of perception and vision, and not within my recollection has there been in public life in the United States a man who has demonstrated the qualities of statesmanship, courage, and executive efficiency, in so marked a degree as our own Governor Dewey.

Today a large part of the world is more or less openly engaged in ideological-economic warfare between Communist and non-Communist systems. Since political ideologies in the final analysis are merely instruments of economic theories growing out of group concepts of rights, and since man fights to acquire or hold, we have offensive and defensive wars. While the winner is not always able to force the refinements of his particular ideology upon the vanquished, the thumbscrews of economic pressure are sure to be turned. In earlier days it was slaves and ransom, indemnities, and the scrapping of navies. Today it is the altering of national economies and their allocation to zones of influence.

Today we are participating in a haphazard way in mapping and stabilizing such zones. We are lending money to non-Communist nations—and, by the way, if we referred to countries that are not democracies, or are at best pseudo-democracies, as non-Communist nations, we would be doing a semantic service and probably gaining a point. We are trying to keep the old nationalistic balance of power and at the same time make transfers to a new scale. Under the duress of war, we enacted emergency legislation with required despatch, but I see a grave threat to our foreign policy if we continue to consider crises abroad singly as unrelated incidents.

Today many eyes are turned to America, and the needs and greeds and hungers of many countries, factions, and races take on meaning for us. If we raise their living level, will we lower our own? How will their changing standards affect the free-enterprise system if we, as do-gooders, drag ourselves into Government-ringed morasses and dissipate our substance improvidently in impractical largesse? How long will American taxpayers be willing to contribute their dollars to the Treasury in Washington, to be doled out to the benighted in the "foreign-mission field" of economics?

In the spirit of frankness which should characterize this gathering and this occasion, I feel impelled to state that I voted for the Greco-Turkish relief bill with many misgivings, nor were these misgivings decreased by the editorial comment of the New York Times, characterizing the payments to be made pursuant to the provisions of this bill as "token payments." The Times says wisely and convincingly that large though the amount may be in some aspects, such a provision will not be sufficient to prove the wisdom of a policy, because the military aid for Greece thus supplied will not be great enough to give defense against a major power, nor is the economic aid possible under this bill sufficient to restore prosperity even in one small country.

The editor of the Herald-Tribune comments dramatically that the so-called "Truman Doctrine" as adopted by the Senate and House of Representatives "comprises only the raw materials of a policy."

We must all hope earnestly, to quote from the editorial last referred to, that the national administration will "employ those funds and the legitimate influence that goes with them in such a manner as to achieve as efficiently and completely as possible, the goals embodied in the bill."

Perhaps the provision for Turkey and Greece should not be thought of in terms of charity or philanthropy, but only as retarding the spread of Communism in eastern Europe, which would, of course, be highly detrimental to the interests of democratic governments everywhere.

However this may be, we recently had in New York City a magnificient application of the doctrine that charity begins at home—this in the revelations concerning the operations of the department of welfare in the City of New York, the effect of which will, I fear, be widespread and demoralizing, tending to impair public morale and to render New York City an object of ridicule and contempt and its taxpayers objects of commiseration throughout the land. This is an unfortunate demonstration at this particular time, coming simultaneously with the additional press stories of ultra-sensational character, casting suspicion upon the conduct of the New York City Department of Marine and Aviation.

I do not hesitate to say that the cumulative effect of these incidents places the government of the city of New York squarely on the defensive at this time, both in respect of things that have happened and as involving dereliction in not having discovered delinquencies sooner than disclosure has come.

Waste such as I have indicated brings us to the problem of wastefulness in a broader sense. Should we not ask ourselves: How much longer may we be profligate with our great natural resources? Inventoried today for the inherent qualities of great nationhood, we would rank first; inventoried for tangible assets and national resources we would be second to none. Of these things we are pridefully aware but it would be well for us to pause now and think what assets will be transferable to the next generation.

The fact is our storehouse of wealth underground is rapidly being depleted. The great Mesabi Range is running low on iron ore, copper reserves are petering out and many once high-grade mines yield only low-grade ore. Certain scientists say we have only enough oil for 20 years. These things give the entire Nation cause for alarm, and scientific survey should be made with thought for husbanding our resources. Since minerals are the sinews of a modern power, we cannot afford to find ourselves a "have not" nation, particularly since Russia with its fabulous potential, is hard at work with 10,000 geologists assaying mineral possibilities and boasting of what its airborne detectors have located.

Now as to our resources above the ground, we should not omit consideration of our agricultural wealth. Agronomists tell us that our farmers could double production and there is no question about our ability to feed ourselves. However, while we think of ourselves as the great bread-basket of the world, actually from 1925 to 1942 our imports of foodstuffs of the sort produced here exceeded our exports — and this during the years we were killing piglets and plowing under crops. I cite this not only as an example of economic imbalance but as a precedent established by the New Dealers for a practice apparently continuing as a hangover from their administration. Last week bushels of the new Virginia potato crop were made inedible by saturating with kerosene. Last month and during the first 3 weeks of this month we imported some 600,000 pounds of potatoes from Canada and Canadian potatoes were selling in Richmond, Va., 30 miles from the kerosene-soaked potatoes, for 7½ cents a pound. Early last summer when piles of potatoes started to mount in the fields of my own great potato-growing county of Suffolk, the third largest potato-producing county in the country, I made public protest against this proof of "half-planning." In a seaboard county like Suffolk, with bottoms galore available, surely there should have been a way of finding some sort of bateau to bring alongside these mounds of potatoes and ferry them to the starving in Europe or elsewhere. If starvation is so rife as those in the Administration and others would have us believe, our big bombing planes, now idling in reserve for defense, could well cargo these potatoes and drop them by parachute like manna from heaven to save many a life. Doubtless there will be those to call these suggestions fantastic and impractical, but I submit that there is more merit in them than allowing good edible food to waste when the hungry are starving.

While taking stock we must also consider the ways and means by which our agricultural and industrial civilization is maintained, and it might be appropriate to talk of taxes. I might say here that one of the first lessons a Congressman learns is that while everyone wants taxes cut, everyone and his brother want public finance in aid of projects which affect them personally. We Republicans, determined as we are to reduce taxes, certainly deserve the fullest support. The public should realize careful pruning of so fantastic a growth as the Jack-and-the-Beanstalk vine the Democrats permitted national expenditures to become, is no easy task. The fact we are committed by principle and promise to careful stewardship and are doing our deliberate and considered best to further it, should surely win us, if not respect, the grudging commendation of those who have become accustomed to rush legislation.

To those who are worrying about our "drastic slashing" of expenditures I would say that while I am not for niggardly saving at the cost of civic effectiveness, they might reflect on the fact there is such a thing as national bankruptcy and as long as we Republicans are in power we have no intention whatsoever of permitting it. We have taken the position Justice Holmes assumed when reminded by a litigant that "the power to tax involves the

power to destroy" and he answered grimly, "Not while this court sits."

Pressure groups are a mounting threat and a menace and I believe I was one of the first publicly to decry them. These factions represent "special interest" whether they be in labor, ideas, agriculture, or any one of a dozen things, and immediately they organize they set out in avid pursuit of selfish advantage. We may find ourselves organizing to the point of complete disorganization. Often claiming benevolent intent, they attempt to undermine and influence the legislative, executive, and judicial branches of the Government. My personal belief is they consider themselves a fourth branch.

There was a time when special interests acted as principals and engaged lobbyists to circulate subversively and wheedle from addleheaded or venal legislators what their principals wanted. Today the principals themselves are in the forefront—demanding, demanding. It looks as though the whole country were becoming pressure-minded and along with the deathless lobbyists, hundreds of groups, concerned not at all with the overall welfare but overmuch with their own, are out to force privilege legislation by cajolery, by intimidation and by the very iteration and reiteration of their conflicting requests. Men in public positions justifiably trusted not to give special consideration to individuals, are confidently expected to cater to these pressurers whose disregard of the broader civic objectives is offset only by the copiousness of their literature and the rich nomenclature of their titles and letterheads. The sooner every member of our three branches of government learns to ignore this would-be fourth branch, the sooner will these pressure groups learn the ballot box is their constitutional and rightful medium.

Sooner or later the American people will be as tired of this pressuring as they were of paralyzing strikes. The House of Representatives has passed the Hartley bill which has been called a Bill of Rights, a name that held interest for me since on Memorial Day of last year I called publicly for a Bill of Rights for Labor and Management. I voted for the Hartley bill as a measure intended to serve as a corrective to the one-sided Wagner Act and a deterrent to union outrages too long tolerated. I do not consider it "open sesame" to management nor is it a door slammed in the face of labor. To my way of thinking it is remedial legislation only and no panacea to cure all ills.

Pride in craftsmanship was the motivating factor in the organization of guilds and unions. Men liked the phrase "dignity of labor" but many present-day unions minimize these things while concentrating on the pay-check. Those of us who remember we were without coal last Winter and without telephones this Spring, might take time to think a bit about the fact the CIO and AFL have succeeded in unionizing more than 10,000 workers in the atom bomb town of Oak Ridge. How significant is it that the voice of labor itself has not been heard crying out against injustices in the unions themselves? Has labor silently sanctioned racketeering outrages as a means to the procurement of an end? Its reaction to and performance under the labor bill this Congress will pass will tell the story.

The final determinant in labor relations where the human factor is so great an influence, must be the clarification of personal and property rights. Before we can hope for industrial harmony we must be agreed on what is justifiable and what is allowable in the labor-management relations field. As I said last year no strict diagonal divides labor and capital and actually the entire public is a composite of the two. Management has millions annually for technical research but little for study of the employer-employee angle. Resistance to negotiating instead of bargaining is the greatest of management's sins. Labor has its sin too and cardinal is the deliberate slow-down in productivity per man-hour. No step-up in technocracy can counter-balance the nation's loss in citizen integrity when a man's values drop so low that he will not give "a day's work for a day's pay."

The question which I am most frequently asked, and the same is true of my distinguished associates in the House and the other branch of the National Legislature, is what will President Truman do with the labor bill soon to be presented for his signature.

I am not going to prophesy tonight, mindful of the adage that "A prophet is not without honor save in his own country," nor have I the gift of prophecy vouchsafed to my learned and brilliant friend Drew Pearson, nor the assurance which leads me to hazard predictions as freely as does he.

So what I am going to say is not a prediction at all, but it is only the summarization of what seems to me the most plausible and rational things I have heard in Washington.

It is this: Assuming that a bill resembling fairly closely the present Taft bill will be submitted to the President, what seems to be the best guess I have heard is that the President will sign it, in spite of the vigorous and violent opposition of the so-called leaders of labor who characterize the proposed bill as "slave labor" legislation, intended to destroy the labor unions. By signing the bill, the President will solidify the support of many thousands, whom a veto would estrange. By so doing, the President will also eliminate, for the time being, from controversy between the major political parties, the principal domestic issue (the principal international issues having also been eliminated by bi-partisan cooperation). In this connection the President will probably feel that, so far as labor is concerned, he can, between now and the beginning of the national campaign next year, woo and win the favor of organized labor, who will in any event accept him in preference to the candidate of the Republican Party.

Let us not forget that a President in the White House, anticipating or in the course of the campaign next year, can play many "trump cards" to take last minute "tricks" to win popular favor and support; and this is especially true at a time when international conditions are strained and unsettled, with a widespread and aroused public sentiment in this country, willing to oppose by force of arms if necessary, the encroachments of Communism and of the Soviet ideology.

This leads me to the final note of my address to you this evening, which is a warning against the danger of over-confidence in the ranks of the Republican Party, as affecting the national campaign in 1948.

In fact it is my desire to conclude my brief and informal remarks this evening by sounding a note of warning to the Republican Party throughout the nation, lest there shall be over-confidence now or hereafter, concerning the result of the 1948 Presidential election. It is apparent that President Truman's political aides and that the chairmen and members of Democratic political committees everywhere are already setting the stage for what they hope will be a successful Presidential campaign next year. President Truman and his advisers are not letting any grass grow under their feet in this respect.

The President himself has been playing shrewder politics than it was originally thought he was capable of; and while I have no doubt that if the national election were to be held this year, the Republican candidate would receive a substantial majority of the electoral votes, that is quite beside the point. And let me admonish that the Republican Party should not be over-confident, even though former Vice President Henry Wallace heads a third party next year, as I personally believe to be highly probable. I have heard it said in Washington that a Wallace third party would render certain the defeat of the national Democratic ticket, but let us not rely upon this assertion. To defeat the Democratic national nominees, Truman and Marshall, as I declared a year ago the ticket would be, will require the strongest candidates we Republicans can name. At the head of our ticket many are now asserting that there should be selected Thomas E. Dewey of New York. Even conceding the probability of the Wallace third ticket, we must all work hard, and it is not too soon to begin to work now, to lay the foundation for a solid and successful national campaign in the fateful year of 1948. It was Shakespeare who warned against overconfidence in the striking lines found in the drama Henry the VIII, which you may all remember, and with which I will end my remarks this evening:

"We may outrun, by violent swiftness, that which we run at, and lose by overrunning."

I thank you.

Short-Wave Broadcasts

EXTENSION OF REMARKS

OF

HON. HERMAN P. EBERHARTER

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 28, 1947

Mr. EBERHARTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter:

PITTSBURGH, PA., *May 23, 1947.*

HON. HERMAN P. EBERHARTER,
House of Representatives,
Washington, D. C.

DEAR CONGRESSMAN EBERHARTER: I understand that the House will shortly consider the Mundt bill to authorize the State Department to continue its short-wave broadcasts and I have been advised that the heads of all the short-wave broadcasting companies, with the exception of Mr. Walter Lemmon of Station WRUL, have urged the vital need of continuing the State Department program and have pointed out the impossibility of carrying on an adequate program by individual or corporate contributions.

Having been, I believe, the largest individual contributor to Station WRUL during 1940 and 1941, I wish to state that I completely disagree with the position which I have been advised was taken by Mr. Lemmon that an adequate program could be financed by private contributions. The following memorandum from direct personal experience illustrates, I believe, the important effect of even very limited and rather amateurish short-wave broadcasts and at the same time demonstrates the impossibility of securing by popular subscription even a minute fraction of the money necessary to combat the 30 Soviet short-wave stations.

When we organized the Committee to Defend America by Aiding the Allies in May 1940, some of us discussed the desirability of a short-wave broadcast to Italy in the hope of developing sufficient sentiment against an Italian attack on France. In the early part of 1940, I believe the only short-wave broadcast to Europe was one in Norwegian from WRUL, which also had short-wave broadcasts to Latin America, as did a number of other stations.

I understand that this Norwegian broadcast was 15 minutes, 5 days a week, and was listened to by many members of the Norwegian merchant marine, some of whom sent in small contributions from $1 up. When the Nazis invaded Norway, they ordered the quislings to broadcast to Norwegian ships

to return at once to Norwegian ports, but when the sailors tuned in on the old WRUL broadcast in which they had confidence, they were convinced of what had happened in Norway. It is reported that thousands of tons of Norwegian shipping were saved for Allied use because of this.

In May 1940, I asked Mr. Lemmon if he could put on a short-wave program to Italy and he advised that the station could not undertake this itself but that if I would contribute $300 per month, he would provide 15 minutes broadcasting time 5 days a week. I arranged for an Italian newspaperman in New York to prepare the scripts which were mailed to Boston, where Professor Salvimini and others of the Italian Department of Harvard delivered the broadcasts over WRUL.

After Italy invaded France, I discontinued the Italian broadcasts and arranged for a French newspaperman in New York to mail scripts to Boston where members of the French Department of Harvard broadcast them to France, as a means of helping morale and resistance. Letters and direct personal reports from people who heard the broadcasts in France or North Africa demonstrated their influence in those dark days. When Mussolini began to experience some reverses in the fall of 1940, I arranged for a resumption of the Italian broadcasts in addition to the French.

In late 1940, the French script writer brought to me Mr. Stanislav Petrovich, who had broadcast to Yugoslavia from Paris and London, and who asked if I would provide an opportunity for him to broadcast over WRUL. Mr. Petrovich pointed out the stategic importance of encouraging resistance to Yugoslav collaboration if Hitler made a Balkan drive in the spring of 1941. I inquired of friends who had been in Yugoslavia as to how many short-wave sets were there and learned that while the number was limited, there was one in almost every cafe and that it was a great country for grapevine. I accordingly arranged for three 15-minute broadcasts per week, Mr. Petrovich making recordings at the Asch Recording Studios at New York, which were mailed to Boston and played over WRUL.

When the revolt against the collaborationist Yugoslav Government took place in the spring of 1941, I arranged with Mr. Lemmon for Mr. Petrovich to go to Boston at once and broadcast three times a day. At this time, the only other short-wave broadcasts going into Yugoslavia to combat the Nazi broadcasts were some from the British BBC, which the Germans were jamming. I understand that, when communications were cut in Yugoslavia, in many cases the only means by which people in one section could learn of what was going on in other sections was from Mr. Petrovich's broadcasts.

The American Minister in Belgrade later made public statements about the important influence of these broadcasts on the revolt and Mr. Petrovich has described this in detail in his book Free Yugoslavia Calling. While Yugoslavia was overrun in a comparatively short time, Yugoslav resistance delayed Hitler's timetable about six weeks and brought him to the gates of Moscow at the beginning of winter instead of October 1.

Shortly before January 1, 1941, Hans Jacob, a former German Army officer, who had broadcast against Hitler as the Voice of Strasbourg, came to see me. I also made arrangements for him to broadcast recordings being made in New York and mailed to WRUL.

Many more broadcasts were needed but my financial burden had become quite heavy and Mr. Lemmon seemed to be having great difficulty in fund raising. I accordingly interested some friends in giving a luncheon at a club in one of our larger cities at which Mr. Lemmon and I spoke. Although 30 to 40 business leaders were present, having a net personal worth of probably in excess of $100,000,000, I believe that only about $2,500 in contributions was secured.

It is tragic that, while the Nazis were reported to be spending $200,000,000 for world propaganda in 1941, such comparatively insignificant amounts were available for short-wave broadcasting from this country. In 1941, when the Nazis were blanketing the Near East with broadcasts in the various Arab dialects, I asked Mr. Lemmon if he could not arrange for a broadcast in Arabic, but he advised that he knew of no suitable person. I appealed to a diplomatic friend, who located a Syrian rug salesman who had been educated in Beirut and who offered, if his moving expenses were paid to Boston, that he would broadcast without charge and support himself by rug selling. With the Nazis jamming BBC, it was tragic that this should have been the only voice opposing the Nazi Middle East propaganda in 1941.

We are fundamentally engaged in a war of ideas and it will be fatal if we throw away our weapons just because a few errors have been made in a large program. Unless we get the truth to the Russian people, how can we expect them to oppose any aggressive plans which their heirarchy may develop? Today apparently the only way we can get over the Iron Curtain is by the State Department Voice of America short-wave program and other educational activities.

We must also bring the truth to the other peoples in the world whose minds are being poisoned by Soviet propaganda. It is reported that the Soviet has over 1,400 branch headquarters in France alone. The British, in spite of their terrible financial problems, are reported to be spending about twice as much as our Voice of America program and Chile approximately 40 percent as much.

There is ample evidence of the great value of the Voice of America program throughout the world. As one illustration, when the Soviet officials arrested the leader of the Small Landowners' Party in Hungary, and the United States protested, the Soviet prevented the Hungarian papers from publishing the protest. The Voice of America broadcast, however, carried the news of our protest over the Iron Curtain into Hungary, and within a few days the American Embassy in Budapest received over 10,000 requests for information on our protest. The attacks by Ilya Ehrenburg and other Communists on the Voice of America program is another illustration of its effect and importance.

If ideas sell themselves spontaneously, as some have declared, then the billions of dollars being spent by American business on advertising is being wasted. But we know that the truth must come to men before the truth can make them free.

What would we think of a business enterprise which refused to spend one-tenth of 1 percent of its budget for public relations, which is approximately the ratio of the cost of the State Department Voice of America program to the total Federal budget. This $31,000,000 per year is equal to our cost of only a few hours of the Second World War, yet in the last analysis it may be the most important means of preventing a third world war.

Sincerely yours,

FREDERICK C. MCKEE.

Sugar Rationing

EXTENSION OF REMARKS

OF

HON. EDITH NOURSE ROGERS

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 28, 1947

Mrs. ROGERS of Massachusetts. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Harold L. Ickes from the Washington Star:

MAN TO MAN—HOUSEWIVES SHOULD ORGANIZE SUGAR MARCH ON AGRICULTURE DEPARTMENT

(By Harold L. Ickes)

All over the country fruits and berries are now or soon will be ripening. Housewives are washing up their home canning equipment. They might better be organizing a broom brigade for a march on the Agriculture Department.

A storm may be expected to arise when the housewives discover that they are not going to get any extra sugar for canning this year. Agriculture undoubtedly is perfecting excuses which will quiet the lowering storm. Its arguments will be that sugar is still in short supply, and that transportation is in a state. As a last resort it will make the appeal that anyway the sugar-rationing program was invented by the OPA, and hence is a vestigial remnant which ought to be preserved in a museum.

To meet the expected complaints the sugar officials have granted each person at least 35 pounds of sugar this year, an increase of 10 pounds over last year. But the joker in the proceeding lies in the lack of an extra allowance during the period when fruit is ripening.

COMPLAINTS OF "FAST ONE"

It was persistent complaints about the rationing of sugar that hastened the demise of the OPA and resulted in the present increased allotment to domestic civilian users. But by increasing the yearly allotment the Government has not softened the bitterness arising out of the unpleasant fact that, whereas last summer there was an allowance of an extra 10 pounds for canning, this summer the housewife has been promised a coupon for only 10 pounds of sugar which must last to September 30. It is no wonder that complaints have arisen that the Government has put over a fast one on the home canners for the benefit of the hand-me-down products.

The complaints have come chiefly from the women of the country, largely farm or suburban, who were unable to get sugar for canning last year and, as a result, were compelled to spend high prices for ready-made jellies and preserves. Certainly the complaints that I have received were from those who were thrifty enough to do their own canning and had the means to do so—all except the sugar. Home canning ought to be encouraged. It not only means a lower cost of living, it makes for the well-being of the family. Moreover, there are those who think that home-made jellies and jams generally speaking, are to be preferred to those made in factories.

Restricting the home on sugar is wonderful for the canning factory. When the housewife cannot can her own fruit, she is compelled to buy the factory's product at an inflated price, and because the housewife cannot can her own fruit, there is more fruit available for the commercial canneries at a deflated price. Moreover, regardless of price, the suburbanite or the farmer who produces small quantities of fruits for his own use is not equipped to pick and market that fruit. So it simply rots on the ground.

DEFENSE OF RATIONING

In defense of its rationing of sugar, Agriculture says that there is only so much sugar and that the industrial users have been cut as well as everyone else. What they do not say is that industrial users are now employing more sirups, as they are equipped to do, as a substitute for sugar. The production of corn sirup has doubled; that of cane refiners' sirup is up eight times over prewar production. These are not rationed. And most of this increased production is going to industrial and commercial users of sugar. Further, there is no scarcity—at least such

a scarcity as we have been asked to believe. In fact, the Cuban sugar crop this year is expected to be nearly a million tons greater than last year.

The American housewives would be willing to adjust themselves to a scarcity in supply. The substance of their complaint is that the sugar-rationing program has been used to change the buying habits of the Nation to the profit of the industrial users of sugar. They maintain that they have been short-changed on sugar so as to be compelled to buy manufactured products at high prices instead of using their home canning and baking facilities.

They feel that had it not been for the determined forcing of home canners into the market for manufactured products, the prices would have fallen long ago.

Our Government can do curious things at times. And so can our businessmen. They are all for a competitive market, they are for competition and individual initiative—or pretend to be—except when the competition and the individual initiative are real.

Fruit and Vegetable Market News Division

EXTENSION OF REMARKS
OF
HON. JOSEPH R. BRYSON
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 28, 1947

Mr. BRYSON. Mr. Speaker, since 1915 the Fruit and Vegetable Market News Division of the United States Department of Agriculture has conducted a service for the benefit of growers and various trade groups concerned with the marketing of fruits and vegetables. At the present time this agency operates year-round offices in 22 of the larger terminal markets. In addition, throughout the course of a year approximately 40 seasonal field offices are operated during the active harvesting and marketing seasons in major producing areas. Through an interchange of information over the market news leased wire system these offices have kept growers, shippers, and other factors informed as to supplies, market conditions, and prices in important producing areas and in major terminal markets. This has made possible more effective distribution of the available supplies, so as to obtain the best returns. This system of daily reporting, with dissemination on a national basis, has also made it possible for growers and shippers to maintain a close check on returns being received.

An example of the seasonal field offices is the one which has been operated at Spartanburg, S. C., in my own district, for the past two summers during the peach season. Last year South Carolina topped all States in the shipment of fresh peaches, and Spartanburg County topped all counties in the Nation.

When South Carolina became a major peach-producing State producers and shippers realized they were at a disadvantage in not having complete market information available during the shipping season, so in response to urgent requests from growers and shippers in that area the Spartanburg office was opened in the summer of 1945. Last season the active mailing list of the Spartanburg office carried over 900 who received daily mailed reports. Most were South Carolina growers and shippers, although many reports were sent to distributors in terminal markets or producers in other nearby areas. The Spartanburg Herald and Spartanburg Journal and radio stations WSPA and WORD gave daily publicity to market reports furnished by the Spartanburg office. Through these various means of market news dissemination all interested parties were kept currently advised as to market conditions and prices in the South Carolina peach crop. I have been informed that the Department of Agriculture has received numerous favorable comments on the work done by this office at Spartanburg and I, myself, have received letters from the peach growers expressing their appreciation for the fine market news service furnished them by that office.

The cost to the Government of the Spartanburg office is slightly over $1,000 per season. The State of South Carolina, through the Clemson College extension service, cooperates to the extent of about $300. The Spartanburg office operates normally during a period of about 6 weeks. That office is of a type similar to about 80 percent of the seasonal offices and more than half of the terminal market offices, in that it is operated with one technical marketing specialist and one clerk. Because of the small personnel involved in the operation of such offices it is virtually impossible to reduce the cost of operation since the work cannot be handled by one individual. In view of this, any extensive reduction in funds could be absorbed only by the closing of certain offices, since the cost of operation has always been at a minimum level.

The important role played by the Spartanburg office is clearly indicated by the following statistics: Total rail shipments of peaches from South Carolina during the 1946 season were 9,396 carlots, as compared with 6,791 cars from Georgia and a United States total of 31,805 cars. In addition to rail movement, there was a fairly heavy truck movement from all the major peach-shipping areas. As compared with the 10-year average, the production of most States during the 1946 season was little changed. The one exception, however, was South Carolina, as this State's estimated production in 1946 was nearly three times as large as the 10-year average. No other State even doubled the production of the 10-year average period 1935–44. During the 1946 season South Carolina peaches were shipped to 33 States, the District of Columbia, Canada, and Cuba.

On the basis of statistics reported by the Bureau of Agricultural Economics, South Carolina has another large peach crop in prospect for the forthcoming season. The April 10 crop report shows the condition of the South Carolina peach crop on April 1 at 85 percent of normal, which is three points higher than last year.

In view of the indispensable service of the Market News Division to the farmers and fruit growers and the consumers throughout the Nation, it is hoped that this agency may be continued at its present level of operation.

Danger Signals for Agriculture

EXTENSION OF REMARKS
OF
HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 28, 1947

Mr. JUDD. Mr. Speaker, at the time when we are considering the agricultural appropriation bill for the next fiscal year it seems appropriate that we consider some basic factors underlying our agricultural economy which are disturbing because they can lead to serious trouble if ignored.

Under leave to extend my remarks, I include the following article by Chester D. Tripp, published in January 1947:

People are fairly complacent about the agricultural price situation. The well-being of the people is high, consumption is high, crops are bountiful, the world needs our food, and will for some time. In addition to this, a beneficent Government has guaranteed parity prices on 20 of our important crops. So why worry? Between an assured big demand, an assured adequate price, and an assured large consumption it would seem as though time might be put in to better advantage than trying to look for trouble. It is generally a thankless job to be a dike inspector when the water is low. The inhabitants are usually complacent about the condition of the dike under such circumstances. Experience tells us that a timely survey of some of the salient points in the dike that might develop points of weakness are often warranted.

A discussion of the agricultural situation, with this in mind, might be interesting. We have data covering a very long period of agricultural prices and, strange as it may seem, these data disclose devastating maladjustments in the agricultural price structure in the years following great wars. History accounts for these upsets in different ways. In the great upset after the Napoleonic War, the literature indicates that agricultural prices went to pieces because the expansion of world shipping opened up great new sources of supply. After the Civil War we experienced another upset, which the commentators of the day felt was due to the opening of the West, which brought in a superabundance of supplies. The record indicates that after a short waiting period agricultural prices were nearly cut in two after World War I. It seems more logical to simply say that all great wars interfere with production and distribution than to try to give some definite reason for the occurrence. War, as such, brings great numbers of people to the verge of starvation. As a result, prices and production are increased wherever possible. As the world returns to normalcy and production and distribution improve, the weight of competition weighs heavily on the artificial price structure created by the war. In each important war of which we have record the price of agricultural products increased enormously during the war and then fell precipitately a short time after the war.

We have lately finished another war, during which prices advanced enormously, thus completing the first lap of the cycle; in fact, ceilings, quotas, incentives in one form or another were tried, but to no avail. The price structure of agricultural products is higher today than it has ever been in the memory of man.

Under such conditions, it does not seem as though one was going far afield to look for trouble, or, to put it another way, to look for repetition of the standard pattern. One outstanding thing is the well-known

fact that consumption of agricultural products is one of the most inflexible factors in all our economy. Well-being can be increased substantially without any great change in quantity of consumption. Abundant means increases the demand for quality goods, but the demand for calories is relatively inflexible. A ditch digger may acquire a million dollars but he does not change his food consumption in proportion by so doing. We are obviously dealing with a rigidity in consumption, and, for this reason, it is interesting to note what drastic price changes are necessary to cut production.

Production of agricultural items is surprisingly stable. There is the time lag of a crop year involved in most production. Many crops, such as fruits, are planned years in advance: They have to be marketed regardless of price at the time of their maturity. With this in mind, it is interesting to see what a drastic drop in prices took place in 1920 and what a relatively small effect this had on production.

Again, the decline in prices that started in 1929, went on for several years before average production was cut as much as 10 percent. We further note that at the present time, the volume of agricultural production is almost at its high point and the price range is at a new high.

The per capita domestic consumption is now at the high figure for all time, and agricultural exports for the year are very high. If either of these factors should decline, even slightly, on the record we face a set of facts that might lead to disturbing results. There is no reason to believe that the export demand will stay at this high point unless we are prepared to give food away. For economic reasons, we are getting more cautious in our giving and time is working against us, as around the world production is slowly being re-established. As far as the domestic situation is concerned, our population is consuming about 16 percent more food per capita than it ever did before, and it is not likely to increase that amount greatly.

To be sure we have another bulwark back of the price structure, and that is the parity arrangements with the Government. Prices are now on an average of 124 percent of parity, and, in theory, prices could drop to 90 percent of the parity figure without unduly reducing the purchasing power of the agricultural areas. Many of our requirements are priced well above parity but some prices are beginning to recede so that great quantities of material might be tendered to the Government under the guaranty. As an illustration, the enormous corn crop is just on a parity point and any further drop in the corn price might load the Government with an enormous amount of corn, because, under the law, the Government stands ready to pay parity to the grower for his product. Corn, on the other hand, is largely consumed in producing beef cattle and hogs. Both cattle and hog prices are well above parity. If, however, there should be a drop in these prices below parity, the principal market for corn would rest with the Government. We would then immediately be faced with storage problems, or arrangements for further donations, or long-term sales that might weigh heavily on balancing the budget.

The law covering agricultural parity only deals with twenty commodities out of some hundred that are recognized on the commodity list. Among these unrecognized commodities are a number of important crops that are very important in certain agricultural areas and to large groups of the population. Take, for example, the citrus fruit situation. Citrus fruits have no parity. Yet, their culture is of paramount interest in Florida, Texas, and California. It has enjoyed 3 years of excellent prices which have encouraged intensive cultivation and substantial new plantings. Now, as the result of good crops and the backing up of demand, we face a surplus of supply. The price dropped from $40 a ton to about $10 a ton. This new price is unrewarding to the grower. Grapefruit juice, based on this price, is literally as cheap as spring water. It is quite a question whether this drop in price will increase consumption as much as 10 percent. This break in price is slowly filtering through to retail channels. Juice canners find that their inventory has seriously backed up on their shelves. A number of plants are closed because they do not dare face the commercial risks involved in further manufacturing and, as a result, a demoralization is taking hold in these fruit-raising territories which is beginning to show itself in the spending habits of these communities.

Another example of oversupply that has already come to the surface, is the potato situation. I have personally seen tens of thousands of bushels of graded and sacked potatoes going to waste in the fields because there is no place to store them nor a market to put them on. Yet, there certainly are many people in the big cities who are eating low-grade potatoes at prices fully up to the parity figure. Obviously, the Government is in an embarrassing position. If potatoes are offered at great discounts to consumers, the market of the whole industry would become demoralized. Literally, we are facing an economic waste that is reminiscent of the days in Brazil when coffee was used for firing boilers. Although weakness has broken out only in a few spots, we cannot lose sight of the fact that the situation has been bolstered by great exports and that domestic consumption is at the highest figure it has ever been. These factors are alarming in themselves. When taken into consideration in the long-time record, however, the pattern without exception shows agricultural price demoralization after every great war. One is warranted in stopping and thinking before the trouble even starts.

I am not predicting a demoralization of agricultural prices. I am supplying some facts and figures which to my mind are thoroughly disturbing. Our price structure is out of line with the rest of the world on many items. The rest of the world's production is beginning to increase again, and I think we should be mentally prepared for something of an upset in our exports. The laws governing parity prices may help for a minute but if these parity prices are too high to limit production, they only develop further complications such as added donations, or congested storage, or actual destruction of food. Parts of the world have gone through a period of 5 years without having enough to eat. We are not going into a period where there is too much to eat, but we may be facing a period where there is more than we can eat and more than the other fellow can pay for.

Agriculture is not an industry unto itself. Its well-being has profound psychological effects, in that the problems this industry faces in regard to prices may easily be reflected in the affairs of other economic groups.

CHESTER D. TRIPP.

The Late Reverend Edward T. Dunne

EXTENSION OF REMARKS

OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 28, 1947

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include herein the following inspiring eulogy in tribute to the exemplary piety of Rev. Father Edward T. Dunne, which was delivered by Rev. Father Cornelius Sherlock, diocesan superintendent of schools, Boston, at the funeral mass at St. Patrick's Church, South Lawrence, Mass., on Saturday, May 24, 1947:

"He that shall do and teach, he shall be called great in the kingdom of Heaven." Matthew 5: 19.

Right Reverend Monsignori, Reverend Fathers, Reverend Brothers and Sisters, relatives and friends of Father Dunne, the emotions that weigh upon our hearts this morning are many. Probably the most assertive is a feeling of loss that one so loved and so revered has left our earthly paths to walk the streets of another world. And so we do well to express our sympathy to one another and to pray that the pain of this bereavement may not be too great for our all too human hearts to bear. To Father Dunne's mother, and to his brothers and sisters we promise our prayers that God may lighten the burden of their sorrow and console them by their excellence of his now completed priestly life. To the priests with whom he lived and worked we express our sorrow for the loss they have sustained. We, the companions of his student days, who prepared with him for the life in God's vineyard, tell to each other our mutual sadness that one whom we admired and loved has left us. To the sisters and the children we hesitate to put in words our feelings for their great loss. They had too great a share of his interest and devoted care. To his friends, the faithful of Saint Patrick's, and that other multitude who knew and loved him at other times and in other places we extend our condolence at the loss of their priestly friend.

But if the thoughts of sympathy and sorrow seem to be uppermost in our minds they are not the most important truths of which we should be conscious. The Church, still mindful of the sadness of deserted friends, would remind us that death is really the vestibule of heaven, that, after all, Catholics are always preparing for their last day on earth as a time when the cares and heartaches, the trials and disappointments of life are shuffled off. She would drive home to our minds the fact that death is a gateway through which those who have served God well move into an eternity of endless, or infinite happiness. The truth is that Father Dunne, deep and intense as his love for us really is, would not return from the joys of Heaven. He would rather tell us that time is at most a passing instant and that, if we will but follow the commandments and counsels of our Lord, we will join him in his happiness in God's own good time. Laughter and tears have a way of being strangely mixed in this uneven life of ours but for Catholics, even in such deep sadness as this, the fact of our eternal destiny transcends our sorrow and make today rich in the reality of a priest's ineffable reward as he enters into the heavenly home an all-loving Father has prepared for him.

Father Dunne was on the point of completing his nineteenth year as a priest in the archdiocese of Boston. Actually he and I had arranged to have dinner together tomorrow evening to observe the anniversary of our ordination to review a little the 19 years that have passed and to plan ahead for priestly work in the future. But such plans are always, at most, tentative. Quite clearly, man proposes, but God disposes.

Ordained on the 25th of May 1928, Father Dunne was assigned to the parish in Ayer for the summer. When autumn came he was transferred to Saint Paul's in Wellesley where his long and deep friendship with Monsignor Daly began. Eight years in Wellesley were followed by a shorter assignment to the parish of the Immaculate Conception in Newburyport. He then came here

to Saint Patrick's to spend the last eight years of his life working again with Monsignor Daly, but now for the people of South Lawrence.

If he had a characteristic which stood out above all others, it was his intense devotion to children. In his earlier priesthood in Wellesley there was no parish school but there two important groups of young people found in him a zealous friend and prudent guide. It was there that he developed with great succees his work with Catholic Boy Scouts. I remember well the eagerness with which he outlined plans for his charges and the satisfaction he reflected with each succeeding achievement. This activity developed, in more recent years, into his extensive work for Scouting in this area. His interest and ability were widely recognized and, as you know, he served as commissioner for the Catholic Boy Scouts of Essex County.

He was concerned too, in those earlier years, with the problems of Catholic students in non-Catholic colleges and carried on, with great expenditure of time and energy a very successful program among the Catholic students at Wellesley College. From time to time in later years the evidence of the excellence of this work appeared in the letters he received from far places of the world, from former students to whom his guidance was still proving a compass in perplexity or an anchor in some stormy reach of life.

When he came here to South Lawrence the opportunity for which he seemed most fitted presented itself. Here was an excellent parish school. With the encouragement of his pastor and friend, he entered into school work with high purpose and unbounded energy. Despite the exactions of busy parish life he studiously prepared himself for school work. He became interested in every educational problem that appeared and left no stone unturned to help boys and girls in their quest for happiness. The Sisters came to know him as a generous, sound and realistic friend who worked tirelessly with them in every way that would assure success for the educational program. Their loss in him will not be easily forgotten.

Through all his activity there appeared a constantly reiterated philosophy that reduced itself to the irrefutable question, "What doth it profit a man if he gain the whole world and suffer the loss of his own soul." Teaching with him was to make children happy and in his scheme of things even temporal happiness and success must be so attained that it will lead his children inevitably to heaven.

I remember well a week we passed together in Maine in which much of our time was spent in studying some smaller forms of marine life in the great tide pools at the rocky edge of the sea. One day while we were wondering at the beautiful complexities and obvious purpose of some tiny organisms, he said, almost wistfully, "If we could only hold classes here on this magnificent coast, how much more effectively we could explain to children the power and wonder of God." That night he left for South Lawrence bringing back with him great water jars of sea life that his teachers, and later the children, might examine these marvelous creatures and understand more clearly some truths of science and envision more fully the power of God who created such wonders of the sea.

But he saw the growth of children in mind and soul as a problem much broader than the school and so it was that he took particular delight in his work with the Holy Family Sodality. "Children," he would say, "are so largely the products of their homes." He could say this with a natural logic for he himself illustrated in his life the wondrous influence of his own parents, parents whose teaching and example gave two priests to God and a daughter to His service. Through the mothers and future mothers of Lawrence he still worked valiantly for the welfare of children. The broader aspects of community life also claimed his attention. Non-Catholic and Catholic alike knew him as one concerned about community affairs. He worked willingly with any group that aimed at community improvement. The ultimate reason again was that his children would one day be adults in this community and his continuing love for children was a compelling force that made him work for an even better society in which they might live.

Father Dunne had no personal ambitions, no thirst for fame, no quest for honors. In fact, in regard to himself, he was singularly reticent. All he desired was the opportunity to work, to bring God to others in the mass and the sacraments, to teach, to teach others to use God's graces, to teach his boys and girls to be happy here and happy for eternity. He didn't seek, not even expect thanks for his work but like the exiled patriarch of Patmos sought "no greater grace than this, to see all his children walk in the way of truth."—3 John 1: 4.

We who are gathered here today cannot view this occasion as one of unalloyed sorrow. Ours is not a ceremony of farewell but rather one of brief separation from one whom we shall later join in unending heavenly joy. The sacrifice with which we mark his going is not an offering ending in death but rather a sacrifice that renews life, a life of the souls of men, a life that will never end. This moment is, in reality, a time of congratulation that one who served God well, beyond the usual measure of men, now faces our Lord to hear the ancient commendation: "Well done * * * enter into the joy of the Lord."

Father Dunne has been a doer of the word of God and a teacher of His truth. It is of such that the Lord said: "He that shall do and teach shall be called great in the kingdom of Heaven."—Matthew 5: 19.

Newsweek Presents Remarkable Survey—What Communists Are Up To: Intrigue and Infiltration

EXTENSION OF REMARKS

OF

HON. KARL E. MUNDT

OF SOUTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 28, 1947

Mr. MUNDT. Mr. Speaker, as a member of the House Committee on Un-American Activities I desire to call attention to an article from the June 2 issue of Newsweek magazine. This is indeed a remarkable and a noteworthy article. It is a comprehensive, carefully detailed analysis of Communist activities and influences in the United States. It names names, cites cases, and identifies the media relied upon by Red Fascists to spread the atheistic doctrine of communism. It should be read and thoughtfully studied by all Americans.

The article follows:

WHAT COMMUNISTS ARE UP TO: INTRIGUE AND INFILTRATION—ENEMY WITHIN THE GATES

In a Federal court in the Nation's Capital last week, a small wisp of a man named Carl Aldo Marbani stood with clenched hands and blanching face listening to the reading of the verdict on each of 11 charges against him. The charges intoned by the jury foreman, all involving concealment of Communist affiliations while in Government employ, were not new to the Italian-born Marbani; in the course of his 11-day trial he had heard them many times. But now the dread word "guilty" uttered after each and every one of them sent him white.

Small wonder that Marbani's conviction brought joy to the Department of Justice; although every high official in Washington has long known that Communist penetration into the Government has attained serious proportions, this trial was the first of its kind. To Attorney General Tom C. Clark, the door was wide open to press the administration's $25,000,000 program to eliminate Communists from the Federal pay roll.

How far? What not a few Americans asked was, If Marbani, a Communist Party member under the name of "Tony Whales," could insinuate himself into a wartime job in the highly secret Office of Strategic Services (he picked targets for the Doolittle raid on Tokyo) and could later enjoy a $7,175-a-year State Department position, how far had Communists been able to penetrate other phases of American life where surveillance of key figures could not begin to match the Government's screening of its employees?

To close students of the Communist conspiracy, like David Dubinsky, president of the International Ladies Garment Workers Union, "No organization in American life has been immune from Communist penetration. * * * Labor unions have been their special target * * * [but] obedient to centralized direction, Communists have bored within church bodies, educational institutions, women's clubs, scientific groups, and, believe it or not, businessmen's associations."

If most Americans, natively nonconspirational in the first place, found it difficult to believe that a small band of zealots, numbering not more than 70,000 party members and a half million or so fellow travelers, could wield the power of a potential "fifth column," it was not to be wondered at. Nevertheless, the evidence, if examined with reasonable patience, could not be denied.

1. FRONTS AND BACKERS

When the anti-Communist movement of the twenties was at its zenith, the party went underground. Today its tactic is different. Party members, blatant during the war, are making themselves inconspicuous, but are laboring more furiously than ever through fellow travelers and innocent liberals who have never grasped the fact that the Communist Party's policies and strategy are guided solely by Soviet interests.

Consequently, the Communists work through fronts—innocent-appearing outfits with idealistic-sounding names, organized for specific purposes. These groups often succeed in attracting many non-Communist liberals, and occasionally even stanch conservatives.

Often, the Communists move into already established liberal organizations and seize control. They did this with the American Labor Party in New York. The Communist-controlled ALP has been quite successful. It has elected one member to Congress, Representative VITO MARCANTONIO, and two New York City Councilmen, Michael Quill and Eugene Connolly, who work hand-in-glove with two councilmen elected on the Communist Party ticket, Benjamin Davis, Jr., and Robert Cacchione.

Change here for Moscow: The case of the Progressive Citizens of America is characteristic of the way Communists can infiltrate liberal organizations and make them soap boxes for Communist propaganda.

The Independent Voters Committee, later renamed the Independent Citizens Committee of the Arts, Sciences, and Professions, and the National Citizens Political Action Committee, now merged in the PCA, started out in 1944 for one purpose—to reelect Franklin D. Roosevelt. Although the Communist Party later openly boasted that it had done much to build up the Independent Citizens Committee, both the ICC and the NCPAC at

first were relatively straightforward New Deal outfits.

After the election, however, they started veering more and more from concern with domestic reform to propaganda for the Soviet Union. The change-over was complete by last December, when the merger into the PCA took place.

Jo Davidson is cochairman, but the real boss is Hannah Dorner, executive vice chairman. Miss Dorner denies that she is pro-Communist but she has traveled for years in pro-Communist circles. Among the PCA vice chairmen are Paul Robeson, Van Wyck Brooks, Lillian Hellman, and Clark Foreman—all of whom have been identified for years with Communist fronts.

Current PCA heroes are Henry A. Wallace and Senator CLAUDE PEPPER, of Florida, and the principal PCA activities consist of issuing manifestoes against the Truman doctrine and staging pro-Soviet rallies in Madison Square Garden, with all the carefully planned theatrics which once characterized the Nazi rallies at Nuremberg.

Other Communist-front organizations currently engaging in political activities include:

The National Committee to Win the Peace. This was organized in April 1946, with the blessings of two Senators, PEPPER and GLEN H. TAYLOR, of Idaho; 20 Representatives, and the NCPAC. It set up shop in New York, under control of the remnants of the American Peace Mobilization, which had broken up after Hitler attacked Russia. The national director is Abbott Simon, former member of the Young Communist League, who helped to found the American Peace Mobilization. Cochairmen are Marine Col. Evans F. Carlson and Paul Robeson. Robert W. Kenny, who recently was praised by Pravda, is a vice president. The organization devotes itself to attacking American foreign policy, but has grown less active since the Progressive Citizens of America was formed.

Civil Rights Congress: This was an official merger of the International Labor Defense, legal arm of the Communist Party, which Representative VITO MARCANTONIO, of New York, headed, and the National Federation for Constitutional Liberties, which the Communists organized after the American Civil Liberties Union voted to ban them. The group is currently engaged in defending Gerhart Eisler, the Soviet agent.

The National Veterans Committee: Communists were drafted into the Army like anyone else, so there are several thousand veterans in the party. Under the name of the National Veterans Committee, many recently went to Washington to demonstrate against the Truman doctrine.

Joint Anti-Fascist Refugee Committee: This organization gained considerable respectability during the war, harvesting the names of many good people who opposed nazism and fascism and wanted to help their victims. Since the war, however, it has been devoting its attentions to professional Communists, among them, Eisler.

The National Council of American-Soviet Friendship: Ever since the Communist Party was established, it has kept one front or another in operation to promote sympathy for the Soviet Government. Usually the principal sponsor has been Corliss Lamont. No front ever amounted to much until Russia became an ally during the war. Then, the National Council of American-Soviet Friendship suddenly blossomed with conservative, respectable names like those of Senators ARTHUR CAPPER and LEVERETT SALTONSTALL and Judge Learned Hand. Since the war, the council has driven away the conservatives, as well as many New Dealers such as ex-Secretary of the Interior Harold Ickes, by its constant attacks on the United States' foreign policy, and especially the Baruch plan for international atomic control.

2. INFILTRATION IN THE CIO

Paradoxically, the man who brought the Communist Party into the CIO and the man who shelters it there are both bitterly anti-Communist. Although John L. Lewis has always kept the door closed to Communists in his own union—the United Mine Workers of America—nevertheless, when he was starting the CIO he put Communists by the score on the organization's pay roll.

Lewis needed skilled organizers, and he didn't care where he found them. And when David Dubinsky, the nimble-witted president of the International Ladies Garment Workers Union, warned him that he was banking trouble, the massive Lewis, who towers over Dubinsky, haughtily rumbled:

"Dave, who gets the bird—the hunter or the dog?"

Years passed. Lewis's unyielding isolationism and his opposition to Franklin D. Roosevelt caused the mine leader and the CIO to part company. Adolf Hitler's double-cross of Joseph Stalin changed the Communists from isolationists and partisans of Lewis to war mongers and avowed enemies of their former favorite labor leader. Dubinsky met Lewis in Washington.

"John," he said, "who gets the bird—the hunter or the dog?"

Lewis confessed that Dubinsky had been right, and he, wrong. Once the Communists had been let into the CIO, it was almost impossible to get them out.

Under Philip Murray, numerous attempts to oust the Communists have been made. Not all the anti-Communists in the CIO are right-wingers. Some, like Walter Reuther, the youthful redhead who runs the United Auto Workers, are old-time Socialists. In spite of the newspaper headlines, they have failed to shake the Communist grip appreciably. A devout Catholic, who takes guidance from priests sympathetic to labor, Murray has consistently encouraged the anti-Communist bloc. But just as consistently, the CIO president has inconsistently kept them from taking drastic action.

In the heirarchy: Murray's right-hand man is still Lee Pressman, general counsel of the CIO, who follows the Communist Party line. The editor of the official CIO weekly, the CIO News, is still Len De Caux. An indication of whose orders De Caux follows and where his sympathies lie can be gained from the way he treats stories about Communists in the CIO. In the CIO News, the CIO resolution of last November decrying Communist Party activities was headlined: "CIO reaffirms Americanism." In the CIO publication, Steel Labor, which is run by Murray, the headline was: "CIO warns Communists: Don't meddle in unions."

The consequence is that Communists and fellow travelers now control CIO unions totaling 25 percent of the organization's membership of 5,600,000.

Murray's solicitude for the Communists springs from the fact that every serious attempt to oust them has materially weakened the CIO. When fellow traveler Morris Muster finally broke with the Communists and resigned as president of the United Furniture Workers of America, at the same time blasting the secret Communist Party rule, the union nearly disintegrated. Several locals quit and joined the AFL.

Similarly, the attempts of the Association of Catholic Trade Unionists to shake the Communist control of the United Electrical, Radio, and Machine Workers, and the Mine, Mill, and Smelter Workers have succeeded in weakening not the Communists but the unions themselves.

In all, there are now 15 CIO unions controlled by the Communists or fellow travelers:

United Electrical, Radio, and Machine Workers (membership, 600,000): Albert J. Fitzgerald is the president and non-Communist front man. The real power is wielded by Julius Emspak, general secretary-treasurer, and James J. Matles, organization director. Both are smart, able, tireless, and effective. And both have long records as fellow travelers. During the early thirties they were identified with the Trade Union Unity League, the Communist party's now-defunct dual trade-union movement. During the Hitler-Stalin pact, Emspak was listed on the letterhead of the American Peace Mobilization, the Communist Yanks-Aren't-Coming outfit, as national council member. As far back as 1933, the Communist Daily Worker quoted Matles: "Only the Communist party, as the party of the working class, represents the interests of the entire working population."

Mine, Mill, and Smelter Workers (membership, 125,000): The president is Maurice E. Travis, who succeeded party-liner Reid Robinson in March, when the latter was forced out by anti-Communists. Travis had previously been expelled from the United Steel Workers, Murray's own union, for spending union funds on Communist-party activities.

The Fur and Leather Workers (membership, 100,000): President Ben Gold is that rarity, an open Communist Party member.

National Maritime Union (membership, 100,000): After studiously following the Communist-party line for 10 years, President Joseph Curran, an ex-seaman himself, finally broke with the Communists. Curran claims there are only 500 party members in the NMU. Nevertheless, he admits that "107 of the 150 elected officials * * * are Communists."

Farm Equipment and Metal Workers (membership, 75,000): Grant W. Oakes is the rugged-faced, aggressive president of this union, which has no appreciable opposition to its consistent pro-Communist line.

Food, Tobacco, Agricultural, and Allied Workers (membership, 75,000): The president is Donald Henderson, onetime economics instructor at Rutgers and Columbia. Neither Henderson nor his union has ever wavered from the party line.

United Office and Professional Workers of America (membership, 50,000): Until recently, President Lewis Merrill was contributing editor of the Communist New Masses and taught at the Communist Jefferson School in New York. After the CIO's anti-Communist policy statement, he resigned both posts. However, when the Daily Worker attacked Merrill for this, his UOPWA immediately took pains to emphasize that it had not turned anti-Communist. Within the CIO, the UOPWA is considered so pro-Communist that office workers in the employ of the national organization, though clearly within the UOPWA's jurisdiction, nevertheless have formed their own independent union.

Transport Workers Union (membership, 50,000): This is the property of Michael J. Quill, who is also New York City councilman. The membership of the union is predominantly Catholic and predominantly of Irish extraction. Quill himself is that paradox: A practicing Catholic, he also follows the Communist Party line. After Germany attacked Russia, Quill had trouble in his union: His anti-British membership could not understand his switch to interventionism. This problem no longer bothers him.

American Communications Association (membership, 25,000): Joseph Selly is the Communist-line president of this union.

United Public Workers of America (membership, 50,000): The UPWA was formed in amalgamation of the State, County, and Municipal Workers and the Federal Workers of America. The president is Abram Flaxer, who had been president of the former; the secretary-treasurer is Eleanor Nelson, who had been president of the latter. Flaxer and Miss Nelson both are inveterate party-liners.

Characteristically, at its organizing convention, the union denounced all forms of imperialism—except the Russian.

United Furniture Workers of America (membership, 50,000): Since Munster's resignation as president, the Communists have made their grip on the union even tighter. Party-liner Morris Pizer is the president now.

Inland Boatmen's Union of the Pacific (membership 5,000), National Marine Cooks' and Stewards' Association (membership 10,000), International Union of Fishermen and Allied Workers of America (membership 10,000), and International Longshoremen's and Warehousemen's Union (membership 50,000): Harry Bridges is president of the longshoremen's union and dominates the other three west coast maritime organizations. A crafty, smooth operator, Bridges at one time also dominated the entire CIO on the west coast, but Murray stripped him of that power.

The Communist Party has devoted particular attention to waterfront unions. Although it has never been able to gain complete domination over American shipping, it nevertheless has always had grandiose ideas. The most recent was Bridges's plan for welding all longshoremen's and seamen's unions into one Committee for Maritime Unity. The plan foundered when Joseph Curran, realizing that it would push him into the background in his own union, broke with the Communists.

But, even without the Committee for Maritime Unity, the Communists have managed to gain control of many of the men who load and man the Nation's merchant ships. In the event of war, Bridges' longshoremen's union could tie up shipping on the west coast, while the National Maritime Union could cripple it seriously in the Atlantic. And Selly's American Communications Association, which mans ship radios, could disrupt American communications at sea. With Communists or fellow travelers dominating unions representing 25 percent of the CIO membership, the havoc they could inflict on industry generally in the opening weeks of a war would be difficult to calculate.

3. INROADS IN THE AFL

"We don't have any Communists in the American Federation of Labor," aging President William Green declared last September. The statement was only half true. The Communists have not been as successful in the AFL as they have in the CIO. Nevertheless, they and their fellow travelers do considerably influence several AFL unions:

The Brotherhood of Painters, Decorators, and Paperhangers: This is the only AFL union represented in the World Federation of Trade Unions, which the AFL itself refused to join because Russia dominates it. The majority of the brotherhood is non-Communist, but several of the officials are devoted party liners. The secretary-treasurer of the New York local is Louis Weinstock, an open member of the party. In the Midwest, the union is headed by Courtney D. Ward of Cleveland, who denies membership in the party but follows the party line.

The Conference of Studio Union: This consists of about 10 Hollywood locals. One of the leaders is Herbert F. Sorrell, who unquestionably is pro-Communist.

The Hotel and Restaurant Employees International Alliance: Here, again, the Communists have made inroads. The New York local, which has between 30,000 and 40,000 members, is controlled by them.

The Bakery and Confectionery Workers Union: The Communists are especialy strong in the New York and Chicago locals.

For years, the Communists have been openly dissatisfied with the small progress they have made in the AFL, as compared with their power in the CIO. According to J. Edgar Hoover, there recently has been agitation in the party to reorganize to influence the AFL.

Hoover's information: "A party functionary said it was imperative that 3,000 party members be infiltrated in the AFL without publicizing this fact."

4. MINORITY REPORT

The Communists have always paid especial attention to minority groups—Jews, Negroes, and immigrants—and for obvious reasons. Theoretically, they should be fertile ground for Communist propaganda. Many of them are extremely poor; many, like the Negroes, have long-standing grievances. The Jews, realizing that anti-Semitism exists in the United States and remembering always what happened in Germany, naturally are insecure. Moreover, since Hitler was anti-Red, the Communists can argue that anyone who denounces communism must be sympathetic to nazism. The assertion, is not precisely logical, nevertheless is occasionally effective.

The immigrants sometimes have sentimental memories of their homelands, and if those lands are now in the Soviet orbit, the Communists can attempt to convert the memories into attachment for Russia.

Foreign fronts: The most important pro-Communist group working among minorities, the American Committee for the Protection of Foreign Born, covers all minority groups except the Jews and Negroes. Among its major activities is protecting foreign-born Communists from deportation.

In addition, there are individual front groups for almost every foreign-language group: The American Slav Congress, which supports Russian grabs in eastern Europe; American Relief for Greek Democracy, meaning the guerrillas; and the American Committee for Yugoslav Relief, meaning Tito. The most recent front is the American Society for Cultural Relations With Italy, meaning the Italian Communists.

Among Negroes, the principal front is the National Negro Congress, whose Communist ties are so clear that President Philip Murray has forbidden CIO unions to affiliate with it. Others include the Council on African Affairs and the United Negro and Allied Veterans of America. None has made appreciable progress, and the Communists have therefore begun to move into the old-line National Association for the Advancement of Colored People.

The major Jewish organization is the American Jewish Labor Council, frequently confused with the militantly anti-Communist Jewish Labor Committee. Its principal accomplishment recently was in getting sober, extensive treatment in some unsuspecting newspapers of a report from a delegation which recently visited Poland. For members of a Communist-front group, the delegates reached a conclusion that was hardly surprising. They declared Poland was "democratic."

5. THE LINE IN THE CHURCHES

As practicing Marxists, the Communists naturally oppose all religion. As practical men, they keep as quiet as possible about it. Instead, they seek to work inside the churches; denying what Marx and Lenin constantly affirmed—that communism is the deadly enemy of religion—and representing themselves as striving for the same earthly, if not spiritual, goals as the church. They have made no progress whatever among Catholic priests, who actively fight them, and very little among Jewish rabbis. But they have enlisted several valuable allies in the Protestant churches:

Dr. Harry F. Ward, professor emeritus at Union Theological Seminary, has long been associated with communism. A one-time chairman of the American Civil Liberties Union, he resigned when the board voted to ban Communists. Ward frequently has spoken at Communist rallies in praise of the Soviet Union, and he lectures occasionally at the Red-sponsored Jefferson School.

Until recently, the Reverend Stephen H. Fritchman was director of the Unitarian Youth Activities and editor of the Christian Register, official Unitarian monthly. Constantly under fire on charges of using both positions to promote communism, he resigned from the former and 2 weeks ago was ousted from the latter. He has written for the New Masses, and sponsored no less than 22 pro-Soviet organizations, including the "Yanks Are Not Coming" movement and the National Council of American-Soviet Friendship.

The Reverend William Howard Melish is associate rector of the Protestant Episcopal Church of the Holy Trinity in Brooklyn. He is chairman of the National Council of American-Soviet Friendship. Melish has long denied being pro-Communist, but 2 years ago he wrote a eulogy of communism for the Churchman, an Episcopal magazine, which the Daily Worker reproduced in full.

The Protestant, despite its pretensions, is not affiliated with any official Protestant group, but its editor, Kenneth Leslie, nevertheless, has managed to attract the support of many prominent Protestant ministers, including the Reverend Louie D. Newton, president of the Southern Baptist Convention. Like the Communists, it turned overnight from isolationism to interventionism when Hitler attacked Russia. Currently it follows the party in support of Henry Wallace and in opposition to the Baruch plan for atomic control and to the Truman doctrine.

6. PARTY IN PRINT

The Communist Party is crowded with writers and would-be writers, second-raters mostly, but prolific, nevertheless, and from Communist presses flows an unending stream of newspapers, magazines, books, and pamphlets. Some are officially Communist, written by and for Communist Party members in the party's strange, multisyllabic jargon. Others are designed to gain mass circulation; consequently they sugar-coat their propaganda.

The principal official Communist publication is the Daily Worker (circulation 23,000) and its Sunday edition (circulation 67,000). In New York, which has an enormous Jewish population, the party also publishes the Yiddish-language daily, Freiheit (circulation 21,000). The weekly New Masses provides Communists with their major cultural fare; and Political Affairs, a monthly, contains theoretical articles for the heavier thinkers among the faithful.

The People's World, published in San Francisco, could be called the west-coast edition of the Daily Worker. The New World, published in Seattle, is not officially Communist. But as the mouthpiece of Hugh De Lacy, a party-liner and former University of Washington instructor, who once managed to get elected to Congress, its editorials can hardly be distinguished from those in the Worker itself.

A relatively new arrival in Detroit, the Michigan Herald clearly speaks for the party there. The Chicago Star is the Communist Party organ for that part of the Midwest. Its featured columnist is Howard Fast, of the New Masses staff.

Pocket propaganda: Easily the most successful of the publications which, though denying any connection with the party, nevertheless doggedly follow the party line, are In Fact and Reader's Scope. In Fact, whose circulation runs to around 176,000, is especially popular among professionals, including university professors. In four small pages, issued weekly, it purports to give the low-down on the news, which it maintains is kept from readers of the daily newspapers by corrupt, reactionary publishers.

George Seldes, who publishes In Fact, customarily replies to charges of being pro-Communist with loud denials and threats of suit for libel. Nevertheless his staff has invariably had Communists and fellow travelers

on it, and In Fact continues to echo faithfully the editorials in the Daily Worker.

Reader's Scope is published by Leverett Gleason, who also was publisher of the now-defunct party-line magazine Friday, and who founded Salute. Gleason no longer publishes Salute, which nevertheless still contains several Communists and fellow travelers in its stable of former Yank and Stars and Stripes writers. Among them are DeWitt Gilpin, well-known Communist editor and organizer; Len Zinberg, who has written for the Daily Worker; and James Dugan, formerly an editor of the New Masses.

Bait and dope: Reader's Scope attempts to compete with the Reader's Digest and, indeed, looks very much like it. Many of its articles could well appear in the Digest; they are light reading, devoid of political message. They are only bait.

Scattered among them are less frivolous articles. Each issue contains eight pages of so-called inside dope about Washington and world affairs, which invariably read like the month's output of Daily Worker editorials, boiled down and recast. And each issue also contains two or three pieces by Communist favorites. Reader's Scope, for example, reprinted Fast's "The American." It also reprinted excerpts from Elliott Roosevelt's "As He Saw It," which is the way the Communists happen to see it now.

The editor of Reader's Scope is party-liner E. A. Piller. Until recently the foreign editor was another party-liner, Johannes Steel. And Gleason, himself was recently accused in court of having at one time joined the Communist Party under the pseudonym of Alexander Lev.

The left-wingers have a favorite book club, the Book Find Club, which claims more than 75,000 subscribers. Among its policy-makers have been Isidor Schneider, avowed Communist and member of the New Masses staff, and another pro-Communist, Vivian Sharp.

The Book Find Club at times distributes the books of anti-Communists; for example Arthur M. Schlesinger Jr.'s Age of Jackson. But most of its selections are either the work of party members or else are on themes which chance to coincide with the party line of the moment. In February 1945 it listed some "close friends." They were: William Gropper, New Masses associate editor; Alfred Kreymborg, New Masses contributing editor; Howard Fast, New Masses associate editor; Henrietta Buckmaster, New Masses writer; E. Louise Mally, instructor at the Communist Jefferson School, and William Mandel, author of the pro-Soviet Guide to the Soviet Union.

Not all the fellow-traveling writers and editors work in pro-Communist organizations, however. Many are employed by reputable publishers and publications, where they occasionally manage to influence editorial policy. Daniel S. Gillmor, who helped Gleason found Friday, is now associate editor centering on development at the Survey Graphic. Richard O. Boyer writes for the New Yorker. Other prominent writers who have aided the Communists include Dashiell Hammett, Louis Adamic, Albert Maltz, Donald Ogden Stewart, Langston Hughes, Clifford Odets, Dorothy Parker, Lillian Hellman, and Ruth McKenney, who has been expelled from the party but still announces herself as pro-Communist.

In New York, center of the publishing business in the United States, the Communists have long controlled the Newspaper Guild, which has contracts with newspapers and magazines and claims a membership in the New York writing profession of 8,100.

7. IN BRIGHT LIGHTS

Just why so many Hollywood and Broadway celebrities have joined Communist fronts in recent years would be difficult to say. The fact remains, however, that many of the fronts now dazzle with their names. Some of the celebrities are clearly pro-Communist. Paul Robeson, the singer, for example, makes no secret of his sympathy for the party. Others, like Dashiell Hammett, the writer, are obviously not innocents either. Still others, however, appear merely to have been caught in the Communist swirl.

For the Communists, the value of the celebrities is hard to overestimate. Most of them know little or nothing about politics. But their mere presence on committees and at rallies is certain to attract other people. Among those persistently found in Communist fronts are Edward G. Robinson, Orson Welles, Norman Corwin, Fredric March, Canada Lee, Earl Robinson, Herman Shumlin, Olivia De Havilland, John Garfield, and Lionel Stander.

Although fellow travelers are numerous in Hollywood, they have not exercised as great an influence on the movies as they wish. Communists frequently have boasted that they were able to get a few propaganda lines in this or that production. On Broadway, however, the pro-Communist influence is greater. In writing for the stage, authors with leftiest sympathies can be more outspoken.

On the air: At one time or another, party liners and fellow travelers have managed to get on the radio as commentators. The party's two favorites, Johannes Steel and William S. Gailmor, recently lost their jobs, but J. Raymond Walsh, nimble-tongued research director of the Progressive Citizens of America, still broadcasts daily over station WMCA.

The major Communist attempt to spread propaganda by radio was balked when the Federal Communications Commission recently denied the application of the People's Radio Foundation for an FM station. The sponsors of the foundation included some of the best-known names in Communist and fellow-traveler circles: Frederick V. Field, wealthy backer of Communist enterprises; Norman Corwin; Howard Fast, novelist; William Grooper, cartoonist for the Communist press; Leverett Gleason, publisher of Reader's Scope; Rockwell Kent, artist; Max Yergan, secretary of the Communist-controlled Council on African Affairs; Charlie Chaplin; and A. A. Heller, Communist "angel."

TYPEWRITER FIGHTERS

There were Justice Department men at the first underground convention at which the Communist Party was organized in 1922, and the FBI has steadfastly kept an eye on its activities ever since. Department files bulge with data on individual Communists and fellow travelers, with reports on secret meetings, and even with recordings of secret conversations.

The Department has always preferred not to publicize its findings, because doing so would hamstring its work by warning the individuals that were being watched. But newspapermen and writers have not been under any such handicap. Five men stand out as relentless pioneers in the fight to expose Communist infiltration:

Isaac Don Levine: Dean of the anti-Communists, Levine served abroad for The Chicago Daily News and later, the Hearst newspapers. Among his books are: The Russian Revolution, The Man Lenin, The Road to Oblivion, and Red Smoke. Recently he started a new magazine, Plain Talk, a monthly devoted to baring Communist and other totalitarian activities.

Max Eastman: A onetime radical, Eastman was editor of The Masses during the First World War. He now is a roving editor of The Reader's Digest. His books include: Since Lenin Died, Leon Trotsky, Marxism: Is It Science, Stalin's Russia and the Crisis in Socialism, and The End of Socialism in Russia.

William Henry Chamberlin: A newspaperman since 1917, Chamberlin covered Russia and later the Far East for The Christian Science Monitor. He is the author of Soviet Russia, The Soviet Planned Economic Order, Russia's Iron Age, The Russian Revolution, and Collectivism—a False Utopia. He is now a columnist on The New Leader and a correspondent and columnist for The Wall Street Journal.

Eugene Lyons: After working for The Soviet Russia Pictorial and Tass, the official Soviet news agency, Lyons went to Moscow in 1928 as correspondent for the United Press. While there, he got the first interview with Stalin after the latter's rise to power. More recently Lyons has been editor of The American Mercury and Pageant. His books include: Moscow Carrousel, Assignment in Utopia, Stalin, Czar of All the Russias, and The Red Decade.

Frederick Woltman: Winner of the 1946 Pulitzer prize for reporting for his exposés of Communist-front activities. Woltman has been with the New York World-Telegram for 18 years. It was he who identified Gerhart Eisler as the mysterious Hans Berger, reputed head of Communist activities in the United States. His disclosure of the pro-Soviet propaganda of the National Council of American-Soviet Friendship led to mass resignations from the organization.

Communism in America today is under the heaviest fire it has ever experienced. The Truman doctrine for containment of Soviet expansion, the Government's anti-Communist domestic policy, and the movement of American liberals to drive Communists out of their ranks have stirred the public to a new awareness. Compared with the hysterical anti-Bolshevik drive which followed the First World War, the present movement is a far more realistic and intelligent effort to combat Communists. The main gimmick: The possibility that the public—as it did after the last war—may weary of the anti-Communist fight, leaving the door open once more to the masters of political and economic infiltration.

Department of Agriculture Appropriations, 1948

EXTENSION OF REMARKS

OF

HON. PETE JARMAN

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 28, 1947

Mr. JARMAN. Mr. Speaker, hailing from an agricultural section as I do and believing in the agricultural program established by this Congress, I naturally regret the attempted meat-ax destruction of that program by the Republican members of the Appropriations Committee. I am confident that no Democratic member voted for such destruction.

It is deplorable for agricultural research to stop and equally so for farmers to lose the protection they have been so justly receiving as the result of section 32 funds. This morning one of my Republican friends referred to these funds as having been a gravy train for certain segments of agriculture. Gravy train or not, whether desirable or not, whether worth while or not, having been set aside for this purpose by this Congress, the Republican-controlled Appropriations Committee has no right to unconscionably withdraw these funds as has occurred.

In fact, regrettable though it is for the progress of agriculture to be hampered and the production of food and

fiber to be reduced, as will result from this Republican attack, I am possibly even more disturbed by the attempt to cause this Congress to fail to meet its obligations—to carry out its promises. I am a great believer in integrity and straight shooting. I never indulge in a commitment unless reasonably sure that I can carry it out. In line with this policy, I rarely accept invitations to speak immediately, but consider them carefully before replying. When I do reply that I will be present, such will be the case unless something very unforseen occurs. Similarly I never indulge in promises relative to patronage until ready to make the appointment. By the same token, I expect others to keep their promises to me. It is no more necessary, however, for individuals to keep their commitments than for nations. Commitments such as these can be kept by our Nation only through action of this body.

As I understand it, practically all the funds this Republican attack attempts to eliminate have been directly authorized or promised to agriculture by this Congress. For instance, the AAA program. Funds for it will be by this act reduced from $300,000,000 to $165,000,000. The gentleman from Mississippi [Mr. WHITTEN] proved unequivocably yesterday that this $300,000,000 was very definitely authorized last year in plain language when the motion from the gentleman from Georgia [Mr. TARVER] to do so was approved 62 to 19. That, my colleagues, was a promise to the farmers of America that $300,000,000 would be available to them for soil improvement, provided they spent $600,000,000 of their own money for this purpose. They have had every reason to take this Congress at its word—spend this money of their own and earn this $135,000,000 which is eliminated. They have done so, and now are we to say to them by permitting this action to stand, "Your confidence in the parliament of your country is unjustified. It is true that when another party was in control you were definitely promised $300,000,000, provided you earned it. It is true that you have earned it. Unfortunately, however, the Republican Party has gained control of the Congress—a party which is so determined to reduce the tax burden of the rich that it is willing to violate the pledge of the Congress to you and attempt to destroy, not only your well-established farm program but your confidence in the parliament of your country"?

For my part, Mr. Speaker, I do not intend to so betray my country by violating its pledged word. Consequently, I shall vote to restore not only this item, but every other one which has been promised to the farmers of America. I implore you honest, fair-minded ladies and gentlemen to do likewise.

Let it be understood by all that the Democrats are not responsible for whatever loss of confidence may result. On the other hand, it is directly traceable to the determination of our Republican Members to cut appropriations, in order to try to make a showing by indulging in sufficient false economy to save funds for tax reduction. Does anyone doubt that they particularly have in mind the reduction of the taxes of those who hold the huge money bags and indulge in the tremendous contributions to Republican campaign funds? For this we must pay in school-lunch funds, farm tenant funds; yes, in all these funds so worthwhile to the future of our country. This is one of the results of Republican control of the Congress.

Department of Agriculture Appropriations, 1948

EXTENSION OF REMARKS
OF
HON. WALTER K. GRANGER
OF UTAH
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 28, 1947

Mr. GRANGER. Mr. Speaker, we folks in Utah are always interested in any legislation or appropriation that in any way affects the agriculture of our State. So the recent appropriation bill for the Department of Agriculture, as recommended by the Appropriations Committee of the House of Representatives is of particular interest in Utah.

One of the important items in that bill is the provision for funds to carry on the agricultural-conservation program, administered by local elected farmer-committeemen in our State and in all the other States of the country.

The agricultural-conservation program is the program under which the majority of farms and ranches in Utah have carried on soil- and water-conservation practices. These practices have included such things as revision of irrigation systems, leveling of land for irrigation, improved grazing practices on the range, development of range stockwater, and many other similar practices to maintain and improve the productivity of our agriculture.

I want to point out, in this talk, three very serious ways in which the program will be affected if the appropriations bill is finally enacted in the form reported by the House Appropriations Committee. These ways are: First, funds for this year's program would be cut about in half—and I shall show how this cut would affect the 1947 farm program as it operates in Utah; second, the program would be completely eliminated after 1947; and third, funds for administration are cut so low that it would just about wipe out the farmer-committeemen system of administering the triple-A conservation program.

Let us take these points up, one by one:

First. Funds for the 1947 program of "conservation and use" would be cut about in half. The budget request for the program was almost $302,000,000; the committee report recommends an appropriation of around $166,000,000. Results of such a reduction would be immediate.

Farmers feel that they have been working under a definite promise in carrying out 1947 conservation practices. Since farmers work with the season, the program year starts around January, and by this time of the year many farmers have already under way or have completed some program practices. It, therefore, has been customary for the appropriations acts to include, each year, first, appropriations for the program already in operation; and, second, authorization for a conservation program to be developed for the next year within the limits of a specified amount of funds.

When the appropriation act for the Department of Agriculture was enacted last June it included the following language:

Provided further, That such amount shall be available for salaries and other administrative expenses in connection with the formulation and administration of the 1947 programs (amounting to $300,000,000, including administration) of soil-building practices and soil- and water-conservation practices, under the act of February 29, 1936, as amended, and programs under the Agricultural Adjustment Act of 1938, as amended.

The situation was clearly explained to the Congress, and the Members were urged to consider most carefully whether or not they wanted to authorize the full amount of $300,000,000 for the crop year 1947. They were asked to decide at that time whether they wanted to reduce the amount of the authorization, and not to wait until a year later, after plans of the Department and of farmers had already been completed and in many cases put into operation.

The authorization was not rejected. It was not reduced. Instead the amount of $300,000,000 was approved by an overwhelming majority. And the Republican Party a year ago was not deprived of its vote—Members could then, as now, express their opinions on bills and vote as they saw fit. It is easy to understand why farmers feel that they have been working for 6 months or more under a definite promise from the Government in carrying out 1947 conservation practices.

The proposed reduction in the appropriation for 1947 would—theoretically—make funds available for payments of about 55 cents on the dollar of what farmers thought was a commitment. But actually it would be almost impossible to work out payments on any such average basis.

For one thing, many farmers have already completed conservation practices for this year. With an appropriation of the size reported to the House, two courses of action would be possible: First, to make payments for practices already completed—which would be very unfair because it would penalize those farmers who intended carrying out seasonal practices which must be accomplished later in the year; or, second, to try to collect from farmers part of the assistance they have already received, and this no doubt would mean that many farmers would be put on the debt register of the Government. That would be only the beginning of many serious difficulties.

Now, how would this proposed reduction of funds affect the operation of the agricultural conservation program in our own State?

The cut in ACP funds would reduce Utah's intended allocation for 1947 from $1,221,000 to approximately $610,500, as nearly as present estimates can be made.

If farmers who have not already carried out their plans for conservation practices were to receive any benefit from the program, under the proposed cut, rates of payment would have to be reduced for individual practices in order to spread the available funds thinly over all the practices, both completed and planned.

In Utah the average size of farms run considerably under the average of Western States as a whole. Income is resultingly smaller and conservation payments even more important as an incentive and an aid to farmers in carrying out measures to conserve and improve their soil resources.

Because of favorable weather and early announcement of the 1947 agricultural conservation program—made possible by the congressional authorization last year of the $300,000,000 program this year—conservation work in Utah is considerably ahead of preceding years. Except for practices which can be performed either in the spring or fall—such as leveling, reorganization of irrigation systems, and construction of livestock water developments which had been planned by operators for this fall—conservation practices in Utah are started, and many are completed. Nontechnical assistance to operators by county office employees in laying out construction practices has expanded a great deal in Utah this spring and has been an important factor in the progress already made with this year's program.

An estimated 6,000 Utah farmers have indicated they would apply superphosphate fertilizer to their land under provisions of the 1947 program, which allows an ACP payment covering approximately 70 percent of the cost of the fertilizer when applied to such soil-building crops as legumes and grasses.

The average farmer in Utah will apply two tons of superphosphate under provisions of the program, which in 1947 would cost a total of $58.20. The 1947 program promised him an ACP practice payment of $36 for the two tons. On the basis of the recommended reduction in ACP funds, he would get only $18 in program payments, and his two tons of superphosphate will now cost him $40 of his own money, nearly twice as much as the $22 it would have cost him under the authorized program.

Since practically all of this phosphate has been applied, and much of it was bought under the purchase-order plan, the average Utah farmer would have to pay back about $20 to his conservation association to make up the reduction in his payment, or else he would be put on a register of indebtedness to pay back the amount later. It is safe to assume that much of the superphosphate not obtained under the purchase-order plan and not yet applied would then go on soil-depleting crops, and the conservation aims of the phosphate practice would go "by the board" as a result of the low reimbursement made available under the proposed reduced appropriations.

Irrigation is important in Utah, and the Agricultural Conservation Program has been extremely helpful to irrigation farmers in reorganizing their systems of irrigation so as to conserve water and increase the production from their land. Now, how would the reduced appropriations affect this type of farmer? Under the original $300,000,000 authorization, a farmer with 10 acres of land to level would plan on a total cost of $300, of which $80 would be reimbursed by his ACP payment. His own contribution would amount to $220. With the reduced appropriation, he could expect a practice payment of only $40, increasing his own expense to $260 for the project.

In some cases where the farmer has had the work done by contract, a purchase order similar to that used in the phosphate program has already been issued to the earth-moving contractor. If the appropriations cut stands, it will be necessary for the farmer to pay out additional cash to make up for the reduction in payment or else be placed on the register of indebtedness.

Much of the earth moving is being done by enterprising contractors, many of them ex-GI's, who have bought expensive equipment to do this work adequately on the basis of the encouragement the agricultural conservation program gave to such work. The Department of Agriculture has already been forced by the implications of the Appropriations Committee's report to suspend all purchase orders outstanding for earth-moving work.

If the reduced appropriations stand, these contractors will find much of their business "gone with the wind."

How about our Utah rancher? How would reduced appropriations for the 1947 program affect him? Here's how:

A Utah rancher planning to construct a 1,200 cubic-yard stock-water dam to improve the distribution of grazing on his ranch up to now has expected a $120 ACP payment to help him with the estimated total cost of $240. Under the recommended reduction in appropriations, the ACP payment would be reduced to $60 and the farmer's contribution increased to $180.

This brings me to point 2 in summarizing the ways the cuts in funds recommended by the House Appropriations Committee would affect the farmers' conservation program:

The second way a reduction in the appropriation for the agricultural conservation program would affect farmers would be that the program would be completely eliminated after 1947.

The conservation practices which are coordinated and financed under the ACP program have been developed and approved through years of experimental and educational work by State and Federal agricultural agencies. The gains made under the program toward preventing depletion of the Nation's soil fertility would in many cases be completely nullified, because farmers could not afford to do themselves anything like what needs to be done.

And very definite gains have been made. Proof of this statement is on all sides. The change in the Dust Bowl alone has been almost miraculous—within the last 10 years it has been transformed from a desertlike, arid region of heaped-up mounds of gray dust to a lush, green, fertile area.

The third result of reduced appropriations for the triple-A program would be the wiping out of the elected farmer-committeeman system, which has a vital part in administering the program.

The budget request was for about $9,000,000 for State and national administrative expenses in carrying out the program; the House committee has cut this $9,000,000 figure down to $1,950,000. The budget request was for around $24,000,000 for county administrative expenses. The House committee has cut this figure down almost half—to about $13,000,000.

These local committees, elected in a nonpartisan way by their fellow farmers, have been generally acclaimed as an example of democratic government at its best. They insure that the farm programs shall be workable and adapted to the needs of the country. They do this by giving farmers themselves a direct voice in formulating and in administering the programs.

The farmer committees provide a direct chain of communication between Government and producers—without this direct means of reaching individual farmers, the Nation would have experienced great difficulty in translating national war-production needs into individual farm terms. Without this direct means of reaching farmers, the country could easily lapse into the unfortunate conditions of the early thirties—where surpluses of certain crops became entirely unmanageable because farmers had no way of knowing how much national markets would take.

Of course, the only reason why a congressional committee dares to suggest the elimination of a program which reaches down to every farm into the Nation is that, on the whole, the farm economy is just now on a fairly even keel. But I wonder how many people realize the part the national farm program plays in keeping the farm and national economy stable? Remove the farmers' means of cooperating to serve the Nation's present needs and to preserve its future soil fertility, and conditions might soon revert to those of the disastrous days of every farmer for himself.

The committees have been responsible, not only for administering the conservation programs, but for many other programs made available to farmers by the Congress—commodity loans, production goals, surplus removal, distribution, and others.

Loss of this administrative machinery would seriously weaken the price-support program, which was largely expanded for the war and postwar periods in order to tide farmers over their difficult transition from war to peacetime production.

Since conservation practices both protect the Nation's soil resources and insure its food supply, the public has an interest and a responsibility in the improvements which farmers make on the land which they in effect hold in trust for future generations.

And besides the direct investment aspects, expenditures of public funds for assistance with conservation practices constitute an incentive to operators to carry out practices as an evidence of

public interest and thus encourage operators to perform practices which they otherwise would never start. If payment rates were reduced by half, as it is estimated the recommended appropriation reduction could require, much of the incentive would be removed, and conservation practices can be expected to fall off markedly.

Department of Agriculture Appropriations, 1948

EXTENSION OF REMARKS
OF
HON. WESLEY A. D'EWART
OF MONTANA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 28, 1947

Mr. D'EWART. Mr. Speaker, I am disturbed in regard to the amount of $5,300,000 appropriated for forest highways on page 44 of the agricultural appropriation bill, as it does not adequately provide for absolutely necessary connecting links or sections of our Federal highway program that are within national forests.

The Congress has authorized for this purpose for each of the three postwar years $25,000,000. Last year $4,500,000 was appropriated under this authorization, and $9,000,000 was appropriated under earlier authorizations.

Under this bill we propose to appropriate $5,300,000 for forest highways, which under the rule generally followed would make available for these necessary connecting links in the State of Montana just $450,000. This would limit construction to 1 project, and there are 10 projects planned for the season.

There are no frozen funds or former appropriations available to add to the $5,300,000. We, therefore, have less than half available for this year's construction program of what we had last year.

I realize the necessity for economy and am in full accord with the program, but I would invite the attention of this committee to the fact that these funds are used on short stretches of highway within national forests, to connect Federal-aid highways that come up to the boundaries of the national forests. Ordinarily these stretches of road are in high mountain country, where a bad road is exceedingly dangerous. It would therefore seem to me, even in view of the high cost of construction, that some increase should be made in this particular appropriation. I realize that the Committee cut this fund to the present figure because of lack of materials and labor and also because of the exceedingly high cost of construction. I believe that wherever possible construction should be postponed until more can be had for a construction dollar. However, in this instance it appears to me that an addition to the $5,300,000 granted in spite of the above consideration would be justified.

I sincerely hope this committee can see its way clear to grant a raise in this appropriation.

Department of Agriculture Appropriations, 1948

EXTENSION OF REMARKS
OF
HON. J. M. COMBS
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 28, 1947

Mr. COMBS. Mr. Speaker, the amendment which has been offered to raise the appropriation for REA to $250,000,000 merely proposes to put back the $25,000,000 which the Appropriations Committee cut out of the President's budget estimate. I want to call your attention to the testimony of the Administrator, Mr. Claude R. Wickard, as shown in the printed proceedings of the hearing on this bill, wherein he testified that loan applications had far exceeded available funds; that the backlog of applications on June 30 of this year are expected to be about $270,000,000. This, he states, reflects the strong demand there is for electric power by millions of our rural population. He says further that—

We regard the request for $250,000,000—

The amount approved by the Bureau of the Budget—

as the minimum amount necessary to enable borrowers to enter into the contractual obligations for continuing their progress in extending this essential service to rural people in the most orderly and economical manner.

The simple fact is that about 2,500,000 rural homes of this Nation are without electric service. I know of no program fostered by this Government which has brought more benefit to the rural people and the Nation than the rural electric program. It enables the farmers and the rural dwellers to modernize their homes, to have electric lights, water systems, and the small power machines that lighten the load of the farm work and render their farms more productive. It enables the housewife on the farm to have her electric washer, running water in the house, and electric refrigerator and the other conveniences which we have come to consider as essential to the standard of living of the people of our country.

The enormous backlog of applications for loans evidences the interest of the rural people of America in getting the blessings of electric service. Down in my own district I have attended a number of the stockholders meetings of the rural electric co-ops which serve the 11 counties of our district. I must confess that I was amazed to see the interest of those people and the time and effort, and I may say the intelligence, which they put into making this great program operate. These subscribers for electric service read their own meters, keep watch upon their electric lines, and report to their central office the locations of breaks in the lines. The boards of directors serve without pay and, in short, they are helping themselves to the great modern conveniences of electricity. It is in this way alone that they can bring this service to the sparsely settled rural areas at a cost they can afford.

In traveling over our district I have been amazed at the development rural electrification has brought to the rural areas of deep east Texas. Along a highway in the northern section of our district last summer I counted 27 modern country homes built within the space of about 15 miles within the last 4 or 5 years, every one of them equipped with electric service and the modern conveniences that go with it. Rural electrification has brought about a back-to-the-farm movement not thought possible a few years ago. The reason is simple. With the conveniences that electricity provides the farm home becomes as comfortable, or in many respects more comfortable, than the city home. With modern highways and rural mail delivery, plus the conveniences of electricity, country life is made truly attractive, and the longing of our people to get back to the soil is drawing many thousands of them back on the farm.

These people are the real independent Americans—the very backbone of the independence and intiative that we love to feel is characteristic of all Americans.

Yet, the cut in the appropriations for this great work will prevent thousands of the rural people of our Nation getting the electric service they so much desire. I cannot understand the attitude of the Appropriations Committee in making this cut. It is true we need economies in Government spending, but how on earth can we of the Congress justify this refusal to make the loans that our farm people need, and which will be fully repaid, when we in the same Congress vote many millions of dollars of loans to foreign countries—many of which loans may never be repaid? It is true we are fighting a battle of survival of democratic institutions all over the world, and I, along with the majority of you, have supported that program, and intend to continue to support it, but I am saying to you that the development of our own country should be our first concern. Until recent years our farm people have had mighty little consideration from our Government. In fact, I know of no part of our population which has asked less and deserved more. I do think this amendment ought to be adopted and the farm people of America given the consideration they are so justly entitled to receive at the hands of the Congress.

Department of Agriculture Appropriations, 1948

EXTENSION OF REMARKS
OF
HON. A. L. MILLER
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 28, 1947

Mr. MILLER of Nebraska. Mr. Speaker, the farmers in my district are interested primarily in the price they will get for the products they raise, and in the price they must pay for the machinery and other things they must buy.

It does seem that this Congress should establish a parity or support price on all

agricultural products which will guarantee the farmer a fair and equitable return for the products he produces. Farmers have a real stake in our Nation's financial security. I firmly believe the prosperity of our Nation depends upon the well-being of agriculture.

The farmers are not interested in building up a huge bureaucratic Agriculture Department. At present, its employees number more than 70,000. When J. Sterling Morton, of Nebraska, was Secretary of Agriculture, the employees were less than 1,000 and the budget $3,000,000. Today, the request from the Department amounts to more than $1,000,000,000.

I have received a number of wires relative to the cut given REA. I have always been a stanch supporter of the extension of REA. I do find that the bill authorizes loans up to $225,000,000 for rural electrification for the next fiscal year. Instead of borrowing from the RFC as at present, after June 30, 1947, these loans will come directly from the United States Treasury. It would seem that borrowing directly from the Treasury will not only save three-fourths of 1 percent interest now paid to RFC, but will eliminate red tape necessary by going through another agency. Reductions of $1,550,000 for administrative expenses should reduce the number of field men and inspectors. I am certain this Congress will do nothing to cripple the normal expansion of REA.

The REA will have on hand by July 1 some $550,000,000, of which $325,000,000 has been allocated, but because there is a scarcity of transformers, wire, and other equipment it has not been possible to energize homes desiring electricity.

Moneys lent to these REA districts is being paid back with interest. It is a good investment and so different from the billions of dollars in loans and gifts to foreign countries, much of which will never be returned.

In looking over the bill, I feel that there are some places where further cuts in personnel could and should be made. There just seems to be too many on the pay roll in the Department of Agriculture. I expect to support those amendments which will further reduce this top-heavy pay roll.

In general, the Agriculture bill as reported, calling for $831,000,000 for 1 year, seems to meet the needs of agriculture. The committee has given it careful consideration. I expect to support the committee amendments and the bill.

The Challenge to Alabama Women

EXTENSION OF REMARKS
OF
HON. LISTER HILL
OF ALABAMA
IN THE SENATE OF THE UNITED STATES
Thursday, May 29 (legislative day of Monday, April 21), 1947

Mr. HILL. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address which I prepared for delivery before the Alabama Federation of Women's Clubs, Mobile, Ala., May 8, 1947. Because of important business before the Senate I was unable to be present, and in my absence the address was delivered for me by the Hon. Albert J. Tully, United States District Attorney for the Southern District of Alabama.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

From the beginning men have said that "woman's place is in the home."

To the honor and credit of American women, it may be said that they have never accepted the idea that their only mission was in the home.

Woman's place is in the midst of affairs. Whether housewife, businesswoman, or professional worker—she must take her place as an active citizen.

During the 27 years that women have been able to take part directly in political affairs, through the ballot, they have taken the lead in initiating and supporting progressive laws.

Among one of their earliest major achievements was the Sheppard-Towner Act for the "public protection of maternity and infancy," which halted the disgraceful death toll of mothers and babies.

Theirs was the major influence in the enactment of child-labor laws to stop exploitation of children in factories; food and drug laws to protect the consumer; laws to provide decent hours of work for women in industry; development of the merit system in city, State, and Federal service; and the establishment of a social-security system.

The women of Alabama have been a prime influence in helping Alabama, among the States, blaze the trail in child-welfare work and in carrying the public-health service to every county in Alabama. Under the leadership of Julia Tutwiler, Alabama was in the vanguard in providing coeducation of men and women in Alabama schools and colleges.

This troubled world needs more than ever today the enlightened and active participation of women in public affairs.

Many of the problems we Alabamians face today begin with our children. They involve the education, the health, and the recreation of the child; the house and the home he knows. Together they fashion the kind of world the child lives in. And out of their pattern emerges the child's character and his preparation for life.

What of the education of our children? Today education in America is at a crisis. Thousands of teachers have left the schoolroom. A distinguished educator, after a Nation-wide survey for the New York Times, declares that "although the schools of the United States did not suffer a single air raid during the war, they are being wrecked as surely as though they had been blasted by heavy bombers."

We know how critical conditions are in Alabama schools. Classrooms are terribly overcrowded. Equipment in many schools is old, dilapidated and inadequate. There are still about 1,400 1-room schoolhouses in use in the State. The average salary for Alabama school teachers is now $1,300 a year. Janitors and charwomen in public buildings are paid more. Is it surprising that one-third of the State's teachers hold only emergency certificates and are not properly trained and prepared for their work?

What this means is that the children of Alabama are being denied their American birthright. They are being denied that education which will best help them grow up to be good citizens and earn a decent living.

Poorly educated American children are the whole country's problem. The Federal Government must share the responsibility to equalize educational opportunity. But persuading the Federal Government to accept this responsibility is a long, hard struggle—in the face of powerful opposition from many forces over this Nation.

As we press the fight for Federal aid to education, we remember the 72-year battle for woman's suffrage, the long struggle to get children out of the factories, and many other weary struggles for social progress.

We have come far in the fight from the days when even many educators did not see the need or the fundamental justice of Federal aid for education. I shall continue the fight with every power at my command. Tonight the cause of education calls to you to give your active, your militant support to Federal aid, and also make certain that the State fully meets its prime responsibility for public education and do all it can to give our children the opportunity for an adequate education.

We know that a nation can be strong only if its people are healthy.

Alabama, we are proud to say, is far ahead of many of its southern neighbors in its public-health service. But much remains to be done. The experience of the selective service in wartime is a sharp reminder of the job ahead. Two out of every five of Alabama's young men were rejected as unfit for military service.

Health protection must start with the child. Yet thousands of Alabama children have physical defects—faulty vision or hearing or teeth—that can be corrected.

Child health can be most efficiently and economically guarded through programs integrated with our schools. The weakness of such programs today is that they are inadequately financed and provide only casual and infrequent checks upon the child's physical condition.

The Federal Government has recognized the efficiency and economy of coordinating education and health in the school-lunch program. I am happy to tell you that only a few days ago we appropriated in Congress the necessary additional funds to carry on the program.

The lack of medical facilities in Alabama is indeed disturbing. The State has a serious shortage of doctors, dentists, and nurses. You and I know too well that Alabama does not have nearly enough hospitals and health centers to give our people adequate care. This is especially true in the rural areas, where 29 counties have no registered hospital.

We can have doctors, dentists, and nurses only as we have hospitals and health centers. We are gratified that more hospitals and health centers are being planned under the Hospital Construction and Survey Act passed by Congress last year, which I had the honor of sponsoring. This act provides that the Federal Government will pay one-third of the cost of each hospital and health center constructed, if the remaining two-thirds is provided from other public or from private sources. Under the act, Alabama will get some $15,000,000 of Federal funds over the 5-year period, which in proportion to population is approximately twice as much as the wealthier States will get.

The Federal Government is ready to give this aid, but it is up to us as Alabamians to make certain that Alabama provides her share of the money so that we can go forward with the construction of hospitals and health centers in our State.

Alabama cannot ignore juvenile delinquency and its alarming increase throughout the country.

The vast majority of delinquent children come from poor and underprivileged families—where the child often does not have proper food and clothing or decent housing, where the economic position of the entire family is so insecure that the child feels insecure and turns his resentment first against more fortunate children and then against society.

Government must not contribute to delinquency by failure to meet its responsibil-

ity. I want you to know that Senator JOHN SPARKMAN and I have introduced in the Senate a bill which will substantially increase Federal aid to State and local welfare departments for dependent children in low-income States such as Alabama.

Slums and substandard housing are breeding grounds for delinquency. The Federal Government and certainly some of the local governments are derelict today in their failure to meet the obligation to assure low-cost housing.

With schools, health and recreation programs, and decent housing, we can wipe out the causes of delinquency and build a strong, healthy, intelligent American youth.

We cannot quarantine delinquency. The virus can reach to your child and my child. If we do not move now to correct the economic and social conditions which breed juvenile delinquency, our State and our Nation will pay a tragic price in the years ahead.

Alabama needs your help—as individuals and as members of one of the State's most active and influential organizations—in striving to meet her problems. But above and beyond your service to Alabama, lies the great task of our generation—the building of lasting peace for the world.

Let us look honestly at the chances for peace.

The war ends with two mighty nations on this earth—the United States with her democracy, Russia with her communism. If we are to have peace, these two nations must learn to live together.

Yet Russia has put her own expansion—her design for power and domain—ahead of building the peace. Russia has relentlessly pushed her sphere of influence far beyond her historic borders and drawn a line of satellite nations from the Baltic to the Mediterranean. The three Baltic States, Poland, Rumania, Hungary, Yugoslavia, and Albania, are but puppet states for the Kremlin.

During the past year Russia has exercised the veto in the Security Council of the United Nations 11 different times and Russia refuses agreement on the international control of atomic energy, on the establishment of an international police force under the United Nations, on international trade, and on practically every major measure vital to the building of the peace.

Of the eight subsidiary organizations of the United Nations, Russia has joined only one—the World Health Organization. Russia has refused to become a member of the United Nations organizations dealing with refugees, education and science, food and agriculture, aviation, labor, the International Bank for Reconstruction and Development, and the International Monetary Fund.

At Paris, at London, at New York, Secretary Byrnes and the representatives of Britain and France sat around the table with Russia's representative, Molotov, seeking agreement—striving to begin the building of the peace of the world. Each time Molotov made success impossible and frustrated the efforts for agreement.

Secretary Marshall has just returned from a fourth conference at Moscow where he too failed to get agreement from Russia. The Russians made no genuine effort to reach agreement at Moscow. Instead Molotov merely repeated previous demands which already had been rejected.

As we know, the first step in the building of the peace is agreement on a sustaining German economy and a government for Germany. The terms which Russia demanded at Moscow as the price for agreement on Germany are:

1. Billions of dollars in reparations from Germany, which would actually be paid largely from the United States Treasury. Russia would drain Germany of her current production, delay German economic recovery, and force the United States to continue the costly financial burden of supporting the German inhabitants in the zone of American occupation.

2. A centralized government for Germany under which a dangerous concentration of power could easily fall into totalitarian hands—hands which even now Russia is contriving to make communistic.

3. Control of Austrian industry and finance which would make Austria another Russian puppet state.

Russia has no qualms about delaying the terms of peace. She sees advantage for herself and her communism in delay.

Delay enables her to keep troops in Hungary and Rumania. Russian troops in these countries keep them under Russian domination. This means Russian pressure on Italy, Greece, and Turkey, carrying Soviet influence to the Dardanelles and the Mediterranean.

But the biggest stake in Russia's waiting game is the hope for the economic and social collapse of Europe, which would create chaos and make fertile the soil for communism.

The people of war-shattered Europe even now are hungry and miserable. If the democratic nations do not prevent collapse, the people of Europe may well feel forced to turn to communism—to trade freedom for bread.

Russia thwarts peace, hoping either for the social and economic collapse of Europe, or that the United States, tired and disillusioned, will give in to Soviet demands.

At Moscow, America matched patience and endurance with the Kremlin, while in Washington America took action to meet the threat of Russian expansion. The United States proclaimed the Truman doctrine of aid to Greece and Turkey to help them maintain their independence. The United States said to Russia, "This far you have gone, but no further."

The lessons of "too little and too late" are still vivid in the minds of Americans who have just fought a war. They remember too well the world's indifference to Japan's seizure of Manchuria; Mussolini's rape of Ethiopia; the Fascist dress rehearsal for war in Spain; and Hitler's military occupation of the Rhineland, first of his many acts of international aggression which finally engulfed the world in flame.

America has let the shattered nations of Europe know that she will help them get their fields and factories back into production, relieve their hunger and suffering, and give their people opportunity for productive work.

As Mr. Sumner Welles predicted, Russia has accused the United States of seeking to destroy the United Nations. This is not true. This is typical Russian propaganda.

The United States among all the nations is the great rock upon which the United Nations stands.

There could be no better way to destroy the United Nations than to give it a task beyond its powers, a task in which it is foredoomed to failure. If we did this, we would play into the hands of predatory and reactionary forces over the world. We cannot afford to founder the vessel with too heavy a cargo.

As one of the original framers of the Senate resolution of March 1943—known as the B_2H_2 resolution—which paved the way for organization of the United Nations, let me reaffirm my faith in the United Nations. Our ultimate hope for peace lies in the United Nations. And through the United Nations we shall substitute the rule of law and reason for force and violence.

We must seize every opportunity and continue to use every power at our command to reach an understanding with Russia.

The United States must command Russia's respect if we are to reach such an understanding. And we know after months of negotiation that Russia respects strength. We must keep America strong—not only in military preparedness, not only in determination to withstand delay and pressure, but strong in her domestic economy. America in another depression might well forfeit her leadership for the peace of the world. She might drag down the rest of the world with her.

There are signs today of danger to our economy: Spasmodic efforts to reduce dizzy prices. A cost of living which increased during the past year more than five times as much as the total rise under war controls. The highest profits in history. Reduced purchasing power. And efforts to provide tax reductions which would hand a bonus to those with big incomes and leave the salaried man, the farmer, and the wage earner hard pressed by higher prices.

We must take heed of these storm signals in time.

In giving help to Europe America must insist that Europe be rebuilt on a basis that will remove as far as possible the causes and conditions out of which have grown so many of the wars of the past.

In 1940, before the United States entered the last war, the St. Louis Post-Dispatch placed its finger on the heart of Europe's fundamental weakness when it said:

"What are the historical forces whose ferment has brought Europe into a great war for the second time in a quarter century? * * * This area is divided into many separate nations, each with its own illogical tariff barriers, which keep it from exporting its surplus commodities to its neighbors or receiving from them the goods in which it is deficient. * * * To carve a continent into a crazy quilt of small nations creates irresistible economic pressures. Recurrent explosions are inevitable until some machinery to relieve these pressures is devised."

We must strive to relieve these pressures, to prevent these recurrent explosions through some machinery under the United Nations. The UN Charter provides for regional development of political and economic systems within the United Nations. We should build this machinery, through the United Nations, in a United States of Europe modeled upon our own Union of sovereign States.

A peaceful and united Europe would strengthen the United Nations and ease its difficult tasks. It would reduce the recurrent pleas for American support and lessen the drain on America in loans and aid. It would strengthen democracy and fortify the peace of the world.

A united Europe is not a new idea. It has been the goal of enlightened men since the Middle Ages. It was the "great design" of Henry IV, of France, in the seventeenth century. Victor Hugo pleaded for union at the International Peace Congress in 1849. After the First World War Aristide Briand, of France, and Gustave Stresemann, the German democratic leader, tried in vain to implant this vision in the minds of the treaty makers.

Today men speak out once more for a united Europe. Prime Minister Attlee of Great Britain has said: "Europe must federate or perish." Winston Churchill has spoken eloquently of a "new structure of peace which no one will dare challenge." And at this moment the Congress of the United States has before it a resolution calling for approval of the "creation of a United States of Europe, within the framework of the United Nations."

Built upon a constitution such as ours, guaranteeing the fundamental freedoms to every man, a united Europe can join hands with the United States of America, with peace-loving peoples everywhere, for the fulfillment of the words of Victor Hugo:

"Clearing the earth, peopling the deserts, improving creation under the eye of the Creator and uniting, for the good of all, these two irresistible and infinite powers, the fraternity of man and the power of God."

Peace is the great task of the Twentieth Century. It challenges the courage, the imagination, and the patriotism of every American. For the burden rests finally upon us. Britain is old and weary. Russia, vigorous and hungry for new domain, has put her own bid for world power ahead of building the peace.

I have faith that we can reach understanding and agreement with Russia and avoid an atomic war. But it cannot be through appeasement and compromise of principle. We must be patient but firm, strong but understanding.

We have at this moment our opportunity to lead mankind forward and upward over a new frontier and into a new era. We failed to grasp such an opportunity at the end of the First World War. Destiny has now blessed us by giving us a second chance. It may be the last. We cannot count on a third.

We shall need our prayers and our faith. And with God's help, we will build a lasting peace, with freedom and justice for all men.

Margarine and the Consumer

EXTENSION OF REMARKS
OF

HON. OLIN D. JOHNSTON

OF SOUTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Thursday, May 29 (legislative day of Monday, April 21), 1947

Mr. JOHNSTON of South Carolina. Mr. President, I ask unanimous consent to insert in the Appendix of the RECORD an article entitled "Margarine and the Consumer," which was published in the South Carolina Farmer, official journal of the South Carolina Farm Bureau, under date of May 1947. This article was written by Mrs. Corrie T. Plyler, of Columbia, S. C., secretary to the Honorable J. Roy Jones, commissioner of agriculture for the State of South Carolina. Mrs. Plyler is a former president of the Business and Professional Women's Club of South Carolina, and an ardent student of the question of discriminatory taxes on margarine.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

MARGARINE AND THE CONSUMER

(By Corrie T. Plyler, Columbia, S. C.)

The farmer traditionally has been called provider of the Nation's food; therefore too frequently we forget that the farmer is also a consumer. No matter how varied a crop he produces, he cannot satisfy all his needs from the produce of his farm but, like every other citizen, must buy at the village store or in the neighboring market town or city. He benefits or suffers from whatever aids or injures consumers in general.

During the recent war emergency many a United States consumer became aware for the first time of the severe burden which falls upon his dinner table by reason of harsh and unjustified taxes and restrictions imposed upon a pure-food product. Unable to buy butter, which became as scarce as the proverbial hen's teeth, many an American consumer found to his amazement that margarine which he would have liked to spread on his bread could not be bought in the yellow color he had come to like for his table fat, or else was not available to him at all.

If he was curious enough to inquire, he learned, perhaps, that his State imposed so heavy an excise tax on margarine that none at all found its way into the State in peace or normal times. If he lived in Pennsylvania or Ohio, for example, he learned that his State prohibited the sale or use of yellow margarine entirely. If he lived in Wisconsin, he learned that his State imposed a 15-cents-per-pound tax on every pound of margarine sold within its borders, as well as license fees of $25, $500, and $1,000 on retailers, wholesalers, and manufacturers of the product, respectively. Furthermore, the Wisconsin consumer discovered that if he wished to buy margarine outside the State in order to avoid the 15 cents excise tax, he must then pay a use tax of 6 cents a pound, to say nothing of taking out a consumer's license at the cost of $1 a year. And all these, only samples of various State taxes, to be sure, are in addition to the Federal taxes and license fees listed in a recent article entitled "Margarine and the Farmer."

As a result, margarine is very unequally distributed among the population. Consumers in neighborhoods of small grocers, who cannot afford the margarine licenses, must either go out of their way or do without the product; they are thus denied the right to buy a pure American food for no reason except that it is held to compete with another American food. In a State where the tax restrictions on margarine are as stringent as in Wisconsin, consumers are completely denied the opportunity to buy the product. They may justifiably question whether it was any part of the intention of the fathers of our country thus to discriminate between the people of various parts of the Federal Union. In eight different referendums consumers have registered a denial that the laws against margarine express the will of the people. But such spontaneous recordings of public opinion have gone unheeded.

Indeed, the consumer too often is not audible. Not only does he discover that he is not able to buy margarine, but—and this he usually does not know—he is unable to buy butter at a price which reflects the true condition of demand and supply in the market. Unquestionably, to shop on this basis should be every consumer's right. The retail price of milk and of all other dairy products is determined not by the open market, nor usually by public authority, but by compromise with these artificially high prices. However, many in the industry would turn around and fight a competitor by demanding a handicap in the form of a tax, which ultimately falls on the consumer. Instead of reaping his share of the gains of economic activity, in this case the consumer bears the brunt; he is caught between high prices of one producing group, set by an artificial market, and high prices of another group, forced up by tax legislation. Such taxes, the Tax Institute has justly observed, "distort competitive relationships without bringing compensation benefits to the general public."

High prices have reached into all our pockets with insidious fingers these last several months. Our left-over pennies have dwindled and dwindled, and we have wondered when prices would halt their skyward flight. Some consumers have already begun to curtail their purchases, either from necessity or from a patriotic desire to bring prices down. The United States Government tells us that during the second half of 1947 a decrease in demand for consumer goods and services grows quite likely.

The decrease in purchases, it is anticipated, will be greater for dairy products than for consumer goods in general. During the war, and up to the present, the consumption of dairy products rose to unusual heights, largely because of an increase in the income of low-income families. But now supplies of other consumer goods are increasing. Consumer purchasing power is expected to decrease, especially among the low-income groups. The United States Department of Agriculture is confident that these developments will divert some spending away from dairy products—clear evidence that the low-income consumer does not in normal times have enough money to buy all the dairy products he needs and would like to have. For optimum nutrition, we need to consume at least as much fluid milk as during these recent years. These years have made it clear, also, that in order to continue to use these greater quantities of fluid milk, we cannot eat as much butter as we did prior to the war. We are fortunate in possessing, therefore, an entirely satisfactory substitute in margarine, a product of cottonseed and soybean oils and other crops of American farms.

But, say some short-sighted butter producers and distributors, "You shall not buy margarine on the same basis as you buy butter. You shall pay tax for eating margarine instead of butter."

The situation is no less absurd than if a manufacturer of silks were to appeal to Congress and the legislatures in this wise: "We cannot produce enough silk goods at a price low enough for every American. We cannot weave even enough for those who can afford this luxury material. Therefore you must impose a special tax of 10 cents on every yard of rayon material; furthermore, every department store selling rayon goods must be forced to pay a special license fee of, say, $1,000 a year. Then the public will know that the store is selling yard goods which is not silk. If you don't do this, more rayon will be sold, and our silk business will be ruined." It is impossible to believe that any silk manufacturer ever seriously thought of making such a demand.

But commercial butter interests do not hesitate to demand that taxes, license fees, and other needless restrictions be placed upon margarine, in spite of the fact that they cannot make available enough butter and fluid milk at the same time for a healthful diet for all Americans.

No one who has taken the trouble to investigate any longer questions the nutritive value of margarine. Scientific authorities in the field of nutrition, physiology, public health, and medicine have attested its purity, wholesomeness, energy value, and equivalence to butter in all the nutritive essentials.

Countless consumers have found, during the recent shortages of butter, that margarine tastes good and that it pleases both as a table and cooking fat. They have been frankly perplexed when they remembered, some of them, their long-standing prejudice against the product.

Wherein, then, they have asked, lies any defensible reason for taxing margarines off the tables of the Nation's families? If the consumer cannot afford butter—and there are many in this class—can there be any conceivable defense, in a free enterprise democracy, for denying him the right to buy margarine, an entirely satisfactory substitute, as easily and on the same terms as the more expensive product?

Some claim the need of the restrictions on margarine as a way of preventing fraudulent sales. For such, let us point to the Federal Food, Drug and Cosmetic Act which controls all foods, and the various State pure-food laws, as well as the Federal margarine regulations. Any possibility of fraud in the sale of margarine belongs to the "horse and buggy" era.

A tax on food has been recognized for centuries as a regressive burden, bearing most heavily on the low-income groups. Lawmakers, social workers, political scientists,

and economists, have consequently frowned on this type of tax—even when it might conceivably benefit some other group in the population. But, as shown in the article "Margarine and the Farmer," the margarine taxes benefit nobody.

If a day should come when, by reason of taxes repealed, consumers could buy all the margarine they wanted—and in the yellow color which they like for their table fat (a great part of commercial butter is artificially colored, without any requirement that it be so labeled)—the forces of supply and demand in the market would serve to distribute margarine to those who want it and at a price they can afford to pay, and butter to those who can afford to pay for the higher-priced product.

Then Americans would be able to drink more fluid milk, since less milk would be diverted to butter. Fluid milk, moreover, brings the dairy farmer a higher price than milk destined to become butter or cheese or any other dairy product. Such a consequence would, in the long run, garner more regards for the dairy farmer than legislation directed against margarine.

It bears repeating that every farmer is a consumer as well as a producer. While his interest in outlets for the produce of his farm guides his activity to a large extent, his interest in getting a fair deal as a consumer should be no less impelling. For of what avail are good crops and good markets with the profits they reap if he cannot spend his money to fill his daily needs in a profitable way?

RFC's Small Business Loan Activities—RFC Does Not Make Loans That Banks Will Make; Banks Given Chance To Participate in All Loans—Impressive Tables Disclose Valuable Service Rendered Small Business by RFC

EXTENSION OF REMARKS
OF

HON. WRIGHT PATMAN

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 27, 1947

Mr. PATMAN. Mr. Speaker, the RFC Act expires June 30, 1947. The question of its extension is now before the Committee on Banking and Currency of the House. It is my opinion that this agency is needed now to assist small business more than ever before. It will be needed in the readjustment period ahead. The proposal advanced by the Federal Reserve Board is not sufficient to take the place of RFC, and besides the RFC has so well demonstrated its ability to properly make these loans in a satisfactory manner that no change should be made.

During the calendar year ending December 31, 1946, the Reconstruction Finance Corporation made 12,247 loans to business enterprises involving $563,743,000. This was five times the number of such loans made in 1945 and eight times the number made in 1944. It also represents 33.3 percent of all loans made to business enterprises by the Corporation since its inception in 1932.

This performance reflects the Corporation's desire to fulfill its obligations to the small businessman because 91 percent of the 12,247 loans mentioned above were for $100,000 or less—typical small-business loans. The following table indicates the statistical base from which the foregoing summary statements were drawn:

RFC loans to business enterprises

Period	Number of loans	Percent of cumulative total	Amount, RFC and banks	Percent of cumulative total
1932 through Dec. 31, 1946	36,794	100.0	$3,670,289,000	100.0
1944	1,533	4.2	372,180,000	10.1
1945	2,437	6.6	436,888,000	11.9
1946*	12,247	33.3	563,743,000	15.4
*To small business	[1] 11,148	30.3	[2] 246,302,000	6.7

[1] 91 percent of 1946 total.
[2] 43.6 percent of 1946 total.

The upward trend in business loans which developed in 1946 has carried over into 1947, as the following will show. The monthly average of business loans made in 1946 was 1,021 loans whereas during the first 4 months of 1947 the monthly average of business loans approved in the field was 1,048. Since no loans are made by the Corporation unless the credit sought is unobtainable elsewhere, this would indicate a rising demand for RFC funds in 1947 over and above 1946.

Much significance attaches to another break-down of these 12,247 loans to business enterprises in 1946, keeping well in mind the fact that 91 percent of them were made to small businessmen. A very large proportion of the 1946 loans were made in participation with banks, namely 8,597—or 70.2 percent—involving $480,582,000 of which the banks took $129,310,000. Only 29.8 percent of the 1946 loans, involving $83,164,000, were made without bank participation.

The favorable bank participation trend established in 1946 has not carried over into 1947. During the first 4 months of 1947, 4,193 loans to business enterprises were approved in the field, of which 1,802, or 42.9 percent, had to be made without bank participation. The following figures indicate the rapidly rising bank trend away from participation in RFC loans:

RFC loans to business enterprises in 1947

Year 1947	Bank participations		RFC direct loans		Total
	Number	Percent of total	Number	Percent of total	
January	885	85.7	148	14.3	1,033
February	688	60.8	444	39.2	1,132
March	469	41.8	652	58.2	1,121
April	349	38.5	558	61.5	907
Total	2,391	57.1	1,802	42.9	4,193

It is of some significance that in the month of smallest-loan activity as shown above, RFC also obtained the smallest proportion of bank participations.

Since in every instance the banks are given first opportunity to make the loans that RFC eventually makes, or to participate in them, it is of more than passing interest to discover why the banks do not make the loans originally requested of them, or participate in them when made by RFC. To this end a study was made of 1,339 direct loans authorized by the Corporation in the last half of 1946, representing approximately 85 percent of the total number of direct loans made in that period. The results are shown below, the reasons being arranged in order of numerical importance except "Miscellaneous." Where two or more reasons were advanced, the refusal was classified according to the principal reason:

Reasons why banks declined	Business loans	Veterans' loans	Total loans
Policy of not handling GI loans	-------	278	278
Unacceptable type of collateral offered	74	173	247
Maturity requested was too long	74	100	174
Insufficient down payments made on equipment	3	114	117
Applicant entering upon a new enterprise	39	31	70
Insufficient collateral offered	21	35	56
Banks were extending current credit but did not want to undertake long-term loans	34	10	44
Applicants were outside areas serviced	13	29	42
Banks "do not make this type of loan"	15	26	41
Banks do not make capital loans	28	5	33
Amounts requested were beyond legal limits	16	10	26
Interest rate too low for maturities asked	3	15	18
Banks did not care to participate with RFC	17	-------	17
Applicants' ventures were speculative and financial success was not assured	8	7	15
No reasons given by banks	4	11	15
Miscellaneous reasons	45	101	146
Total	394	945	1,339

No application for a loan from RFC is considered until the applicant has demonstrated his inability to secure the required financing from a bank or other private source of credit. Then his problem is carefully studied to see if it can be made attractive to a bank. In the 12-month period from May 1, 1946, to April 30, 1947, the banks made loans to 2,204 out of 13,693 such cases referred to them after RFC study. If a bank will not make a loan or participate in it, the Corporation then tries to work out a direct loan.

The purposes for which business enterprises borrow funds from RFC fall into certain general classifications as shown in column 1 of the table below, which excludes mining loans, Smaller War Plants Corporation loans, and loans made in participation with banks under the blanket-participation agreement. Column 2 shows the dollar volume of the various classifications with percentage proportions of the total for the last 6 months of 1946. Column 3 similarly covers the period from 1932 to November 30, 1941. The war period is eliminated from column 3 because of its distortions from normal trends. Only the last 6 months of 1946 are considered in column 2 because the distorting effect of

reconversion financing was felt well into the middle of 1946.

Purposes for which proceeds of authorized business loans were to be used (excluding BPA, mining, and SWPC loans)

Purpose	July 1, 1946, through Dec. 31, 1946		1932 through Nov. 30, 1941	
	Amount	Percent	Amount	Percent
Total	$57,734,000	100.0	$463,978,000	100.0
Machinery and equipment	10,152,000	17.6	35,595,000	7.7
Real estate and construction	11,197,000	19.4	58,216,000	12.5
Working capital	31,064,000	53.8	212,513,000	45.8
Debt payments	5,279,000	9.1	121,178,000	26.1
Other purposes	42,000	.1	36,476,000	7.9

It is immediately apparent that larger proportions of the Corporation's loans to business enterprises are going into working capital and fixed assets than formerly was the case, and considerably less is being used for debt payments and other purposes. The somewhat increased proportion shown as going into fixed assets is accounted for largely by the need for replacing or revamping buildings and equipment worn out by war uses or rendered inadequate by new technical developments and requirements.

Conscience of America Demands Justice to the Jew in Palestine

EXTENSION OF REMARKS

OF

HON. CHARLES A. WOLVERTON

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 28, 1947

Mr. WOLVERTON. Mr. Speaker, on Tuesday evening, May 27, 1947, the Camden United Citizens Committee, composed of distinguished citizens of Camden, N. J., and vicinity, recognizing the obligation of this Nation to promote and support the cause of Jews in their effort to establish a free and independent nation in Palestine, to provide for their immediate admittance therein, and to protest the inhumanities under which Jews now suffer in their effort to protect and advance their rights in Palestine, held a mass meeting of citizens in the auditorium of the Camden High School.

At the conclusion of the meeting the following resolution was unanimously adopted:

Whereas the British Government has repeatedly violated its obligations as the mandatory of Palestine by repudiating the solemn pledges expressed in the Balfour Declaration and the Palestine mandate with regard to the facilitation of Jewish immigration into Palestine and the continued development of the Jewish national home; and

Whereas the plight of the Jewish survivors in Europe is steadily worsening, making it imperative that they leave that hostile continent at the earliest moment; and

Whereas the seizure and mass deportation to Cyprus of so-called illegal Jewish immigrants constitute a brutal campaign against helpless men, women, and children, completely inconsistent with the principles of the Atlantic Charter; and

Whereas such immigrants embark for the Holy Land as of their legal right, since the white paper of 1939, which bars their entry, was repudiated by the Permanent Mandates Commission of the League of Nations as inconsistent with the Palestine mandate, thus making illegal the policy pursued by the mandatory power; and

Whereas the Government of the United States of America, through the passage of resolutions in both Houses of Congress, and through public statements of policy enunciated by every President for over 30 years, is committed to the free upbuilding of Palestine as the Jewish national homeland, and through planks in the platforms of both major political parties is pledged to free Jewish immigration into the Holy Land and the establishment in Palestine of a free and democratic Jewish commonwealth: Therefore be it

Resolved, That the citizens of Camden County and surrounding area respectfully call upon the Government of the United States to take the initiative during the fall meeting of the General Assembly of the United Nations in vigorously championing the program for Palestine, which it has repeatedly reaffirmed; and be it further

Resolved, That we call upon the Government of the United States to insist that the Jewish people, as the party most directly concerned, be accorded full representation in all deliberations regarding Palestine within the United Nations through the Jewish agency, the internationally recognized body authorized to speak for the Jewish people in respect of Palestine; and be it further

Resolved, That pending a final settlement of the Palestine question by the United Nations, the great weight of the United States Government should be brought to bear on the mandatory government to the end that an interim policy based upon the existing mandate be set into motion at once providing for immediate large-scale Jewish immigration into Palestine and the removal forthwith of the discriminatory land restrictions in the Jewish national home; and be it further

Resolved, That copies of this resolution go forward to the President of the United States, the Secretary of State, the Under Secretary of State, the American delegate to the General Assembly of the United Nations, and Members of both Houses of the Congress of the United States.

Files of the Committee on Un-American Activities

EXTENSION OF REMARKS

OF

HON. JOHN S. WOOD

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 29, 1947

Mr. WOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement:

USE MADE OF THE FILES OF THE COMMITTEE ON UN-AMERICAN ACTIVITIES BY MEMBERS OF CONGRESS AND VARIOUS GOVERNMENT DEPARTMENTS, JANUARY 22–MAY 27, 1947

During the period January 22 to May 27, 1947, inclusive, a total of 512 visits were made to the files of the Committee on Un-American Activities by persons who made their own check through records and publications of the committee. The total number of names on which they checked was 8,529. These callers were employees of congressional committees or individual Members of Congress or employees of various agencies in the executive branch of the Government, namely, the Departments of Commerce, Interior, Justice, Labor, Navy, State, Treasury, and War, the United States Civil Service Commission, and the Veterans' Administration.

A break-down of the total number of visits made and the total number of names checked by the visitors for each month of the present year shows:

Month	Number of callers	Number of names checked
Jan. 22-31, 1947	48	975
Feb. 1-28, 1947	92	1,462
Mar. 1-31, 1947	128	2,128
Apr. 1-30, 1947	132	2,450
May 1-27, 1947	112	1,514
Total	512	8,529

In addition, the commitee staff assisted these callers in cases where they were unable to find information which was known to be available or in cases where they needed to consult source material contained in the files. Sixty-six requests of this kind were filled by members of the committee staff covering information on 47 individual names and 65 organizations.

During the same period of time, Members of Congress made 313 separate requests for information from the files of the Committee on Un-American Activities. In answering these requests, committee employees made a search of files, records, and publications of the committee and furnished Members of Congress with written reports containing the information which was available on the 602 individual names and 236 organizations listed in these requests. In many cases it was necessary to check the names of the officers and sponsors of an organization through all sources in order to make a report on the organization, and no record has been kept of the number of names checked in such cases.

The following figures will show the monthly totals for this year of the number of requests received from Members of Congress, and the number of individual names of persons or organizations involved:

Month	Requests from Members of Congress	Individual names listed in requests	Organizations listed in requests
Jan. 22-31, 1947	13	18	7
Feb. 1-28, 1947	53	118	21
Mar. 1-13, 1947	71	167	66
Apr. 1-30, 1947	104	140	46
May 1-28, 1947	72	159	96
Total	313	602	236

Irrigation and Reclamation Developments

EXTENSION OF REMARKS

OF

HON. WARREN G. MAGNUSON

OF WASHINGTON

IN THE SENATE OF THE UNITED STATES

Thursday, May 29 (legislative day of Monday, April 21), 1947

Mr. MAGNUSON. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a very interest-

ing editorial published in the Walla Walla Bulletin.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

POOR CAMPAIGN STRATEGY

Republicans in the Pacific Northwest are largely responsible for the public land development program and hydroelectric power impetus which bore fruit under a New Deal administration. The attitude of a few importantly placed Republicans in Congress with respect to the future of reclamation and power development by Federal funds is such as to offend a large and influential segment in their party.

The use of Federal money in bringing thousands of acres of western arid lands into high production was inspired by and realized through efforts of Republican Senators and Congressmen from the States of this region. Washington, Oregon, and Idaho began submitting feasible programs nearly a half century ago. The Columbia Basin, McNary Dam, and numerous other projects now about to be weighed in the balance at Washington as a result of a middle western Republican's position of power, were born in the minds of community and district leaders, preponderently Republican.

If now the Republican Party permits the development of the Pacific Northwest to go by the boards, after what the opposition did to further the region's progress, it may be difficult for the GOP to count on such support as its ticket received at the polls in 1946. The solid South has taken its crumbs from the table of the Democratic Party and, with one exception, stayed solid. The Pacific Northwest is not politically so devoted and, while there are large numbers of Republicans who would prefer to see their party in power, their loyalty nationally may be tested severely unless the present attitude in influential spots at Washington, D. C., is moderated considerably with respect to our economic future.

Proposed Second-Class Postal Rate Raise Poor Example to Business

EXTENSION OF REMARKS

OF

HON. HAROLD C. HAGEN

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 27, 1947

Mr. HAGEN. Mr. Speaker, from all parts of the Nation come protests against the proposed raise on second-class postal rates.

We all know that the administration, backed up by the Republican Congress, recently asked for lower prices in order to stop the rising spiral of inflation.

Now comes the United States Post Office Department, supported by a portion of the membership of Congress, asking for increases in the most necessary service the Government renders—increases which will put many newspapers and magazines out of business—and will seriously cripple the free press of America, so necessary to our American way of life.

David Lawrence in his column dated May 20, which is published in many large papers throughout the country, very ably presented this inconsistency in an article entitled "Proposed Postal Rate Rise Sets Poor Example to Business."

Mr. Lawrence wrote in part as follows:

The Government itself is setting a poor example to businessmen. After all the hullabaloo about the necessity of price reduction, Newburyport plans and meetings of left-wing economists to argue for voluntary price reductions, the Government, which operates one of the biggest businesses in America—the postal service—decides on an increase in prices to the public.

The Post Office Department, whose directing manager is still a member of the President's Cabinet, has recommended that rates be increased to yield $173,000,000 more, while the House Post Office Committee now favors rates what will yield about an additional $110,000,000 a year.

Both the members of the House committee and Post Office officials seem to overlook the advice so often given by the CIO that wages can be increased and deficits can be absorbed from profits. Here the Government has been increasing wages and is about to end the fiscal year with a surplus or profit of $2,000,000,000 or more, and yet the self-same Government increases prices to the public. One suspects that the Government officials have not been reading carefully all the economic advice they have been getting from left-wing quarters.

Certainly this is no time for the Government itself to be raising prices and to be arguing that it must overcome a deficit in some particular department. There are other departments of the Government operating at a deficit—as, for instance, the Agriculture Department which serves the Farmers and the Labor Department which serves the labor unions. One wonders why the service by the Post Office Department cannot be charged up, as all other services are, to the taxes paid by the people as a whole.

Curiously enough, the postal rates will operate as an increased tax on many companies which already pay heavy taxes to the Government. As for newspapers and periodicals, the new tax in the form of postal-rate revision upward will cause the more successful companies to ship in bulk by express and mail their publications from distribution centers from local zones or counties where the rates are low. Smaller companies will be penalized and the advantage will go, as usual, to the bigger businesses.

Statistics have already been furnished Congress showing that the Government will lose revenues by reason of changes in methods of distribution and that the price increase will be a boomerang. It remains to be seen whether the experiment in price raising will work out to reduce or increase the so-called postal deficit.

The trouble with the Post Office Department is that it isn't operated as efficiently as is private business. The post-office system is honeycombed with politics and affected by political considerations. Most of the mail that now goes free should be paid for—the post-office business then would have not only a balanced budget but a profit besides.

If ever there was a need for lower rates and the stimulus of larger volume, it is in a business like the postal service. If the rates were reduced, more mail would be sent, especially by business houses which now spend a huge proportion of the money expended for postage. Lower rates would increase volume and at no proportionate increase in cost of carrying it or delivering it. Experience with air mail, which recently went from 6 to 8 cents an ounce, showed the public is sensitive to price changes. It was changed to 5 cents and revenue increased.

There ought to be a commission to study the efficiency of the Post Office Department and the impact of postal rates on mail volume before new rates are legislated.

Marine General Carlson Died Disillusioned

EXTENSION OF REMARKS

OF

HON. GLEN H. TAYLOR

OF IDAHO

IN THE SENATE OF THE UNITED STATES

Thursday, May 29 (legislative day of Monday, April 21), 1947

Mr. TAYLOR. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a news item entitled "Marine General Carlson Died Disillusioned."

There being no objection, the article was ordered to be printed in the RECORD, as follows:

MARINE GENERAL CARLSON DIED DISILLUSIONED

PORTLAND, OREG., May 28.—Brig. Gen. Evans F. Carlson, famous leader of Carlson's Marine Raiders, died a disillusioned man because he feared that un-American interference in Greece and China was starting the United States on the road to another war, his widow believed today.

When he donned his uniform in World War II after an earlier retirement, he was convinced he would be fighting in the final world conflict, she said.

"When he died," Mrs. Carlson added, "he was no longer sure."

Mrs. Peggy Whyte Carlson was at the bedside of her husband at Emanuel Hospital when he died yesterday morning of coronary occlusion.

She said her husband, hero of the Makin and Guadalcanal campaigns, will be buried at Arlington National Cemetery.

Following World War II, General Carlson became a vice chairman of the Progressive Citizens of America, of which Henry A. Wallace is principal spokesman.

Mr. Wallace traveled from Portland to Brightwood, Oreg., last Sunday to see General Carlson. Mrs. Carlson said Mr. Wallace and her husband discussed what the general thought was un-American interference in Greece and China.

"My husband's views were that there should be no barrier between peoples of good faith. He believed that between them, Russia and the United States could save and insure world peace. * * * He couldn't understand how America could, with a clear conscience, dictate the internal affairs of other countries," Mrs. Carlson said.

Thefts From Starving Austria Reveal Bad Faith of Soviet

EXTENSION OF REMARKS

OF

HON. JOHN J. ROONEY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 29, 1947

Mr. ROONEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Brooklyn Eagle of May 28, 1947:

THEFTS FROM STARVING AUSTRIA REVEAL BAD FAITH OF SOVIET

Moscow's light regard for solemn pledges is, of course, a notorious weakness of the Soviet regime. It becomes a particularly reprehensible weakness when it involves the imposition of hardship upon a nation already

deep in distress and struggling desperately to survive.

Austria is such a nation. Its economy is disrupted; its resources are exhausted; its industry is destroyed, and its people are hungry. Yet Soviet Russia has not hesitated to ravage the land, or at least the area which its troops have occupied, removing industrial equipment and food and in other ways making more acute the crisis of the people.

This charge is made in frank, forthright terms by Gen. Mark W. Clark, who has just returned from Austria in an angry mood. He directs at the Soviet Government a shameful indictment—that of having failed to cooperate with the other occupying powers "in accordance with the solemn pledge all of us made to the world for its future peace and prosperity."

General Clark charges far more serious derelictions than simple failure to cooperate. He alleges specifically that the Russians seized Austrian livestock and other resources, notwithstanding that it had been agreed that the occupying forces would not subsist off the land, and that they exported surpluses above their own needs.

These commodities, of course, were taken from a starving people, with no hope of subsistence other than their own products. They were taken from a fundamentally decent people, a nation which was just as much a victim of Hitler's aggression as were Poland, Greece, and the other invaded countries.

The treachery and duplicity of the Russians did not, however, end with the looting of the land. For the encouragement of communism and in violation of the pledge to aid in the recreation of a sovereign, independent, and democratic country, the Soviet authorities gave "extra food, higher wages, and better rations" to Austrians who would join the Communist Party.

This whole story, of course, has a familiar tone and content. It provides added reasons for firm policies in dealing with the Russians and resisting the direct and subtle aggressions through which the Communist cause is carried forward.

Stop, Look, and Listen

EXTENSION OF REMARKS

OF

HON. GEORGE B. SCHWABE

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 29, 1947

Mr. SCHWABE of Oklahoma. Mr. Speaker, many think we are traveling a dangerous route in the attempts of this administration to raise the standard of living throughout the world by depleting our own resources.

It is only common sense to say that there is a limitation beyond which we cannot safely go in the lending and giving of our finances and resources to other countries and their citizens. We have only a given amount of resources. In the dispensation of our charity, as individuals, I dare say that we first attempt to determine how much we can afford to donate and not leave ourselves impoverished. The same principle holds true with the economy of nations. The best minds definitely agree that an early determination should be made of just how far we can go in raising the standard of living of other people, without impoverishing our own people and destroying our economy.

It behooves us to stop, look, and listen.

I am pleased to submit for the consideration of my colleagues and of the public generally certain statistical information which has recently been compiled by one of the great economists of this country. These facts and figures should challenge the attention of all who have the welfare of the present and future generations of this country at heart. This analysis, although based on prewar figures very largely, should be revealing. It shows the dangerous route which we are now following and where the projection and continuation of the national administration's program will inevitably lead. It is a dangerous course for us to pursue.

The following shows the relative economic position of the United States and the remainder of the world:

As nearly as we can estimate on the basis of very detailed calculations first made by us in 1930, the wealth and income of the United States before the outbreak of the present war compared substantially as follows, in round numbers, with the wealth and income of the remainder of the world:

1. Population: World total, latest estimates (1938–39), around 2,145,000,000; United States (corresponding date), around 130,000,000 (present, around 134,000,000); percent of world total, around 6 percent.

2. Wealth: World total, around $1,100,000,000,000; United States, around $330,000,000,000; percent of world total, around 30 percent. (Around 1930 the wealth of the United States was estimated to be from 33 to 35 percent of the world total.)

3. Income: World total, around $210,000,000,000; United States (1940) $72,000,000,000–$75,000,000,000; percent of world total, 34–36 percent. (In 1929 the United States income was estimated at 41–42 percent of the world total.)

It is significant that the relative position of the United States gradually deteriorated during the decade of the thirties, due to the fact that recovery in other leading countries was much more rapid than in the United States.

To make the problem as simple as possible, the United States, with 36 percent of the world's income and 6 percent of the population, has a living standard per capita equivalent to 6 units of income (36 divided by 6). The rest of the world, with 64 percent of the income and 94 percent of the population, has a per capita standard equal to two-thirds unit of income, or on the average one-ninth of that of the United States.

In order to establish "equality" throughout the world, the United States must retain only her per capita share of the total world income, i. e., she must reduce her income to 6 percent of the total, and must give away the remaining 30 percent of the world income which she now holds, so that 94 percent of the population outside the United States will also receive 94 percent of the world income. This operation would theoretically raise the rest of the world to an average per capita income of 1 unit—which is a theoretical gain of 50 percent from the present average. But the average citizen of the United States would, in the process, lose five-sixths of his income.

In other words, if there were no economic loss in this process of "redistribution," and if the rest of the people of the world who receive our "gifts" would continue to work as hard as they do now to produce their own sustenance, we would reach a theoretical equilibrium with all people in the world (including the United States) having a standard of living one-sixth as high as that now prevailing in the United States.

In actual dollars this would mean roughly a distribution of a little more than $60,000,000,000 to something over 2,000,000,000 people. The average man outside the United States would have his income increased by a little more than $30 per year. This might be a fortune for a Chinaman or a heathen dweller in the tropics—but purchased at a price which would mean the utter degradation of the people of the United States.

Further, in view of our well-known experience with the Negro in the South, and the observed reactions of the most backward people throughout the world, it is probable that, if this country should redistribute its income in the manner indicated, the great bulk of the recipients thereof, who are already existing on two-thirds of a unit of income, would merely work half as hard as before in order to support themselves, and would thus maintain their income at the old two-thirds unit level by earning only one-third themselves, and bringing up the balance with the one-third unit which we contribute. Also, under the conditions outlined, productivity in the United States would rapidly decline.

That the foregoing is no idle analysis is shown by the following quotation from the bulletin of the United States State Department, under date of December 27, 1941, page 589:

"Lend-lease countries cover two-thirds of the earth's surface and contain nearly two-thirds of the population of the world. Up to the present time, the defense of 33 countries, including the British Empire, has been declared vital to the defense of the United States, and steps are being taken to strengthen the defenses of these countries."

Already most of the world outside the United States and the countries dominated by Germany, Italy, and Japan are covered by a plan which commits the United States to the indefinite extension of credit and shipment of all kinds of commodities, without any hope of repayment. It is further the announced policy of our Government to supply our resources in order to rehabilitate even the Axis countries after they shall have been defeated. That completes the present program for world redistribution of our wealth and income.

Creation of a World Government

EXTENSION OF REMARKS

OF

HON. GLEN H. TAYLOR

OF IDAHO

IN THE SENATE OF THE UNITED STATES

Thursday, May 29 (legislative day of Monday, April 21), 1947

Mr. TAYLOR. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Adventure for Peace," written by Malvina Lindsay. The editorial has to do with the efforts of approximately 400 citizens of Norwalk, Conn., in securing 18,000 signatures to a petition calling for the creation of a world government.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

ADVENTURE FOR PEACE

(By Malvina Lindsay)

TOWN TACKLES MARS

Symbol of a new, more robust attitude in this country toward future perils is the

peace project of the stalwart citizens of Norwalk, Conn.

One thousand residents of Norwalk—population 45,000—will shortly come to Washington to present to President Truman and Secretary of State Marshall a petition with 18,000 names. It calls on the United States delegation to seek to strengthen the United Nations so that no nation can back out, no nation can defy it, no nation can make atom bombs.

Self-styled practical men, now struggling futilely to settle the war they failed to prevent, are of course calling these people "visionaries." But there is a chance the names of Norwalk leaders will live in the history books. For they are dramatizing a new spirit abroad in the world, one that, though small on the surface, has strong roots. It is a turning from fear, war mongering, retreat, inaction, and can't-be-done defeatism to a bold program for combating the terrors now threatening the world.

Back of the Norwalk petition lie many significant happenings—a conversation on the state of the world by a few persons who suddenly decided the time had come to do more than talk; a meeting in the high school to hear Norman Cousins, editor of the Saturday Review of Literature, tell what he had seen the atom bomb do at Bikini, and a housewife's rising to ask what one woman could do about the bomb; an appeal to a group of civic volunteers to dedicate 4 months of work to the project of helping citizens speak their minds by petition, and a reminder that this inconvenience was far less than what they would suffer from an atomic war or from surviving in a community full of diseased victims, who might give birth to abnormal children.

The 400 men and women who went from door to door, or met the trains, petition in hand, did not always find their task easy. They met the usual name calling—"Communist," "imperialist," "reactionary," "radical," "visionary," "stooge of Britain." But most citizens gave eager support. Most welcomed the chance at last to do something tangible about world affairs, to ease the guilt and frustration they felt over their passive citizenship.

Meanwhile in Asheville, N. C., major world government organizations of this country merged into United World Federalists devoted to strengthening the United Nations into a limited world government to prevent war. A European branch is in the making. Federalist groups exist in every country in Europe outside the Soviet sphere. Some advocate European union, some union of the democracies, some universal world federation.

What will come of all this brave setting out for what "realists" of power politics regard as a Utopia at least 500 years distant? Leaders of this mental wagon train are certain more will come than many people expect. This, they say, is something more than the enthusiasm that flowered so brightly for the League of Nations, then wilted so quickly before congressional frost, and was buried under distractions and isolationism of the 1920's.

The movement for world government, they point out, is a hardier plant. It sprouted out of necessity—the weakness of the United Nations in its present form. And it has no alternative save a world armed with atom bombs, disease germs, cosmic rays.

Chief question put to federalists is: "How will you make the Soviet Union join?" The answer invariable is that not being citizens of the Soviet Union, they cannot make it do anything. Their job is to see that this country takes the lead in the only possible movement to save humanity. They hope the Soviet Union will be realistic enough to come in. If it does not, this Nation should strengthen itself by belonging to a four-fifths world movement which should continue to keep the door open for Russia.

International Civil Aviation Organization

EXTENSION OF REMARKS
OF
HON. ALFRED L. BULWINKLE
OF NORTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES

Thursday, May 29, 1947

Mr. BULWINKLE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address by Hon. Garrison Norton, Assistant Secretary of State and chairman of the United States delegation, at the opening plenary meeting of the first assembly of the International Civil Aviation Organization on May 6, 1947, at Montreal, Canada:

Mr. President and delegates, this first session of the assembly of the International Civil Aviation Organization is an occasion which we from the United States view with special gratification. The fact that the International Convention on Civil Aviation has come into full force and effect in considerably less than the 3 years originally contemplated is a demonstration that the 52 delegations at Chicago built well and successfully.

We can now proceed with certainty to establish the Organization on a permanent basis. I do not minimize the important achievements of the interim period. I am sure that there has never been another provisional international organization which sought as fully as this one to measure up to all phases of the job to be done. The record is one of great accomplishment.

The United States Government, perhaps not alone, has at times been left breathless by the pace of Council meetings, committee meetings, division meetings, regional meetings, and special meetings. Aviation is not a business on which matters can be left to wait forever, nor one in which the problems disappear if simply left unattended.

First and foremost, the Organization is devoted to the formulation of international standards on all matters affecting the safety, regularity, and efficiency of air navigation. By ratifying the Convention, every member state has accepted a solemn treaty obligation to collaborate not only in preparing but also in carrying out the international standards. This obligation must be fulfilled.

It is fortunate that the productive work initiated at Chicago on these standards has been carried forward through two successive revisions. It will be possible for the new Council, when it is elected a few days hence, to act immediately upon the whole code of standards already developed. I believe that one of the first actions of the new Council should be to adopt the standards which are ready. We can all then leave this Assembly with the knowledge that the standards have been officially submitted to the member States and may be expected to come into effect 3 months later under the procedure established by the Convention.

The coming into effect of these standards throughout a large part of the world can be a major contribution to safety of life in the air and will be if we all take seriously our obligations.

The agenda for Commission II contains few items which will excite vigorous debate in the plenary sessions of the Assembly. We should regard this as a tribute to the organizational pattern and procedure which has been developed for handling technical matters in the divisions, the Air Navigation Committee and the Council.

A second field of fruitful work envisaged at Chicago lies in the general area of Commission III of this Assembly. Here we shall be concerned with the economic, commercial and political problems of international air transport.

These problems are no less demanding than those in the technical field, but our progress has understandably been slower and more difficult. It is the view of the United States that there are at least five types of activity in the economic field among which we should distinguish in planning the work of the Organization.

One is the collection, compilation, and publication of factual information. We cannot emphasize too much the fundamental importance of these activities, in which every nation should assist by carrying its share of the load.

The second is the activity of the Secretariat in analytical study. It takes the form not only of dissecting the issues for detailed examination, but also of arranging all of the known facts in relation to the issues. The United States supports fully the ideal of thorough-going staff work by a competent international staff which will assist committee deliberation on proposals as to policy.

Still another type of activity of the Organization in the economic field consists of the formulation of recommendations for national action. The principal examples so far are the proposals for a standard form of bilateral agreement formulated at Chicago and the recommended practices for facilitation of international air transport. In general, and particularly in Commission III, the United States believes it well worth while to work through recommendations to the member States. We regard this as a means of initiating progressive action and of exploring the ground before more decisive forms of international action are attempted.

The fourth type of activity, when it is possible, is undoubtedly the most satisfying form of international collaboration. It consists of decisive international action through the adoption of standards or the acceptance of agreements or treaties. This form of action is always the most difficult. Every government is reluctant to support or enter into binding commitments without full study of the prospective consequences. Nevertheless, we can look forward hopefully to a constant enlargement of the area of such action. The United States will continue to support such endeavors.

The final type of activity in the economic field relates to the administration of international agreements once they have been concluded. The implementation of every important new agreement will be the subject of discussion in this Assembly, and in the council and its committees as we search for a common understanding of our mutual obligations. In some cases it will be necessary to provide specifically for the arbitration of disagreements and disputes. In such cases the United States believes the Organization can be helpful in establishing and maintaining the machinery of arbitration. However, the Organization itself should not be vested with arbitral duties.

In dealing with all of the items on the agenda for Commission III, the United States will seek to apply the general principles which I have just outlined. In this statement I wish to comment further on only one item of the Commission III agenda, namely, the proposed multilateral agreement on commercial rights in international air transport.

It is the view of the United States that our efforts to produce a multilateral agreement on air commerce at Chicago and since have suffered from the lack of experience and of tested information. We still do not have adequate primary statistical data bearing on some of the major problems involved in the draft. Such data are greatly needed. Nevertheless, the present draft represents considerable progress beyond anything we have had before.

The United States intends to work hard in the hope that a treaty agreement can be reached at this Assembly on many of the principles applicable to international air commerce.

Our specific proposals for revision of the draft proposed by the Air Transport Committee will be presented in Commission III. We hope that agreement will prove possible with respect to principles on capacity, rates, unfair practices, the facilitation of international air services, and the arbitration of disagreements. We further believe that the first two freedoms, those of transit and of nontraffic stop, have already received such general acceptance that they should now be put forward in permanent form as part of the proposed treaty. We do not believe that it is practicable to include a general exchange of commercial rights in the proposed treaty at this time. We do believe that the treaty should include suitable provisions to outlaw discriminatory practices in operations under such treaties.

In our negotiations, let us not neglect the "forgotten man"—the individual traveler of any State who wants to go somewhere at a time and in aircraft of his own choosing.

In commenting on the work of the Organization in the technical and economic fields, I have dealt with the two main substantive fields we had under consideration at Chicago.

Another field, the breadth of which was not fully forseen at Chicago, and in our opinion not yet fully forseeable, is that which is entrusted at this Assembly to the Commission on Legal Questions.

In this field, two draft conventions are before the Assembly. The first is known as the Draft Convention concerning the recording of rights in rem in aircraft.

This convention provides for the recording and recognition of property rights in aircraft. It will facilitate the necessary financing as aircraft fleets are rebuilt and expanded. Such a convention is greatly needed. The present draft is the best we have ever had. It provides a basis on which we can hope to complete action this year.

The Draft Convention on the legal status of the aircraft commander is also before the Assembly. Here, too, it is possible that a final text will be prepared and opened for signature.

The CITEJA, which originated the study of these conventions, has had a long and useful background of study and accomplishment. We look forward at this Assembly to participating in making appropriate arrangements to continue the work of CITEJA within the Aviation Organization.

In the other main substantive field of the organization, that of establishing policies for financial and technical aid through the organization under chapter XV of the convention, there has been little precedent. The United States hopes the Commission VI, as well as all others, will realize that our organization, for all its accomplishments, is still young. There has been little time to collect and analyze the basic data that will lead to intelligent decisions. We are all anxious to make decisions to improve the safety, efficiency, and economy of international air transport. Yet, we must recognize that decisions made without facts may hamper more than help our objectives. In all fields the United States urges the accumulation of facts. It appears that the documentation prepared for this field of joint support allows for the establishment of flexible policies and full exploration of the facts. The United States, under its national policy of support of the United Nations, views with great satisfaction the completion of negotiations on the draft agreement of relationship between the Aviation Organization and the United Nations. Final approval by the United Nations is, however, subject to compliance by ICAO with the resolution adopted by the United Nations General Assembly on December 12, 1946, recommending that Franco Spain be debarred from membership in international agencies brought into relationship with the United Nations.

In accordance with this fundamental policy of support of the United Nations, the United States believes it is essential that the relationship agreement between the United Nations and ICAO be brought into force. The retention of Franco Spain as a member of ICAO would mean that the agreement of relationship could not come into operation. The United States delegation accordingly will propose that the Assembly of ICAO adopt an amendment to the Convention which will comply with the United Nations resolution.

Support of the recommendations of the United Nations General Assembly is more important to the United States Government than is the technical advantage of having one country continue as a member of this Organization. We hope that all members share our views on this subject.

There are several other decisions of a general nature to be made by this Assembly. It is to be hoped that the Council will be elected as soon as practicable in order that it may organize before Commission V completes its work. The new Council will then be able to obtain any necessary clarification of the organizational policies established by that Commission.

During this Assembly it appears desirable that a decision be reached on the location of our next convening. The United States favors a suitable location outside of North America.

It is hoped that the next Assembly agenda can be more limited than the one upon which we are now to embark. Perhaps two out of every three Assemblies could be confined to administrative matters and urgent items, a thorough review being held only every third year.

The United States believes that the strength of this Organization lies in a competent continuing Council, its Committees, and the Secretariat. We should build upon our experience to make them even more effective in the future.

In closing we recall with pleasure the cordial reception afforded us last year. The United States extends to the Canadian Government and people of Canada its sincere appreciation for their hospitality to the Organization during this, its First Assembly. Although this year's agenda is heavier than that of last year, the documentation has been so carefully and well prepared that it should be possible to complete our work in a considerably shorter time than was the case last year.

Operation Naval Reserve

EXTENSION OF REMARKS

OF

HON. THEODORE FRANCIS GREEN

OF RHODE ISLAND

IN THE SENATE OF THE UNITED STATES

Thursday, May 29 (legislative day of Monday, April 21), 1947

Mr. GREEN. Mr. President, on last Sunday afternoon Mr. John Nicholas Brown, Assistant Secretary of the Navy for Air, delivered an admirable address entitled "Operation Naval Reserve," at Roger Williams Park, in Providence, R. I. His address is most stimulating and informative in regard to the Naval Reserve, and I think it will be of general interest. Therefore, I ask unanimous consent to have it printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Since joining the Navy Department in November, I have traveled 25,000 miles, from Montreal to Trinidad, from Boston to the western tip of California. Everywhere I have been, I have found Rhode Island men serving in the Navy; on ships, in planes, in under-sea craft, in shore-based establishments dedicated to research and development of modern weapons. Beyond this, I have met thousands of naval personnel from other parts of the country who have served in Rhode Island at some time in their career. Many of these look back upon this State as their second home. A surprising number have bought property here, and look forward to becoming Rhode Islanders on their retirement. To us, all this may not seem remarkable; but to the statistician, the historian, and the geographer, it would seem extraordinary that the smallest State in the Union, a mere 1,214 square miles, one-eighth of which is water, should be so deeply and ubiquitously involved in the largest maritime force in the world and, indeed, in the history of the world. Ladies and gentlemen, we know the answer—there is probably not a man or woman in this audience a member of whose family has not served at some time or another in the United States Navy. There is not a man or woman here, I am sure, whose Rhode Island ancestors have not included at least one seafaring man. It is not accidental that this smallest State of all has carried her commerce in her own ships at some time or other to every port of the known world, and that this commerce was, from its founding, the lifeblood of this colony, nor is it extraordinary that, in order to protect and defend their commerce, the men of Rhode Island armed themselves and engaged in naval warfare against their enemies long before the United States Navy came into being. Their naval history does not begin with the Revolution. More than 80 commissions or letters of marque to capture vessels and merchandise of the enemies of the King of England were issued by Rhode Island in King George's War, between 1739 and 1748, and more than 60 in the French and Indian War, between 1756 and 1763. The first naval action of the Revolution was a fight between the Rhode Island ship *Katy*, under Captain Whipple, and a British vessel off Conanicut Point on the 16th of June 1775, the day before the Battle of Bunker Hill.

It is only natural that when the newly constituted Federal Government turned to the creation of a navy for the defense of America it should look to Rhode Island for leadership, both in ships and in men. Commodore Esek Hopkins was the United States Navy's first flag officer. In 1801 the first American man-of-war to carry the Stars and Stripes into the harbor of Constantinople was the ship *General Washington*, built and launched at India Point in Providence. Some years later it was Oliver Hazard Perry, of Bristol, who won the Battle of Lake Erie and his brother Mathew, the commodore, who opened the Empire of Japan to intercourse with the outside world. The ultimate effects of this action cannot be gaged accurately yet, not even by those of you who fought to conquer that Empire.

During the last war, this small State was bristling with naval establishments. Our harbors were netted, our inland and coastal waters seamed and pocketed with restricted areas, where missiles fired from land and air and under the sea were constantly being tested for range and accuracy. Such names as Quonset Point, Davisville, Melville, Price's Neck, Charlestown, Coddington Point, Brown University, the naval training station, the Newport Torpedo Station, became household words to Rhode Islanders, representing as they did a vast immigration of young men from all parts of America to be trained here as experts in naval warfare. Some brought

their families with them. Many of these stayed and became permanent residents of the community upon which they were cast by the mammoth tide of war.

Now this tide has receded. Demobilization has sent the major portion of these young men back to their homes and civilian occupations, but the citizen of this State who believes that the United States Navy is, has ever been, or will ever be thoroughly washed out of Rhode Island in peacetime is under a grave misapprehension.

I wish that I might take each one of you over this State by plane and let you see from the air how deeply the Navy is involved in Rhode Island, and, consequently, Rhode Island in the Navy. Their destinies, so long united, have become by now inseparable. Flying in from the west, we see on our right hand submarines from the New London base operating around the waters of Block Island, while on our left, fighting planes take off and land at Charlestown on the mainland, still actively participating in the training of Navy fliers. In a few minutes we are over Narragansett Bay, where from the mouth of Newport Harbor clear to the tip of Quonset Point we see anchored ships of the Atlantic Fleet, which recently have left their wartime base in Maine to return to their home waters in Rhode Island. Over Newport we look down upon the United States Naval War College, the first of its kind in the world, through which virtually all the great naval commanders of this country during the past 75 years have passed. It was there that Admiral Mahan taught his famous theories on the influence of sea power on history, which were to change the naval strategy of the continent of Europe even before they were fully appreciated in his own country. Adjoining the war college and projecting its buildings to the tip of Coddington Point we see the new postgraduate school for line officers on the site of the old training station, where 525 junior officers are taking an intensive course.

Close aboard, the United States naval hospital, greatly expanded during the war, is still filled to capacity with war casualties undergoing special treatment, as well as the routine medical cases of peacetime operation. Looking behind us, we notice that the gunnery range at Sachusett Point is still active. Moving up the bay, we look down upon Melville, once the training site of the renowned "expendables" and their comrades of the PT squadrons, and now a fueling depot, as well as the principal fleet recreation area.

Across the bay on the other side we begin to notice unusual air activity. Planes are taking off and landing at frequent intervals, while great carriers lie alongside the piers below. This is Quonset, the Navy's most important Rhode Island installation, and one of the great world centers of naval aviation. Its own air activity personifies the heart and core of the modern Navy, for today airplanes are the striking power of the fleet. Quonset Point is the home port for four of our big carriers. Narragansett Bay also constitutes the home waters of all the light cruisers in the Atlantic Fleet—the *Houston*, the *Manchester*, the *Little Rock*, the *Portsmouth*, the *Wilkes-Barre*, the *Dayton*, the *Fargo*, the *Huntington*, and our own U. S. S. *Providence* which returned from the Mediterranean only a few days ago. In addition, 35 of the Atlantic Fleet destroyers make their home port here. This is more than half of the total number which are now active in the Atlantic Fleet. It is routine for all of these ships to be in their home ports except when on distant service or in fleet exercises. This, of course, does not mean that we shall see all of them at anchor at one time here in Rhode Island, but it does mean that in the course of a year all of them will have been with us for a more or less extended period, as will, either temporarily or permanently, the families, comprising around 20,000 persons, of the officers and men involved. This presents a difficult housing problem, with which I know you are familiar, but the files of the Navy Department contain much correspondence which indicates the willingness of our chambers of commerce and other public organizations to assist in this tedious problem in order that the families who would like to come here while the ships are in port will have some place to live.

So now, just as in the days of old, ships are going forth from Narragansett Bay and carrying the name of Rhode Island to all parts of the world, and with them something of our tradition and our heritage. It is to me inspiring as a citizen of this State to think that the aircraft carrier *Leyte*, with Rhode Island as her home, was the ship that made a courtesy call just a few days ago at Constantinople, and is now anchored in the Bay of Naples. Once again it is a Rhode Island ship that carries the American flag into Turkish waters, just as the *General Washington* had done before her in 1801. I am also inspired by the fact that the carrier *Philippine Sea* sailed out of Narragansett Bay to join Admiral Byrd for exploration in the Antarctic, and that she has just brought back from this exceptional voyage a much broader knowledge of air operations in polar regions.

Two other carriers—the *Kearsarge* and the *Randolph*—are now anchored down the bay. These ships will soon sail for ports in northern Europe with midshipmen from the Naval Academy.

All of these expeditions not only serve the very useful purpose of showing our flag around the world and insuring the safety and welfare of our people wherever they may be, they are also extremely broadening to the men on board who are able to see and realize the conditions under which the other peoples of the world live. They bring back with them a better knowledge and ability to assist in carrying out our desire to maintain the peace of the world. I know that you will be interested in the reactions of these young men, and I suggest that while home from these cruises you talk with them about these things.

In my association with the Navy both in Washington and on numerous trips aboard ship and to naval installations throughout the country, it has been borne in upon me that the United States Navy is the greatest engineering organization in the world. Regardless of the actual number of men involved, whether 3,000,000 as was the case at the end of the war, or scarcely a tenth of that, the number of men is small in proportion to their effectiveness since, like all men with high skill, they have control of vastly complicated mechanisms, the resulting power of which cannot be measured by any yardstick of manpower.

This Navy is our country's first line of defense. This should be clearly borne in mind at all times. It would seem a reasonable policy for the country in general, and this State in particular, always to back its Navy, because, whatever the cost, the Navy is still the cheapest insurance in terms of manpower and in terms of that manpower's effectiveness that this country can buy. But because the Navy is small, it must rely for support and for its expansion in time of trouble upon a wide group, to be in readiness with special skills and special training to fill out the peacetime framework. To provide this essential backing by the people, the Navy is asking you to join the Reserve—to show here in Rhode Island that you stand ready in peace—as you were in war—to lend a hand in maintaining our naval power so that the United States may continue strong—and by this strength to maintain the peace.

There are two kinds of civilian Reserves. The Organized Reserves have a close and regular association through drills, cruises, and occasional duty at a naval station. Through these they receive instruction in many things useful not only for future service in the Navy, but also often for their own civilian purposes. For the drill time and lesson time they are paid. There is a slogan which says "Earn while you learn." However, the Organized Reserve alone is not a broad enough foundation on which to build a wartime Navy. There has therefore been created a Volunteer Reserve to provide a means by which those men who cannot attend regular drills may help as much as possible. This group is paid only for the time actually spent on some specific Navy assignment. But its members definitely belong to the Naval Reserve, and through study and association may develop great usefulness to the Navy—and to themselves. In time of emergency when the Navy must expand rapidly, these men will constitute a very potent nucleus and they will be invaluable in assisting in the mobilization of the large numbers of untrained men necessary to man a wartime Navy should we ever again be faced with that terrible need.

It seems to me wholly admirable that the modern Navy, based as it is upon the most advanced of scientific equipment, assured of the mastery of the seven seas by means of those floating airfields which we call aircraft carriers, as well as all of the vessels that support and protect them, stands ready to transport and escort our troops to the lands of our enemies whoever and wherever they may be, protecting our commerce and denying access to our shores. It seems to me wholly desirable that this modern, up-to-date, alert defense of our country should be as modern and up to date in the development of the principles which deal with human beings as it is with the scientific weapons they must employ. The advantages which the modern Navy gives its men, the opportunity for steady improvement as well as recreation and fellowship, are unsurpassed. With our age-old tradition of seamanship, of hospitality, of responsibility to the Navy, I believe that in this day you will come forward and create a Reserve force that will be staunch and ready to carry on—as Rhode Islanders have always done—in peace—or in war.

Work of Members of Congress

EXTENSION OF REMARKS
OF

HON. RAYMOND S. SPRINGER

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 29, 1947

Mr. SPRINGER. Mr. Speaker, there has been much comment among the people regarding the work of the Members of Congress. Very little is generally known of the hours they serve, and of the service they render, to the people of their respective districts. However, in passing it is sufficient for me to say that practically every Senator and Representative spend long and unusual hours in their offices, working upon departmental matters, holding conferences with other Members, sitting upon committee hearings where much evidence is submitted and heard, or serving in the executive sessions of the committees upon which they serve, reading and giving careful study to the many and various bills which are submitted for consideration, reading and studying the printed hearings upon these bills, going

to the many and various departments of Government to consult the officers relative to important matters of their constituents, and all the while receiving and answering the great stacks of mail coming from the people of their respective districts. Of course, the United States Senators receive the mail from people all over their State. Both the Senators and the Representatives have the same character of work to do. They are a busy group of men. All of their time is consumed, and each night in the office buildings in which their offices are located practically every office is found to be going strong, trying to complete the work of the day. Many days are filled from early dawn to late at night with hard work. There is no limitation of time, and there is no limitation of the hours of work. Their work determines the number of hours they are required to continue their effort. All of this is in addition to the study of the measures which are in debate, and in the preparation to participate in the debate on the floor of the House and Senate. And may I say here that it is highly important for every Senator and Representatives to be well prepared and in full possession of the facts when he takes part in the debate of these highly controversial issues which come before these great legislative bodies, because there are many others who have studied and prepared for the debate and they are familiar with every issue involved.

Mr. Speaker, a very illuminating editorial was written by Mr. Stewart Riley, publisher of the Bedford Daily Times-Mail, of Bedford, Ind., upon this same subject. He has had the experience of visiting with Representative EARL WILSON, of Bedford, and Senator WILLIAM E. JENNER, of Indiana, and he found both of these public servants extremely busy. That same condition faces every Member of both the Senate and House from our great Hoosier State. The things Mr. Riley saw he carried back to Indiana with him, and he wrote the fine editorial to which I desire to refer herein.

Mr. Speaker, I cannot speak too highly of the daily efforts of two Members of Congress—Senator WILLIAM E. JENNER and Representative EARL WILSON. Mr. Riley has analyzed, in his well-written editorial, their daily problems. When he analyzed the problems of the two gentlemen, above mentioned, he referred to the problems of every Member of the Congress.

Therefore, Mr. Speaker, I extend my remarks in the Appendix of the RECORD and include the editorial to which I have referred, and which appeared in the Bedford Daily Times-Mail, of Bedford, Ind., of date May 7, 1947, which illustrates the work of a Congressman, which editorial is as follows:

CONGRESSMEN AND SENATORS WORK HARD

A few days in Washington convinces even the casual visitor that Congressmen and Senators put in more than a 40-hour week serving their constituents, and this Ninth District has two of the hardest-working men in Congress—Senator WILLIAM JENNER and Congressman EARL WILSON.

In 4 days in Washington we saw quite a bit of Nyle Jackson, EARL WILSON'S secretary. Mr. WILSON was busy with conferences and roll calls.

Five-year old Billy Jenner has started on a successful business career selling magazines. To date, he has amassed 30 cents, but that is the first step. Young Bill says he wants to make a million dollars, so he can give his daddy half of it, so daddy won't have to work so hard, and can stay home and play with his son.

Father Bill, the Senator, was appointed on the Labor and Education Committee of the Senate. For six straight weeks that group met nearly every day from 10 a. m. to 6 p. m., and evenings were consumed in studying the other problems of the Senate. Mrs. Jenner says she doesn't see as much of her husband as she did when he was campaigning for office. Bill himself says, "I didn't realize what a job this is. I was down here for a few weeks before, but that was the end of a session, and most of the work had been done. No fooling, I'm tired." He looked it.

EARL WILSON starts his day with conference at 8 o'clock in the morning. Then he takes out a little time to answer correspondence. By midmorning he is either in committee work or on the House floor. With so many very important roll calls he must constantly be available. What little afternoon time he has is spent in studying legislation or trying to perform services for the people of the Ninth District.

We had lunch with Mr. WILSON in the House restaurant the day President Alemán spoke before Congress. Mr. WILSON stands very well with his fellow Congressmen. Almost every Member who came into the restaurant said, "Hello, Earl," or waved. It was quite evident from the manner of the greeting that the salutation was sincere, respectful, and genuine. EARL WILSON stands very well among the Members of Congress. Of course, Members of the opposition try to belittle him, but that is politics. The reorganization bill probably pushed Mr. WILSON out of chairmanship of the Flood Control Committee, but he is a ranking Member of the House Committee on Public Works, which is made up of the old Committees on Public Buildings and Grounds and Flood Control. We met Congressman DONDERO, chairman of the Public Works Committee, and he said, "We think a lot of Mr. WILSON down here." It was quite obvious from his tone that he meant what he said, and was not just giving Earl a build-up before one of his constituents. The people of the Ninth District can well be proud of the type of men they have sent to Washington.

Both Senator JENNER and Congressman WILSON look tired. They were kind enough to ask us out for dinner. The WILSONS were to call at our hotel at 6:30. At 6:45 Mr. WILSON telephoned to say that he was held up for a roll call on the rent control bill, and for us to go on out to JENNER'S. He would join us later if possible. He did arrive about 8:30. That made it a 12½-hour day. The party broke up about 10:45, as both Bill and Earl wanted to go home to bed.

A study of the men present at the joint session of Congress addressed by President Alemán showed most of the men on the floor looking a little weary from hard work and confining attention to their jobs. As a sidelight on this joint session, probably the most outstanding man in the room was Secretary of State Marshall. He came in leading the members of the Cabinet. He is an outstanding personality. He just radiates strength of character. He didn't say a word, as the honors went to the Mexican President, but from the comments of the other folks in the galleries, our admiration of the former Chief of Staff was shared by most of the audience. Mr. Marshall looked tired, too. This business of working for the Government is no easy job for men who are really interested in serving their country.

Our respect for all Members of Congress, and especially the two men from Bedford, was tremendously enhanced by seeing them in Washington. They are splendid, hard-working men.

Tax Exemption and Co-ops

EXTENSION OF REMARKS

OF

HON. ROBERT A. GRANT

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 29, 1947

Mr. GRANT of Indiana. Mr. Speaker, following are two recent editorials from Indiana newspapers on the competitive advantages of tax-exempt co-ops.

The first, from the Fort Wayne News-Sentinel, reads as follows:

PLEA FOR TAX EQUALITY

A resolution of the Indiana General Assembly memoralizes Congress to amend Federal revenue legislation to withdraw from tax-exemption benefits cooperative associations and organizations or industries operated in a similar manner.

Usually when the subject of such exemption arises, there is an inclination to becloud the issue by arguing whether cooperatives are a good thing.

There is much to be said on both sides of the question; the merits or demerits of cooperatives may be laid aside now as having nothing to do with the taxation issue involved.

Farm interests weigh heavily in the cooperative movement. It is interesting, therefore, to recall that farm organizations were in the vanguard of the campaign for a law requiring that religious, charitable, and educational organizations pay property tax on real estate used for income purposes. Such a law was passed and upheld by the courts.

But what of the payment of Federal net income taxes? Ah, but that is different, the Farm Bureau cooperatives and other cooperatives contend.

How is it different?

What is the difference between the principle of equality in tax payment as applied to religious organizations on property levies and Federal income tax payment as applied to cooperatives?

The cooperative spokesmen carefully refer to their profits by another name and speak voluminously of dividends returned to their members. Some of them point out that cooperatives in certain instances do pay Federal income taxes without advancing a logical reason why all should not pay.

Has anyone heard the cooperatives ever claim they could not stay in business without what virtually amounts to a Government subsidy? Indeed, has any authentic spokesman denied that their business could be operated profitably while paying the taxes their competitors are obliged to pay?

Thoughtful citizens regard this not as a personal problem in which an honest decision should be made when the facts are understood.

The resolution referred to, it should be pointed out, is aimed only at cooperatives which are business organizations; purely farm-membership associations are not affected.

To the reminder that there are inequalities in many taxing fields, this newspaper would reply with a reminder of its own: That it has argued for their elimination. An example is our current testimonial to the

need of ironing out inequities in real-estate valuations.

Interestingly enough, a number of the co-op leaders themselves agree that cooperatives need no soft cushion of special privileges.

If our system of free enterprise is to mean anything at all, such concerns will have earned their place in the economic field when they run the same course as their competitors in private business.

The other, from the Zionsville Times, is as follows:

We joined with the Indiana Farm Bureau and other State-wide organizations first to pass and then successfully to take through the courts the law of 1937, which said that all real estate used for income purposes, whether owned by religious, charitable, or educational organizations, should pay property tax. Although such organizations' receipts from these rental properties were used for worthy purposes, nevertheless we all agreed—and the legislature agreed—that they should pay their share of property tax the same as other competing properties. The courts upheld this.

We see no difference between this principle as applied to property tax and the issue of whether or not all types of co-ops, whether farm bureau or others, should pay Federal net income tax. The fact that they call their profits something else, and thus escape this Federal tax, in no way changes the situation. Neither does their claim that some co-ops do pay Federal incomes taxes make a logical reason why all should not pay. We have never heard the co-ops claim they could not stay in business without this Federal subsidy.

We have refused to consider this issue in any way a personal one, but rather one on which the people will make a decision when they understand the facts. These resolutions will affect only cooperatives which are business organizations and in no way affect any purely farm membership associations, such as the Farm Bureau.

We have refused to permit the issue to be complicated by red-herring tactics of debating whether or not co-ops are a good thing; we don't believe this has anything to do with the taxation issue involved.

We realize there is inequality in every field of taxation, and a continuous effort must be made toward equality.

We agree with a large number of co-op leaders—and even a large number of Hoosier farmers—that co-ops need no special privileges and should pay all taxes the same as any other business, and that once they do, they will take their rightful position in the economic field.

Americans for Democratic Action Program Submitted Deserves Consideration by Congress

EXTENSION OF REMARKS

OF

HON. ESTES KEFAUVER

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 29, 1947

Mr. KEFAUVER. Mr. Speaker, under leave to extend my remarks, I wish to include a letter to the Honorable JESSE WOLCOTT asking consideration by the Joint Committee on the Economic Report of the program of ADA. The letter is as follows:

MAY 22, 1947.

Hon. JESSE WOLCOTT,
Vice Chairman, Joint Committee on the Economic Report,
Capitol Building,
Washington, D. C.

DEAR MR. WOLCOTT: The primary concern of the Congress is the health and stability of the national economy. This great responsibility was emphasized and underlined by the passage of the Employment Act of 1946, which established a joint committee of both Houses to advise the Congress and its committees on major matters of economic policy.

As Members of Congress, we are increasingly concerned over the rapidly mounting price level and the attendant decline in purchasing power which, taken together with other factors, in the opinion of competent observers and experts, portends a recession or slackening of economic activity in the near future. The Council of Economic Advisers and the President have issued a warning on this subject. More recently, a committee of 11 leading economists and former Government officials, including Chester Bowles as chairman, William H. Davis, Leon Henderson, Paul Porter, Professor Seymour Harris, under the sponsorship of Americans for Democratic Action, have issued an analysis of the dangers in the present economic situation and recommendations for remedial action which they say should be adopted within the next 60 days in order to curb and cushion the anticipated recession.

If the conclusions reached by this group and by other business and Government spokesmen are correct, there is no more important problem before the Congress and the Nation. We know that, if the Congress lives up to its responsibility, it is not necessary for this country to go through the old and tragic cycle of boom and bust. We believe that a serious recession at this time would not only create widespread suffering and serious dislocations here at home, but may well jeopardize our position in the world, and our hope for world recovery and reconstruction. We believe that the time to take action against the threatened recession is before it occurs. The issue clearly lies before this session of Congress.

Although this report does not profess to have all the answers, its recommendations present a concrete program of legislation and executive action which merits prompt and earnest consideration by the Congress.

As Members of the House of Representatives, we respectfully request you as vice chairman of the Joint Economic Committee, to place this report before that committee and to urge immediate hearings on it and other proposals, and the formulation of definite recommendations for timely action.

We do not make this appeal as a partisan measure. The issue of economic stability transcends political lines. To fail to deal with the most important problem before the country today would be an evasion of our duties as elected Representatives of the people.

Sincerely yours,

HENRY M. JACKSON, Washington; CECIL R. KING, California; FRANCK R. HAVENNER, California; WALTER K. GRANGER, Utah; JOHN A. CARROLL, Colorado; J. PERCY PRIEST, Tennessee; WALTER B. HUBER, Ohio; ALBERT GORE, Tennessee; FRANCIS E. WALTER, Pennsylvania; FRANK BUCHANAN, Pennsylvania; THOMAS E. MORGAN, Pennsylvania; MIKE MONRONEY, Oklahoma; HERMAN P. Self-Perpetuation of Government Agencies

EXTENSION OF REMARKS

OF

HON. WALTER NORBLAD

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 29, 1947

Mr. NORBLAD. Mr. Speaker, since coming to Congress I have often heard it said that the danger of establishing any particular office or agency in the Government is that you never seem to get rid of them. In most cases there seems to be an attempt at self-perpetuation to provide employment for those in that office. The United States Spruce Corporation of World War I, which took 25 years to liquidate, is an example.

In other cases it seems that they hang on because care and maintenance of the old files provides the necessity or, should we say, the excuse.

I have recently checked to determine whether or not the ghost of that famous old bird, the Blue Eagle of 1934, was still in existence. To my surprise, I find that the NRA is still with us 12 years after the termination of its brief but hectic existence. This agency, as you will recall, lived but a year or two, and in June of 1935, by act of Congress, it presumedly ended. A few months later the President, by Executive Order No. 7252, administered the final rites, and for all intents and purposes that was the last of our famed Blue Eagle.

We now find that in 1947 there is still one full-time employee and one half-time employee engaged in working on the files of the NRA. They contend that as late as this spring some businessman in this country requested an application to file under and comply with the terms of the NRA.

Certainly the cost of the present employees of this short-lived agency are not of any great consequence, but it does confirm the fact that once established

a Government office never seems to completely die. Considering the large number of agencies which were set up subsequent to the alleged demise of the NRA, and particularly those of World War II, we have just cause to wonder if most of those agencies presumedly in the process of liquidation will not still be hovering over us like the ghost of the Blue Eagle when my son, now in the second grade, shall have become the possessor of a long gray beard.

Ives-Fulton Bill Against Discrimination in Employment

EXTENSION OF REMARKS
OF

HON. JAMES G. FULTON

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 29, 1947

Mr. FULTON. Mr. Speaker, because I have been receiving many requests for a summary and analysis of the provisions of H. R. 2824, known as the Ives-Fulton bill, I am explaining the main features of the legislation for the RECORD.

This bill was introduced in the House on March 27, 1947, and on the same date in the Senate, S. 984, by Senator IVES, of New York. The cosponsors of the bill in the Senate are Senator IVES, of New York, Senator SALTONSTALL, of Massachusetts, Senator SMITH, of New Jersey, Senator MORSE, of Oregon, Senator CHAVEZ, of New Mexico, Senator MURRAY, of Montana, and Senator MYERS, of Pennsylvania.

The Ives-Fulton bill is essentially a compromise bill based on principles of the successful statute now in effect in the State of New York. H. R. 2824 sets up a system of local, State, and regional advisory and conciliation councils to enable localities to settle on a voluntary basis questions of discrimination in employment. The bill also provides for an approach at settlement by conference, conciliation, and persuasion, before resorting to steps leading to orders by governmental authority.

SUMMARY OF PROVISIONS

First. Practices prohibited: The bill forbids discrimination in hiring, firing, or conditions of employment because of race, religion, color, national origin, or ancestry by an employer of 50 or more engaged in interstate commerce and also forbids him to utilize any employment agency or other placement service which discriminates—section 5a. The bill forbids a labor organization having 50 members in the employ of one or more subject to the act to discriminate against any individual or to segregate or limit its membership in any way which adversely affects his employment opportunities—section 5b. The bill forbids employers and labor organizations to discriminate against any person for having opposed an unlawful employment practice.

Second. Exemptions: The bill exempts State or municipal—but not Federal—agencies as well as nonprofit religious, charitable, fraternal, social, and educational associations, other than labor organizations—section 4.

Third. Who enforces act: The bill creates a National Commission Against Discrimination in Employment composed of seven members at an annual salary of $10,000 each, appointed by the President with the advice and consent of the Senate for overlapping 7-year terms—section 6.

Fourth. Powers of Commission: The bill authorizes the Commission to investigate charges, attempt to eliminate discrimination by conference, conciliation, and persuasion, issue complaints, hold hearings, subpena witnesses, make findings of fact, issue cease-and-desist orders, order reinstatement or hiring, with or without back pay, and seek enforcement of its orders in court—section 7.

Fifth. Sanctions: Violation of a court-enforced order of the Commission may be punishable as a contempt of court—section 8. Wilful resistance to Commission representatives is a misdemeanor—section 14—punishable by a fine of not more than $500 and/or imprisonment for not more than 1 year.

Sixth. Administrative procedure: The charges may be filed by or on behalf of an aggrieved person or by any member of the Commission. The commissioner who filed a charge shall not participate in a hearing or trial thereof. Three members of the Commission hear the parties argue the case, but after the hearing, the entire Commission—three members constituting a quorum—must decide it. Procedure is in conformity with the Administrative Procedure Act—section 7 and section 8.

Seventh. Judicial review: Review is had in circuit court of appeals in accordance with the Administrative Procedure Act. An order may be set aside if arbitrary or capricious or not supported by substantial evidence—section 8.

Eighth. Government agencies and Government contracts: Commission orders against a Federal agency may be enforced by the President and not by the courts. The President may also issue regulations to prevent unlawful employment practices on any Federal contract employing 50 or more persons. Such regulations are enforced by the Commission—section 10.

Ninth. Notices: Every employer or union subject to act must post notices about act approved by Commission; a willful failure to post is punishable by a fine of from $100 to $500—section 11.

Tenth. Other provisions:

(a) The act is to be known as the "National Act Against Discrimination in Employment"—section 1.

(b) The declaration of policy cities the constitutional and moral justifications for the act, including the Charter of the United Nations. The right to employment without discrimination is made a Federal civil right—section 2.

(c) A trial examiner who presides at a Commission hearing must be a resident of the Federal judicial circuit in which the alleged unlawful practice took place—section 6f.

(d) At the request of an employer whose employees refuse to cooperate with the act, the Commission may offer remedial action—section 6g.

(e) The Commission may create State or regional advisory or conciliation councils and may empower them to study the problem or specific instances of discrimination in employment—section 6g.

(f) Complaints must be filed within 1 year after discrimination has been committed—section 7h.

(g) The act does not affect in any way veterans' preferences laws—section 12.

(h) Regulations of the Commission may be set aside by a concurrent resolution of both Houses of Congress—section 13.

For further information I would advise the interested citizen to write to the National Council for a Permanent FEPC at 930 F Street NW., Washington 4, D. C.

The Ives-Fulton bill provides specifically as follows:

A bill to prohibit discrimination in employment because of race, religion, color, national origin, or ancestry

Be it enacted, etc., That this act may be cited as the "National Act Against Discrimination in Employment."

FINDINGS AND DECLARATION OF POLICY

SEC. 2. (a) The Congress hereby finds that the practice of discriminating in employment against properly qualified persons because of their race, religion, color, national origin, or ancestry is contrary to the American principles of liberty and of equality of opportunity, is incompatible with the Constitution, forces large segments of our population into substandard conditions of living, foments industrial strife and domestic unrest, deprives the United States of the fullest utilization of its capacities for production, endangers the national security and the general welfare, and adversely affects the domestic and foreign commerce of the United States.

(b) The right to employment without discrimination because of race, religion, color, national origin, or ancestry is hereby recognized as and declared to be a civil right of all the people of the United States.

(c) This act has also been enacted as a step toward fulfillment of the international treaty obligations imposed by the Charter of the United Nations upon the United States as a signatory thereof to promote universal respect for, and observance of, human rights and fundamental freedoms for all without distinction as to race, sex, language, or religion.

(d) It is hereby declared to be the policy of the United States to protect the right recognized and declared in subdivision (b) hereof and to eliminate all such discrimination to the fullest extent permitted by the Constitution. This act shall be construed to effectuate such policy.

DEFINITIONS

SEC. 3. As used in this act:

(a) The term "person" includes one or more individuals, partnerships, associations, corporations, legal representatives, trustees, trustees in bankruptcy, receivers, or any organized group of persons and any agency or instrumentality of the United States or of any Territory or possession thereof.

(b) The term "employer" means a person engaged in commerce or in operations affecting commerce having in this employ 50 or more individuals; any agency or instrumentality of the United States or of any Territory or possession thereof; and any person acting in the interest of an employer, directly or indirectly.

(c) The term "labor organization" means any organization, having 50 or more members employed by any employer or employers, which exist for the purpose, in whole or in part, of collective bargaining or of dealing with employers concerning grievances, terms or conditions of employment, or for other mutual aid or protection in connection with employment.

(d) The term "commerce" means trade, traffic, commerce, transportation, or com-

munication among the several States; or between any State, Territory, or the District of Columbia and any place outside thereof; or within the District of Columbia or any Territory; or between points in the same State but through any point outside thereof.

(e) The term "affecting commerce" means in commerce, or burdening or obstructing commerce or the free flow of commerce.

(f) The term "Commission" means the National Commission Against Discrimination in Employment, created by section 6 hereof.

EXEMPTIONS

SEC. 4. This act shall not apply to any State or municipality or political subdivision thereof, or to any religious, charitable, fraternal, social, educational, or sectarian corporation or association, not organized for profit, other than labor organizations.

UNLAWFUL EMPLOYMENT PRACTICES DEFINED

SEC. 5. (a) It shall be an unlawful employment practice for an employer—

(1) to refuse to hire, to discharge, or otherwise to discriminate against any individual with respect to his terms, conditions, or privileges of employment, because of such individual's race, religion, color, national origin, or ancestry; and

(2) to utilize in the hiring or recruitment of individuals for employment any employment agency, placement service, training school or center, labor organization, or any other source which discriminates against such individuals because of their race, religion, color, national origin, or ancestry.

(b) It shall be an unlawful employment practice for any labor organization to discriminate against any individual or to limit, segregate, or classify its membership in any way which would deprive or tend to deprive such individual of employment opportunities, or would limit his employment opportunities or otherwise adversely affect his status as an employee or as an applicant for employment, or adversely affect his wages, hours, or employment conditions, because of such individual's race, religion, color, national origin, or ancestry.

(c) It shall be an unlawful employment practice for any employer or labor organization to discharge, expel, or otherwise discriminate against any person, because he has opposed any unlawful employment practice or has filed a charge, testified, participated, or assisted in any proceeding under this act.

THE NATIONAL COMMISSION AGAINST DISCRIMINATION IN EMPLOYMENT

SEC. 6. (a) There is hereby created a commission to be known as the National Commission Against Discrimination in Employment, which shall be composed of seven members who shall be appointed by the President by and with the advice and consent of the Senate. One of the original members shall be appointed for a term of 1 year, one for a term of 2 years, one for a term of 3 years, one for a term of 4 years, one for a term of 5 years, one for a term of 6 years, and one for a term of 7 years, but their successors shall be appointed for terms of 7 years each, except that any individual chosen to fill a vacancy shall be appointed only for the unexpired term of the member whom he shall succeed. The President shall designate one member to serve as Chairman of the Commission. Any member of the Commission may be removed by the President upon notice and hearing for neglect of duty or malfeasance in office, but for no other cause.

(b) A vacancy in the Commission shall not impair the right of the remaining members to exercise all the powers of the Commission and three members thereof shall constitute a quorum.

(c) The Commission shall have an official seal which shall be judicially noticed.

(d) The Commission shall at the close of each fiscal year report to the Congress and to the President concerning the cases it has heard, the decisions it has rendered, the names, salaries, and duties of all individuals in its employ and the moneys it has disbursed, and shall make such further reports on the cause of and means of eliminating discrimination and such recommendations for further legislation as may appear desirable.

(e) Each member of the Commission shall receive a salary of $10,000 a year.

(f) The principal office of the Commission shall be in the District of Columbia, but it may meet or exercise any or all of its powers at any other place and may establish such regional offices as it deems necessary. The Commission may, by one or more of its members or by such agents as it may designate, conduct any investigation, proceeding, or hearing necessary to its functions in any part of the United States. Any such agent designated to conduct a proceeding or a hearing shall be a resident of the Federal judicial circuit, as defined in sections 116 and 308 of the Judicial Code as amended (U. S. C. Annotated, title 28, secs. 211 and 450), within which the alleged unlawful employment practice occurred.

(g) The Commission shall have power—

(1) to appoint such agents and employees as it deems necessary to assist it in the performance of its functions;

(2) to cooperate with regional, State, local, and other agencies;

(3) to pay to witnesses whose depositions are taken or who are summoned before the Commission or any of its agents the same witness and mileage fees as are paid to witnesses in the courts of the United States;

(4) to furnish to persons subject to this act such technical assistance as they may request to further their compliance with this act or any order issued thereunder;

(5) upon the request of any employer, whose employees or some of them refuse or threaten to refuse to cooperate in effectuating the provisions of this act, to assist in such effectuation by conciliation or other remedial action;

(6) to make such technical studies as are appropriate to effectuate the purposes and policies of this act and to make the results of such studies available to interested governmental and nongovernmental agencies; and

(7) to create such local, State, or regional advisory and conciliations councils as in its judgment will aid in effectuating the purpose of this act, and the Commission may empower them to study the problem or specific instances of discrimination in employment because of race, religion, color, national origin, or ancestry and to foster through community effort or otherwise good will, cooperation, and conciliation among the groups and elements of the population, and make recommendation to the Commission for the development of policies and procedures in general and in specific instances. Such advisory and conciliation councils shall be composed of representative citizens residents of the area for which they are appointed, serving without pay, but with reimbursement for actual and necessary traveling expenses; and the Commission may make provision for technical and clerical assistance to such councils and for the expenses of such assistance.

PREVENTION OF UNLAWFUL EMPLOYMENT PRACTICES

SEC. 7. (a) Whenever a sworn written charge has been filed by or on behalf of any person claiming to be aggrieved, or a written charge has been filed by a member of the Commission, that any person subject to the act has engaged in any unlawful employment practice, the Commission shall investigate such charge and if it shall determine after such preliminary investigation that probable cause exists for crediting such written charge, it shall endeavor to eliminate any unlawful employment practice by informal methods of conference, conciliation, and persuasion. Nothing said or done during such endeavors may be used as evidence in any subsequent proceeding.

(b) If the Commission fails to effect the elimination of such unlawful employment practice and to obtain voluntary compliance with this act, or in advance thereof if circumstances so warrant, it shall cause a copy of such written charge to be served upon such person who has allegedly committed any unlawful employment practice, hereinafter called the respondent, together with a notice of hearing before the Commission, or a member thereof, or before a designated agent, at a place therein fixed, not less than 10 days after the service of such charge.

(c) The member of the Commission who filed a charge shall not participate in a hearing thereon or in a trial thereof.

(d) At the conclusion of a hearing before a member or designated agent of the Commission the entire record thereof shall be transferred to the Commission, which shall designate three of its qualified members to sit as the Commission and to hear on such record the parties at a time and place to be specified upon reasonable notice.

(e) All testimony shall be taken under oath.

(f) The respondent shall have the right to file a verified answer to such written charge and to appear at such hearing in person or otherwise, with or without counsel, to present evidence and to examine and cross-examine witnesses.

(g) The Commission or the member or designated agent conducting such hearing shall have the power reasonably and fairly to amend any written charge, and the respondent shall have like power to amend its answer.

(h) Any written charge filed pursuant to this section must be filed within 1 year after the commission of the alleged unlawful employment practice.

(i) If upon the record, including all the testimony taken, the Commission shall find that any person named in the written charge has engaged in any unlawful employment practice, the Commission shall state its findings of fact and shall issue and cause to be served on such person an order requiring him to cease and desist from such unlawful employment practice and to take such affirmative action, including reinstatement or hiring of employees, with or without back pay, as will effectuate the policies of the act. If upon the record, including all the testimony taken, the Commission shall find that no person named in the written charge has engaged or is engaging in any unlawful employment practice, the Commission shall state its findings of fact and shall issue an order dismissing the said complaint.

(j) Until a transcript of the record in a case shall have been filed in a court, as hereinafter provided, the Commission may at any time, upon reasonable notice and in such manner as it shall deem proper, modify or set aside, in whole or in part, any finding or order made or issued by it.

(k) The proceedings held pursuant to this section shall be conducted in conformity with the standards and limitations of sections 5, 6, 7, and 8 of the Administrative Procedure Act, Public Law 404, Seventy-ninth Congress, June 11, 1946.

JUDICIAL REVIEW

SEC. 8. (a) The Commission shall have power to petition any circuit court of appeals of the United States (including the Court of Appeals of the District of Columbia) or, if the circuit court of appeals to which application might be made is in vacation, any district court of the United States (including the Supreme Court of the District of Columbia) within any circuit wherein the unlawful employment practice in question occurred, or wherein the respondent transacts business, for the enforcement of such order and for appropriate temporary relief or restraining order, and shall certify and file in the court to which petition is made a transcript of the entire record in the

proceeding, including the pleadings and testimony upon which such order was entered and the findings and the order of the Commission. Upon such filing, the court shall conduct further proceedings in conformity with the standards, procedures, and limitations established by sections 10c and 10e, of the Administrative Procedure Act.

(b) Upon such filing, the court shall cause notice thereof to be served upon such respondent and thereupon shall have jurisdiction of the proceeding and of the question determined therein and shall have power to grant such temporary relief or restraining order as it deems just and proper and to make and enter upon the pleadings, testimony, and proceedings set forth in such transcript a decree enforcing, modifying, and enforcing as so modified, or setting aside in whole or in part the order of the Commission.

(c) No objection that has not been urged before the Commission, its member or agent, shall be considered by the court, unless the failure or neglect to urge such objection shall be excused because of extraordinary circumstances.

(d) If either party shall apply to the court for leave to adduce additional evidence and shall show to the satisfaction of the court that such additional evidence is material and that there was reasonable grounds for the failure to adduce such evidence in the hearing before the Commission, its member or agent, the court may order such additional evidence to be taken before the Commission, its member or agent, and to be made a part of the transcript.

(e) The Commission may modify its findings as to the facts, or make new findings, by reason of additional evidence so taken and filed, and it shall file such modified or new findings and its recommendations, if any, for the modification or setting aside of its original order.

(f) The jurisdiction of the court shall be exclusive and its judgment and decree shall be final, except that the same shall be subject to review by the appropriate circuit court of appeals, if application was made to the district court as hereinabove provided, and by the Supreme Court of the United States upon writ of certiorari or certification as provided in sections 239 and 240 of the Judicial Code, as amended (U. S. C., title 28, secs. 346 and 347).

(g) Any person aggrieved by a final order of the Commission may obtain a review of such order in any circuit court of appeals of the United States in the circuit wherein the unlawful employment practice in question was alleged to have been engaged in or wherein such person transacts business, by filing in such court a written petition praying that the order of the Commission be modified or set aside. A copy of such petition shall be forthwith served upon the Commission and thereupon the aggrieved party shall file in the court a transcript of the entire record in the proceeding certified by the Commission, including the pleadings and testimony upon which the order complained of was entered and the findings and order of the Commission. Upon such filing, the court shall proceed in the same manner as in the case of an application by the Commission under subsection (a), and shall have the same exclusive jurisdiction to grant to the petitioner or the Commission such temporary relief or restraining order as it deems just and proper, and in like manner to make and enter a decree enforcing, modifying, and enforcing as so modified, or setting aside in whole or in part, the order of the Commission.

(h) Upon such filing by a person aggrieved the reviewing court shall conduct further proceedings in conformity with the standards, procedures, and limitations established by sections 10a and 10b of the Administrative Procedure Act.

(i) The commencement of proceedings under subsection (a) or (g) of this section shall not, unless specifically ordered by the court, operate as a stay of the Commission's order.

INVESTIGATORY POWERS

SEC. 9. (a) For the purpose of all investigations, proceedings, or hearings which the Commission deems necessary or proper for the exercise of the powers vested in it by this act, the Commission, or any member thereof, shall have power to issue subpenas requiring the attendance and testimony of witnesses and the production of any evidence relating to any investigation, proceeding, or hearing before the Commission, its member, or agent conducting such investigation, proceeding, or hearing.

(b) Any member of the Commission, or any agent designated by the Commission for such purposes, may administer oaths, examine witnesses, and receive evidence.

(c) Such attendance of witnesses and the production of such evidence may be required, from any place in the United States or any Territory or possession thereof, at any designated place of hearing.

(d) In case of contumacy or refusal to obey a subpena issued to any person under this act, any district court of the United States or the United States courts of any Territory or possession, or the Supreme Court of the District of Columbia, within the jurisdiction of which the investigation, proceeding, or hearing is carried on or within the jurisdiction of which said person guilty of contumacy or refusal to obey is found or resides or transacts business, upon application by the Commission shall have jurisdiction to issue to such person an order requiring him to appear before the Commission, its member, or agent, there to produce evidence if so ordered, or there to give testimony relating to the investigation, proceeding, or hearing.

(e) No person shall be excused from attending and testifying or from producing documentary or other evidence in obedience to the subpena of the Commission, on the ground that the testimony or evidence required of him may tend to incriminate him or subject him to a penalty or forfeiture; but no individual shall be prosecuted or subjected to any penalty or forfeiture for or on account of any transaction, matters, or thing concerning which he is compelled, after having claimed his privilege against self-incrimination, to testify or produce evidence, except that such individual so testifying shall not be exempt from prosecution and punishment for perjury committed in so testifying. The immunity herein provided shall extend only to natural persons so compelled to testify.

ENFORCEMENT OF ORDERS DIRECTED TO GOVERNMENT AGENCIES

SEC. 10. The provision of section 8 shall not apply with respect to an order of the Commission under section 7 directed to any agency or instrumentality of the United States, or of any Territory or possession thereof, or any officer or employee thereof. The Commission may request the President to take such action as he deems appropriate to obtain compliance with such orders. The President shall have power to provide for the establishment of rules and regulations to prevent the committing or continuing of any unlawful employment practice as herein defined by any person who makes a contract with any agency or instrumentality of the United States (excluding any State or political subdivision thereof) or of any Territory or possession of the United States, which contract requires the employment of at least 50 individuals. Such rules and regulations shall be enforced by the Commission according to the procedure hereinbefore provided.

NOTICES TO BE POSTED

SEC. 11. (a) Every employer and labor organization shall post and keep posted in conspicuous places upon its premises a notice to be prepared or approved by the Commission setting forth excerpts of the act and such other relevant information which the Commission deems appropriate to effectuate the purposes of the act.

(b) A willful violation of this section shall be punishable by a fine of not less than $100 or more than $500 for each separate offense.

VETERANS' PREFERENCE

SEC. 12. Nothing contained in this act shall be construed to repeal or modify any Federal or State law creating special rights or preferences for veterans.

RULES AND REGULATIONS

SEC. 13. (a) The Commission shall have authority from time to time to issue, amend, or rescind suitable regulations to carry out the provisions of this act. If at any time after the issuance of any such regulation or any amendment or rescission thereof, there is passed a concurrent resolution to the two Houses of the Congress stating in substance that the Congress disapproves such regulation, amendment, or rescission, such disapproved regulation, amendment, or rescission shall not be effective after the date of the passage of such concurrent resolution, nor shall any regulation or amendment having the same effect as that concerning which the concurrent resolution was passed be issued thereafter by the Commission.

(b) Regulations issued under this section shall be in conformity to the standards and limitations of the Administrative Procedure Act.

FORCIBLY RESISTING THE COMMISSION OR ITS REPRESENTATIVES

SEC. 14. Whoever shall forcibly resist, oppose, impede, intimidate, or interfere with a member, agent, or employee of the Commission while engaged in the performance of duties under this act, or because of such performance, shall be punished by a fine of not more than $500, or by imprisonment for not more than 1 year, or by both.

SEPARABILITY CLAUSE

SEC. 15. If any provision of this act or the application of such provision to any person or circumstance shall be held invalid, the remainder of this act or the application of such provision to persons or circumstances other than those to which it is held invalid shall not be affected thereby.

COMPARISON OF H. R. 2232, SEVENTY-NINTH CONGRESS, AND IVES-FULTON BILL, H. R. 2824, EIGHTIETH CONGRESS—GENERAL STATEMENT

H. R. 2232 was selected for comparison because it was prepared by the Labor Committee of the Seventy-ninth Congress and was the only bill of its kind in that Congress to be reported by the committee.

Briefly the principal points of difference in the two bills are as follows:

H. R. 2232 makes the act applicable to labor unions of 6 or more persons and to employers of 6 or more persons, whereas H. R. 2824 sets the figure at 50 in each case.

H. R. 2824 provides for local, State, and regional advisory and conciliation councils to enable localities to voluntarily settle questions of discrimination in employment. It also requires an approach at settlement by conference, conciliation, and persuasion before resorting to steps leading to a cease-and-desist order or dismissal of the complaint. H. R. 2232 does not have these provisions.

H. R. 2824 permits Congress to disapprove a Commission regulation at any time after issuance thereof. H. R. 2232 limits congressional disapproval to 60 days after issuance of the regulation.

H. R. 2232 requires that antidiscrimination clauses be included in Government contracts.

H. R. 2824 omits this provision.

H. R. 2824 exempts from operation of the act State and local governments and certain nonprofit organizations. H. R. 2232 has no such provision.

H. R. 2824 offers aggrieved parties additional opportunities for judicial review pursuant to the Administrative Procedure Act (Public Law 404, 79th Cong.).

Section by section comparison

Section	H. R. 2232, 79th Cong.	H. R. 2824, 80th Cong.
Sec. 1: Short title	"Fair Employment Practice Act"	"National Act Against Discrimination in Employment."
Sec. 2: Findings and declaration of policy	Sets forth the underlying factual basis and policy for the regulation provided by the bill. The Congress finds that discrimination in employment because of race, creed, color, national origin or ancestry (1) leads to domestic and industrial strife and unrest, (2) forces large segments of our population permanently into substandard conditions of living, (3) creates a drain upon the resources of the Nation, (4) causes a diminution of employment and wages which disrupts the market for goods in commerce, all of which (5) burden, hinder, and obstruct commerce.	Sets forth the underlying factual basis and policy for the regulation provided by the bill. The Congress finds that discrimination in employment because of race, religion, color, national origin, or ancestry (1) is contrary to the American principles of liberty and equality of opportunity, (2) is incompatible with the Constitution, (3) forces large segments of our population into substandard conditions of living, (4) foments industrial and domestic strife, (5) deprives the United States of full productive capacities, (6) endangers the national security and general welfare, and (7) adversely affects domestic and foreign commerce.
	No similar provision.	Cites act as a step toward fulfillment of the international treaty obligations imposed by the Charter of the United Nations upon the United States as a signatory thereof to promote "universal respect for, and observance of, human rights and fundamental freedoms for all without distinction as to race, sex, language, or religion."
Sec. 3: Definitions	Defines in ordinary terms the words, "person, labor union, commerce, affecting commerce," and "Commission." "Employer" excludes all employers of less than 6 individuals. A "labor union" excludes organizations having less than 6 members.	Defines in ordinary terms the words, "person, employer, labor organization, commerce, affecting commerce," and "Commission." "Employer" excludes employers of less than 50 individuals. "Labor organization" excludes organizations having less than 50 members.
Sec. 4: Right to freedom from discrimination in employment.	Declares that the right to work free from discrimination is an "immunity" of citizens of the United States, which shall not be abridged by any Federal or State agency.	Declares right to employment without discrimination to be a civil right of all the people of the United States.
Exemptions	No provision.	Exempts from operation of the act any State or municipality or political subdivision thereof, or any religious, charitable, fraternal, or other nonprofit corporations or associations, except labor organizations.
Sec. 5: Unfair (unlawful in H. R. 2824) employment practices defined.	Declares as an unfair employment practice (1) by an employer the refusal to hire, the discharge of, or the discrimination against, any person because of race, color, creed, religion, national origin or ancestry, or limitation of recruitment on that basis; (2) by a labor union the refusal of or expulsion from membership or the discrimination against any employee, employer or member for the foregoing reasons; and (3) the discrimination by an employer or labor union against any person because he has opposed practices forbidden by this act.	Declares as an unlawful employment practice (1) by an employer the refusal to hire, the discharge of, or the discrimination against an individual because of his race, religion, color, national origin or ancestry, or the utilization of recruitment agencies which practice discrimination; (2) by a labor organization the limitation, segregation, or classification of its membership in any way which would deprive or limit any individuals' employment opportunities; and (3) the discrimination against any person by an employer or labor organization because he has opposed any unlawful employment practice.
Sec. 6: Fair Employment Practice Commission.	Creates the Fair Employment Practice Commission composed of 5 members appointed by the President for 5-year terms ($10,000 a year) with the advice and consent of the Senate (original members would serve for terms ranging from 1 to 5 years).	
	The Commission would replace the Committee on Fair Employment Practice established by Executive Order 9346 of May 27, 1943, and which was terminated on June 30, 1946, by the act of July 17, 1945 (59 Stat. 473).	No provision.
The National Commission Against Discrimination in Employment.		Creates the National Commission Against Discrimination in Employment composed of 7 members appointed by the President for 7-year terms ($10,000 a year) with the advice and consent of the Senate (original members would serve for terms ranging from 1 to 7 years).
	No provision.	Provides for creation of local, State, or regional advisory conciliation councils to enable localities to voluntarily settle disputes, and empowers the Commission, upon request of an employer whose employees refuse or threaten to refuse to cooperate in effectuating this act, to assist in such effectuation by conciliation or other remedial action.
Sec. 7: Prevention of unfair (unlawful in H. R. 2824) employment practices.	Empowers the Commission to prevent unfair employment practices by the issuance of cease-and-desist orders. Procedure calls for filing of charges with the Commission, the holding of hearings before it, the making of findings of fact, and the issuance of cease-and-desist orders or dismissal of the complaint.	Empowers the Commission to prevent unlawful employment practices by the issuance of cease-and-desist orders. First, however, the Commission shall investigate the written charges of persons claiming to be aggrieved and shall endeavor to eliminate the practice complained of by conference, conciliation, and persuasion. Cease-and-desist orders are to be issued only after efforts to obtain voluntary compliance with the act have failed and hearings have been held before the Commission on the practices complained of. Proceedings shall be conducted in accordance with secs. 5, 6, 7, and 8 of the Administrative Procedure Act (Public Law 404, 79th Cong.).
Sec. 8: Judicial review	Incorporates, by reference, the procedure for judicial review and enforcement of the Commission's orders which is now applicable to orders of the National Labor Relations Board (U. S. C. 29: 160 (e), (f), (g)).	Same as H. R. 2232 (provisions are written into bill) except that additional provisions are included to provide for conducting of further proceedings by the reviewing court in accordance with section 10 of the Administrative Procedure Act (Public Law 404, 79th Cong). where (a) the Commission files petition for enforcement of an order or for appropriate temporary relief, or (b) a person aggrieved by the Commission's final order files petition for review.
Sec. 9: Investigatory powers	Confers upon the Commission the customary powers of subpena and administration of oaths.	Same as H. R. 2232 except that the provision making failure to obey a court order to appear and testify before the Commission punishable as a contempt of court is omitted in H. R. 2824.
Sec. 10 (H. R. 2232). Sec. 13 (H. R. 2824). Rules and regulations.	Empowers the Commission to issue regulations necessary to carry out the act, but provides that Congress may disapprove any regulation by the adoption of a concurrent resolution within 60 days after issuance of such regulation. After adoption of such a resolution the Commission would be barred from issuing another regulation having the same effect as the one disapproved.	Same as H. R. 2232 except that Congressional disapproval of a regulation may occur at any time after issuance.
Sec. 11 (H. R. 2232): Inclusion of antidiscrimination clause in Government contracts.	Requires that every contract to which the Government is a party shall include an antidiscrimination clause.	No similar provision.
(H. R. 2824): Notices to be posted	No similar provision.	Requires every employer and labor organization to post in conspicuous places upon its premises notices prepared or approved by the Commission setting forth relevant information deemed appropriate to effectuate the purposes of this act. Fixes a $100 to $500 penalty for each violation.
Sec. 12 (H. R. 2232). Sec. 10 (H. R. 2824). Enforcement of orders directed to Government agencies.	Provides for a means of enforcing the Commission's orders against Federal agencies or their officers who have been guilty of discriminatory employment practices. The Commission may request the President to take any action deemed appropriate to obtain compliance with an order. The President may discharge summarily any Federal employee who has willfully failed to obey an order of the Commission.	Similar to H. R. 2232 except that it does not specifically include authority for President to summarily discharge a Federal employee for noncompliance with an order but gives the President power to establish rules and regulations to prevent the committing or continuing of an unlawful employment practice by any person who makes a contract with any Federal agency or instrumentality which contract requires the employment of at least 50 individuals.
(H. R. 2824): Veteran's preference	No provision.	Specifies that this act shall not repeal or modify Federal or State laws creating special rights or preferences for veterans.
Sec. 13 (H. R. 2232). Sec. 14 (H. R. 2824): Interference with the Commission or its agents.	Prescribes penalty of $5,000 fine and/or 1 year's imprisonment for willfully resisting, interfering, etc.	Prescribes penalty of $500 fine and/or 1 year's imprisonment for forcibly resisting, interfering, etc.
Sec. 14 (H. R. 2232). Sec. 15 (H. R. 2824): Separability clause.	The usual separability provision.	Same.

Friends of the University of Salzburg

EXTENSION OF REMARKS
OF
HON. AIME J. FORAND
OF RHODE ISLAND
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 29, 1947

Mr. FORAND. Mr. Speaker, under leave to extend my remarks, I include the following address delivered by the Reverend Dr. Joseph B. McAllister, S. S., of the Catholic University of America, at a meeting of the Friends of the University of Salzburg, held at the Carlton Hotel, Washington, D. C., Monday, May 11, 1947:

Friends of the University of Salzburg, we are gathered here to take another step forward in organizing an effective plan to help reestablish and to develop the Austrian University of Salzburg.

This seat of learning has survived the vicissitudes of centuries of political unrest. Its foundation may be as early as 700 A. D., when, according to one account, a group of Irish monks founded the monastery of St. Peter. From that early beginning down right to the present day there has been an unbroken religious life in the monastery. Wars have come and gone with their terrible wastefulness, but the continuity of worship has not been broken in this most Latin of all German-speaking towns.

As an intellectual foundation the University of Salzburg has had an uneven history. The Benedictine Fathers took over the administration in the early part of the seventeenth century and entered upon a program of development, to bring the institution to the ranks of a full university, offering the usual liberal courses of such an institution. But this program went into eclipse in 1810, when the university ceased to be a university in fact and was restricted largely to theological studies. At the turn of the century there was again new life injected into the ancient foundation.

For a long time there had been felt a great need for a new university in Austria. Salzburg was an obvious choice, not only for its honorable religious and academic traditions, but also because of its natural beauty and geographical location. Salzburg stands at a cultural crossroads, where the culture of the Mediterranean basin meets that of the Germanic lands. Plans were laid and funds were collected—only to have the entire scheme crushed by World War I.

But like the storied Phoenix the university of Salzburg rose to the challenge of reconstruction. Under the leadership of illustrious rectors and the inspiration of Msgr. Ignaz Seipel, the heroic Chancelor of Austria and a former professor at the university, Salzburg gathered together the remnants of the past to prosecute its progress toward full university stature. The Holy See seconded the movement by establishing a philosophical institute, endowed with the right of conferring the doctorate in philosophy. Other institutes were founded, for historical research, liturgical studies, folklore, history, geography, and science. The impressive Collegium Benedictinum was built. In this development the United States of America had its share by reason of the contributions which Benedictine houses in this country made to their sister institution in Salzburg.

The picture was brightening for a great Christian university geared to meet the needs of a postwar Austria and Germany. In 1930 new impetus was given to the plan and in 1931 steps were taken in the International Catholic University Weeks, to make Salzburg an intellectual center. The success of these "weeks" as well as other ventures of the university raised high hopes for the immediate future of the University of Salzburg—only again to have the hopes and aspirations and years of work and building and saving struck down by World War II.

The academic life and organization of Salzburg of course suffered. Yet with the cessation of hostilities little damage to the buildings of the university was revealed. They stand today, along with a respectable library, ready to serve as the cornerstone for another attempt to make Salzburg a flourishing and complete university.

Today men of good will everywhere want to see Europe rise from the debris of war. And now, today, more than even a few months ago, men of good will realize that it must be a new Europe renewed and revivified with the life of traditional truth and truly democratic ideals.

There are threats in the German and Austrian scene of hunger and misery, of multitudes without homes and shelter, of ruined industry and unemployment and idle mines and dislocated commerce, along with the terrible threats of cold and plague and disease. These are real and in no sense to be minimized.

Yet as the spirit is truly an integral part of man, so should its needs have a voice in the general appeal for help to war-torn Europe. I need not mention, much less stress, the blanket of materialism which is spreading over those parts of the world which Russia possesses or indirectly controls.

It is imperative that a counter force be mustered and put into operation. Certainly a factor in those forces must be a strong center of Christian thought.

For such a center Salzburg has many things in its favor. It has a long and honorable history. Though stretching back into a dim past, it is alive to the needs of the present. It has the nucleus of the physical requirements for an institution of learning. It has to some extent also the basis of the academic needs. It is today functioning in a modest, courageous way. It has a naturally beautiful location and geographical convenience. Though Austria is 90 percent Catholic, Salzburg cuts across political and religious and racial lines in its world-wide reputation as a musical and cultural center. Above all, it lies in that part of Austria apportioned to the United States of America.

In founding the Friends of the University of Salzburg, one of our first moves was to lay the matter before the proper Government officials. The State Department grasped at once the significance of our aims and gave the necessary authorization for us to try to contribute something toward building up Salzburg as a great university.

The present Holy Father, following the precedent of Pius XI, has expressed his pleasure in the movement and has conferred his blessing upon all who join the association, as well as upon their families. The Archbishop of Salzburg is deeply interested and grateful for what we may be able to do. Likewise, the organization has been warmly received by many members of the hierarchy in the United States and has found patrons in prominent laymen and institutions of higher learning.

In general the purpose of the Friends of the University of Salzburg is to render financial help to the university for its rehabilitation and for its development. The association will try to make contact with friendly persons and organizations with a view to obtaining their interest and support. Furthermore, it will strive to have the studies at the university organized along truly Christian and democratic ideals and principles. For this purpose it will aid in building up the resident faculty and encouraging the exchange of professors with this country. Schools in theology and philosophy, law, medicine, science, literature and journalism, social and economic studies, music and art, all, it is hoped, eventually will find a place in the broad ambit of Salzburg. Its work will be implemented by appropriate arrangements for exchanging academic credits, so that students from this country can follow courses in Salzburg without sacrificing the time from their regular college work. As a result, Salzburg should become a lively source of mutual good will between the Continent and the United States and a power to promote a better understanding among the various peoples.

The importance of these aims, I may suggest, is vindicated by the move on the part of the Harvard Student Council. It will conduct a seminar in American civilization this summer, in Salzburg, July 15 to August 31. To defray the cost of sending 80 students and professors to the seminar the council is raising $23,000.

In conclusion let me repeat that there is not functioning today in Germany or in Austria a single full-fledged university devoted to Christian ideals of thought and living. Secondly, there is the engulfing tide of anti-Christian ideologies sweeping east and west and south across Europe, threatening conflagration on all sides. Thirdly, the physical needs of war-torn Germany and Austria are great. But amidst the urgency of these needs the call of man's higher aspirations should not be allowed to go unheard. Rather the decisive challenge of the time is to meet the threat of these ideologies with the only weapon able to subdue them. They are in fact a political and economic and philosophical and social revolution. Their rise in Europe can well be, as Father Edmund Walsh, S. J., is reported to have said, comparable to the fall of the Roman Empire. Be it so. Then let us take from history the transcendent fact, that in the ruins of the mighty empire which was Rome, Christianity did not perish. It met the threats of the invaders and of the new order and with the weapon of eternal truth not only salvaged western Europe but eventually gave the world a new civilization.

Fred Came Home Today by Plane

EXTENSION OF REMARKS
OF
HON. ROBERT A. GRANT
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 29, 1947

Mr. GRANT of Indiana. Mr. Speaker, late last evening I returned by plane from Rogers City, Mich., where I had attended the funeral of our late beloved colleague the Honorable Fred Bradley, Representative from the Eleventh District of Michigan.

Yesterday's Rogers City newspaper, the Presque Isle County Advance, carried in eloquent terms a short front-page tribute to their neighbor and friend, Fred Bradley. Those who were nearest to Fred can best appreciate the value of the following story:

FRED CAME HOME TODAY BY PLANE

Yes, that is what Rogers City folks said, Fred came home by plane. They remembered how Fred, not Congressman Bradley, used to buzz the local housetops with his first little plane until we local folks cussed him out, just as he would do when we incurred his displeasure.

They remembered how he liked to come down Rogers City's short main street, where traffic moves leisurely, dressed in rough tweeds, jaunty cap and even coveralls, yelling

across at whoever he might see. "How's fishing out on Trout River since we put in the dam?," or "Has the duck flight started yet?" "Hello you son-of-a-gun, what's going on tonight?"

Washington, yes and Detroit, and London, and Moscow, all will call attention to his passing. He was the fellow who put the small town, here the train backs in, on the map of the world. They too will tell, but in others words, that Fred came home to Rogers City, and by his favorite transportation, by air.

How did he vote on a certain piece of legislation? Maybe folks don't remember. But they do remember that the boys he appointed to the Government Academies from the Eleventh District of Michigan were never appointed for political reasons.

Was he a prewar isolationist? We forgot long ago, but he was 100-percent American and he always voted that way, regardless of party.

Today at 2 o'clock the town was quiet. Window shades on the town's little stores were drawn and the main street was deserted. Fred had come home by plane and the local folks were down at the church on the corner seeing Fred off on his last flight. They were not thinking about Congressman Bradley, his political record, or his faults. Those things we know, better than the folks in Washington or elsewhere.

They were paying their last respects to Fred, the fellow who mingled with, and liked, his fellowmen, in all walks of life. It might have been said that he was born with a silver spoon in his mouth, to quote the old adage, but that never changed him.

Happy landing, Fred.

Continuation of Rent Controls Means Continuation of Housing Shortage

EXTENSION OF REMARKS
OF
HON. GEORGE B. SCHWABE
OF OKLAHOMA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 29, 1947

Mr. SCHWABE of Oklahoma. Mr. Speaker, I am just in receipt of a letter from a gentleman in Oklahoma City who offers some very convincing arguments to the effect that the longer we have rent controls in effect, the longer our housing shortage will continue. I quote the following letter:

HON. GEORGE SCHWABE,
House Office Building,
Washington, D. C.

DEAR MR. SCHWABE: You are going to vote soon on action to extend or kill rent control, and let me say that the longer time goes on the more clear it is that the very thing you are holding onto—rent control—is what is causing the housing shortage in the country today, the same as it caused the shortage in everything else as long as controls were held on them. There is no meat shortage now, and beefsteak is not $1 per pound either, in fact on many meat cuts the price is less than the old OPA ceilings, and so it is with most everything else, even automobiles. You can buy a new car of nearly any make you want, maybe not from a dealer but from a used car lot; the price is higher but not more in proportion than wages to the unions have gone up, so what is unfair about that? We do not have to buy them if they are too high.

There is no housing shortage today that could not be taken care of by using the present housing we have to the maximum, as it should be. What could be more silly than to build thousands of houses that will not be used in a few years, and will stand vacant. If the thousands of apartments and houses were occupied today by the number of tenants that was intended for them to be occupied by, there would be no housing shortage, and add to that the thousands of houses that are being built and where are you? When rent on a good 4-room brick duplex is frozen at $22.50 per month, and is occupied by a single man, or single girl, why should they want to share it with anyone? If the rent was $45, as it should be in order to compensate the owner for owning it, then these single people would double up as they always have in the past, and the housing situation would be solved.

Freeing the new units from rent control will help some, but it will not solve it. Nobody in his right mind is going to build new apartments now unless he is willing to make a deal of some kind to get the rents fixed at a high rate, and then he cannot tell for sure how much he will have to pay for that right. Some new rent director may hike the ante and take away all his chance to even break even because he gets mad at him. Let me give you an illustration. We manage 24 units in the 1200 block on West Fourth and Fifth Streets. As those units become vacant we have been furnishing them, and then reregistering them in accordance with the regulations. These apartments are all identical, and the furniture is about alike in all of them. In March one of them went vacant and we furnished it and rented it at $50 per month, with water and garbage paid, which is more than it would bring on the free market, but which we could get due to an OPA-created shortage. We failed to register it until 2 days after the 30-day period was passed due to an oversight in our office, and the rent director reduced the rent to $25 per month and ordered us to refund 3 months' rent. The owner is so mad at this injustice that he has ordered us to hold every apartment vacant in the future. Here is the reason: The apartment across the hall from this one has a rent ceiling set by the rent director at $37.50 per month. When we received notice of their intention to reduce the rent we called this to their attention, but it made no difference.

There are thousands of units here like that, and hundreds of them are vacant at this time. Add these to the hundreds of houses that are vacant because they are for sale and the owners could not get possession of them because of rent control if they rented them. In most cases the rent is frozen at a level that is so low it just about pays the taxes. For instance, a six-room brick bungalow in a good location with a rent ceiling of $27.50 per month, and we have several like that now that we can show you.

I have been in the management business in Oklahoma City since 1924, and it is my firm conviction that if rent control is not extended beyond June 30 that by September 1, 1947, there will be no housing shortage, and that rents will not be higher to the average tenant than they are now. The rent on the bungalow above will go up, of course, but the so-called black-market rents will come down enough to more than make up for the difference, and you are supposed to represent all of the people. There are thousands of units here on which rents are fixed by the rent director at more than they would bring on the open market. I have in mind some new duplexes just east of North Eastern Street, about Twenty-eighth Street, on which the rent is set at $75 per month. They are small three-room apartments, which would fit into the living room and dining room of the house I mentioned above. Can anyone say that is fair?

The answer is up to you; please be fair; let rent control die on June 30; and let's return to the American way of life. If rents go too high there are builders enough in the country who have money enough to build enough units—and will on a free market—to control rents. Nobody can be hurt in the few months it takes to build.

Very truly yours,

OSCAR BIESER.

Spend and Elect, GOP Version

EXTENSION OF REMARKS
OF
HON. AIME J. FORAND
OF RHODE ISLAND
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 29, 1947

Mr. FORAND. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Washington Daily News of May 29, 1947:

SPEND AND ELECT, GOP VERSION

Leaning is leaning, anyway you figure it.

Whether it's on a shovel by the roadside or a set of clippers in the sheep pasture makes little difference to the public purse, which gets nicked heavily either way.

But it makes considerable difference whether the shovel leaner or the sheep owner gets the money.

A Republican Congress was elected last November on a wave of impatience with New Deal extravagance and nosing into private business.

It was the New Deal that subsidized the shovel leaners when depression lay heavily on the land. Jobs were few and children hungry. Leaf raking and other forms of made work were unsound. But there was some justification for them on the grounds of emergency human needs.

What aroused the country was a tendency to carry the system over into more prosperous times, to expand Government subsidy and control and tie up voters to Government hand-outs.

Now a faction of Republicans, including many who were most indignant at New Deal extravagances, is attempting a return to its own pet hand-out system, identified in the good old days by the names of Fordney-McCumber and Smoot-Hawley.

It happens that the trick first comes to attention in the case of wool, already heavily subsidized. The plan is to increase both Government subsidies and tariffs. The subsidies come directly out of the taxpayers in high tax rates, the tariffs indirectly in high prices. If you've shopped for a woolen suit lately you know what we're talking about.

Wool comes first on the new grab list, but by no means last. This is a system for appeasing special minority groups—wool growers, in this case, instead of reliefers—for winning friends and influence votes with public funds.

It is more brazen, less excusable than shovel leaning, because there is no emergency need. The wool growers are doing all right.

This scheme should be understood for exactly what it is, and its advocates exposed for exactly what they are.

They are of the same school of practical politicians, so roundly damned in the New Deal, the spend-and-spend, elect-and-elect boys.

They were not, it is obvious, so outraged at the squandering of public money for political purposes. It was just that the wrong people were spending the money and the wrong politicians getting elected.

We believe President Truman also is opposed and will veto this wool grab bill and help to knock this new spend-elect system in the head.

Direct Information

EXTENSION OF REMARKS
OF
HON. NORRIS POULSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 29, 1947

Mr. POULSON. Mr. Speaker, under leave to extend my remarks, I should like to include in the RECORD a letter from a personal friend who was born and reared in Austria, migrated to the United States, and subsequently became a citizen. He is now with the American Government on foreign assignment in Austria and writes me the following letter from which I have, of course, eliminated all names:

MAY 17, 1947.

DEAR NORRIS: Thank you very much for your letter of April 24; I am gladly accepting your invitation to comment on the events over here. Our mail is not subject to any censorship, and you may evaluate my information as you will. If you want more details or more specific news whenever you have any doubts as to the veracity of any statement, please let me know, and I will make a closer check.

The failure of the Moscow Conference has had a very bad effect on the morale of the Austrians. An increasing majority accepts it as a fact that things will continue as they are, "not enough to live on but too much to die." The common Austrian does not feel that the question of German property concerns him greatly. All he knows is that he cannot take any initiative in the economic sphere until the troops have left this country. The farmer in lower Austria does not want to raise potatoes as long as he is not sure that he will harvest them, that he will not be ordered to deliver the fruits of his harvest to the Russian mess sergeant. The economic reconstruction is not possible as long as the ownership of the largest enterprises in eastern Austria is not established beyond any doubt. During this period of waiting, certain anti-Democratic trends may develop based on disillusion and hunger, and for this reason many Austrians felt that a bad state treaty would be better than none at all. I wonder whether you know that the Austrian delegates in Moscow were ready to accept the proposals made by the Soviets (though both of the delegates belonged to the Conservative People's Party) and that only the insistence of General Clark and Lord Hood prevented the final settlement there. I feel that Clark's opposition was fully justified and that he rendered Austria's independence a great service. The real issue is not whether the former German enterprises would become Soviet property or not if the Soviets were ready to acknowledge that these enterprises would be subject to Austrian sovereignty. Russia wants these factories to be exempt from any legislation, taxes, etc. What that would mean was shown in the recent hunger demonstrations which were staged by the Communist Party in Vienna.

The food distribution is in the hands of a poorly qualified Austrian Government which fails to enforce the laws requiring the Austrian farmers to deliver a great part of their harvest. The farmers prefer to divert their surplus to the black market, to the export market, and to the provisioning of holiday makers, etc. Secondly, the Government fails to control the distribution of the harvest delivered to them. Thirdly, the Government publishes the weekly rations in spite of their knowledge that the food on hand does not permit such rations. There is considerable discontent in the population which does not find any outlet as the three parties are equally responsible for the coalition government. On May 5, the Communists, however, decided to call a strike. All Russian-owned factories in Vienna closed and the workers marched into the city where their speakers asked both for larger rations and for an orientation to the east. On the next day the workers in the Russian factories wanted to continue the strike, while the workers in all of the other plants went back to their work. The Russian managers told them that they could stay away from work only if they would march and demonstrate in the city. "Either you work for Russia or you demonstrate for Russia." Austria bordering on three Russian-dominated countries (Yugoslavia, Czechoslovakia, Hungary), could not remain independent if 100,000 of workers, technicians, employees would be economically and politically dependent from Russia.

On the food situation any visitor coming to Vienna will be surprised to see the flower shops well-stocked and flowers on sale everywhere. At the same time it is impossible to purchase any lettuce or other vegetables. There is not a sign of victory gardening anywhere. The Viennese feel that they earn more by selling flowers than by growing vegetables—and the Allies should get the necessary foodstuffs in. As a former Austrian I am ashamed to confess that the Austrians have made it a habit since World War I to ask the world for subsidies, which they consider due to them because Schubert and Beethoven were Austrians. On May 21 the Socialists will arrange a mass demonstration with the particular slogans: We want the end of occupation; we want a larger share in the world's food distribution scheme. Certainly both demands are very popular but it is difficult to understand how one can at the same time turn against the occupants and still ask them for more relief. Besides flowers the American visitor will be surprised at the quantities of junk which the Austrian manufacturers are producing now—wood carvings of the poorest quality for export purposes—while in all of Vienna you cannot buy a wooden spoon.

I think that the American authorities should have concentrated upon directing the Austrians how to help themselves rather than promising them more and more relief. We have and, mainly, have had a number of quite capable officers and civilians here but most of them are here because they could not get a job at the same pay (or even half of the same pay) at home. I cannot give you the names of those most recently arrived but I do want to give you one example. John Doe is an amiable fellow, and I do like him very much as far as the social life is concerned. Once he was a lawyer in Florida although it is a mystery to me how he ever passed the bar examination. Then he was employed with OPA. When OPA closed down he was given overseas employment in our office, in the legal division, with a civil-service rating of P–6 as an expert on international law. With his 25 percent overseas pay, he makes about $7,500 a year and no one, not even John himself, will claim that he has any slightest knowledge of international law. The standard of our legal division is not only below the standard of the British (it is an accepted fact that the British have the best experts in any field but then they have had the most experience in administration of foreign countries) but it is also below that of the Soviets.

We have failed in the problem of denazification. The Government, I understand, now considers it a closed chapter, which was a mistake. Everyone knows that the Communists and not the Nazis are the most dangerous elements to our country. Nevertheless we should have been the most vigorous in the denazification move. People all over the world should know that we are determined to carry out whatever policy we start. There are still many Nazis—our policy encourages them to cling together—and because they might turn in a body against us, we are breeding a potential enemy force. These Nazis might turn Communist as their country formed the alliance of September 1939 with Russia. In addition to all of these factors, we have the disappointed young democratic element in this country who would have become our future associates in any conflict. It would have been far better to have alienated the Nazis than to shove these people into the ready embrace of the Russians and their fellow travelers. Our denazification policy was very limited. It aimed only at firing people from the jobs they held during the Nazi regime. The following joke is typical of the public reaction to our policy:

A passer-by addresses a street sweeper who is doing a very clumsy job: "Have you always been a street cleaner, my man?" "No," replied the street cleaner, "I have not. Before the war I was a professor at the university but I was a Nazi and I am not, therefore, permitted to teach any longer—so I am now a street cleaner."

"But what are you, sir," asked the street cleaner of the passer-by.

"Oh," said the passer-by, "I am a university professor. Earlier I was a street cleaner, but you see, I, too, was a Nazi and I am, therefore, not permitted to clean the streets any longer."

It would have been much more important to start on an educational program. In about 2 weeks 25 young Austrians will leave for Denmark where they will undergo a 2 months' training period at the College of Askov. This was my own idea and I worked it out with the assistance of some of my Danish friends. For the time being I am trying to get the Army to provide transportation while the Danish friends of mine will take care of all other expenses incurred. This method, I feel, is a far more constructive densification program than the one presently being carried on. These young people should learn in Denmark how democracy works in practice and how it benefits a small country. Perhaps they will learn there also the well-developed methods of economic reconstruction.

If the United States would support such plans, it would help to develop here in the heart of Europe a truly democratic community of friends for America. Perhaps you could take this matter up with the right people, but so far Americans show much more interest in propaganda than in education.

One of the most expensive and least profitable agencies is the Information Service Branch. The majority of Austrians are at a loss to understand why America maintains this organization 2 years after the conclusion of hostilities. ISB occupies in Vienna three or four large hotels while there is not a single hotel available for tourists or businessmen. I believe there are about 50 Americans and numerous Austrians employed by this agency. You Congressmen should look at their displays with the eyes of a hungry, disillusioned Austrian. On large posters you see pictures of Independence, Mo., the President's home, of homes in Hollywood, of new car models, etc., etc. All that might be most interesting in America to Americans, but the Austrians feel that it is an ill-timed exhibition of American wealth.

The editorial language of the American-controlled dailies is anti-Russian, but there is no need for anti-Russian propaganda in a country where hundreds of thousands of women and girls have been raped by the Russians, where the Russians for the second year retain tens of thousands of prisoners of war. While there is a definite danger of communism in France and Italy, and while eastern Europe is totally controlled by the Russian forces, there is no Communist danger in Austria unless it should be from an invasion by a neighboring country. I feel that all of the money spent for ISB and

similar agencies could be saved—or at least a part of it could be saved and the remainder diverted to educational projects where indigenous teachers could work in cooperation with American, Scandinavian, and other democratic teachers preferably in private schools and colleges.

I do hope that you will one day make a visit to Vienna but in the meantime, please let me know if you want me to ferret out any information you might need.

With best regards to your family and to yourself,

Most sincerely yours,

——— ———.

If You Keep Faith

EXTENSION OF REMARKS
OF
HON. W. J. BRYAN DORN
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES

Thursday, May 29, 1947

Mr. DORN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following poem by the late Lt. Jack E. Spear, Third Army, Infantry, United States Army, killed in action December 29, 1944, in the Rundstedt offensive and buried in United States military cemetery, Hamm, Luxembourg; also an article on Hamm Cemetery:

IF YOU KEEP FAITH

(By Lt. Jack E. Spear)

If you keep faith with me you need not weep
If I am killed, for I will not complain
Of any death if by it others gain
The things I think are worth my life to keep;
The right to have, to know, to love, to speak.
If all win these I will endure my pain,
And on the battlefront, where I have lain,
Will find an honored place in which to sleep.
But if when peace returns to you once more
You break the word you gave humanity
By keeping not the pledge to which you swore,
Then carve in stone this epitaph for me:
"Here lies a fool who placed his hope in war
And gave his faith to insincerity."

SOME THOUGHTS ON HAMM CEMETERY

The American military cemetery at Hamm is considered by many to be the most beautiful of any over which our starry banner keeps watch and ward. Some 8,400 of our bravest and finest sleep here in an atmosphere fragrant with the love and affection of the tiny nation for which they laid down their lives. A large proportion of these men gave their lives within a short period of time and within an area very close to the spot where they now lie in sure and certain hope of a glorious resurrection. Not one is a stranger to others sleeping there. Each has beloved comrades who entered into glory a few hours or days before him or after him, and from the same area. The soil which they moistened with their precious blood was dear to them even during the short period while they fought for it, and the people whom they have redeemed by their supreme sacrifice are filled with devoted recognition of the price of their ransom.

The first ceremony to be held at Hamm Cemetery was on Memorial Day 1945 when with the Sovereign, Her Consort, the Grand Ducal Government, and mighty warriors of our own Army, we paid tribute to the heroes who laid down their lives that freedom might live. I have visited Hamm at every season of the year and still do not know at what time it is most poignantly beautiful. I have been there "when spring with dewy fingers cold bedecked with flowers the hallowed mould"; I have been there in the prime of glorious summer when earth and forest and sky in radiant beauty have united in praise and thanksgiving, and I have found that in the fullness of mellow autumn the symphony of colors from flaming copper beeches to the deeper green and almost purple of perennials, first have made me think that Hamm is then most beautiful, but later, one day when accompanied by His Royal Highness, General Prince Felix, who wished to pay us special tribute in his own royal person on All Souls Day, I thought the cemetery whose graves were wrapped in a white down comforter of spotless snow as if warmly tucked in for winter's sleep was the most beautiful of all.

In the democracy of death all men are equal, and it is good to note that the white crosses and stars of David which mark our heroes' graves at Hamm are all the same. The graves of General Patton and General Betts are no different from the graves of their comrades in death who may be an unknown soldier on one side and a private soldier on the other. I have never been in Hamm Cemetery when Luxemburgers were not there bringing flowers or meditating by some grave which their love and care have adopted, and how faithful they are in visiting these graves and decorating them with the fairest flowers of the revolving seasons. The tremendous numbers of visitors bear eloquent if silent witness thereto. I do not think any man of good will can visit Hamm Cemetery without being heartened and edified by the experience. Face to face with the eternal verities of life and death and heroism, one is enriched and purified by meditation on many things and feels the everlasting truth of that exultant message 2,500 years ago when the prophet said: "But the souls of the righteous are in the hands of God, and there shall no torment touch them. In the sight of the unwise they seem to have died and their departure to be attended with utter destruction, but they are at peace."

GEORGE PLATT WALLER,
United States Chargé d'Affaires
ad Interim, Luxemburg.

FEBRUARY 1, 1947.

How To Identify an American Communist

EXTENSION OF REMARKS
OF
HON. HERMAN P. EBERHARTER
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Thursday, May 29, 1947

Mr. EBERHARTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement from Look magazine of March 4, 1947:

HOW TO IDENTIFY AN AMERICAN COMMUNIST

(Adapted from material prepared by Friends of Democracy, Inc.)

There is no simple definition of an American Communist. However, certain general classifications can be set up. And if either a person or an organization falls within most of these classifications, that person or organization can be said to be following the Communists' lead.

These identifying classifications include:

1. The belief that the war waged by Great Britain and her allies during the period from August 1939 to June 1941 (the period of the war before Russia was invaded), was an imperialistic war and a game of power politics.

2. The support of a foreign policy which agrees always with that followed by Soviet Russia, and which changes as the U. S. S. R. policy changes.

3. The argument that any foreign or domestic policy which does not fit the Communist plan is advanced for ulterior motives and is not in the best interests of either the people or of world peace.

4. The practice of criticizing only American, British, and Chinese policies, and never criticizing Soviet policies.

5. Continually receiving favorable publicity in such Communist publications as the Daily Worker and the New Masses.

6. Continually appearing as sponsor or coworker of such known Communist-front groups as the Committee To Win the Peace, the Civil Rights Congress, the National Negro Congress, and other groups which can be described as Communist-inspired because they fall within the classifications set forth here.

7. Continually charging critics with being Fascists, no matter whether the criticism comes from liberals, conservatives, reactionaries, or those who really are Fascists.

8. Arguing for a class society by pitting one group against another; and putting special privileges ahead of community needs, as, for example, claiming that labor has privileges but has no responsibilities in dealing with management.

9. Declaring that capitalism and democracy are "decadent" because some injustices exist under those systems.

Of course, actual membership in the Communist Party is 100 percent proof, but this kind of proof is difficult to obtain.

How To Recognize an American Pro-Fascist

EXTENSION OF REMARKS
OF
HON. HERMAN P. EBERHARTER
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Thursday, May 29, 1947

Mr. EBERHARTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement by Friends of Democracy, Inc.:

HOW TO RECOGNIZE AN AMERICAN PRO-FASCIST

There are very few in the United States who admit being Fascists. Those who do fit into what might be termed "the Fascist pattern," invariably proclaim they are anti-Fascist, anti-Nazi, and anti-Communist.

Huey Long undoubtedly was right when he declared that if fascism comes to America it will come in the guise of an anti-Fascist movement.

Followers of the Fascist line in this country call themselves such names as Christian Nationalists; they identify themselves as 100-percent Americans and incorporate such words as "constitutionalism," "Americanism," etc., in the titles of their organizations.

The pattern they follow is important, not the names they give themselves.

The following are characteristics of those who fit into the American Fascist pattern:

1. Racism is common to all groups, individuals, and publications following the pro-Fascist line in America. In fact, it is a cornerstone of the pro-Fascist movement everywhere. In this country it takes the form of "white supremacy," in which white people are regarded as the master race, while Negroes, orientals, and other colored people are viewed as inferior persons.

2. Anti-Semitism is a common denominator of all pro-Fascist and "100-percent American" groups. Anti-Catholicism sometimes is substituted for anti-Semitism in predominantly Protestant areas, but the demogogs

and rabble rousers have found anti-Semitism to be the most effective political weapon, due in part to the tremendous impact of the Nazi propaganda on the people of the United States.

3. Antialienism, antirefugeeism, and anti-everything foreign is a major characteristic of the American-Fascist pattern. Indeed, fascism all over the world professes a strong "nativism" and invariably is opposed to "foreigners" and people of other nations.

4. Nationalism is always associated with fascism in every country. The extreme nationalist claims that his own country is "the Master Country," just as he asserts that his own people are "the Master Race."

5. Isolationism is a distinct part of the pro-Fascist pattern. The extreme isolationists seek to isolate themselves from the rest of the world. They feel self-sufficient, and in the United States, have taken the position that this country is safe behind the "impregnability" of two great oceans.

6. Anti-internationalism (in the same sense that internationalism is a voluntary association of equal peoples) is also part of the Fascist pattern. The "100-percent American" believes this country can live apart from the rest of the world. This anti-internationalism includes opposition to the United Nations and all other efforts to arrive at international understanding and cooperation for peace.

7. Red baiting invariably is a part of fascism, which indiscriminately labels all of its opponents as Communists and Bolsheviks. Communism is used as a bugaboo to frighten people into accepting fascism. All liberals and progressives, Jews, international bankers and foreigners are described as Communists or "fellow-travelers" by the pro-Fascists. In fact, anyone who is not a "100-percent American" and an extreme nationalist, is apt to be dubbed a Communist.

8. Antilabor, particularly antiorganized labor, is a predominant characteristic of fascism everywhere. Good and bad labor leaders, and all labor unions, are lumped together by the Fascist-minded as "revolutionary" and "communistic."

9. Sympathy for other Fascists is common among the pro-Fascists. In pre-Pearl Harbor days, this sympathy included a defense of Hitler and Mussolini as "the great bulwarks" against communism. During the war, it was directed to sympathy for Petain and his Vichy Government. Now it takes the shape of sympathy and defense of the Franco regime in Spain, and Argentina's Peron Government.

10. Antidemocracy is another of the great common denominators of the Fascist-minded. "Democracy is decadent," Fascists everywhere declare. In the United States, the favorite theme among the pro-Fascists is that our country is a "Republic," not a "democracy." Democracy, the "anti's" say, is "mobocracy," the rule of the mob. A "Republic" is the rule of the elite, while democracy, according to their definition, is a synonym for communism.

11. The glorification of war, force, and violence is a major belief of the extreme Nationalists and Fascist-minded. They say that war is the greatest creative activity of man, and military heroes are glorified. One of the pro-Fascist slogans, which has been exploited in this country, is that "Life is struggle, struggle is war, war is life."

12. The one-party system is a distinct feature of the Fascist pattern. In most Fascist countries, it has meant the suppression of all opposition parties. In the United States, the Fascist-minded assume the position that theirs is the only true American party, and that all other parties are treasonable and un-American. One of the principal slogans of Fascists everywhere has been: "One people, one party, one State."

Editorial From Columbia Magazine

EXTENSION OF REMARKS
OF

HON. JOHN E. FOGARTY

OF RHODE ISLAND

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 29, 1947

Mr. FOGARTY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the magazine Columbia:

The people on our street have some ideas about the way things are going. They are by no means chronic whiners, but they are unhappy about the prices they have to pay for food and clothing and everything else, about the extreme difficulty of getting and keeping decent living quarters, about the feeling of tension, cantankerousness, and uncertainty in the air they breathe. They are confused because they are getting so many different explanations of these matters that they are unable to tell which, if any, is the right one.

They ask you to consider, for example, the innocent citizen who remembers away back when the automobile manufacturers printed the f. o. b. price of their vehicles in their national advertising. He gets a notion that he would like to buy himself a modest little wagon—nothing de luxe, you understand—just a simple boiler of the least costly make and model, so that he can take the wife and children out for a spin Sunday after mass to let them get the three-room-and-bath kinks out of their frames. Assuming that the miracle happens and he actually gets a car, he also gets a collection of extras, which are by no means optional, and he pays roughly twice as much as he did before the war.

We leave this discontented brother to cool himself with little squirts of water from that windshield gadget that seems to be the principal postwar contribution of a great industry to its eager customers. He is less to be pitied than the breadwinner who goes out to buy the family shoes and shirts and bacon and eggs and beans and such. After all, you can live without a hydromatic clutch, but you do have to eat and in these latitudes wear clothes. What the aforesaid breadwinner is asking is why he has to pay $68 and some change for a suit that looks suspiciously like the prewar $40 job; why the price of eggs goes up at the same time that eggs become more plentiful in the market.

The wonderment of the people on our street about these things is rapidly turning into resentment. During the war they were told to put the blame on the shortages of many consumer items that naturally and unavoidably occurred and they took the explanation, for the most part, with good grace. They do not believe that, at this date, shortages are the cause of the high prices. They are convinced that someone is trimming them too close around the ears and they do not like it. They were told, not so very long ago, that the devil was Government controls as administered by the late OPA. Then the story was that the inept OPA was driving goods into the black market. But now there is no OPA and Joe Doakes wants to know why he should have to pay black-market prices for over-the-counter merchandise. He would also like to know when that good old free competition is going to start making his week's pay last a whole week. It's only a detail, of course, but it bothers him.

Some poorly informed captains of industry and commerce, the neighbors say, must be under the impression that during the war all their customers somehow became rich, that their mattresses are still lumpy with fat rolls of hundred-dollar bills, and that the present price scale is just what they need to sustain a healthy pride in their hoard of war bonds. The only trouble with this idea is that it's not so. We'll grant that some citizens did themselves well—and did so legitimately—during the war. But there aren't enough of them to wear all the $2 shirts are are being offered at $3.95, and the sooner this is understood the better it will be for all concerned.

When the neighbors get together nowadays, these are the topics of their conversation. They are in a mood to really pour it on, if they could with certainty identify the villain. That's the catch—everybody has an alibi. The corner storekeeper claims he has to pay high prices for his stock; the jobber says the same about the wholesaler; the wholesaler blames the manufacturer; the manufacturer blames the producer of the raw materials and, of course, labor. The producer of raw materials blames—you guessed it—labor.

It seems that labor is getting all the money (although our street gets little mail from Palm Beach) and, if labor would stop being annoying and demanding, everything would be hunky-dory. In spite of the persuasively written statements in newspaper advertising space, which are a feature of all sizable present-day differences between labor and management, we doubt that this is quite the full story. And the fact that some labor leaders have made serious mistakes, or have even committed crimes, doesn't add up in our book to a valid reason for throwing a workingman's claims and aspirations out of court. Organized labor at present is getting a bad press. In itself, this is no novelty; but there is a danger in the situation that is new—the danger that if the propaganda has its apparently intended effect on Congress the country will almost certainly suffer serious harm. Stripped of the pious protestations of concern for free enterprise and the right of every man to be his own Algerbook hero, etc., etc., the objective of the drive is to bat the unions' ears off—to "cut them down to size," as the saying goes. We would have no sympathy with such a project at any time and this is the most inopportune moment in recent history for anyone to be engaged in it.

This time of growing crisis, when the future of freedom and the good life in the world depends so directly upon a strong and united American people, is emphatically not the time for a knock-down-and-drag-out battle between capital and labor. Such a brawl would bring joy only to the Communists here and to their bosses in the Kremlin. There would be no winner but Dictator Stalin, who, you may be sure, would lose little time, in the event of an American domestic smashup, in taking over the rest of Europe.

As an essential preliminary to a reasonable settlement of honest differences, we recommend to labor leaders abandonment of the truculence that too often leads them to conclude their remarks with the phrase "or else." And to the negotiators on the other side of the table we recommend discard of the high eyebrow and the how-dare-you-my-good-man attitude. Neither side should expect to gain any public sympathy by the exchange of epithetic statements dreamed up by some publicity man who fancies himself as a smart phrasemaker. In fact, it has become smart not to be smart and the great, tired, word-weary public that sits uncomfortably in the middle of these jams reserves wreaths of laurel for the man who will speak the truth.

That's what the people on our street are interested in—a reasonably decent portion of straight talk and square treatment. They are not violently interested, at the moment, in what Gromyko said to Austin, because

they have enough common sense to know that Gromyko is singing for his supper and has all the importance of Charlie McCarthy as an international figure. They are, however, fed up with and resentful of the modern propaganda which is designed, as J. J. Gilbert, of the NCWC News Service says, "to make one uncertain about the principles, or uncertain about acting on those principles once they are clearly seen."

It may be, of course, that we do not meet the right people, but these are the gripes we hear. We think they are well-founded gripes, but they are not sour. They can be cured by the exercise, in the proper places, of some restraint, generosity, and good will—especially good will. What the country needs, even more than a good 50-cent cigar, is a dash of the wartime spirit of unitedness in a common cause. If what we have was worth the lives of the many thousands of young soldiers and sailors who died in the war, we ought to be able to keep it without bitter wrangling, name-calling, and plain selfishness. That's what the people on our street think.

Address of Hon. James Forrestal

EXTENSION OF REMARKS

OF

HON. WALTER A. LYNCH

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 29, 1947

Mr. LYNCH. Mr. Speaker, on May 26 last, 1,300 members of the Democratic Party of New York State gathered together at the Hotel Commodore, New York City. The occasion was the dinner tendered by the New York State Democratic Committee to that outstanding and distinguished American, General William O'Dwyer, mayor of the city of New York, and was presided over by the Democratic State chairman, Hon. Paul J. Fitzpatrick as toastmaster.

The guest speaker was the Honorable James Forrestal, Secretary of the Navy, and under the unanimous consent granted me I take pleasure in including his remarks. Secretary Forrestal's address follows:

It is a high privilege to share tonight in paying honor to the mayor of New York City.

His life is the answer to questions about the vitality of American democracy. You ar all familiar with his progress from deck-hand to policeman. You know that his education was self-achieved; that it culminated in graduation from Fordham Law School. You have watched his career as lawyer, district attorney, and judge and his distinguished service in the Army. Now he is the mayor and chief magistrate of the largest city in the world, with a daily task of infinite complexity and responsibility.

This history of a man is moving testimony not only to the tenacity and the stubborn purpose of Bill O'Dwyer but also to the health and vigor of American institutions. His career is living proof of our belief that there is no ceiling on achievement, no limit on opportunity. He is our answer to the question whether in a competitive and individualistic society a man of humble birth can rise to distinction.

There are Bill O'Dwyers in every city and town and county of the United States. And it is the good fortune of America that we can continue to draw upon the services of such men.

Character, intelligence and hard work are the American criteria of public recognition. That is our creed. The life of the mayor gives us confidence and new faith in that creed as did the life of another great New Yorker and a great American, Alfred E. Smith.

Against the background of the mayor's career, I propose to make a few observations upon this American system which has provided the opportunity for his public service.

Do not be dismayed that I am about to start upon a long talk. I recall that in other days, before the invention of radio and the synthetic speech, in the days when every New Yorker wanted to emulate those giants of oratory—Bourke Cockran, Tom Grady, and Al Smith—Tammany Hall had a most effective method of dealing with long-winded beginners in public speaking.

Neophytes in the art of making friends and influencing people to vote the right way were driven through the streets of their assigned district in a horse-drawn cart. Their platform was the rear of the wagon, and the driver had instructions to watch the crowd. At the first sign of boredom he was to whack his one-horsepower locomotive and drive away.

That was a practical and effective method of making it clear to all would-be orators that the first requirement in dialectics is to hold the interest of an audience. Such a dinner as this, under restraints of politeness and limited exits, does not permit that procedure. I can only promise that when I detect the unmistakable signs of boredom, the somnolent visage and the glazed eyeball, I shall apply that old Tammany rule to myself and drive off into the night.

This country, both in terms of its past growth and its present influence and power rests upon certain foundations, political, social, economic, and spiritual. Each has been essential in the development of our free society which has as its objectives security, equal opportunity, and individual freedom. Among these foundations are our system of government and politics, business and commerce, labor, and agriculture.

The rooftree and foundation is, of course, government, through which we obtain our objectives of liberty, of justice, and of equality, under laws of our own making. Government by itself cannot create a prosperous nation, but it provides the essential framework within which industry and agriculture, labor and management, banking and trade, the arts and sciences, and education make their effective contribution. It is the framework these elements of our society must have for the free functioning, under law, of their activities.

Representative government means politics, and I want to pay my respects to politicians.

It is sometimes fashionable to speak slightingly of politics and politicians—as if politics could ever be divorced from government without substituting either anarchy or autarchy, chaos, or despotism. Politics is the essence of government. It is an honorable profession; it is hard and honorable work. It means membership in political organizations; it means running for office, getting out the vote, and all the other tedious chores of practical politics. To hold politics, honestly practiced, in contempt is to be contemptuous of democracy itself and of our relationship to government as its master, not its servant.

May I say at this point, that from my own experience I know of the honesty, the patriotism, and the good intent of the people of both parties who serve in our National Congress, and I can assure you that they are a splendid group of men and women, of far higher quality and caliber than the general public is led to believe.

Claude Bowers, our present Ambassador to Chile, once wrote a piece for the Virginia Quarterly entitled "In Defense of Politicians." I was impressed by his argument that one of the first objectives of a would-be dictator is to achieve disparagement of professional politicians and thereby to exploit the weaknesses of democracy. In Germany and Italy the dictator-to-be undertook by intimidation and ridicule to dominate leaders in business, labor, and politics. When that was accomplished, the autocrats took over. When politicians go, Hitlers arrive.

I have some knowledge, from personal experience, of the drudgery anyone assumes when he takes a practical interest in public affairs. My father was always active in the Democratic Party. As a boy I was an unwilling assistant in his activities. I had to help canvass his election district, to get the voters first to register and then to vote. It took a lot of the little time I had available for baseball and other cultural pursuits.

I pointed out that fact to my father, and his rejoinder always took the form of an essay on the duties of a citizen. I wound up working to preserve the Republic at the then bitter cost of never becoming a good first baseman. Jim Farley did better, both in politics and baseball.

By that experience of long ago I became aware of the hours which district and precinct workers put in on the sometimes unappreciated task of building and maintaining a political organization. That is why, in paying tribute to Mayor O'Dwyer, I also pay tribute to all those of you who have had the discipline and unselfish patriotism to maintain a continuing interest in party affairs.

For three quarters of a century the powers of government in the United States have been exercised by one of two great parties—the Republicans or the Democrats. Broadly speaking, that has proved to be a sound system, as, under different party labels, it has been in our sister democracies of Canada and Great Britain.

Governments deriving from more than two or three parties have proved incapable of providing strong and continuing federal systems. Thus, proportional representation, while attractive in theory, seems to be unsound in application. It is government by fractions, the beginning of government by veto, without responsibility. In Germany that system gave Hitler his opening.

My own inherited Democratic membership was cemented by my admiration for two of its greatest leaders—Woodrow Wilson and Alfred E. Smith, for whom I know Franklin Roosevelt had the same admiration and respect. Their names, with those of Jefferson, Monroe, Madison, Grover Cleveland and Newton Baker illustrate the diversity of appeal and the variety of thought which attracted men to this party.

The charge has sometimes been made that the Democratic Party embraces too many diverging and conflicting schools of economic and social thought. The conservatism of the South and the radicalism of the great cities of the North are said to make poor teammates—granted that we accept the unsubstantial evidence that all Southern Democrats are reactionary and all Northern urban Democrats are radicals—which I do not. Even if one accepts the existence of these differences of opinion, I hold the fact to be an asset and not a liability. The essence of democratic government is to provide every group in our system a fair chance for expression.

That is what I regard as the genius of President Truman's administration. By voice and deed he has demonstrated his deep belief in the right of every man to express his opinions. It is a distinguishing feature of his relations with his Cabinet and with the present majority party in the House and Senate. There is no political subtlety or smartness in the President's effort to cooperate with the Republican Congress. He knows that the problems of the world are too deep and too serious to be dealt with on the level of domestic partisan politics.

When he bespeaks cooperation he means just that, and I know he has done his best to carry out his part of the pledge.

I want now to talk a little about business and the American economic system.

This great industrial, agricultural, and trading community which is the United States, was built under a social and economic philosophy which we may call democratic capitalism. It is a system dedicated to the idea that the welfare of the country is better secured through the exercise of individual initiative and effort than it could be by a state-owned economy administered through a vast and complex bureaucracy.

With that belief I hold deeply and strongly.

During the war I saw what a complicated job it is to operate the national economy with Federal controls. Some were necessary to achieve the cooperation required for total war. But their continuance in peacetime would wreck the country and in my judgment destroy its capabilities for service to the world. There is no one man or committee of men with sufficient knowledge, wisdom, and capacity to manage an economy as hugely productive as ours—an economy which poured out the weapons and men to achieve victory in the war and which since has poured out billions to help restore a deeply injured world society.

This economy of ours is a delicately balanced machine. Its driving force is incentive, not merely the incentive of profits or wages but the incentive of service. The production of goods in quantity is its mainspring and it is that quantity production which provides the real wages of labor.

Socialistic advocates in Britain have found that underproduction can and does produce unemployment; that high wages which cannot buy goods cease to provide the incentive to work just as businessmen find that high prices destroy markets.

Business and commerce are effective forces for peace and stability in the world. Businessmen are always on the side of peace because they need it to provide the conditions under which their ventures can be pursued with confidence. Businessmen are by nature radical optimists—if they were not, few could continue against the appalling obstacles that today hinder the free exercise of their energies throughout the world.

No governmental planning or supervision or control can take the place of business initiative in maintaining that high production of goods and services which made this Nation great and which the world will require from us for many years to come.

All nations and states in the world today are based upon capitalism, the difference being merely between state capitalism and individual capitalism. Our system finances productive enterprise from the savings of individuals, deposited in banks and insurance companies, rather than collected by Government levy. The savings of our people are channeled into new ventures and into the extension of existing enterprises through commercial and investment banking.

The alternative is for government to collect all the people's earnings above subsistence needs, to channel those savings as it wills and ultimately to own the instruments of production. Inevitably that means that government must ultimately own and control and direct labor.

I am in violent disagreement with every and any aspect of such a system.

But let us not forget that it can and does offer a hard and ruthless competition, for elsewhere it bids for the minds of men and women surviving in despair and poverty, in the ruins left by war, with promises of a future worldly paradise.

Such an appeal Hitler made to the unhappy German people. That he and his satellites perished with his mad dreams can be of little solace to the grey shadows of human beings who walk today in the rubble and ruin of Berlin.

I want to talk about another great stone in the foundation of American society. No group in our community has a greater share in meeting and overcoming the great difficulties of the postwar world than American labor. At the moment the tide of popular sentiment seems to be running somewhat against labor and particularly against the leaders of labor. I would like to recall to businessmen that a little over a decade ago the tide was running sharply against business and its leaders.

As a nation we are apt to make black-and-white assessment of blame when we are troubled. That is an understandable and human weakness but the temptation to put on labor all the blame for industrial difficulties and high prices is as unjust as it is to saddle all business with that blame.

I came to know a good many labor leaders during the war. I saw a good deal of labor itself and I can testify to the great participation of the American workingman in victory. Most leaders of labor are neither Communists nor Socialists. Many of them realize the need of adjustments to rectify existing imbalances in labor laws. Bitterness against all labor and all labor leaders as a group is just as dangerous, just as unfair as the tendency 15 years ago to smear all business and all management. Indicting fellow Americans by groups is the negation of democracy, for ours is a classless society in fact, not by empty boast.

It would be inappropriate for me not to make some mention here of another great foundation stone of our Nation—the Armed Services. The Army and the Navy, the Marines and the Air Forces, during the war constituted the greatest fighting forces on earth. Now, let there be no misunderstanding, they are dedicated to keeping the peace. They exist not to impose the will of the United States upon other people but to guard us against attack, to defend the United States; in due course, to take their part in securing world peace through the policing functions of the United Nations, and, finally to make clear to the world that we do not again intend to succumb to the fallacy that you can secure peace by stripping yourself of the means and of the power to make war.

Let me utilize this reference to the Army and Navy to draw a rough parallel between them and our American society.

During the war we developed and used the greatest military combination of men and machines that history has known.

Army Ground Forces, trained at great speed, magnificently equipped, smashed their way across Africa and Europe in extraordinary military achievement.

The Air Forces of the Army, almost from a standing start, within 3 years achieved mastery of Germany's air power.

The United States Navy swept the seas of two hemispheres clear of the enemy, transported and supplied our forces overseas, and extinguished Japan as a naval power.

No one of these services could have done the job alone. It needed all three, working as a team, to win.

There is no room for group ego in the military services, and there is no place for it in our national society. Government cannot do the job alone. Invested capital cannot run factories without labor, nor can labor produce goods without that imponderable which has been so spectacularly developed in this country—the genius and skill of management.

We are all members of a common national team. We are all workers in the final analysis. We are all consumers. We are all investors, not merely in real estate and securities but in the future of America. Labor, without the partnership of private capital, must wind up as the corporate property of the state. Conversely, capital has a vital interest in a busy and prosperous America. There is no haven in which capital can be immune from depression.

The success of the American system is the greatest guarantor of its continuance. In addition to the exports of American credit and food and goods to a stricken world we must also send the spiritual message which is our real and greatest answer to the preachers of the doctrine of the economic and soulless man. I know of no better expression of such a faith than a quotation which I read last week from a hitherto unpublished essay of Woodrow Wilson:

"There is one thing I have a great enthusiasm about, I might almost say a reckless enthusiasm, and that is human liberty. The individual is indispensably the original, the first fact, of liberty. There is no such thing as corporate liberty. Liberty belongs to the individual or it does not exist."

That is the spiritual message which America, with God's help, must transmit not merely for its own preservation but for the salvation of the world. That is the faith of our community which we must export along with our capital, our foodstuffs, our machines, and our charity. It is the true essence of what we fought for in two wars. It is, I say again, personified in the career and service of Mayor O'Dwyer. It was because he came to a great free community that he had the opportunity to rise. It is because of his own deep devotion to liberty that he continues to serve the people.

National Science Foundation Should Be Established

EXTENSION OF REMARKS

OF

HON. GORDON L. McDONOUGH

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 29, 1947

Mr. McDONOUGH. Mr. Speaker, the establishment of a National Science Foundation is of the utmost importance to the United States, and this Congress should pass legislation for the creation of this Foundation.

We are living in the scientific age, and must recognize the importance of scientific research and development. The war brought with it the discovery of atomic energy and American scientists developed the atomic bomb which stunned the world and enforced immediate peace.

Science opened the door to atomic warfare. What we have already seen of the destructive force of this new weapon is but the smallest part of its potential. Atomic energy coupled with the principle of the guided missile directed by television presents a demolition force so powerful that the destruction of an entire nation would not be improbable through its use. Atomic bombs small enough to be planted by saboteurs and detonated through the use of radio waves at the discretion of an enemy power are no longer mere fictional fantasy, but a possible danger which must be reckoned with for national safety.

There is only one answer to the problems which face us with the advent of atomic energy and atomic warfare. That answer is scientific research carried on by the best scientific minds this Nation can produce. Through such research we

may find methods to counteract the destructive power of atomic energy and learn how to harness it for peacetime use for the benefit of all our people.

We need a National Science Foundation to coordinate the efforts of all the branches of science in research which will convert and confine atomic energy to peacetime utility. Atomic energy must be harnessed to produce power, and we cannot envision the extent to which this new force may revolutionize industry, transportation, and every phase of daily living. Our scientists can do the job, but they must have the tools with which to work, laboratory equipment, and men and women who are specialists in science to assist them and carry on the work of scientific research.

Before the last war, Europe had many centers of science, and the United States could draw upon these reservoirs of scientific knowledge for the development of new methods and new materials in medical research, biological science, and chemistry and physics. These European centers have been destroyed, and the United States must now develop its own scientific centers or be bypassed by the scientific development of other nations, such as the U. S. S. R. which has made available almost $1,000,000,000 for scientific research this year.

We must seek out the most promising material among our youth and provide scholarships so that boys and girls with special adaptability in the field of science can receive adequate training. Upon completion of their work, these young scientists can enter the field of research, and their accomplishments will benefit the Nation.

The future safety and prosperity of the United States may well depend upon the advancement of scientific research. We need a National Science Foundation, and I believe its establishment is of equal importance with any other issue before the Eightieth Congress The Senate has already approved S. 526, a bill which creates a National Science Foundation. I urge the Members of the House to pass this legislation, which will insure the maximum progress of scientific research and discovery in the United States.

Voice of America

EXTENSION OF REMARKS

OF

HON. JAMES P. RICHARDS

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 29, 1947

Mr. RICHARDS. Mr. Speaker, under leave to extend my remarks, I include an illuminating article in the New York Herald Tribune of May 28 by Walter Kerr on the Voice of America program:

WHY THE RUSSIANS TUNE IN—VOICE OF AMERICA PROVIDES ONLY FACTUAL PICTURE OF UNITED STATES

(By Walter Kerr)

Recent attempts in Congress to smother the State Department's Voice of America broadcasts to foreign lands are both alarming and astonishing to an American citizen returning to this country from the Soviet Union.

The explanation is simple. In the nightly programs beamed from the United States he found the only information available to Russians in their own language of American affairs as Americans see them. Opposing them were the carefully edited Soviet press and radio, painstakingly critical of American opinion and American action, presenting one over-all picture which may be summarized as follows:

That the United States is a fumbling, confused, grasping country that grew rich during the war and now hopes to enslave the world economically and politically—the whole controlled by a group of powerful industrialists, bankers, and politicians who prefer war to peace, social strife to social order, and fascism to civil liberties.

The only contrary view that a Russian can hear comes from the Voice of America. Yet this voice came close to being silenced by congressional action a short time ago. The arguments against it claimed that it was unauthorized, mismanaged and a waste of money.

The first two objections apparently will be taken care of by a new bill which was approved last week by the House Foreign Affairs Committee and which, if it becomes law, will continue the broadcasts in the new fiscal year beginning July 1. The third—that it is a waste of money—is more difficult to answer, since there is no way of evaluating in terms of money the benefits of accurate information.

Americans in Moscow, however, contend that the programs are listened to by Russians, and their only suggestions consist of recommendations for improving the broadcasts.

As evidence of listener interest, besides individual Russians whom they know, they cite the recent attack on the Voice of America by Ilya Ehrenburg, the Soviet propagandist, whose skill with the pen most certainly would not have been employed if no one bothered to listen to what the Voice was saying. They also point to a recent cartoon in the magazine Krokadil, which pictured a department store display of short-wave receiving sets made in the shape of ducks. The duck sets were advertised as being useful for hearing the "quack, quack" broadcasts of the Voice of America.

Joseph Newman, the New York Herald Tribune correspondent in Moscow, reports that only a limited and spotty reaction has been noted since the programs were started last February. There is reason to believe, he says, that the broadcasts are heard mostly by higher-income groups, since they include men and women who can afford to buy short-wave sets. These sell for 1,500 rubles each, or more than the monthly income of a highly skilled and productive worker in a Moscow factory.

Among listeners he mentions doctors, lawyers, teachers, newspapermen, writers, actors, artists, dancers, scientists, army and naval officers, factory directors, engineers, and more important Government officials.

He says that the number of persons who hear the programs is not known by anyone and there is no basis for an intelligent guess. It is estimated, on the other hand, that there are about 1,000,000 sets in the Soviet Union, a majority of them built for short-wave reception.

He adds that without publicity of any kind Russians know the transmission time (9 p. m. to 10 p. m. daily) and frequencies (11,870 and 7,290 kilocycles). They have found out by playing with their own sets or by word of mouth.

The most serious criticism of the programs was poor reception, but this has been improved recently, although not sufficiently to put them on a par with broadcasts of the British Broadcasting Corp. Soviet seven-tube sets, however, pick them up easily.

Of the material itself the most common complaint from Russians and Americans alike is that a 1-hour transmission is too long. It has been proposed to change over to three half-hour programs. It has been said that the treatment of scientific subjects is too technical for anyone except a scientist. One listener finds the jazz music too hot and another says he can hear all the classical music he wants over Soviet stations.

The top suggestion is that the programs be made even more factual than they are. Listeners apparently would prefer to hear discussions of problems confronting America rather than efforts to picture the United States as a paradise which they suspect it is not. Such suggestions are passed on to Americans in Moscow, who in turn report them to the State Department. They take a real interest in the Voice of America.

Rice Leaders Rap Controls as Unfair

EXTENSION OF REMARKS

OF

HON. HENRY D. LARCADE, JR.

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 29, 1947

Mr. LARCADE. Mr. Speaker, under permission to extend my remarks in the Appendix of the RECORD, I wish to include a copy of a newspaper article from the Lake Charles American Press, as follows:

RICE LEADERS RAP CONTROLS AS UNFAIR—DECLINE IN PRODUCTION, INCREASE IN MARKETS CITED AT CONVENTION

GALVESTON, TEX., May 24.—Rice dealers, brokers, and jobbers attending the Rice Millers Association convention here today said that possible continuation of controls on rice after the expiration date June 30 were unfair and unnecessary.

W. M. Reid, New Orleans, association executive vice president, said the 400 persons attending the convention were opposed to any extension of price controls.

"If controls continue, it will hurt the domestic rice market 100 percent," Reid said, "since 40 percent of the rice crop will be shipped out of the United States. The part of the rice crop allowed to remain in this country, under present regulations, will remain under fixed prices.

"It is unfavorable to the industry for controls to remain," Reid declared, "because there is no reason for one product to be under Government regulations when it is unnecessary."

PRODUCTION DROPS

Rice declined in production 25 percent in 1946 while markets for foods showed an increase of 43 percent in production over the prewar level, Reid said.

Unless price controls are lifted and rice is allowed to be sold on the domestic market, the consumer will be weaned away from the use of rice by its prohibitive costs and limited production, he said.

George Smith, Dewitt, Ark., vice president, said growers believed continued governmental controls would cripple their business.

Watson Rogers, Washington, D. C., president of the National Food Brokers Association, told the convention that members of the rice industry must strengthen their sales and merchandising programs if rice is to recapture its place in the American diet.

BUYING POWER

Fred J. Rossiter, of the United States Department of Agriculture, said in an address that he is concerned over the world's buying power.

"Before we become too optimistic about the heavy demand for rice," he said, "we must weigh the world's buying capacity."

He said several food experts have pointed out that the need for rice today is much greater than that of the prewar demand.

"Authorities estimate," he continued, "that the rice-eating population has increased from 5 to 10 percent during the past 10 years. This indicates that the need for rice will be far above the available supply."

Organized Chaos

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 29, 1947

Mr. SMITH of Wisconsin. Mr. Speaker, as part of my remarks, I am including a news article by Mr. Constantine Brown, wherein he points out that there is anything but order in Europe today. It should be of interest to all Members of the House.

THIS CHANGING WORLD—ECONOMIC AND POLITICAL SITUATION IN EUROPE CALLED ORGANIZED CHAOS

(By Constantine Brown)

Herbert Hoover, who because of his realistic and nonpartisan approach to world affairs ranks as America's elder statesman, informed the House Appropriations Committee that our present policies in Germany and Japan are forcing the American taxpayer to carry the burden of those countries' reparations.

Those who have kept abreast of developments in Europe and Asia concur with Mr. Hoover's conclusions, which are based on long study of conditions and several investigations undertaken at the request of President Truman. The Chief Executive himself is reported to share most of Mr. Hoover's contentions.

The economic and political situation in Europe can be described as the most perfectly organized condition of chaos the world has ever known. There are several points of economic vacuum in Europe, as well as in Asia, and American resources are being sucked into them in such quantities that if the flow continues, they will be drained off in the foreseeable future.

RUSSIAN POLICY BLAMED

We cannot afford to let the world starve. This is an American axiom which no political party in this country can change. However, present chaotic conditions will never be corrected as long as Russia has her way, which is to mulct certain parts of Europe of their substance while generating chaos in others.

For the last 2 years we have been pouring money and raw and manufactured materials into Europe while Russia transferred to her own territory whole industrial plants from the occupied areas. She also has taken many raw materials native to the countries behind the iron curtain, much private loot from private individuals and subsistence from the land for her armies of occupation.

All agreements reached at Tehran, Yalta, and Potsdam which were not 100 percent in favor of the U. S. S. R. have been violated by Moscow. Our efforts to conclude a peace treaty with the Germans have failed so far because Russia was refused more than her share. The only peace treaties we have been able to conclude have been those with Italy and the Balkan satellites, which were on Germany's side during the war and are now dominated by Soviet generals.

The essence of these treaties is in their retention of Russia's present satellites behind the iron curtain. The treaty with Italy, where there is no Russian army of occupation, makes it possible that within 2 years after ratification America will be called on to provide Italy with the means to pay war indemnities to Russia and Yugoslavia.

TREATIES BEFORE THE SENATE

Thus, while no progress is made to provide Germany and Japan with a peace treaty, enabling them to get back on their feet economically, the United States Senate has before it five other treaties. They have been approved by the U. S. S. R., either because they place some of these former Nazi satellites completely in Russian power, or because, as in the case of Italy, they permit a continued drain on American resources.

In his letter to Representative TABER, Mr. Hoover voiced the feeling of a number of officials when he suggested that separate peace treaties be concluded immediately with Germany and Japan, regardless of whether Russia joins the effort to restore peace or not.

The attitude of some State Department officials that we must proceed cautiously lest we offend Russia is no longer valid, in the opinion of the former President. The American Government has shown itself more than cooperative and has not hesitated to draw on the purses and resources of its citizens to help create a better world.

But those efforts have not been successful, obviously, because of the handicaps raised by our wartime ally. Hence, if the next foreign ministers' conference in London proves as fruitless as that in Moscow, there will be no other solution than to conclude a separate peace with the principal former enemy countries.

Alaska and the Canal Zone

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 29, 1947

Mr. SMITH of Wisconsin. Mr. Speaker, last week I discussed the necessity for establishing adequate protective measures for Alaska and the Panama Canal Zone. As a result of that speech I have received many letters of commendation. Under leave to extend my remarks I am including herewith copies of two letters received which are very pertinent to the problem. I have deliberately withheld the names of the people who have written the letters but if any Members of the House should desire that information I shall be glad to furnish it.

MAY 22, 1947.

Representative L. H. SMITH,
Washington, D. C.

DEAR SIR: The enclosed newspaper will explain, in part, why I am writing you this letter.

I arrived home this week from 7 weeks in the Canal Zone. Ever since my arrival in the zone I have wondered to whom I could write that would be interested in hearing what I found to be facts during my stay down there.

I am not an alarmist but to me, watching those numerous ships and freighters with their precious loads of needed cargo, going and coming through that Canal, I can feel only that one of the greatest and most important key spots is United States possession of that Canal. That isn't all, I talked with dozens of GI's and a few officers, without one exception I found them to be not only uneasy but alarmed and in most cases very bitter over the neglect of our (and their) Government in the protection of a spot more vital than Pearl Harbor.

On Army Day I saw 36 pitiful planes do their best to put on an Army Day show. I walked up to one young GI standing in front of the post office, I had never seen him before, and asked him if that's all the planes there were on the zone. He said bitterly, "Every one and we had a hell of a time to get all of those together, to put on this show today, I hope all those poor devils come back."

My son-in-law is a master sergeant at Howard Field. I couldn't get him to tell me anything (he was a first lieutenant during the war, bombardier, so learned never to talk) so I went out and talked to just any lad I met and most of them were willing to talk, especially those alone down there and for whom no quarters have been given for their wives to join them. You are 1,000 percent right, security should begin at home and the Canal Zone is ripe for any enemy bomb which is dropped there, there could be no retaliation except from a few ground artillery scattered around over the zone.

I don't pretend to know all the military secrets of the zone but a blind person with ears, need only listen, to learn of the helplessness of a less than skeleton force now stationed on the zone.

Please do all you can to strengthen that Canal Zone for the safety and protection of these United States. To whom can I write further or are my efforts futile? It does seem so important to me.

Had the Japs struck at that Canal we might have lost the war.

Russia won't be so stupid.

Respectfully.

MAY 22, 1947.

Representative LAWRENCE H. SMITH,
House Office Building,
Washington, D. C.

DEAR CONGRESSMAN SMITH: With much interest we read your statements regarding Alaska and the Canal Zone and wish to commend you warmly for setting forth these facts. You fellows might ask Mr. Marshall what he was doing at Yalta when that magnanimous character, Roosevelt, gave the Kurile Islands to Russia. Maybe he was out for a canter at the moment and left that important business to the very able Ben Cohen! And who is this Ben Cohen that he is forever at the elbow of Marshall? Don't bother to answer that one!

Not long ago a boatload of "fishermen" plus a pregnant woman got shipwrecked off our northwest coastline. The ladies aid from that part of our Nation rushed like mad to buy gifts for the new Red baby and the poor mother, the men folk received new suits, etc.—the story was, they were "scientists" digging around in the ocean for something the Russians dropped there many, many years ago! I hope they had their fingers crossed when they unfolded that one. Now we have more "scientists" galloping around these parts. I heard them: They say they want to find out how we raise citrus fruit, yet from what I gathered, they have tried and already knew the climate there does not favor the growth. Well, I do hope they were shown all the other wonders we have in southern California—such as the aircraft factories, etc., etc. Of course that would be dull stuff for Russian botanists—but all Russians love boats and San Pedro is a very fascinating harbor. Of course Americans aren't allowed in—not even Americans like this family whose forebears pioneered to build this Republic. One day we drove near there, inadvertently, and I thought sure they'd shoot us before we could drive out. My husband spotted a Marine—regular service—and called "Hi, remember General

Smedley Butler—I'm his cousin"—I honestly believe that saved our lives! Maybe, in fact I feel so certain from the way things're going—we'd do well to carry a hammer and sickle—just in case! Drop around to the Russian outfit known as the American Russian Institute and learn about the wonderful work these fine people are doing—if there isn't one in Washington, let me know, and I'll send you some literature which you will find most enlightening. And, do you know that one "Bill Wolff" of the People's Educational Center (they call 'em different names in different cities)—see the Tenny Report (Senator, Cal.) 1947 for his record—is going to teach at the University of Wisconsin this summer? Would you like to know more—and would you help us oust him? He and his mob have already been turnd out of L. A. City College.

We are grateful for men like you in Washington. These are times more frightening than the average dumb American realizes.

Sincerely.

Golden Gate Bridge

EXTENSION OF REMARKS
OF
HON. RICHARD J. WELCH
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 29, 1947

Mr. WELCH. Mr. Speaker, yesterday, in commemoration of the tenth anniversary of the opening of the Golden Gate Bridge, I invited the attention of the House to this great wonder of the modern world.

This morning I have received an editorial which has appeared in the San Francisco Call-Bulletin entitled "A Key to Progress." Under the unanimous consent granted to me, that editorial is as follows:

A KEY TO PROGRESS—GOLDEN GATE BRIDGE ANNIVERSARY IS REMINDER OF JOB AHEAD TO INSURE FUTURE ACHIEVEMENT

Tomorrow is the tenth birthday of a great San Francisco symbol.

It is not in a class with the ferries, the cable cars, or any of the quaint relices and reminders of an amiable past.

Probably it is more famous, certainly more important, and most assuredly more in step with modernity.

We speak of that masterpiece of human endeavor—the Golden Gate Bridge, first opened to public use May 27, 1937.

More than any other landmark, this should be our symbol today.

This is the bridge that "couldn't be built."

This is the fulfillment of a dream which took official form as long ago as 1918, when RICHARD J. WELCH, now a Congressman, and then a supervisor, introduced and obtained unanimous passage by the board of supervisors of a resolution which called for a survey to determine the practicality of such a bridge.

And as the bridge is a symbol, so Mr. WELCH's dogged and dauntless fight to bring about its completion is a splendid example of what foresight and determination can accomplish.

As a supervisor, as a bridge director, as a Member of Congress he has battled, successfully, to overcome Army obduracy, selfish opposition, and just plain, dumb unimaginativeness, even as he fought successfully for the San Francisco-Oakland bridge and is fighting now for a new crossing, so badly needed, which will bring the trains to San Francisco.

The Golden Gate Bridge is a beautiful monument to the imagination and the enterprise and the courage of San Francisco and her sister counties who were associated with her in the project, a monument not only to what has been done but what can be done.

The bridge district, itself a gesture to the communion among bay area counties, has made steady progress, financially, through the decade of the span's existence.

As great as it is, though, the achievement, and its benefits so far, are but a beginning.

The potential resources of the great area to the north—the Redwood Empire—linked to us by the bridge, are a long way from being fully exploited.

It remains for all of us to realize and to act upon the possibilities of the future.

It remains for the State to cooperate in the development of the region served by the bridge. Important roads which serve as key traffic connections between this area and the rest of the State—the Sears Point road and Black Point cutoff, for example—should be improved to an extent which not only would match the present need, and remedy present defects and hazards, but which would fulfill the needs of the future.

Indeed, the Golden Gate Bridge is more than just a monument. It is a key to immeasurable progress.

Expenses Are Being Cut

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 29, 1947

Mr. SMITH of Wisconsin. Mr. Speaker, under leave to extend my remarks, I include the following interesting news article by Mr. David Lawrence on the subject of cutting expenses and just what the Republicans have done about it:

FEDERAL EXPENSE CUTS ATTEST TO COURAGE OF GOP LAWMAKERS

(By David Lawrence)

Nothing so unspectacular as cutting Government expenses gets any cheers from the spectators—in fact, all one has heard thus far has been jeers. Yet the Republican majority in Congress is doing a job that hasn't been done for many years—certainly not since the Democratic Party came into power in 1933, when, after having promised during the 1932 campaign a 25-percent decrease in the Federal budget, expenses were deliberately increased.

The Republicans are cutting deep. Hence the cries of distress from the bureaucrats from coast to coast. In Washington, where the habit has been to spend and spend and elect and elect—as the saying went in New Deal days—the criticism of the Republicans is severe. Naturally those affected by the cut in expenses don't like it.

But what is surprising is that the taxpayers far and wide do not seem to appreciate what is being done in their behalf in the National Capital. All they read in the press is that this or that important item has been cut and that the Republicans are going to get punished by this or that section of the electorate for having reduced certain expenditures.

ATTEST TO COURAGE

Few things attest more to the courage of the Republicans than their readiness to cut agricultural and reclamation appropriations when these mean votes in Western and Middle Western States that are predominantly Republican. The Democrats just can't understand it—they think their Republican brethren are committing political suicide.

When the House of Representatives, under the leadership of the chairman of the Appropriations Committee, Representative JOHN TABER, of New York, promised to make substantial cuts, the critics scoffed. Before Mr. TABER could get the details arranged, they jeered again and said he couldn't possibly bring in any substantial cuts. But the House of Representatives has already cut about $2,300,000,000 toward the $4,500,000,000 set by the Senate as its goal, and the House plans further cuts on the War Department and the bill covering independent offices and agencies.

It was then rumored that the Senate would restore virtually all the cuts and that economy would come to naught. But the Senate, in passing the Treasury, Justice, and Labor Department bills, didn't make any material change from the House cuts.

When the critics are not arguing that the Republicans just can't make any big cuts, they are saying that the reductions are phony or paper cuts. All this merely spurs the Republican leadership on to prove their sincerity. The result has been the most drastic cuts in appropriations that have been made in a dozen years.

Now unquestionably some of the cuts are too severe and some things should not be eliminated, but experience teaches the legislators that they never can find out what is vital and what is superfluous unless they force a shake-out. The only way to do it is to cut and put the bureaucrats on the defensive. Usually those agencies which are cut come up with some way of managing to get along without as much money as before.

UNEXPENDED BALANCES

It should be borne in mind that most of the figures used in the press dispatches relate to actual appropriations. This is a different thing from actual expenditures in a budget because the Treasury often spends money made available under the appropriation laws of previous years. There is, as a matter of fact, a lot of loose money around in the Government—unexpended balances—that can be saved. The Republican majority, through its committees, is going through the Government's finances this year with a fine-tooth comb. It is a salutary development.

Much more economizing can be done. If, after the 1948 election, the Republicans continue in power, they will do even more cutting. For if they can reduce expenses as much as they have in the face of an approaching national election, they certainly will not hesitate to go further when they win public approval at the polls.

The United States Government has needed an economy wave for a long time. Extravagances grow with the years and soon items that were appropriated for a purpose a decade ago are listed as essential. The belief that the Government owes special favors with public funds is deeply ingrained and the thought that certain sums can be spent permanently, irrespective of the plight of the taxpayer, is widely held in bureaucratic circles.

The Republicans have been wise in proposing tax reduction. Without that urge they couldn't have cut the budget. Unfortunately, the Democrats have done everything they could to hamper the economy program. But the Republicans will emerge successful in their legislative battle and by July 1, when the next fiscal year begins, they will have lopped off a bigger percentage from the budget than any Congress ever cut from the budgets of a predecessor Congress.

John Hollis Bankhead 2d

MEMORIAL ADDRESS

OF

HON. CARTER MANASCO

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Monday, May 19, 1947

On the life, character, and public service of Hon. JOHN HOLLIS BANKHEAD 2D, late a Representative from the State of Alabama

Mr. MANASCO. Mr. Speaker, on June 12, 1946, an all-wise providence saw fit to remove from our midst Hon. JOHN HOLLIS BANKHEAD 2D, of Alabama.

His passing brought to a close the service in Congress of one of the most illustrious names in American history. For over 50 years there was a Bankhead in the Congress of the United States.

The illustrious father, John Hollis Bankhead, Sr., was for many years a Member of the House of Representatives, climaxing his long and distinguished service as a Member of the United States Senate. William Brockman Bankhead served as a Member of the House of Representatives from 1917 until his death in 1940, serving the last 4 years of his life as Speaker of the House of Representatives.

Senator BANKHEAD was born on a farm in Lamar County, Ala., on July 8, 1872, and received his early educational training in a little country school of the period. He graduated from the University of Alabama and received his law degree from Georgetown University. Immediately upon admission to the Alabama bar he entered the active practice of law in Jasper, Ala., as a member of the firm of Coleman and Bankhead. Later he formed a partnership with his brother, William Brockman Bankhead, which continued until the latter's election to Congress. In 1920 his son, Walter Will Bankhead, became a member of the firm. Senator BANKHEAD was president of the Bankhead Coal Co. from 1911 until 1925 and in his dealings with his employees he gained the reputation of being fair and progressive. He was appointed to the board of trustees of the University of Alabama in 1917 and was a member of the board until the time of his death.

Senator BANKHEAD was an eminent lawyer and when elected to the Senate in 1930, he gave up one of the largest law practices in the South.

In 1933, thousands and thousands of farmers were losing their farms as a result of mortgage foreclosures and tax liens. The price of agricultural commodities in most instances would not pay for the actual cost of production to say nothing of the payment for the long hours of toil of the farmer and his family. Huge surpluses of agricultural commodities were piling up in the warehouses throughout the Nation further depressing the price of these products. Senator BANKHEAD took the lead in writing legislation to correct the economic plight of our great farm population. A large part of the agricultural program was put into effect as a result of legislation drawn by Senator BANKHEAD. Among the most important legislative acts in which he played the leading part were the tenant purchase program, the agricultural adjustment program, the agricultural marketing program, the price support program, and the Soil Conservation Service. All of these programs were not only humanitarian but were also economically sound.

During the war years, Senator BANKHEAD'S legislative tasks were doubly arduous. He was a member of the Appropriations Committee, which supplied the funds for our great war effort, a member of the Banking and Currency Committee, which handled many war measures, including price control, and was a member of the Committee on Agriculture. Any one of these committees required more strength than the average man has, yet Senator BANKHEAD was an active and effective member of all three of them. Last year many of his friends tried to get him to go home and rest for a little while, but he said he had two more bills for the American farmers that he wanted to finish before he took a much-needed rest. It can be truthfully said that he was a martyr to the cause of the farmers whom he loved so well.

In the death of JOHN HOLLIS BANKHEAD 2D, the Nation lost a profound statesman. A more distinguished service was never rendered in the legislative field than was rendered by this great man. His life was dedicated to the service of the public. He carved a place in the hearts of the American farmers that time will never erase. He fathered more constructive legislation for the benefit of the farmers of our Nation than any other man in the long legislative history of this country. The result of his untiring efforts improved the lot of the lowliest tenant farmers and sharecroppers in the remotest parts of our great country. The various Bankhead farm bills raised the economic level of all the farmers and in doing so raised the economic level of all Americans. The Nation can ill afford to lose men of the intelligence and integrity which Senator BANKHEAD possessed.

Citizenship, an Organic Act, and Civilian Administration for the People of Guam

EXTENSION OF REMARKS

OF

HON. NORRIS POULSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 29, 1947

Mr. POULSON. Mr. Speaker, under leave to extend my remarks, I should like to include in the RECORD the statement made by Dr. Laura Thompson in behalf of the American Civil Liberties Union, at hearings on Guam bills before the Public Lands Committee, on May 28. Dr. Thompson is not only an eminent anthropologist but is the author of the book, Guam and Its People, and is a recognized authority on the subject of that island.

The statement follows:

Mr. Chairman, I am testifying in behalf of the American Civil Liberties Union, a national organization devoted to the safeguarding and effectuation of the Bill of Rights and the Constitution of the United States. The Civil Liberties Union strongly recommends, for the people of Guam, citizenship, an organic act, and government by a civilian agency.

As an anthropologist with a special interest in Oceania, I have worked and written on Fiji, New Guinea, Hawaii, and the Marianas Islands, which include Guam. My testimony is based on scientific research regarding the people of Guam, their habits, customs, government, economy, social life, history, and archeology. This research, commenced in 1929, has continued off and on for 18 years. It included field work in Guam in 1938-39 at the invitation and under the auspices of the naval government of Guam and under the further auspices of the University of Hawaii, the Social Science Research Council, and the Institute of Pacific Relations. Out of this study of Guam have emerged several monographs, articles, and books on the archeology, native culture, and modern life of the Marianas area; among these being Guam and Its People, used extensively by the Navy as a source book on the island.

Before proceeding, I wish to state that it took me several years of intensive research to grasp the extent to which the naval government of Guam is, and has been since its inception in 1899, unprecedented in the annals of American history (with the exception of Navy-governed American Samoa). It took me a long while fully to grasp the extent to which the personal power of its military governor is unchecked either by statute law or by superior authority. The pattern of the administration by the United States Navy in Guam is so far outside the experience of the average American that it cannot be compared to anything that we are personally familiar with, and, indeed, I doubt whether there has been anything comparable to it in Anglo-Saxon history since the Magna Carta. If, therefore, my testimony may sound extreme, it will be because the facts are extreme.

The naval government of Guam is today, and has been since it was turned over temporarily to the Navy Department by Executive order of the President in 1899, a rapidly rotating personal dictatorship. I use the term "personal dictatorship" advisedly. For in the short-term naval Governor there is vested not only the executive function of government but also the legislative function and the judicial function. The functions—the three branches of government—are not separated, each operating as a check on the others, according to American principles of government. They are all under the personal control of the naval Governor. In other words, the naval Governor not only executes and administers the government over the civilian population, but he makes and unmakes the laws of the island at will through executive orders, proclamations, and the promulgation of temporary codes; and he controls the courts and sits as the supreme judge beyond whom there is no appeal.

There is not time to discuss how this absolutism by decree grew up under the American flag. Suffice it to point out that precedents set by the first naval Governor of Guam have been followed and elaborated through the near half century of naval rule.

But one fact of history should be fully noted. At the time of the Spanish-American War, the Guamanians had been full-fledged citizens of Spain, on a basis of legal equality with all Spanish subjects, for over 200 years. Soon after the arrival of the first permanent mission in 1668, Spanish citizenship, the laws of the Indies, and the right of appeal to the intermediate court at Manila and the Supreme Court at Madrid, were extended to the natives of the Marianas. A form of indirect administration was initiated, by which the natives were given a measure of self-government. A system then developed of the election of local officials through the electorate of the natives.

When the American Navy took over in Guam, the natives lost their Spanish citizenship, their rule under statute law, their right of appeal to a supreme court beyond the Island, their municipal elections, and the limited self-rule they had attained under Spain. And thereafter, and until now, in spite of the pledge in Article IX of the Treaty of Paris (that Congress would define their status and rights), the Guamanians have not been granted American citizenship, a legal system which could not be abrogated at the will of the rotating governors, or any legally guaranteed civil rights whatsoever.

Instead, was inaugurated, and perpetuated until now, the centralized, personalized absolutism by decree of rotating naval governors over civilians.

Here it should be observed, that although the naval government of Guam resembles in structure the navy yard or battleship type of regime which is its prototype, it differs therefrom in one crucial item. An American navy yard or battleship is governed under military law whereunder the individual, though he may not claim the protection of the requirement of grand jury indictment or of jury trial, yet has certain protections. The judge's decisions are subject to automatic review by higher authority. In Guam, on the other hand, the individual is denied not only the right of trial by jury and the protection of grand jury indictment, but also is denied any appeal or review whatsoever beyond the Island and its naval governor. In Guam, therefore, the military absolutism over civilians, having dispensed with all the usual checks and balances, even those of martial law, is unlimited and complete. In the naval government of Guam, law, and legally guaranteed civil rights, as these are known to the average American, do not exist. The naval Governor of Guam has actually more power, on that island, than any other individual or institution under the American flag—more even than the President, or Congress, or both of them together, within areas governed by the Constitution.

Under such conditions, it is easy to see that the office of naval Governor of Guam might be a considerable burden to an American citizen, whether or not he be a naval officer. He is sent to Guam as its Governor by the President as Commander in Chief, through the Secretary of the Navy. He, a Navy career man, trained and experienced in the complexities of the science of naval warfare, must assume the responsibilities of his new and briefly held office with little or no prior training or experience in the administration of civilian populations, and little or no knowledge of the people over whom his rule is the law. But note: Not merely must he, thus proceeding under orders, thus assume the anomalous role of Governor of Guam, for which he is ill-prepared and which is far from his sphere of major concentration and interest, but he must assume that role on a part-time basis. For the Governor of Guam is also commandant of the naval station of Guam, since the last war a major naval Pacific base; and recently his military duties have been expanded, so that now he holds the important assignment of commandant of the Marianas, Carolines, and Marshalls.

Bearing all of these facts in mind, is it any wonder that the naval government of Guam is not only arbitrary and capricious but also uneconomic and inefficient as well? That it is uneconomic is revealed by the Hopkins committee report. According to that committee, the appropriation estimate for the fiscal year 1948, exclusive of rehabilitation costs, payment of war-damage claims, and compensation for lands taken, is $2,037,754, or $88 per capita for every Guamanian man, woman, and child. That per capita cost of government is higher than the per capita cost of any State in the Union, higher than the cost of the United States Indian Service, three and a half times higher than the per capita cost of the government of Puerto Rico. The naval government of Guam is, therefore, one of the most expensive governments in the United States.

On this matter of comparative costs of government, I think that your committee may be interested in certain parallel data from another group of Pacific islands, Western Samoa, which is governed by New Zealand.

In Western Samoa, the elementary schools are supplied by mission societies, the intermediate and higher schools by the government. One of the most efficient and productive health services in the world is supplied by the government. All the other usual services of government are provided. The total cost, for the 68,000 Western Samoans, in the year of 1945–46, was 234,169 pounds, or about $936,000. The per capita cost of government and all its services was $14.

Let us compare Guam and Western Samoan results, in terms of reduced death rates and increase of population. In 40 years, from 1901 through 1940, the Guam population increased about 130 percent, an average rate of increase of 3.25 percent. In Western Samoa, from 1924 through 1945, the population increased 94 percent, an average rate of increase of 4.5 percent. In Western Samoa, between 1925 and 1946, the deaths per 1,000 of live births, of children under one year of age, were reduced from 186 to 53.8. The over-all death rate in Guam is 13.9 per 1,000; in Western Samoa it is 13. The Samoan health service contains 18 trained Europeans, 161 trained Samoans, and 1 Chinese. This Western Samoa data is taken from the report of New Zealand to the Mandates Commission of the League of Nations, dated July 2, 1946. Guam's per capita cost of government, $88; Western Samoa's per capita cost of government, $14. Western Samoa's government is a civilian government.

That the naval government of Guam is inefficient as well as very costly is shown by the record both present and past. Time does not permit a detailed presentation of the long record of governmental inefficiencies on Guam. For this record I would refer your committee to my detailed study of Guam government in the revised third edition of Guam and Its People, Princeton University Press, 1947. A few examples will have to suffice. The naval government's health record on Guam, often cited by the Navy Department as having been outstanding, shows a surprising laxness.

For example, during all of the two decades prior to the World War not a single physician specializing in public health had ever been assigned to Guam. Except for leprosy, there was no isolation ward for communicable diseases, not even for tuberculosis. And the water supply of the city of Agana, wherein dwelt not only over half of the prewar population of islanders, but also a large proportion of the naval colony, was not chlorinated until 1941, 43 years after American occupation, despite the fact that its contamination was responsible for an annual epidemic of dysentery, which brought debilitation and death. Even within the naval compound, where I lived, dysentery was rife in 1939; and why? The water which patients, nurses, and doctors were drinking, after being thoroughly boiled, was then poured over contaminated ice in the hospital kitchen.

The naval government's arbitrariness and inefficiency in settling Guamanian claims—claims authorized by Congress—and in rehabilitating the Guamanians, or even letting them rehabilitate themselves, right now, almost 3 years after the American bombardment which rendered more than half the population homeless, is well documented in the Hopkins committee report. This report calls attention, among many other things, to the impracticability of the naval government's elaborate plan for the rebuilding of Agana, which to this day remains a grass patch, its former inhabitants living in temporary camps and improvised shacks a year and a half after Congress has appropriated $6,000,000 for the rebuilding of Guam's towns. The fact that the naval government-controlled Bank of Guam, the only bank on the island, refuses to lend money on the basis of claims, when these claims are all that most of Guam's bombed-out, displaced persons have to offer as collateral, is not merely inefficient from the viewpoint of native welfare and the reestablishment of native economy, but also is indicative of the lack of confidence which the naval government itself has in its own ability or intention to settle such claims in the near future except, perhaps, in the words of the Hopkins committee report, "for a mere pittance."

The record, which could be amplified at length, is the more surprising when we turn our attention to the people of Guam themselves. It should not be forgotten that the Guamanians are actually the only civilian population within the United States domain who were subjected to enemy occupation during the recent war, and whose loyalty to the American flag has thus been tested and found true by the supreme tests of torture and death. The Guamanians have shown themselves to be people of maturity and stability, impervious to face-to-face enticements of the enemy, intensely loyal to the United States. Highly disciplined but not subservient, they are bred from the cradle to lawfulness and social responsibility. They have a great capacity to endure frustration and suffering, and can and have endured much, but they are also a fun-loving, charming, witty, and gay people. But besides all this, the Guamanians have shown themselves to be, as far as our record extends into the past, a people of intelligence and ingenuity. For example, the ancient Marianas' culture was outstanding in the whole Pacific area for its remarkable asymmetrical sailing canoe, the famous flying prao which was the marvel of early navigators. The Marianas' stonework, pottery, rice culture, and social organization also were highly developed. This cultural heritage has been enriched through the past four centuries by contacts with Spaniards, Mexicans, Filipinos, Japanese, Americans, and others. Guamanians are very far from being a primitive people. They have long been in contact both with western civilization and the Orient, as well as the neighboring Pacific islands, and as a result they are surprisingly wise in the ways of people—mature and sophisticated in the best sense of that term. Nor are they illiterate. Since 1675, when Guam's schooling was started by the Jesuits, there have been schools for both boys and girls in the principal villages of Guam, and during the American regime, a few years of schooling has been compulsory for every child. Practically all Guamanians are bilingual; those below the age of 45 speaking Chamorro and English, those above, Chamorro and Spanish. Many of them understand other languages, such as Filipino and Japanese.

In short, these people, whom once you have known you can never forget, have proved themselves to be an asset to the United States by their quiet but intense loyalty, deep sense of responsibility, lawfulness, poise, and intelligence, both during the long years of American naval rule and in the years under enemy occupation. Now that we know the score, we Americans, with our strong sense of fair play, can no longer consent to deny them the citizenship, the organic act, and the civilian government which they have earned.

I do not believe that anyone suggests that civilian government in place of naval government will be a cure-all, an instant solution of all problems. But short of civilian

government, there can be no cure and no solution of problems. There is not time now to discuss the details of how civilian government would function, would throw self-help responsibility on those people who are ready for it, and would economically bring to the Guamanians the various resources of our American Government which they need. I do offer for the record, on account of its possible interest to your committee, a brief discussion of certain tried and proved techniques which are proving highly successful in another of the dependency-administration areas of the United States.

I conclude by stating for the American Civil Liberties Union that among the several bills before your committee the one introduced by Mr. POULSON is considered to be the most adequate, and the most fully in line with the historical experience—a long one—of the United States in moving Territories and dependencies toward increased self-government and increased participation in our national life. I mention and endorse particularly two provisions in the Poulson bill—I believe they are contained in the Grant bill, too—going beyond the three fundamentals of citizenship, organic act, and civilian administration. These are the provisions making jury trial in criminal cases optional with the defendant and with the judge; and the provision that Guam shall have a resident commissioner at Washington. This last-named provision is a most essential one, I suggest.

I am appreciative of your committee's courtesy in allowing me thus to testify.

Cashing Terminal-Leave Bonds

EXTENSION OF REMARKS
OF
HON. DWIGHT L. ROGERS
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 29, 1947

Mr. ROGERS of Florida. Mr. Speaker, under leave granted me to extend my remarks in the RECORD, I include herewith an editorial from the Boston Post, Monday, May 19, 1947, endorsing the proposed bill providing that terminal-leave bonds be made negotiable:

CASHING THE BONDS

Congressman DWIGHT L. ROGERS, of Florida, who was a coauthor last year of the bill that paid off the GI's for their accumulated furloughs in nonnegotiable 5-year bonds, has come up with what appears a sensible plan for letting the GI's cash their bonds and still keep them away from the Treasury until maturity. He proposes to make the bonds negotiable, but not redeemable by the Treasury until they have matured.

Under this plan the GI's who need it can sell their bonds for cash; banks or anyone else interested in Government short-term 2½-percent bonds can buy them; and the Treasury won't have to pay out any more, or any sooner, than was provided in the original bill. Mr. ROGERS thinks the bonds would command a premium and that would be a profit to help offset the veterans' loss of interest if they were to sell their bonds. Mr. ROGERS needs more backing for his proposal to get it on the floor for debate, so here's the veterans' chance if they feel that his is a good idea.

Displaced Persons

EXTENSION OF REMARKS
OF
HON. WALTER A. LYNCH
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 29, 1947

Mr. LYNCH. Mr. Speaker, under date of May 27, 1947, there was published in the Home News, the local paper of Bronx County, N. Y., an editorial entitled "Displaced Persons" which I think aptly describes the present situation in this country.

Under the unanimous consent granted me, I take pleasure in including this splendid editorial which follows:

DISPLACED PERSONS

Item: New York City's displaced persons on relief may be transferred to Ellis Island for lack of other housing.

Item: Hearings begin June 4 on Congressman WILLIAM G. STRATTON'S bill to admit 400,000 displaced persons to the United States in a 4-year period.

Item: The United Nations inquiry commission will report next fall on Palestine, the effect of the British white paper cutting off immigration, and the status of Europe's homeless Jews.

Item: This Congress has definitely decided against action on the Wagner-Ellender-Taft housing bill.

Item: Mounting unemployment here swells relief rolls.

Had enough?

Item: Instead of adding the $40,000,000 needed to support the United Nations Children's Emergency Fund, Congress in conference deducted it from the $350,000,000 Foreign Relief bill, leaving only $295,000,000 for relief in Greece, Italy, Trieste, Austria, Hungary, and Poland.

Item: General Mark Clark charges that Russia has stripped Austria of every means of self sustenance, including food factories and materials.

Item: Congress torpedoes the International Trade Conference at Geneva by a House provision permitting the Secretary of Agriculture to increase the import tariff on wool by as much as 50 percent.

Item: Republican Congress insists taxes must be cut now.

Had enough?

Item: Bankruptcy petitions for small business almost keep pace with the rising dividend rates for large business.

Item: Federal appropriations for school lunches, farm electrification, and the production and marketing administration have been sharply cut, or hamstrung.

Item: Food shortages in western Europe and Great Britain continue acute.

That's enough. It isn't all but it's plenty.

A curious kind of schizophrenia has seized hold of us.

In the same breath, we declare our intention of rescuing the world and ourselves from the perils of hunger, while angrily insisting that if it costs money we'll have none of it.

We are disturbed, and frightened, at Europe's famine-made skeleton figures, beckoning a bony-fingered invitation to red fascism, but our attention is really on the nice fat figures represented by national tax cuts and State dollar surpluses.

The sad part of it is, we really know better. We're not that dumb, we're just a little lazy, and growing a little selfish; we're assuming the characteristics of the cartooned figure of the richest man in town. Nations, too, get a little purse-proud, a little intolerant, a little greedy, and a little lazy.

We're acting like the fat man who cleans out the icebox, downs the last piece of chocolate cake and then orders his family on a diet, complaining that food is getting scarce.

We know, for instance, that tax cuts are hardly going to solve a growing relief problem. People on relief don't pay taxes, for one thing. And those of us who aren't on relief can afford it—if just to keep ourselves off the relief rolls.

We know that there aren't too many people—but that there are rather too few houses, we know that tax funds can help cut costs in housing * * * not only so that workers and veterans' families can participate in the American dream—but so that carpenters can go back to work.

We know that steel and lumber and paint and glass and home furnishings and gadgets must find homes to fill—or that production in these lines, too, slows down—and still more workers join the jobless and the unproductive.

We know that if we, the richest and strongest country on earth, will not open our borders to Europe's homeless, no other country really can—or will.

We know that we must buy as well as sell, or there will soon be none to sell to * * * that if Australian sheep can't leap over our tariff walls, American goods can't be sold to Australian sheep farmers.

We know that hunger is the great revolutionary general of all the ages.

The next whistle you hear should not be mistaken for the quitting siren, or the curfew. Instead, it's the start of the second half. We can still win even if the team is a little out of condition. But we've simply got to quit getting our signals mixed.

GOP Record

EXTENSION OF REMARKS
OF
HON. DANIEL A. REED
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 29, 1947

Mr. REED of New York. Mr. Speaker, under leave to extend, I am inserting as a part of my remarks an article by Gould Lincoln, which appeared in the Evening Star on May 29, 1947:

GOP CONGRESS LIVES UP TO PARTY PROMISES—RECORD FOR SPEED IS BEING SET ON TAX AND LABOR BILLS

(By Gould Lincoln)

The Republican Congress has lived up to the party pledges made in the 1946 campaign—to cut Government expenditures, to cut taxes, and to pass a bill amending the Wagner Labor Relations Act, and to otherwise equalize labor and management before the law. It was only a short time ago that critics were holding up the Congress to ridicule as the "do-nothing Congress." As a matter of fact, however, this Congress, under Republican leadership, has established a record for speed in dealing with legislative matters of the highest importance, including taxes, labor, portal-to-portal pay, and foreign loans to Greece and Turkey—a measure of far-reaching importance in the foreign affairs of the country. All in less than 5 months' time. It also put through a constitutional amendment proposed limiting a President to two terms.

It now remains to see how the executive branch of the Government, in the person of

President Truman, will perform. The President has, of course, approved the Greek-Turkey loan. It was his proposal and spark-plugged the new Truman doctrine. He has, with some reluctance, approved the portal-to-portal pay bill. Neither the labor bill nor the tax bill has yet reached him. There have been ominous predictions from Democratic sources that he will veto both the labor bill and the tax bill. The decision, however, lies finally with the President—and he has shown on occasion remarkable independence in important decisions.

If he vetoes the labor bill—and leaves the country with no remedial labor legislation—Mr. Truman will be playing a dangerous game. He will also be taking long chances of losing the support of many independent-minded persons for the sake of retaining the support of radical labor leaders—support which could and would not go anywhere else.

BILL'S CHANCES ARE BRIGHT

Even if the President vetoes the labor bill, its chances of becoming a law are still bright. Both the Senate and the House passed the bill by more than a two-thirds majority. If the Members stick to their original position, the measure will pass notwithstanding Mr. Truman's disapproval. In the House the vote for the bill was almost 3 to 1. In the Senate it was closer—68 to 24.

A tax reduction bill is a ticklish thing for any President to kill. The tax bill as it passed the House and then the Senate, cuts personal income taxes from 10.5 percent to 30 percent with the higher cuts on the lowest incomes. The chief difference between the bills is that the House measure proposed to make the cut retroactive to last January 1, while the Senate's starts the cut as of July 1. It is expected the House will finally yield on this issue, and that the bill as it will go to the White House will start the tax reductions as of July 1. If it is in that form, it cuts the ground from under the most plausible arguments the President could use in vetoing the bill.

Whether the tax bill could be passed over a Presidential veto is extremely doubtful. The House voted 273 to 137 for the measure—one vote short of a two-thirds majority. In the Senate the vote stood 52 to 34. The plea of Mr. Truman and Democratic leaders in Congress is for a reduction of the national debt with the surplus which the Treasury will have at the close of this fiscal year, July 1, and with the receipts in excess of Government expenditures for the next 6 months.

TOO MUCH PARTY POLITICS

To the man in the street, however, it looks as though too much party politics is involved. First, the determination of the Democrats to prevent the Republicans from keeping their pledge to reduce income taxes by 20 percent. And second a desire on the part of the administration to present a tax reduction measure of its own next year, just in advance of the national election.

Ever since the Democrats took over the Federal Government in 1933 there has been a constant increase in Federal taxes—up to the 1945 act passed right after the end of the war. Starting in 1934, each year saw a new tax bill—except in 1941—and all of them exacted heavier tax payments from the people. But when the war ended a measure of relief was extended—with the abolition of excess-profits taxes, capital-stock taxes, and a reduction of the corporate tax, and also a cut in personal income taxes. The total tax reduction was between four and five billions of dollars, of which some billion and a half to two billions was in personal incomes taxes. Indeed, the bill was written so as to relieve 12,000,000 of the lowest-income groups from payment of income taxes.

The personal income tax, however, remains tremendously heavy. It is an item, along with the increased costs of living, which makes it difficult for millions of men and women to make ends meet. The Republicans are intent on reducing this burden. A tax-bill veto will not be popular.

Memorial Day Address of Hon. Alexander Wiley, of Wisconsin

EXTENSION OF REMARKS

OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Monday, June 2 (legislative day of Monday, April 21), 1947

Mr. WILEY. Mr. President, I ask unanimous consent that there be printed in the Appendix of the RECORD the text of the address which I delivered on May 30, 1947, at the Memorial Day exercises conducted in Battleground Cemetery here in Washington.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

A LIVING MEMORIAL TO THE LIVING DEAD

I am grateful to be with you today on this hallowed ground and on this holy occasion to participate with you again in these memory-recalling ceremonies. From boyhood, Memorial Day—Decoration Day—has been a day apart, a day of flowers, of martial music, of veterans in uniforms. Three years ago it was my pleasure to comrade with you on this spot and take part in these beautiful observances.

It is good to return to your midst for many reasons. They are largely the reasons that we are all here today.

1. THIS HALLOWED GROUND

My first reason is that this, of course, is hallowed ground to all who hold the Union dear. We recall that it was at this point that the ramparts of Washington were almost breached by General Early that fateful period in June 1864. He and his horsemen and swift-moving troops had arrived practically at the very spot at which we are now standing. Every able-bodied man in Washington—yes, even those who were not able—followed the call to the colors.

You will recall that Gen. Ulysses S. Grant was at that time fighting before Richmond when he received word of the danger. He immediately dispatched the Sixth Corps down the historic James River and up the Potomac. President Lincoln, who had been out at this spot in the morning, drove to the Seventh Street wharves to meet the Sixth Corps and welcome them. How warmly he greeted those troops. Then the corps marched to reinforce the defenders on the firing line. They marched up Seventh Street, past the Smithsonian Institution, the Patent Office, and the post office. We know the result of their valiant action. Washington was saved by the noble men of that generation, and within a year victory came and Lincoln was martyred.

To the men who gave their mortal lives in this very area we recite the words of a poem:

"Nor shall your story be forgot,
While Fame her record keeps,
Or Honor points the hallowed spot
Where Valor proudly sleeps."

Here in this silent city we pay homage to those for whom the last human roll call has been sounded, but whose spirits are carrying on valiantly and fearlessly just as they did when they dwelt on earth.

2. HONOR TO CIVIL WAR HEROES

In paying tribute to those who fell in the defense of Washington, we honor, secondly, all those who fought in the War Between the States, the men of honest conviction on both sides who made the supreme sacrifice for their views.

We recall the verse:

"Under the sod and the dew,
Waiting the Judgment Day;
Love and tears for the Blue,
Tears and love for the Gray."

3. HONOR OF ALL UNITED STATES WAR HEROES

Memories of Antietam, of Gettysburg, of Shiloh, of Vicksburg, of the Wilderness flood back into our mind's eye. But we see, too, the American heroes who fought in all of America's wars for the land they loved so dearly and the land for which they were willing to give the last full measure of devotion.

They loved the emblem of our freedom—Old Glory. Yes; the flag that floats from the flagpole today is really the same flag over which the men in the blue and the gray fought. It is the same flag that flew with Washington's troops, when blood stained the snow at Valley Forge; the same flag that went with Jackson to New Orleans. To be sure, it had fewer stars then, but it was the same Stars and Stripes. It was the same flag that went with Taylor and Scott to Mexico; the same flag that Grant raised at Appomattox. It is the flag that Dewey and Schley and Sampson flew over the Spanish possessions in 1898, and the same flag that "Blackjack" Pershing carried to the shores of the Rhine.

This is the flag that the Marines raised on Iwo Jima, and the flag that went with Eisenhower to north Africa, to Normandy, and then across the Rhine, the flag that MacArthur raised again over the Philippines and which now flies in Japan. It has flown on all the seas of the earth and all the continents thereof, and with the help of God it will fly high forever over our land, signifying to our own and to all peoples of earth that freedom shall never die.

4. RECOVENANTING OURSELVES

You and I know the fourth reason why we are here today is to recovenant ourselves to the cause which our soldiers and sailors and marines so nobly advanced.

We recall the words of Lincoln on November 15, 1863, uttered on a Pennsylvania battlefield:

"It is for us to be here dedicated to the great task remaining before us, that from these honored dead we take increased devotion to that cause for which they gave the last full measure of devotion; that we here highly resolve that these dead shall not have died in vain; that this Nation, under God, shall have a new birth of freedom, and that government of the people, by the people, and for the people shall not perish from the earth."

Those words of the Great Emancipator have greater meaning today than ever before, with so many of the earth's peoples still living in bondage, but groping for freedom.

1944 MESSAGE

I should like to briefly recall some words I stated to you in 1944. The skies of Europe and Asia were then filled with war clouds and nations were in the full clutch of war. I said:

"Peace will come. It must come without rancor or hatred as peace came to the men who made their last earthly bivouac here. It must come without compromise to the

sacred cause of freedom as it came here to these guardians of faith.

"A righteous victory will be ours. A just peace will be ours. For them we acknowledge our dependence on divine providence. For them we renew to those living and dead our pledge that we will hold high the torch. We will keep faith. And we of this generation pledge we will transmit to those who come after us the liberties of America, unimpaired.

"And with the peace will come added responsibility—the responsibility to rebuild bleeding, suffering humanity and make a repetition of this holocaust impossible. We are dedicated to fulfill this task.

"May God be with us then, to guide the leaders and the people of this Nation, so that the wisdom of the Most High and the heritage of America for all time to come will be ours."

PROBLEMS OF 1947

Those were my thoughts in 1944. Now that the battle is over, we are still seeking for that peace of which I spoke. We can't be discouraged. We have so much for which to be grateful when we compare the lot of our beloved America and ourselves with that of the world, that we cannot let discouragement creep in.

Rather, we have to strengthen the sinews of our wills and our minds, and recognize that we have been precipitated to a new position in the world and that humbly we must go forth to meet the challenges which present themselves. It would seem that we have been set apart—yes; as a chosen people—to meet not again in blood and war, but in an aid to the needy, so that they may rebuild their economy and their lives, and to demonstrate to the war-weary peoples of earth the vitality of freedom's way under the Republic.

CHALLENGES OF ATOMIC AGE

What, then, of the challenges of 1947? On Memorial Day, 1947, for us to dedicate ourselves to the cause "which they so nobly advanced" means to prepare ourselves and our beloved country against any emergency that may be before us in this atomic age. It also means to continue to strive nobly and with great mission for true international understanding among the nations.

America, as I have said, has been called to the highest of all callings—a position of leadership in the atomic age, a leadership that is economic, political, and social.

But while we make our supreme effort to arrive at true international friendship, and while we dedicate our will and purpose for a just and lasting peace, we recognize still that "eternal vigilance is the price of liberty." In this day and age, when time and space have been rendered meaningless by man's inventions, vigilance is necessary on every front.

It is necessary in the field of diplomacy, in the field of arms, and in the spiritual field. We must be prepared mentally, knowing that the peoples of the world are still living on different strata of development; that we and foreign nations see things through different eyes; that our past has been one of devotion to peace, while the past of peoples of other countries has been marred by invasion, by hatred, and by war.

These are the realities of Memorial Day 1947. We must open up our eyes "that we may see," in the words of the Good Book, and in so doing we will be paying tribute to those who stood guard for us in the darkest days of the Republic, and who saw the battle through to success.

OUR RESPONSIBILITY

You remember the words from the immortal poem:

"Take up our quarrel with the foe!
To you from failing hands we throw
The torch; be yours to hold it high.
If ye break faith with us who die
We shall not sleep, though poppies grow
In Flanders fields."

If we break faith, if we fail to fight the foe of international misunderstanding, of international envy and jealousy and hatred, then the dead will not sleep in Flanders nor in battleground, nor in Gettysburg, nor elsewhere. I know, however, that we will be adequate.

CONCLUSIONS

My friends, it has been a pleasure to comrade with you here today. We have briefly reviewed the inspiring past, surveyed the challenges of the present, and peered beyond the veil into the future.

From this gathering and other gatherings throughout the land, Americans will indeed take renewed faith and courage to march forward to the future, holding the flag aloft, boldly, fearlessly, successfully, as did those of 1861–65 and all the other heroes of America's unforgettable conflicts.

In this spirit of hope and of faith I say again "thank you" and Godspeed on our American mission.

Economic Effects of Unemployment

EXTENSION OF REMARKS

OF

HON. JAMES E. MURRAY

OF MONTANA

IN THE SENATE OF THE UNITED STATES

Monday, June 2 (legislative day of Monday, April 21), 1947

Mr. MURRAY. Mr. President, I ask unanimous consent to have printed in the Appendix of the CONGRESSIONAL RECORD a very interesting article prepared by Harry Daniels, of 1426 Twenty-first Street NW., Washington, D. C., dealing with the economic effects of unemployment.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

It is unfortunate that it took a long, costly, and bloody war—World War II—to provide work, security, and a decent standard of living for our people.

In the peacetime 1930's private enterprise and industry failed again to provide work and security for the common people and the result was not only world-wide depression but also the spread of Hitlerism and communism. We were caught in a great depression with more than 14,000,000 jobless, and half the Nation hungry and poorly clad and drifting fast toward an economic crisis which might have produced a dictatorship here had it not been for that great and immortal statesman and Democrat, Franklin D. Roosevelt, who, like a kindly shepherd, fed and clothed the needy all over the Nation as well as provided employment for the jobless.

Today, if our political leaders will take advantage of the opportunity, we once more have a chance—a good chance—to maintain full employment. We know that full employment is possible. Our present task is to maintain full employment in peace as well as in war. Every American knows now that there is no longer any excuse for poverty, insecurity, and joblessness. We are headed, however, for positive economic danger. Already from coast to coast, unemployment is definitely on the increase because we have failed again to use the dynamics of our productive machine to prevent that marvelous machine from turning on us and causing national disaster and ruin.

I am not in accord with the monopolists who say that no important social change is necessary to maintain full employment and improvements in living standards. I take this means to solemnly warn both Republicans and Democrats that, unless free private enterprise is denied unlimited license, we will lose our present opportunity to maintain full employment and a decent standard of living and will, moreover, become slaves to a horrible monopolistic economic system. We can and must solve our economic problems and save the common people from unemployment and its attendant miseries. In order to preserve our society against chaos and collapse, I propose an economic bill of rights. By assuring fundamental economic rights to the common people we not only can solve our economic problems, but also can prevent our Government from failing again into the hands of the monopolists.

HARRY DANIELS.

WASHINGTON, D. C., *May 27, 1947.*

Application of Community-Property Principle to Taxation

EXTENSION OF REMARKS

OF

HON. JOHN L. McCLELLAN

OF ARKANSAS

IN THE SENATE OF THE UNITED STATES

Monday, June 2 (legislative day of Monday, April 21), 1947

Mr. McCLELLAN. Mr. President, I ask unanimous consent to have printed in the RECORD an editorial entitled "Not a Lost Cause," published in the Memphis Commercial Appeal of May 29, 1947.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

NOT A LOST CAUSE

The Senate refused an amendment, offered by Senator MCCLELLAN, of Arkansas, to the tax reduction bill, that would have extended the benefits of the community-property principle to the people of all the States. Senator MCCLELLAN made a good fight in a worthy cause, which is by no manner of means a lost one.

The Senate's rejection of Senator MCCLELLAN's proposal was based on a feeling that it was not wise to complicate further the pending measure, and not on any widespread feeling that his ideas lacked justice and usefulness. Chairman MILLIKIN, of the Senate Finance Committee, though he led the fight against the amendment, said the proposition had top rating among matters to be considered in a general tax-revision bill.

Senator MCCLELLAN may be depended on to continue his campaign for tax equality, and if the people of some 39 States wake up to what he has in hand, his drive will soon be successful.

There are 9 States of the 48 that operate under the community-property law. In these nine States the theory is that husband and wife make equal contributions to family income. On that basis, the family income may be divided for income-tax purposes, with husband and wife each reporting a half. The benefits are considerable in any case, and increase with the amount of taxable income.

The community-property principle was incorporated in the basic law of most of the States that have it, but one or more have taken action to apply the idea. As matters now stand, authorities on laws and taxes believe action by Congress is necessary if the principle is extended. Married people ought to concern themselves especially with seeing that equality is established, and in general no such state of unbalance should be permitted.

Tax Reduction

EXTENSION OF REMARKS
OF
HON. HERBERT R. O'CONOR
OF MARYLAND
IN THE SENATE OF THE UNITED STATES
Monday, June 2 (legislative day of Monday, April 21), 1947

Mr. O'CONOR. Mr. President, yesterday the Baltimore Sunday Sun published a forceful editorial in regard to the tax reduction program now before the Congress. Although this important newspaper had previously expressed its editorial policy against tax reduction at this time, in its editorial yesterday its former position was reversed and in the light of the improved fiscal situation in the country it now supports unqualifiedly the tax bill passed several days ago by the Senate.

I ask unanimous consent to insert in the Appendix of the RECORD a copy of this editorial appearing yesterday, Sunday, June 1, 1947.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

Sometime this week, probably as early as Tuesday, President Truman will have to make one of the major decisions of his administration. The Senate and House conferees have agreed on the tax bill which they will pass. It provides for a reduction in individual income taxes ranging from 30 percent for small taxpayers to about 10 percent for those in the upper brackets. The President must decide whether he will affix his signature or veto the bill.

The decision will not be a simple one for him. When, last January, he sent his budget message to the Congress, he foresaw a deficit in the present fiscal year and a bare balancing of the Government's income and outgo in 1948. Believing that his own estimate of expenditures could not be reduced, he argued strongly against a tax cut.

At that time the Sun followed the President's lead. The vast debt and the long series of unbalanced budgets made it seem rational to arrange the fiscal responsibilities of Congress in this order. First, balance the budget and effect all feasible economies; second, provide for retirement of some part of the debt, however small; third, and only third, reduce taxes. Under the new organization of Congress this seemed to be not only a desirable program but a possible one as well.

The whole economic picture of the country has changed since the President took his position in January. In addition, the fiscal situation has altered radically and very much for the better. The Congress can take very little credit for the change, for its members have followed neither law nor logic in their deliberations. Nevertheless, the change is there and, unless we are to be doctrinaire in our discussion, we must admit it.

The change in the fiscal situation has already been admitted, in part at least, by the Administration. When the President presented his calculation in January, his expectation was for a deficit in the fiscal year 1947, which ends June 30 next. That expectation has now been abandoned. The official estimate still standing admits a surplus of 1.25 billions, and it is common knowledge that this will be exceeded. As responsible a fiscal authority as Mr. John W. Hanes, former Under Secretary of the Treasury, has estimated that the surplus will be between three and four billions. So, fiscally, we are that much ahead of the game.

But that is the smaller part of the improved outlook for Government finances. The President's own figures, in his budget as presented in January, showed a prospective surplus for the fiscal year ending June, 1948, of one and eight-tenths billions. It was this small prospective surplus which brought the President to argue against tax reduction. But since then the congressional economizers have been at work. It is true that they have not yet and probably will not manage to make the cut of six billions which they so blithely promised. But the cuts so far achieved add up to about two billions and will probably go to three billions. This sum can properly be added to the surplus for 1948 estimated by the President. Call the total a conservative three billions and add it to the lower of Mr. Hanes' figures for the current (1947) surplus and the aggregate is six billions. That is, we have taken or are about to take from the taxpayers six billions more than we plan to spend.

So much for the fiscal situation. Now for the outlook as it affects business and industry, the small taxpayer and the large one. It is not only in governmental affairs that the outlook has changed, as we all know. The cost of living, held down by artificial means during the war and for a while thereafter, bounded up in the first part of this year. The rise touched off by a new series of wage demands. Some of these have been granted. Others are still under negotiation. But there is a general admission that with reference to some goods a gap between wages and prices exists. Industrial hesitation has begun to manifest itself. In some lines producers are uncertain of their markets; in others there is no doubt about the resistance of the consumers to present prices. We have, in brief, some of the conditions which in the past have brought about a new turn in the inflationary spiral. The difficulty is that we do not know whether the new turn will be up or down.

In an economy in which Government takes as large a share of the national income as our Government takes, the role of taxes cannot be ignored. High taxes reduce general purchasing power, of course, but they have other effects as well. In the middle brackets, they act as a brake on enterprise, as every small businessman knows. In the upper brackets, their chief adverse effect is to reduce the funds that are called risk capital. Risk capital is the money available for the establishment of new businesses, new industries and, inevitably, new jobs.

So here we have, for the current year and the one coming, a prospective nest egg of some six billions and, if things go well, much more. The Congress, for all the foolish talk from some of its members, and for all its failure to consider its problems in an orderly manner, has grasped this significant fact. It has proposed, as the proper course, to use some two-thirds of this surplus (half this calendar year and half next) for tax reduction. The remainder would automatically go toward reducing the debt.

The proposal is admittedly not a perfect one. The Republican leaders have all agreed that they will have to begin all over again when they reassemble after the recess. Some of the more thoughtful ones have said that the whole tax structure should be rebuilt, a suggestion which makes sense when we remember how quickly and, on occasion, how thoughtlessly the present wartime edifice was put up.

This, then, is approximately the situation the President will face when the tax bill is laid on his desk. He can choose to veto it, recalling his warnings of last January and ignoring the changes which have come about since that time. Or he can admit the shortcomings of the estimates his experts provided, admit also the changed economic picture of the country and sign the bill.

To be sure, if he does sign it, he will be giving his Republican opponents something to crow about. But Mr. Truman, as the country is beginning to understand, is not a devious or calculating man. So far, in most of the issues which have faced him he has been simple, straightforward, and courageous. Politically he has been most effective when he has brushed aside the advice of the political necromancers and acted in accordance with his own decent instincts.

We hope that, with a similar disregard of the soothsayers, he will decide this tax question with relation to the general welfare. The general welfare calls for tax reduction.

Labor Legislation

EXTENSION OF REMARKS
OF
HON. JOHN L. McCLELLAN
OF ARKANSAS
IN THE SENATE OF THE UNITED STATES
Monday, June 2 (legislative day of Monday, April 21), 1947

Mr. McCLELLAN. Mr. President, I ask unanimous consent to have printed in the RECORD an editorial entitled "Phony Charges," published in the Washington Daily News of May 31, 1947.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

PHONY CHARGES

For the next 2 weeks you will hear from union leaders a crescendo of charges that the Taft-Hartley labor bill is "slave legislation"—that it means "involuntary servitude"—that it would "compel men to work against their will."

These charges, we believe, are completely phony.

The bill says specifically that no individual employee shall be required to work without his consent; and that it shall not be illegal for any individual employee to quit work.

So it could not compel anybody to work against his will.

When a number of employees stop work by mutual understanding, for the purpose of enforcing demands upon an employer or protesting against the actions of an employer, that is a strike.

The bill does say, as the late President Roosevelt said, that Federal Government employees have no right to strike. It requires that they be discharged from their jobs if they do strike. But it does not compel any individual to work for the Government.

President Truman has said that jurisdictional strikes, wars between unions at the expense of employers and the public, are indefensible. The bill does make jurisdictional strikes illegal. It also outlaws strikes to force employers to pay for work not done, or to recognize unions contrary to, or in the absence of, certification from the National Labor Relations Board. It authorizes the NLRB to obtain Federal court injunctions against such strikes, but it says that no injunction shall require any individual to work without his consent.

The bill does authorize the President, acting through the Attorney General, to obtain Federal injunctions for the purpose of delaying key-industry strikes that would endanger national health or safety. Such injunctions could remain in force not longer than 80 days. If Government efforts to settle a dispute failed, and if at the end of 80 days the employees voted to reject their employer's final offer, they would be free to strike. And, at all times, they would be individually free to quit their jobs.

Where national health and safety are not at stake, the bill puts no limitation on the right of employees in private industry to strike for such basic economic reasons as wages, hours, and working conditions.

What union leaders really mean, when they shout about "slave legislation," is that they

want no restriction whatever on the power to strike for any reason at any time. We cannot agree with them. The strike, as this country has learned, can be a deadly weapon, destructive to the rights of employers, workers, and the public. The American people want their Government to make fair rules to preserve its proper uses and prevent its abuse. That, we think, is what Congress has done in the Taft-Hartley bill.

Federal Aid to Education

EXTENSION OF REMARKS
OF
HON. WILLIAM B. UMSTEAD
OF NORTH CAROLINA
IN THE SENATE OF THE UNITED STATES
Monday, June 2 (legislative day of Monday, April 21), 1947

Mr. UMSTEAD. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Lagging Federal Aid Bill," published in the Charlotte (N. C.) Observer of May 31, 1947.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

LAGGING FEDERAL-AID BILL

With several bills for Federal aid to education lagging in committees, it might be well to remind the Members of Congress that in the present conflict for survival between communism and democracy, which may well continue throughout the present century, an educated American citizenship will be no less important in swinging the balance in our favor than the rehabilitation of non-Communist countries.

The children now in kindergarten will wage the final contest of ideas and wits to determine whether our western civilization is to emerge victorious over the eastern civilization that is bent upon destroying it.

Russia has realized the importance of this battle of ideas and is spending 8 percent of its national income on education. We in America apparently have not realized it, because we are spending only 3.5 percent of our income for the same purpose. On that basis the next generation of Russians stand a chance of having what may be a determining advantage over the Americans pledged to preserve our western system.

Whether the intellectual preparation of our future citizens for that struggle is the business of the States or of the Federal Government, or both, should be decided by the answers to these questions:

Is not the citizen of North Carolina and of Alabama also a citizen of the United States on an equal footing with the resident of New Jersey or California?

As such, is he not entitled to the same training in citizenship as his fellow American of New Jersey or California?

Both of these questions, we submit, must be answered in the affirmative. Since the North Carolina or the Alabama child will, on coming of age, hold a dual citizenship, State and Federal, it is the business of both the State and the Federal governments to see that he is properly trained in the responsibilities that will devolve upon him in both categories.

If, however, the whole responsibility for this training is left to the States, the child fortunate enough to be born in New Jersey or California will have almost twice the training for citizenship as the child born in North Carolina or Alabama.

That discrepancy is no stigma on the States that spend the smallest amount in actual money on education, for those very States are the ones that work hardest at educating their children. Income payments to individuals in New Jersey in 1945 averaged $1,373; in North Carolina the average was $732. In California in 1945 the average income of individuals was $1,480; in Alabama $700.

Hence, North Carolina and Alabama were spending a larger percentage of their income on education, making greater sacrifices to provide their children with schools, than were New Jersey and California, though they spend in actual money less than half as much as the two richer States.

The American citizen living in North Carolina has the same responsibilities to his country as the American citizen living in New Jersey; he should have the same training to meet them. If the State is not rich enough to give him the same training, it seems obvious that the Federal Government should make up the difference, just as the State makes up the difference between its richer and poorer counties.

Federal aid to education is nothing new or revolutionary. Since 1787 more than 150 bills for Federal aid to education, in one form or another, have been passed by Congress—one for nearly every year of the country's life—and they do not include the large sums spent by PWA on buildings and equipment, by NYA, and through the GI bill of rights.

Under the bill introduced by Senators TAFT, HILL, and others—S. 472—States' rights would be adequately safeguarded because this bill prohibits Federal intervention in the local administration of the schools.

We have seen, therefore, that our system of dual citizenship entails dual responsibilities on the part of both citizen and Government. The citizen has his responsibilities to both the State and the Federal Governments, and they, in turn, have the joint obligation to train the citizen in the discharge of his duties.

The cost of Federal aid under S. 472 would reach a maximum of $250,000,000 annually by 1950—a little more than half of what we have just voted to stop the penetration of communism into Greece and Turkey. But as a weapon against communism an educated American citizenship will be worth 10 times as much as any grants we may make to foreign countries.

We cannot, however, win this battle of ideas as long as the average American 20 years of age never gets beyond the ninth grade in school.

Veterans' Education

EXTENSION OF REMARKS
OF
HON. GEORGE MacKINNON
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Monday, June 2, 1947

Mr. MacKINNON. Mr. Speaker, under leave to extend my remarks, I include two articles which recently appeared in the Washington Post describing the circumstances under which veterans are receiving their education at the University of Minnesota. Statistics show that the University of Minnesota has more veterans in attendance than any other college or university in America. The situations described in the following articles, thus represent a true cross section of current problems with respect to veterans' education:

VETERANS IN COLLEGE

(By Marquis Childs)

MINNEAPOLIS, MINN.—Here on the campus of the University of Minnesota, you get some idea of what mass education means. There has never been anything like it, even in this country where a college education has been fairly accessible to most groups.

Minnesota, by latest count, is the second largest university in the land. Those who compile the figures say that the University of California, at Berkeley, is the largest.

It is hard to believe that there is anything bigger than this bursting institution. The enrollment last fall was more than 27,000 students. The figure today is something more than 25,000.

But the real push begins next fall, and President James L. Morrill is beginning now to get ready for it. The expectation is that in September more than 30,000 students will enroll.

The Veterans' Administration in Washington estimates that the school year 1947–48 will be the peak in the educational boom. But it will be perhaps as long as 3 years before there is any substantial reduction in the record crowds beneath the college elms on every campus.

The reason, of course, is Public Law 346, better known as the GI bill of rights. The student veteran under this bill gets his tuition and his books paid for and, in addition, $65 a month if he is unmarried and $90 a month if he is married.

It is hard to get a break-down of VA figures on education. As of May 1, 5,636,637 veterans' applications for institutional and job training had been approved. Something more than 4,000,000 applied for institutional training.

But these institutions include everything from dance academies to cooking schools. A recent release of the Veterans of Foreign Wars put the number of veterans in "educational endeavors of some kind" at 2,000,000. The best guess is that about 1,200,000 veterans are in colleges.

Here on the Minnesota campus 61 percent of all students are veterans. The average, however, is 90 percent in the schools of business administration and engineering.

This has given rise to some interesting speculation on just what it is the veteran wants out of college. Is he merely after a degree which will be a license entitling him to earn a larger income than he might otherwise have earned? Or is he interested in the clash of ideas in a world that is changing so swiftly?

You get varying answers to these questions. But of one thing there can be no doubt. That is the seriousness, the earnestness, of the overwhelming majority of the students, men and women, on this thronging campus.

Current musical comedy to the contrary, very little of the Joe College atmosphere has survived the invasion of the men out of the war. Whether it is a better foothold in the American system or whether it is ideas and learning in the broader sense, these young people are out for something pretty definite. And they have only a limited time for play.

To see an economic lecturer facing a class of 900 with a microphone in the lapel of his coat is to get some idea of what mass means. There are few dreamers in this class. Heads are bent over and the rustle of note taking can be heard beneath the professor's amplified voice.

In general, President Morrill and his staff seem to have done a good job of adjusting to the unprecedented expansion. Buildings that look like a cross between a barn and a barracks are still going up to provide more space for classrooms, in anticipation of the grand rush next fall. These buildings come from the Federal Government.

For those interested in ideas, there is a constant procession of lecturers from outside. Henry Wallace spoke to more than 2,000 students who jammed the main ballroom of the Memorial Union to hear him. In the student paper, which sets a high standard, an editorial the following day

keenly analyzed the weaknesses of Wallace's position and accused him of double dealing.

On a thousand campuses an experiment is going on almost unnoticed. It is an experiment in mass education, and while we may not be aware of it now, it is bound to have a far-reaching influence on our future.

VETERANS' STRUGGLE FOR EDUCATION

(By Marquis Childs)

MINNEAPOLIS, MINN.—The cost of a college degree can be very high. For many of the 15,000 veterans here at the University of Minesota, it is high in terms of sacrifice and even privation.

With a total enrollment of 25,000 students, the problem of finding a place to live is acute. Young couples with children find it especially difficult. They are suffering under the wicked squeeze of the inflation that bedevils us.

To help out, the university established University Village on a 10-acre site. It is also called Fertile Acres, and you understand why when you see the procession of baby buggies and the innumerable toddlers. You can duplicate University Village on almost any large campus in the country as educators try to cope with mass education.

To be eligible to live in University Village, you must be a married veteran with a child or a child soon to be born. In 214 trailers, 96 prefabs, 100 quonset huts, and 124 barracks, there are 534 families.

You move from the waiting list into a trailer. The trailers have no running water. There are community bath houses for men and women. Cooking is done on a small kerosene stove.

If you're lucky, you will move after a few months from a trailer to half a quonset hut, or to a family unit in one of the barracks with running water and plumbing.

Take a typical family in University Village. Let's call them the Bill Smiths. Bill is 25. He was in his second year of engineering when he was drafted into the Army, where he served nearly 5 years in almost every theater of the war. He was discharged with the rank of major.

Bill and his wife, Betty, are one of the lucky families in half a quonset hut. They have a daughter two and a half and another child on the way.

Making ends meet is tough, very tough. Bill has his $90 a month under the GI bill. He makes about $90 more as a night watchman on the shift from midnight to 3:30 a. m. In the winter, when fires have to be tended, that is no easy job.

Because Bill's income is over $120 a month, the university charges him $44 a month for his half of a quonset. Right at the start that takes a big bite out of the family income. Bill and Betty are trying to save up money for the new baby. They estimate the cost will be a minimum of $150, and that means leaving the hospital for the quonset hut as soon as the doctor permits.

I asked Bill when he found time to study. Third-year engineering isn't a pipe course. Grinning at this question, he said that study had to be sandwiched in at any and all hours. The couple next door, he pointed out, are both taking full courses, the husband in the daytime and the wife at night.

Both Betty and Bill are feeling the burden. The doctor tells Bill he must slow up. Betty, who is pretty and delicate looking, is not well.

There is no play center, nothing but the dusty, cinder-covered street. The youngster is a constant source of anxiety. Since the beginning of spring, a dozen children have strayed away and frantic mothers have had to appeal to the police for help.

The university is trying to find a surplus building that could be used as a child-care center and as a recreation hall for the grown-ups. But that will cost, Bill has been told, $40,000 to $60,000 to equip and maybe it won't be possible. Certainly it is badly needed, as is also a health clinic.

Yet Bill and Betty do not complain. They are remarkably patient. Bill says:

"Well, I guess they're trying to do the best they can for us. And after all, it's an education."

That's one of the extraordinary things about the army of veterans that has come back. Contrary to the dire talk we heard while they were away, they have become part of the normal life of the country with very little dislocation.

The test will come, it seems to me, when Bill and the millions like him finish this educational grind. If they step out into a job that pays a fair salary, then all will be well. But if the jobs aren't there, then I think we will hear from the men who have adjusted so readily to the pursuits of peace.

Sermon by Very Rev. Daniel W. Driscoll, O. S. A.

EXTENSION OF REMARKS

OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, June 2, 1947

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include herein a most eloquent and inspiring sermon delivered by the Very Reverend Daniel W. Driscoll, pastor of St. Mary's Roman Catholic Church of Lawrence, Mass., at the annual memorial mass offered in memory of the dead of the parish, which took place in the Immaculate Conception Cemetery on Memorial Day. Father Driscoll was celebrant of the Gregorian requiem mass and was assisted by Rev. William V. Donovan, O. S. A., as deacon, Rev. Edward J. Carney, O. S. A., as subdeacon, and Rev. Charles F. Hart, O. S. A., as master of ceremonies.

The sermon follows:

My dear friends, another year has passed away since last we met here on this hallowed ground where rest the last mortal vestiges of those we loved in life. Many things have happened since we last assembled here, many important things, while the steady and unremitting beat of time tore off the hours of each day, and this morning we know that many who were with us then paying tribute to our honored dead now also rest beside them 'neath the sod, and from their silent graves look up to us to carry on, to enrich our own souls by the actions of a worthy life, and to help them, by our prayer, on their journey to their God.

This is the sixth consecutive Memorial Day that I, as pastor of St. Mary's and guardian of this cemetery, have come here to honor the memory of our dead; to offer up with you the holy sacrifice of the mass, the greatest sacrifice that man can offer to his Creator, because the victim, the oblation, is the most worthy oblation that can be offered in sacrifice. It is the same victim that was offered on Calvary "the lamb that washed away the sins of the world." A divine victim that was worthy of appeasing the eternal God, and sufficient to redeem mankind. We have come to offer up that sacrifice, and in the charity of our hearts to apply whatever merits we may obtain, to the souls of our dead, especially, those souls whose mortal remains now lie at rest in this consecrated ground. I came not to decorate with flowers, nor to place a fitting monument over their heads. Too often do we decorate with flowers, and fail to remember the souls of those whose bodies lie below. Yes; we may heap all kinds of beautiful flowers; place costly monuments and stately tombstones upon their resting places; but that will not help the immortal soul that has traveled on. That will satisfy only ourselves and, perhaps, deceive our fellow men into believing that we still think of our dead. The living may appreciate flowers, but the dead do not. Give roses and orchids to the living, but give rosaries and prayers to the dead. Those are the flowers that will not die or become rubbish and debris for the caretaker to clear away a few days after our Decoration Day is over. Those are the flowers that will live on forever.

As I go back in memory over the last 6 years, as I gave toward yonder veterans' lot, I see it as it used to be, and as it is today. It has become larger, and many more rows of whitened headstones rise above the grassy green. Time by itself was capable of producing this result, but the ravages of another war has stimulated much, the certain hand of time. On the lot over the graves of our heroes, beneath the flag a cannon stood, the symbol of war. We removed that cannon but we kept the flag, because we hate all that the cannon stands for, while we love all that the flag represents. The cannon stands for war, for power and might, a force that gets out of control and brings with it devastation, suffering, and slaughter. We removed that cannon and put in its place a symbol of peace, of love, of hope; a statue of Christ the King. It represents a power that is always controllable, a power that is righteousness and justice itself; the power of God. You who think the atomic bomb to be powerful, stop and gaze upon that statue. See the world in His hand, and try to imagine what would happen if Christ your King would cease to hold it up. Look upon that gentle hand, and you, in your amazement, will say: "Oh, what power is there in the hand of God." "Let not the wrath of the Lord strike me."

Meditate upon that statue and you will realize how insignificant is all other power compared to it. There at the point of the cemetery it stands, facing the east; the beginning of a new day, facing St. Mary's. Here from which I stand, looking toward the statue, I can see the spire of St. Mary's reaching toward heaven, looking down upon the city like a loving mother watching over her children. Oh, spire of St. Mary's, the first to reflect the tender rays of the rosy dawn peeping over the hills of the eastern horizon, the last to be kissed goodnight by the golden glow of the setting sun sinking behind the shadows of Tower Hill. Oh, spire of St. Mary's, for many years you have borne the cross aloft while your sons and daughters have borne their cross below. From your lofty portals have come the silvery tones of your mellow chimes. Sometimes in the joyous strains of the wedding march, as the blushing bride and bashful groom kneel before your altar; sometimes, in more solemn tones, sounding the funeral knell as the last remains of some departed soul is borne to its final resting place; sometimes in the cold chill of winter, piercing the midnight air of Christmas with the Adeste Fidelis; sometimes, more mellowed with the warmth of spring, sounding the joyous Easter alleluias. O spire of St. Mary's, long may you stand as a beacon of light to protect and guide the freedom and destinies of your children.

And now coming back to this city of the dead, let's pause for a moment at the entrance and meditate upon the crucifixion group. What food for spiritual thought do we find there. See the lifeless body of our Lord, the sorrowful Mother, St. John, and Mary Magdalene. Realize that the object on the cross died that we might live, and when you enter between these massive pillars,

bearing in funeral procession the last remains of your loved ones to the grave; when the world seems dark and brightness has gone out of life, do not languish in unavailing grief as those who have no hope, but look upon the crucifix, know that your Savior also was placed in the tomb but rose again, triumphant, from the grave. Know that He is the resurrection and the life, and that if we believe in Him, even though we be dead, we shall rise again. What solace that is. What encouragement it gives us. What consolation to feel that love and friendship go beyond the grave. Our very nature forbids us to believe that they lead only to the grave. Our instinct compels us to look beyond death's shadow into another world and to brighten by the hope of a future meeting the sorrow that the death of those we love has cast upon us.

But even the thought that love and friendship might bloom again in a brighter land is not sufficient to satisfy the heart; our very affections prompt us to seek a means to bind together the world in which we still remain and that mysterious world beyond the grave where the dead have gone. Our faith confirms the affections of the heart by assuring us that love and friendship can reach beyond the grave and that charity should not cease because one soul still remains in the flesh and the other departed to the unseen land. Faith tells us that there are two worlds, the world of matter and the world of spirit—the world about us, which we see, and the world to come, to which we all must go. She tells us that just as in this world there are different states, so, too, there are different states in the world to come, and that our condition or state in the next world shall depend wholly upon the condition of our soul when it leaves the body. If the soul, at death, be in the state of mortal sin, it is lost forever, no hope may spring in any heart, no prayer may go before the throne of God. But for those who die in the state of grace, salvation is secure. Their fight through life, their combat with the world and the Devil, has ended in victory, and for them is an eternal crown of glory. But as nothing can enter into the beatific presence of God with the slightest stain upon it, and as we know that few can hope to pass without defilement from this world of sin, there must be some place where the soul is completely purified before it can enter into the beatific presence of God. We know that though mortal sin may be remitted as to its guilt and as to its eternal punishment, yet there remains a temporal punishment. And where do those souls go who have passed from this life without having done sufficient penance to satisfy for the temporal debt? Surely they cannot enter into the glorious presence of God, for they are not yet purified. Shall they, then, be cast into everlasting fire? No; for God is faithful to His word, and only to deadly sin has He attached the awful punishment of hell. Where, then, shall such souls go? The church, borne out by reason as well as revelation, teaches us that they shall go into a place of temporary punishment, where they may have their venial sins wiped out and may pay the debt they owe to the infinite justice of God, and such a place, my friends, is that which we know as purgatory.

There lie the holy souls, looking with longing eyes to heaven, awaiting the hour of their release, enduring a punishment so keen that some saints have not hesitated to say that the pains of purgatory are no less than those of hell, only one is temporal, and the other eternal. On their bed of pain they can only suffer; their intense longing for the sight of God brings with it such anguish that every moment seems like ages. Their cries are useless there, and their tears excite no pity. For themselves they can do nothing but endure their pains. Their friends on earth could help them if they would, but their friends, perhaps have long forgotten them. Those friends on earth, who loved them once, and whom they also loved, have ceased to think of them. Yes, we have at times intense sorrow for the dead, but it is not lasting. How many of us have knelt beside the deathbed of a dear friend, a relative, perhaps a member of our own family, and have thought that our sorrow could never be forgotten. How many have watched, through the mist of tear-flooded eyes, a loving mother sink into death's mysterious sleep and have thought that this earth could never be bright for them again, and then, after a few short years, forget the dearest friend they ever had. But such is often the case, my friends, such is the boastful memory that was to survive the grave, such is the affection that was to be eternal, and today from the depths of purgatory many a forsaken soul sadly sends forth the mournful cry, "Have pity on me, have pity on me, at least you, my friends, for the hand of the Lord hath touched me."

Think of these things, my friends, and try not to grow careless in your rememberence of the dead. Do not remember them only in November on All Souls' Day; do not wait until Memorial Day comes around again to remember the souls of our gallant heroes who have given their lives for their country. Remember them often in your prayers, in your morning and evening prayers; when you attend the Holy Sacrifice of the Mass; when you receive Holy Communion. Then when your time shall come, those souls whom you, perhaps, have liberated by your prayers, will remember you; they will intercede before the throne of God for you, and your friends on earth will not forget you.

Expediting Rental Homes Off the Market

EXTENSION OF REMARKS

OF

HON. BEN F. JENSEN

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Monday, June 2, 1947

Mr. JENSEN. Mr. Speaker, under leave to extend my own remarks, I include a letter to me from Pearl M. Schendell, of Council Bluffs, Iowa, also photostatic copies of two letters to her from the OPA rent-control office at Omaha, Nebr.

This is just one more of the thousands of reasons why rent control should have been outlawed long ago so homes for rent would be more plentiful at fair rates.

The letters follow:

COUNCIL BLUFFS, IOWA, *May 27, 1947.*

Hon. BEN F. JENSEN,
Washington, D. C.

DEAR SIR: On February 25, 1947, I wrote you regarding rent control and received a very satisfactory letter from you. I am still after their hide and am continuing to obtain evidence that they are doing more harm than good the way they administer rent control. Instead of being the Office of Housing Expediter, as they now call themselves, they are expediting rental units off of the market. (I have three vacant apartments. One vacant since October 1, 1946, and two vacant since the latter part of March 1947).

The proponents of rent control in its present form, without any general increase, stress the fact that any landlord who has a hardship due to increased operating expenses can obtain an increase in rent. The inclosed photostatic copy of a letter to me dated March 26, 1947, will prove to the most optimistic that this is untrue.

Even though my rents are above top of the rental range, the accountants find that I have a hardship condition. However, my rents are higher than they were on March 1, 1942, on account of improvements made. If the cost of those improvements had all been figured in as operating expense, my hardship would have been greater. However, as you know, most improvements are listed in the income-tax reports for depreciation.

Mr. Mattson had the gall to insinuate that perhaps my loss was due to inefficient operation. However inefficient I may be, I have paid for this $3,000 house, $3,000 worth of improvements and more than $1,000 worth of furniture in less than 4 years. However, my beauty business was not under rent control.

Everyone who rents furnished apartments has incurred increased operating expenses by way of maintenance, repairs, and hired help, if they have made any attempt to maintain the apartments in the same condition, etc., as they were on March 1, 1942. However, no one who is receiving rents comparable to March 1, 1942, may receive a rent increase, so it follows that very few receive it.

Yes, they can file a hardship petition, and the accountants will draw the taxpayers' money while they go painstakingly over all your rent receipts, checks, bills, social security reports, and income-tax reports, etc., when they know beforehand that you will receive nothing if your rents are comparable to those of comparable units on March 1, 1942. One of the accountants told me that if I was losing $1,000 per year I would receive no increase and would have to obtain permission from the rent control office to evict the tenants upon that ground.

Yes, the accountants went through all this farce, when all that was necessary was to determine whether my rents were comparable. What was done after they submitted their report that a hardship condition existed, the same man who inspects the apartments, came around and checked them, and possibly a few others in the neighborhood, and went back to the files and found that my rents were above top of the rental range and said what they could just as well said in the beginning, "No increase granted." This is what is happening all over the country and yet no decrease in the income-tax rate is necessary.

The other photostatic copy is of an order denying a rental increase for an improvement installed after the apartment was placed at the top of the rental range. This would indicate that there was also a top of the range of conveniences to which a tenant might aspire. If this is true, then it is dictatorship, to let a third disinterested party determine what conveniences another citizen may have in his home.

One of my tenants receives $16.35 per day and his wife $4. Yet Mr. Mattson had the gall to state that they did not need a wall switch in their apartment, which they have occupied almost 5 years; although he had refused me permission to remove wall switches and electrical service outlets from two other apartments on the ground that they were necessary to living in the premises, and were services which the tenants could not be reasonably expected to supply. Incidentally, I was not granted a rental increase for these said switches and outlets.

Later, the city electrician demanded a service outlet in each apartment, and threatened to disconnect the electrical service unless such installation was made, Mr. Mattson refused to give me an advance statement of the rental increase which such installations would be granted until I flatly refused to make the installations on the ground that it was neither repairs nor maintenance. Then he gave me a statement in

writing that I would receive 10 cents per week increase for each apartment. I wrote to him that if he could find an electrician who would do the work and furnish the material for 10 cents per week for each apartment to send him over, and if it was against the rent regulations for the tenants to make the installations themselves to send me the proper papers to vacate the apartments. To date, I have heard nothing further from him. The city electrician will probably shut off the electrical service and the tenants will be looking for apartments.

If rent regulation permits such dictatorship, then it is very un-American and should be discarded or changed.

I would also like to know where to take the matter up to learn why the rent-control office here in Omaha refuses to give me an advance statement of what rental increase, if any, I am to receive for the remodeling of a kitchenette in one of the apartments which has been vacant for more than 2 months. Mr. Mattson told me (but not in writing) to send him an estimate of the cost of such remodeling and that he would send me a statement. He refuses to do so, although he knows the apartment cannot be rented in its present condition and that the walls are already torn out. He also refuses to allow the prospective tenants admittance to his office when they go over there to learn why he does not give me this statement so I can go ahead with the work. I am quite positive that he does not intend to allow any rental increase for the remodeling although it will cost $91 and will greatly improve the apartment. My reason for thinking this is the fact that last year I spent $50 installing a separate entrance in one apartment while it was vacant, and although I was not granted an increase in rent for it I was later refused permission to close it on the ground that it was a service reasonably necessary to living in the premises and which the tenant could not reasonably be expected to supply.

There are other instances where I have not received a rental increase for equipment and yet have been refused to remove same. I can furnish copies of all orders showing that I was not allowed the increases and yet was refused the permission to remove same.

In all our correspondence regarding the remodeling of the kitchenette, he has been very careful not to mention the fact that I have requested a statement or that he promised it, as one of the prospective tenants told the office girl that I was making photostatic copies of all their letters and orders and sending them to Congress. But I have written a registered letter and received the return receipt, demanding the statement or the reason why I am not entitled to it, and I may receive a direct reply. At least they can't deny receiving it.

They do not want to commit themselves on paper so that I can have definite proof, and although it is keeping tenants in the street looking for homes, they make it so I either have to rent the apartments at just what they say or lose out altogether. Well, someone has to do something to show them up, and I can afford to do it better than same widow who has no other income. And there are many landlords in this country who simply have to rent for just what they can get or starve.

Another thing, this outfit in Omaha seldom allows adequate rental increases for improvements. They put out literature to the effect that your investment will be protected by the rents granted, but I have a letter in answer to my protests that it would take the rental increase from 8 to 12 years to pay for certain improvements, that rental increases are not based upon the cost of the improvements. If this is actually a ruling of the head office, it is very unjust, especially as they will not give an advance opinion as to what rent you may expect for a certain improvement.

I installed an automatic hot-water heater for the use of my beauty shop. It was not a replacement nor repairs. It cost $85 and heats 40 gallons of water. The apartments have been allowed the use of this service rent free until just recently. I requested permission to remove the heater from the service to the apartments and was refused permission to do so. However, I was allowed 10 cents per week per apartment for this service. The gas company stated that it costs 10 cents to heat 40 gallons of water. Seven apartments would probably use double 40 gallons in a day as, with the water running out of the faucet, the tenants would use more than they would if they had to heat it on the stove. So I am furnishing the hot water for less than cost with nothing to pay for the heater, which, when worn out, will have to be replaced.

These are the reasons why so many apartments and houses are being withheld from the market and why so many persons are offering to pay bonuses for homes. One day I had eight prospective tenants, and five offered to pay whatever I asked. Some even offer to pay the amount above ceiling for a full year in advance or until June 30, 1948. This would be a real hardship on some tenants, but they are having to do it to obtain homes, as it is the only way the landlord could be certain of getting it. For instance, the tenant can promise anything, but once the tenant moves in, he can refuse to pay more than ceiling and cannot be evicted. If the proponents of rent control think that it is really working in favor of the tenants, let them pick up the newspapers and read how many tenants are offering "rewards" and the statement "We can get together." Let them run an ad of that kind and see how many answers they receive, then they may have an idea of how many apartments are being held vacant.

I had some experience with this. I have an apartment which is hardly suitable for two but in which the OPA had raised the rate on the second occupant from 50 cents per week to $1.25 per week without a request from me. The girl said she would take it. However, she had a "reward" ad in the paper, and she found a larger apartment and took it. I do not blame her. I have one other apartment which could have accommodated them very easily, but the OPA persistently refuses to raise the rate on the second occupant from 50 cents per week to $1, although they know I never allow the second occupant in the room at that rate. Mr. Mattson even went so far as to state that if he did anything, that he would lower the rate for the first occupant. I have this statement in writing. So the room is vacant.

One of the prospective tenants who tried to see Mr. Mattson told the office girl that she had two children and that she could move in here if I was allowed the rent I wanted, but that I had refused to accept the balance as a gift. The girl told her that if she paid more than ceiling that she would be breaking the law. The law of self-preservation, I guess, as she has to have a place for her babies and will eventually find someone who will accept the gift.

It may look unjust to charge more rent where there are babies and small children, but the utilities are higher on account of more laundry, and decorating costs run higher as little fingers will mark up the wallpaper, and the rent control insists that the rooms be maintained properly.

I have written a lengthy letter, but you can't fight rent control without direct evidence of how it works, and I can certainly produce the evidence of the inequalities and dictatorship of rent control as it is administered by this office in Omaha.

If some of these practices are against rent regulations, as I have reason to believe, having a copy of rent regulations in my possession, and the necessary legal training to understand same, I would appreciate any information you may give me where I may write to obtain justice. I have written to the head office of the rent control in Chicago weeks ago and received no answer. I presume the matter was referred back to Omaha, and there it was dropped.

If you can use the photostatic copies of the other letters and orders, I will gladly send them. I am writing to Senator KENNETH WHERRY, of Nebraska, as he is also against rent control and this office is in his area.

Yours truly,

PEARL M. SCHENDELL.

OFFICE OF PRICE ADMINISTRATION,
OFFICE OF TEMPORARY CONTROLS,
Omaha, Nebr., March 26, 1947.

In re apartments 1, 2, 3, 4, 5, 6, and 7,
615 Mynster Street, Council Bluffs, Iowa.
Mrs. PEARL SCHENDELL,
Council Bluffs, Iowa.

DEAR MADAM: Your hardship petition on the above units has been processed and the findings are reflected in the enclosed orders.

The accountant's report makes the finding that there has been a hardship condition established. Under Federal rent regulations, in processing petitions of this nature, it is required that when a hardship condition has been established the maximum rent shall then be adjusted to a point which does not exceed the top of the rental range for similar units as rented on March 1, 1942.

A careful review of comparable units in Council Bluffs finds that apartments 1, 2, 3, 6, 7 are now renting not only at the top of the range but above the top of the range. Therefore no adjustment on the basis of hardship for these apartments can be made. However, there has been an increased service in that an automatic water heater has been added since the maximum rent date, which increases the rental value 10 cents per week per apartment. Orders reflecting this are among those attached.

On apartments 4 and 5 the increases as allowed and as shown in the attached orders have been placed at the top of the rental range plus 10 cents per week for the added service of the automatic water heater.

Yours very truly,

C. L. MATTSON,
Rent Examiner.

P. S.—For your convenience a consolidated order is also attached to your copy of the registration.

OFFICE OF HOUSING EXPEDITER—OFFICE OF RENT CONTROL—ORDER DENYING PETITION OR TERMINATING PROCEEDINGS

OMAHA AREA RENT OFFICE,
Omaha, Nebr.

PEARL M. SCHENDELL,
Council Bluffs, Iowa:

The Rent Director has carefully considered your petition and, after due investigation of the matter, finds that the facts in your case do not entitle you to the relief requested under section 5 (a) (3) of the rent regulation. It is therefore ordered that said petition be, and it hereby is, denied. This order of denial is without prejudice to the filing of another petition if other facts can be shown which entitle you to relief under the rent regulation. Rent to remain $4.35 (1) person and $5.60 (2) persons per week.

Issued and effective May 20, 1947. This order is now in effect and will remain in effect until changed by the Office of Housing Expediter.

On March 26, 1947, rent was adjusted to the top of the rental range. A wardrobe replacing a clothes pole does not affect the rental value.

W. S. WINGERD,
Rent Director.

Men and Americans

EXTENSION OF REMARKS
OF
HON. MIKE MANSFIELD
OF MONTANA
IN THE HOUSE OF REPRESENTATIVES

Monday, June 2, 1947

Mr. MANSFIELD of Montana. Mr. Speaker, under unanimous consent to extend my remarks, I am inserting a news story from the Daily Missoulian, of Missoula, Mont., covering the sad but outstanding contribution to our country of Beta Delta chapter of Sigma Chi fraternity of Montana State University. Beta Delta lost more of its membership than any other chapter of Sigma Chi. It was my privilege and honor to know every single one of these fine men, many as students of mine at Montana State University—all as friends.

Their contribution was made in an effort to keep alive the American ideals of fair play, tolerance, and understanding. Let us, as Members of Congress, try to do for our country the things which they fought for, and in so doing, laid down their lives. I will miss each and every one of them as true friends but I shall take courage from their sacrifice and try, in the troublous days ahead, to keep alive the democratic ideals they died for.

The news article follows:

SIGMA CHI IS TO HONOR 24 WAR DEAD

Honoring the memory of 24 members of Beta Delta chapter of Sigma Chi fraternity who lost their lives in World War II, a memorial will be dedicated in a ceremony at 2:30 Sunday afternoon at the chapter house at 1110 Gerald Avenue. Dr. E. O. Holland, president-emeritus of Washington State College, is to come from Pullman to be the principal speaker for the affair.

The project was conceived a year ago and the task of finding out how many members had given their lives was begun. After national and local records had been checked it became evident that the local chapter had lost more than any chapter in the entire Nation, according to Edmund C. O'Brien of Bigfork, committee chairman.

To honor the 24 men it was decided to turn the library of the chapter house into a memorial and to build a memorial fireplace in the yard. Both of these ideas were accomplished.

Large photographs of the men were secured, framed and mounted in the library along with brief accounts of their service to the country. Fluorescent lighting was installed above them and the entire room was done over. The two projects were made possible through the cooperation and financial support of more than 175 persons. Numerous books were presented to the library.

Those in whose memory the memorial was created were: James H. Blair, Forsyth; Jack Brazelton, Helena; Dana Bradford, Townsend; George J. Dignan, Glasgow; George Dykstra, Helena; Kenneth E. Faxon, Billings; Lionel J. Emswiler, Ekalaka; Robert S. Felt, Billings; Walter P. Fitzmaurice, Anaconda; Delbert Halsey, Coeur d'Alene, Idaho; William M. Holt, Great Falls; H. Clarke Irvine, Stevensville; Randall P. Jarvis, Stevensville; Stanley H. Koch, Missoula; John Marsh, Billings; James A. McNally, Butte; William Quaintance, Boulder; Thomas F. Sharp, Fort Benton; Richard C. Smiley, Bozeman; Malcolm R. Stotts, Hamilton; Norman Streit, Jr., Missoula; B. Franklin Thrailkill, Missoula; Donald T. Tilzey, Missoula, and Sidney F. Wharton, Jr., Missoula.

Address of Hon. Thomas D'Alesandro

EXTENSION OF REMARKS
OF
HON. LANSDALE G. SASSCER
OF MARYLAND
IN THE HOUSE OF REPRESENTATIVES

Monday, June 2, 1947

Mr. SASSCER. Mr. Speaker, under leave to extend my remarks, I include the following inaugural address delivered by our recent colleague, the Honorable Thomas D'Alesandro, upon the occasion of his assuming his new office as mayor of the city of Baltimore:

Today a new administration of the affairs of Baltimore's government begins, and today a new municipal charter or form of government goes into effect. We believe that this is a happy coincidence.

The old charter, with the amendments adopted from time to time, served Baltimore well. But it became evident, in recent years, that parts of it had become outdated and obsolete, and that the best interests of the people required a complete revision. So that has been done.

The parts of the charter which have stood the test of experience and time have been retained, and the new provisions, designed to meet current needs, have been so woven into those retained that we have created a new document, strong and clear and certain.

HOPES TO PROVE WORTHY

The new administration hopes to prove worthy of the new charter, and to so administer the government, exercising the powers granted and discharging the duties imposed, that the people of our city will give us their sincere and warm-hearted approval.

It is now our task to discard the obsolete, inefficient, and wasteful procedures of the municipal administration and to replace them with operations designed to obtain the best results, conducted by officials qualified to give Baltimore unsurpassed services.

The work done to produce the new charter will have been done in vain if those who hold office under it fail to exercise the authority granted by it wisely, or neglect to perform the duties outlined by it fully and faithfully. The charter is the law by which we are to be guided. The path we take is to be of our own choosing. And we choose to go forward.

TURN TO DEMOCRATS

The Republican administration of the municipal government has come to an end. Once more the voters of Baltimore have turned to the Democratic Party. This time they have elected a completely Democratic administration, both in the executive and legislative branches.

During this term there will be no division of responsibility. If we are successful the credit will belong to the Democratic Party, and if we fail the Democratic Party in Baltimore city cannot escape responsibility.

I do not make this statement in any partisan spirit, because I believe that political party principles are not of overwhelming importance and do not have any great application to municipal affairs and problems.

RESULTS INTEREST

The people of Baltimore, as in other great cities, are bound to be more interested in the results, in the degree of efficiency attained, than in any particular adherence to a political organization whose principles have less application on municipal levels than where the State or the National Government is concerned. It seems to be true, whatever the reason, that Baltimore has received its best administrations at the hands of the Democratic Party, and this administration will be no exception to the rule.

It is not my intention to restate here the problems which are faced by the government of Baltimore City. Those problems were discussed in detail during the campaign which terminated in the election of the Democratic candidates. At that same election, the voters approved some of the loans proposed by the last administration, and rejected others. It is our duty to make the authorized expenditures when they can be made economically and under circumstances which will provide all of the facilities contemplated.

TO IMPROVE SCHOOLS

We now have the financial means to provide a modern school plant, and we shall also provide adequate salaries for the teaching staff. The improvement of the educational system was one of my most important pledges, and it shall be kept. I mention this activity because of its paramount importance to all of our people, and because of the great responsibility involved in the expenditure of $22,000,000 in new school loans, and $9,000,000 previously authorized, a total of $31,000,000.

Our efforts to improve the condition of the streets will undoubtedly be handicapped by reason of the failure of the $10,000,000 paving loan, but we expect to have, beginning July 1, additional highway revenues from the State and we shall do whatever is possible to better existing conditions.

I am happy that I shall have the benefit of the advice and active cooperation of Mr. C. Markland Kelly, who is continued in office as president of the city council, and of Mr. J. Neil McCardell, who has been elected comptroller.

I have already begun to consider possibilities for the offices of chief engineer and city solicitor, the other two key positions in the city government, and I hope, in the near future, to get advice on those appointments from the groups indicated during the campaign.

BUDGET TO INCREASE

The city budget, already of monumental proportions, is certain to be much larger for the next fiscal year, due to the increased cost of materials and to the increases in pay, some imposed by acts of the general assembly, and others by municipal action, without considering the expenditures for capital improvements approved at the last election.

Whatever happens, I shall not try to shift or dodge the responsibility. I knew what the conditions were or were likely to be when I was a candidate, and I intend to handle each problem as it comes before me according to the best judgment of which I am capable, and with full publicity and information to the people of Baltimore.

I am deeply grateful for the great opportunity which is mine. The voters of Baltimore have selected me to be their chief executive during the next four years. I approach the task humbly, but with an ambition and a determination to promote the health, happiness, and welfare of the people who have honored me so highly. I believe I shall receive complete cooperation in this endeavor from all the members of our Democratic city council. All of us welcome advice and suggestions. We intend to gather around us the finest public servants we can find, encouraging to better performances the many fine men and women already in the public service.

CITES EXPERIENCE

I bring to my new office the experience I have had as a member of the city council, the

House of Delegates of the General Assembly of Maryland, and as as a Member of the Congress of the United States. I bring to it the enthusiasm of one who knows that the opportunities given to honest, hard-working people in this great country of ours are without limit.

I bring to it the confidence of one who belives in the great destiny of our city, State, and Nation. With the help of Divine Providence and the cooperation of all citizens, regardless of party affiliations, we shall reach that high destiny which we believe Baltimore is ordained to achieve.

I am now ready to enter upon my duties as mayor of Baltimore City.

State Department's Left Hand

EXTENSION OF REMARKS
OF

HON. FRED E. BUSBEY

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, June 2, 1947

Mr. BUSBEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Alfred Kohlberg from the May 1947 issue of the publication Plain Talk:

THE STATE DEPARTMENT'S LEFT HAND

(By Alfred Kohlberg)

Why is it that what is good enough for Greece and Turkey, two countries in which we never had a primary interest, is not good enough for China, our ally against Japan long before Pearl Harbor?

The answer to the question will be found by probing into the case of John Carter Vincent, Director of the Office of Far Eastern Affairs and chief figure in the pro-Soviet China clique in the State Department. A scrutiny of his record should provide the key to the major puzzle of America's foreign policy today.

Our Nation has been maneuvered into a course directly opposite to that which was ours in the critical days preceding Pearl Harbor. It was on November 26, 1941, that Secretary of State Cordell Hull handed his historic note to Ambassador Nomura in which was laid down our irreducible minimum basis for peace with Japan. The most important point in Secretary Hull's note read:

"The Government of the United States and the Government of Japan will not support—militarily, politically, economically—any government or regime in China other than the National Government of the Republic of China with capital temporarily at Chungking."

Eleven days later Japan went to war with us because of her refusal to accept our terms. For the last 3 years we have officially taken the position of not supporting the National Government of China.

This has been made crystal clear upon the promulgation of the Truman doctrine. We have offered loans to Greece and Turkey while we deny a long earmarked loan to China. We have proposed to furnish military aid to Greece and Turkey while belaboring China for lacking parliamentary government. And we have undertaken to fight communism in the eastern Mediterranean while we have been consistently seeking to foist it upon China.

These differences are too striking to escape general notice. But what remains to be established is how it all came to be. Whose hand reversed our foreign policy in the most vital area of our national defense?

If you would know how it happened that America's traditional policy of the open door in China had been scrapped in favor of Soviet appeasement, look at the record of John Carter Vincent, who, according to the Washington Daily News, has been "putting a 'for Communists only' sign on the open door."

Probably few Americans are even familiar with the name of John Carter Vincent, who has been described authoritatively as being, to all practical purposes, "secretary of state for China."

Last January, President Truman transmitted to the Senate the nomination of Mr. Vincent, among others, to the rank of Minister Plenipotentiary at Large. Since then the grapevine in Washington has had it that Vincent is slated to become United States Ambassador to China. With the return of Secretary Marshall from the fiasco of the Moscow Conference, and the emergence of the Korean problem to the forefront, the Vincent case becomes one of national concern.

Perhaps that is the reason why the Senate Foreign Relations Committee has been withholding confirmation of his promotion pending an exhaustive inquiry.

It was not very long before President Truman's proposal to loan $400,000,000 to Greece and Turkey had been advanced that John Carter Vincent made a formal address before the National Foreign Trade Council and enunciated his own doctrine in these startling words: "I believe it is unsound to invest private or public capital in countries where * * * a government is wasting its substance on excessive armament, where the threat or fact of civil war exists, where tendencies toward government monopolization exclude American business, or where undemocratic concepts of government are controlling."

Here was a policy which does fit the case of the Soviet Union. But Mr. Vincent would never apply it to Communist Russia. It is a policy which might very well be interpreted as fitting Greece and Turkey. But Mr. Vincent was speaking of China, and what he had in mind, as the Scripps-Howard newspapers pointed out editorially, was the Chinese Government's wasting its substance on excessive armament. Against whom? Against Communist rebels and not a foreign foe—which is the reason why Mr. Vincent has opposed the granting of the $500,000,000 credit earmarked for China unless Chiang Kai-shek forms a coalition with the Communists.

There was really nothing new about Mr. Vincent's promotion of the Communist cause in the Far East. It came into the open early in September 1946, when General MacArthur issued a warning against the danger of communism in Japan. On September 4, 1946, the New York Herald Tribune quoted Vincent as charging MacArthur with launching an anti-Soviet campaign in violation of State Department directives, which have never been disclosed, to use Japan for "building a bridge of friendship to the Soviet Union."

There followed a storm of criticism, whereupon the State Department repudiated the Vincent rebuke of MacArthur. But Marshall Field's PM, the authoritative tabloid in matters pro-Soviet, reported on September 10 that the MacArthur warning was "deeply resented by a number of important State Department officials, one of whom was John Carter Vincent, chief of the Far Eastern Division. Other officials in the Department agreed with Vincent that MacArthur's statement was unnecessarily damaging to Soviet-American relations."

Without specifically mentioning John Carter Vincent, the Washington Daily News expressed prevailing opinion when it declared: "The incident again points the finger at Moscow apologists in the State Department who are working to defeat American policy wherever there is a clash of interests between the United States and the Soviet Union. Until the Department is purged of such influences none of our missions overseas will be protected against such attacks. If the Department fails to clean its own house, the problem is one demanding the attention of Congress."

Even more shocking than the public slap at MacArthur was Mr. Vincent's official conduct in the Dairen incident last December. An American naval vessel was summarily ordered out of the Chinese port of Dairen by the commander of the Soviet occupation forces. This was a flagrant violation by Soviet authorities of the Yalta pact and of all international customs. Moreover, the Sino-Soviet pact of 1945 had clearly provided that Dairen be turned over to the Chinese as soon as it ceased to be a zone of active hostilities.

Mr. Vincent, director of our far eastern affairs, did not hesitate to authorize a spokesman to inform the public that the Russians were acting within their rights. That alone should have sufficed, in other days, to have a subordinate like Mr. Vincent dropped from the diplomatic service or demoted to the rank of clerk in a New Zealand consulate. However, nothing of the kind happened. Once more the State Department repudiated its own spokesman, but it found a face-saving recipe.

On January 6, 1947, it dispatched a note to both the Chinese and Soviet Governments asking them to get together and make a new agreement on Dairen. This meant that Russia, in a new deal, should "sell the same horse over again," as Secretary Marshall characterized such Molotovian diplomacy in Moscow. The previous day the Communist Daily Worker devoted an entire page to prove that it had first laid down the line which the State Department had dutifully followed.

This was not the first time that the Daily Worker had strangely anticipated important moves in our foreign policy. The decision of the State Department to withdraw our troops from China had been preceded by a worldwide Communist campaign, from Moscow to Shanghai to New York, waged during 1946. And that in turn had been presaged by a significant pronouncement made by William Z. Foster before the National Committee of the Communist Party on November 18, 1945, a pronouncement which Mr. John Carter Vincent may or may not have found necessary to read. For those who would explore the devious ways of American policy in the Far East, Foster's declaration, as reported in the Daily Worker for December 2, 1945, is worth recalling:

"On the international scale, the key task as emphasized in Comrade Dennis's report, is to stop American intervention in China. * * * The war in China is the key of all problems on the international front and it is here, above all else, where we have to deal the hardest blow to reaction. * * * On the question of China, which is our key concentration, as Comrade Dennis pointed out, we want to hold 500 meetings all over the country to mobilize all the forces of the people that we can reach to put a stop to the intervention in China. Our party must use every ounce of its strength and skill and organizational ability to make these 500 meetings a success."

In the State Department, Mr. Vincent did his share to contribute to the success of Soviet policy in China and to "deal the hardest blow to reaction." Was he not a progressive, according to the Daily Worker vocabulary?

Within a week after the announcement of the withdrawal of our armed detachments from China, Mr. Vincent attained the high-water mark of his singular career in an address at Cornell University on January 21, 1947. He deprecated the view that it would

be "advantageous for our defense to throw our weight or influence on the side of the status quo" in China.

What a neat diplomatic way of saying the preservation of the National Government of China, the cornerstone of our policy which led to Pearl Harbor, was no longer our concern! Indeed, by that declaration the "Secretary of State for China" repudiated the solemn wartime pledges of President Roosevelt at Cairo and Yalta. But in whose favor had it been done?

As reported in the New York Times, Mr. Vincent was out to encourage "progressive" elements in China. Some Americans might have remembered that these "progressives" were ambushing United States Marines in their peaceful pursuits at that very time.

Who is John Carter Vincent? A fairly obscure diplomat for some 20 years, he rose to the pinnacle of "Secretary of State for China" following the ousting of Under Secretary Joseph Grew by the so-called China bloc centering around Amerasia. It will be recalled that the chief protagonist of the Amerasia case, better known as the State Department Espionage Case, (see Plain Talk, October 1946) Mr. Philip Jaffe, had boasted after his arrest and conviction, "anyhow, we got Grew out."

It was in the State Department reorganization which followed, that John Carter Vincent, until then head of the Division of Chinese Affairs, was elevated to the position of Director of the Office of Far Eastern Affairs.

There is little that is noteworthy about Mr. Vincent's beginnings in the diplomatic service. It was undoubtedly a coincidence that he happened to be American consul at Mukden in September, 1931, when the Mukden incident set off Japan's encroachment on China until it had blazed into a full-scale undeclared war. It was surely a coincidence that Mr. Vincent was transferred to Europe to be attached to the staff of the American delegation of the International Labor Office at Geneva, a body which the Canadian spy case had revealed to be saturated with Soviet agents. And certainly there was nothing remarkable about the close friendship which sprang up in Europe between Mr. Vincent and the leftist-liberal correspondent, William L. Shirer.

Early in 1941, Mr. Vincent took up the post of consul at Shanghai, becoming a few months later, under Ambassador Clarence Gauss, counselor of the Embassy of Chungking. During the period of the Stalin-Hitler pact, between September 1939, and June 1941, Mr. Vincent is known to have expressed admiration and a certain sympathy for Soviet ideas, a hatred for the Japanese, and to have felt that the war did not represent a threat to American security and that therefore we should keep out of it.

While in Chungking in August, 1941, Mr. Vincent came in close contact with Owen Lattimore, one of the best informed Americans on the far places of China, who had been sent by President Roosevelt to act as political advisor to Chiang Kai-shek. Mr. Lattimore will be remembered as the leading propagandist of the doctrine that the Chinese Communists are not real Communists but true democrats who are merely innocuous reformers. This was, of course, before the Chinese Communist leaders began to denounce America as an imperialist enemy worse than the Japanese.

There is no record that John Carter Vincent or any other State Department officials of the Lattimore school had ever taken the trouble to become familiar with the massive evidence of the unbroken relations between the Chinese Communist Party with the Communist International, or of the repeated professions by the Chinese Communist leaders of their 100-percent loyalty to the line of Marxism-Leninism-Stalinism.

When Lattimore returned to America to become director of the Pacific bureau of the OWI (Office of War Information), he saw to it that no Chinese favorable to the National Government of China be employed in his division. He is on record as having urged that Chinese employees should be obtained from the newly started Chinese language Communist daily in New York, the New China Daily News. Mr. Vincent followed his master to Washington to become chief of the Chinese Division of the State Department.

It was not long afterward that Lt. Andrew Roth, of the Naval Intelligence, who was attached to Vincent's section and who was arrested and charged with espionage in the Amerasia affairs, dropped a significant remark to his colleague, E. S. Larsen. "I ran into Lieutenant Roth on the street," Larsen narrates, "and he told me that John Carter Vincent, head of the China section, suspected me of being too close to the Chiang Kai-shek crowd."

Actually the boys of the Lattimore school had changed their tune about Chiang Kai-shek in the summer of 1943, following Moscow's turnabout in the spring of that year. During the first 2 years of the conflict between Stalin and Hitler, the Communist line toward Chiang Kai-shek was one of apparent conciliation. Then suddenly the National Government which had fought valiantly all alone Russia's and America's enemy, Japan, for nearly 6 years, became a target of denunciation as a feudal and reactionary regime.

At that time students of Chinese affairs were puzzled by the Communist switch. Did not Russia still want to use China to keep Japan from attacking Siberia?

Only in 1946 was the key to this puzzle found. It came out at the Nuremberg trial. Evidence was offered, but ruled out, that Hitler had proposed a separate peace to Stalin in the spring of 1943, after Stalingrad. Stalin received the proposal favorably and stated his terms, but the terms were too stiff for Hitler and negotiations broke down. News of these negotiations leaked to the Japs, and Stalin felt sure that they would no longer attack him to bolster a German ally already willing to quit. Russia needed China no more, so her legions of open and secret propagandists were put to work to weaken the national government and to plan postwar chaos and the Communist seizure of power.

These same methods were used on our European allies, Poland and Yugoslavia. That they did not work as well in China was due to Chiang Kai-shek's firm stand and not to our State Department which followed the Soviet line even more closely in the Far East than in eastern Europe.

The turning point in American far-eastern policy came with the memorable mission of Henry A. Wallace to China in the summer of 1944. His guides and advisers on the trip were Owen Lattimore, John Carter Vincent, and John Hazard who had been prepared for this role by 5 years of study in the Soviet Union. Vice President Wallace, who had not yet been scrapped by the Democratic Convention, made his report which remains secret to this day. It is, however, known that the high point of Wallace's study was that the government of Chiang Kai-shek would collapse within 90 days. That was in July 1944.

A hint of the authorship of the Wallace state paper may be found in an article in the April 1, 1947, issue of World Report, in which private sources in the Far Eastern Office of the State Department (believed none other than John Carter Vincent himself) are quoted as expecting "the fall of Chiang and his government." Among recommendations made by Wallace to President Roosevelt were the proposal that the United States back Mao Tse-tung, leader of the Chinese Communists, as the "Tito" of China and the plan that we arm the Chinese Communists, a policy later taken up by General Stilwell under the influence of pro-Soviet advisers.

It was on the issue of arming the Communists that the conflict between Ambassador Hurley and the Vincent clique developed. One of Vincent's comrades, Johr S. Service, who figured unenviably in the State Department espionage case, who acted as Stilwell's political mentor, submitted in October, 1944, a report to Washington which cut the ground from under Ambassador Hurley. That report, Hurley later testified before the Senate Foreign Relations Committee, was "a general statement of how to let fall the government I was sent over there to sustain. The report was circulated among the Communists I was trying to harmonize with the Chiang Kai-shek government."

Some months later, while Ambassador Hurley was in Washington on official business, Vincent's career men back in China utilized the occasion to undermine Hurley's policy. On February 28, 1945, they sent a message to Washington in which they "specifically recommended that we furnish lend-lease arms and equipment to the belligerent Communist armed party in China."

This sabotage by the staff allied with Vincent finally caused Ambassador Hurley to offer his resignation in November 1945. Secretary Byrnes persuaded him to remain on certain conditions. These were embodied in a set of instructions which were dictated to a stenographer in the presence of Byrnes. When Hurley returned the following morning to receive the signed instructions, he found that important points had been deleted. He tried to see the Secretary and was told that he was out. Proceeding to the office of the far eastern division, he learned that the changes had been made by John Carter Vincent. He then resigned.

The mysterious American policy in China, which has made many a Senator and Congressman wonder why the Truman doctrine of stemming communism is not being applied in the Far East, is largely the handiwork of the pro-Soviet bloc headed by John Carter Vincent. He and his associates helped shape the shameful secret Yalta deal by which we had delivered a loyal and tested ally, the National Government of China, without its knowledge, to Stalin's new imperialism. This Red "cell," as the Scripps-Howard press had editorially characterized it, has been "found fronting for the Soviet viewpoint on every issue. * * * The Department's far eastern division is notoriously leftist in its views, and its operations distort the American position in all areas under its direction."

A thorough-going investigation by the Senate of the operations of the State Department's left hand is long overdue. An accounting must be rendered the American people before the nomination of John Carter Vincent to the high rank of Minister Plenipotentiary is even given serious consideration.

America and Russia—Dangers and Hopes

EXTENSION OF REMARKS

OF

HON. FRANK BUCHANAN

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, June 2, 1947

Mr. BUCHANAN. Mr. Speaker, under leave to extend my remarks, I am inserting the following article which appeared

in the New York Times Magazine of June 1, 1947, entitled "America and Russia—Dangers and Hopes," by Brooks Atkinson:

AMERICA AND RUSSIA—DANGERS AND HOPES

(By Brooks Atkinson)

Between the United States and Soviet Russia political relations are obviously serious and possibly grave. But despite the bitterness apparent on every level, they are not dangerous now. Although the pure logic of our relations has pointed toward war for at least 2 years, war is impossible now and by no means inevitable eventually.

We are going through a period of armed truce. Strict Marxians believe that communism and capitalism will have to fight a war eventually, and thousands of nondoctrinaire Americans, with a shrug of their shoulders, have for years expressed the same opinion. But Soviet and American political interests have not clashed yet and need never clash if the Soviets remain within the orbit we formally acknowledged 18 months ago as their legitimate sphere of influence—that is, along their own borders.

Whether or not our relations descend from grave to dangerous depends upon the experience both have in trying to maintain the peace over the next 5 years, upon the stability of France, the control of Germany's recovery by all the Allies and, most of all, upon the strength of democratic life inside the United States.

At present neither the Soviet Union nor the United States is prepared to fight a major war against a powerful opponent, or, specifically, against the other. In view of the present condition of the Soviet Union, Russia unaided could not fight an aggressive war against a modern army for three reasons:

First, socialism in Russia has not yet succeeded in bringing a backward country so far forward. Even before the war life was meager and hard and the needs of the Russian people were much greater than Russian production possibly could satisfy.

Second, the destruction by the invading Nazi armies was calamitous. At least 7,000,000 people were killed, and probably many more than that. Millions more were displaced and driven away from homes, farms, and factories. The destruction of plants in the Ukraine and Byelorussia was overwhelming; factories, railroads, public buildings, mines, collective farms, and homes were wrecked, made unusable or uninhabitable. The Soviet Union is enormous; it has great capacities, its recuperative powers are remarkable, and its people are hardy, vigorous, and good-hearted. But no country can absorb so much destruction and at the same time fight a powerful opponent.

Third, Russia has been suffering for several months from a serious shortage of food. Although growing conditions may be good this year, the shortage of agricultural machinery, fertilizers, and animals will continue and limit the size of the harvest. Before Russia can fight a war against a major opponent it will have to solve some of its most critical internal conditions, which intimately affect the morale and strength of the people.

There is another factor—less tangible but real—that weighs against war. The Russian people love peace as passionately as any in the world. Having suffered deeply during the war, they sacrificed so much to win, they would be dejected by the prospect of another war against a country which, there is reason to believe, they are inclined to like. Just as Americans believe that the Soviet people, taken apart from their tyrannical Government, are a good people at heart, so Soviet people think that Americans are good people at heart, but misguided by vicious and imperialistic capitalists bent on destroying the Soviet Union.

At the moment the Soviet Government, which is congenitally nervous and suspicious, is taking all measures short of war to secure itself against aggression and promote its influence. Ultimately it expects to be the inspiration and source of power for the world. It expects capitalism to collapse; and the economic and political paralysis of western Europe and the poverty of England seem to the Russians to confirm the Marxian doctrines. Despite the truculence and delusions of the Soviet Government, the Russian people are not aggressive; and if there is anything they do not want, it is another major war piled on top of the misery and suffering they are still going through.

Nor, is the attitude of the United States warlike. In respect to food and productive plant, we are in the strongest position of any country in the world. But the people of America do not want a war, never did and never will. The rapidity with which we have permitted our military strength to disintegrate is the true measure of our peaceful intentions. No one who knows anything about warfare can talk complacently about going to war in cold blood, as though all that were needed would be the mechanical process of dropping a few atomic bombs.

Furthermore, it is doubtful that so large and loosely organized a country as Russia could be conquered in that mechanical fashion. With our tight economic and cultural system, which exists by infinite interdependence, America would be more vulnerable to atomic warfare; and since an atomic bomb attack would be not a remote Pearl Harbor but a surprise attack at the heart of our country, we would lose the element of time that in the past has made it possible to prepare defenses.

Since no other country has a stock pile of these terrible weapons an attack on the United States is not possible now. But an attack by the United States is possible in fact; that is, we have the weapons. But it could scarcely succeed on the easy terms many people envision. What is certain is that the deliberate use of atom bombs on a recent ally would, in the first place, leave the vast majority of the Russian people unharmed, build up undying hatred and resistance in the hearts of a patriotic people and also in sympathetic people in other countries; and, in the third place, it would negate before the world every spiritual value we maintain that we stand for.

Some people talk very big in this country—as big as the bellwethers of the Russian Communist Party. But the facts of our current military position hardly bear out the belligerence of our idle conversation. For America's distaste for military service amounts to a passion. Remember 2 years ago? The minute the shooting war was over the boys everywhere wanted to drop their guns and hurry home, and the folks at home could hardly wait for the Army to be disbanded. America's enthusiasm for leaving a war is like the enthusiasm of students for the end of the school year—joyful and disorderly. As an American general once bitterly declared, we have only two speeds—five miles an hour and a hundred miles an hour.

Compulsory military service has now lapsed because Americans dislike it, although the world is still unsettled and our interests are far from secure. It has been impossible to keep experienced armies of occupation in Germany and Japan. The Army we have now has a minimum of training and service, and man for man could not stand against trained Russian soldiers in Europe. Never has a meagerly trained American Army cost so much and yielded so little in military effectiveness. If no other country succeeds in manufacturing atomic bombs and we have 12 or 14 months of leeway we could build another army on the cadres from the last. But despite some eloquent broadsides by voluble patriots in mufti we are not prepared for war today.

War between the United States and Soviet Russia would be the ultimate catastrophe. Neither side could win. The destruction of human life would be harrowing. The world could not recover for generations. Let's not talk so casually about war.

I. HOPE FOR PEACE

For the next 5 years, and probably longer, war is not an immediate danger. Continued association within the United Nations may avert war indefinitely. Unless the Soviets withdraw from the only world organization, both of us will have a wholesome opportunity to test each other's strength and sincerity, and we may also find out whether their political and economic system or ours is going to meet the needs of the world or whether various systems, like the American, the Russian, the English, the Swedish, and others can coexist. Meager as the accomplishments of the UN have been, the American and Soviet statesmen have continued to meet in public, there to discuss vital problems and have dealt with each other on more subjects than before or during the war.

Since the stakes are higher, it is difficult to understand why the Soviets so recklessly endanger the security of the UN by sabotaging so much of its vital business. The stakes are the peace of the world. The awful menace that hangs over the world, despite basic good intentions, is the atomic bomb. We have proposed to turn the bomb over to international control on terms that most nations regard as rational, since we do not want the exclusive responsibility of controlling such a frightful weapon. But the Soviet Union has specifically blocked the plan for international control of atomic energy, which shows either a surprising trust in our peaceful intentions, a reckless disregard of realties, or surprising progress in the manufacture of the bomb. In this respect they risk more than we do, unless they can make the bomb, which is highly unlikely.

Apart from the bomb, the Soviet Union has blocked most of the activities of the UN by a paralyzing use of the veto and by boycotting most of the UN's subordinate activities, on which the world is counting for progress and security. The Soviet delegation does not participate in the World Bank, the International Monetary Fund, UNESCO, the International Labor Organization, Food and Agricultural Organization, relief, Civil Aeronautical Organization, and the International Trade Organization. Nothing could go much further toward the effective creation of two hostile worlds than the negative attitude of the Soviet Union toward the UN.

Curiously enough, this does not correspond to the attitude of the Government toward the UN in Russian internal propaganda. For the UN has been systematically described to the Russian people as a world organization that grew logically out of the war collaboration of the Big Three, which was very popular in Russia. To the Russian people the UN has been portrayed as a progressive step toward world peace.

Although the Soviet Government is a dictatorship, it does take public opinion into consideration, and its attitudes are sometimes apparent in what it prints in the Russian newspapers and says over the Russian radio. The expression of public opinion is narrowly confined and little of it filters through to the newspapers or magazines, or at any rate, on fundamental policy, which is the Politburo's exclusive province. But the Communist Party and the security police are in positions to sample public opinion through the innumerable associations they have with the workers and peasants; and it seems certain that ultimately the Kremlin receives a digest of what the people are saying. Accordingly, the Government would not make any radical decision, like going to war or withdrawing from the UN, without first conditioning public opinion by propaganda.

If the Soviet Union decided now to withdraw from the UN a great sigh of despair would sweep over the Soviet Union. In present circumstances that would be an unpopular decision and might endanger the security of the Government. But the Soviet Government could very swiftly change that attitude by use of its powerful and ingenious propaganda machine.

The current violent attacks on the integrity of the United States might be construed as deliberate action by the Government in that direction, although violent talk is normal in the Russian press. Master of propaganda, the Government controls public opinion, and it can persuade the people that the United States, in both the UN and the Foreign Ministers Council, is threatening the security of the Soviet Union and plotting world hegemony by sinister means. Since the Russians have a passionate love of their own country, at least equivalent to our love for America, that propaganda line would appeal to a vital national emotion, help to unify the people, and strengthen their resistance. In short, the Soviet Government could quickly reverse itself about the UN with at least a large measure of public opinion at home.

As long as the Soviet delegation remains in the UN the hope for world peace also remains, and there is still a margin of time in which some of the world's worst crises can be solved. But there is reason to believe that the Soviet Government never really shared America's buoyant enthusiasm for the UN as outlined at Dumbarton Oaks and San Francisco. Although the UN makes a good speaker's platform from which the Soviet Government can address the world, the Soviet Government cannot accomplish much else against such consistent opposition. For neither its ideas nor its attitudes are popular. Although the Soviets like to have friends abroad they have lost friends as a result of their slow, artful, and unyielding procedures. There are circumstances in which the Soviet Government might consider further participation in the UN a political liability.

Part of the trouble in the UN derives from the nature of the Soviet Government. It is not organized for collaboration by means of conferences, meetings, negotiations, and agreements. By nature it is a dictatorship. In its working technique it is a conspiracy, for it has never recovered from the conspiratorial methods it used to win the revolution.

Under the doctrine that the end justifies the means, the technique of conspiracy has a certain moral value to the Soviet leaders and their adherents, for it has generally succeeded. It has put the Bolsheviks in power; it retains control of the Soviet Union and ultimately it expects to dominate the world by Marxian logic pushed along by political action.

The methods of conspiracy are outlined in the statutes of the Comintern which have been published. Since the Soviet Government is no doubt sincerely acting for what it regards as the best interests of Russia, the elaborate and cumbersome conspiratorial methods it uses at home—that is, secrecy and the police—seem to an outsider to be superfluous, anarchonistic, and a little comic. Unless there is more opposition to the Government than is generally supposed, the technique is no longer necessary there and in time might be superseded by a more efficient and less fearful national organization.

No one except the leaders of the Communist Party knows the extent of Soviet planning for the world revolution. Although the Comintern was publicly disbanded in 1943, the foreign Communist Parties continue as before with propaganda and conspiracy. As in the case of conspiracies in general, there is little concrete evidence to go on, and the public statements of the leaders are designed for tactical effectiveness rather than foreign enlightenment. It does not really change the situation when Stalin makes a benevolent speech or Molotov makes a fighting one, for the methods and objectives of doctrinaire Communists are always the same.

Whatever the source of the conspiratorial technique may be, the organization of the Soviet dictatorship is not by nature geared to collaborate with the rest of the world. Concerned with the development of power and the control of outside states, it cannot comfortably participate in a UN which is based on the self-determination of people and designed to promote respect for human rights and fundamental freedoms. Nothing in the spirit of Russian communism accepts the principle of the political and intellectual freedom of the human mind. In the circumstances, it is highly probable that our relations will for a long time continue to be much as they are now—unpleasant, strained, rancorous, bitter, sullen, resentful. There is no general solution that we can afford to make, for we cannot compromise on freedom and the rights of man. We cannot abandon our national convictions.

II. AMERICA'S ASSETS

Since our differences cannot be reconciled in the reckonable future, we have to look to ourselves for security. If the members of the Politburo are right when they say that Russia's strength is her only security, the same applies to us, for our situation in respect to them is the same as theirs in respect to us. During this period of an armed truce, which may lead either to war or world peace, we must be certain that we do not fail at home. For the peace of the world depends less on the truculence and force of the Soviet Government than on our ability here to fulfill the promises of democracy—which are freedom for individuals, individual opportunity, and a progressively high standard of living.

We emerge from the war with more industrial plants than we have ever known. With about 6 percent of the world's population we can produce 20 percent of the world's goods. During the war new industrial techniques have been perfected and new materials invented. With more skilled workers than we have ever had before, the potentialities of American life are tremendous if our economic and social life can be organized on some stable basis. We enter a period of great material possibilities with many great human problems completely unsolved.

The Marxists expect us to fail. They consider our freedoms as pure matters of form, like voting for candidates selected by political machines. It is a cardinal principle of Marxianism that capitalism will exploit the workers beyond their capacity for endurance, try desperately to capture world markets, imperialistically, to compensate for dwindling markets at home, and finally die a violent death in a bloody political revolution.

Being doctrinaire Marxists, the Soviet leaders by and large believe what they say about us. By dogmatically shutting their eyes to the wholesome aspects of American life they find abundant evidence in our current affairs to bear out the scientific prophecy of a capitalistic catastrophe in America. That may be one reason why they are not in a hurry to make peace with Austria, Germany, and Korea. They think that our bargaining influence will dwindle as our economy goes to pieces, perhaps within the next few months. If we slip into another period of economic paralysis, with staggering unemployment, we shall suffer not only at home but abroad where millions of people are looking to us not only for food and goods but for some moral concept of freedom.

What happens here now has world significance. The lack of stability in our society strengthens the hands of parties and groups that are hoping to capitalize on our failure. The inflation that is threatening the American standard of living and consuming savings, the antagonisms of capital and labor, the parochialism of ownership and management, the inefficiency of labor, the race prejudice that destroys national unity, the crisis in education, the cupidity of pressure groups in politics, the inadequate housing for a growing population—these are the sort of things that have an immediate bearing on the rest of the world and that weaken our hand in dealing with a nation that distrusts our system and stands to profit by our failure. As a matter of fact, our economic system has not been in sound condition for 20 years. The recovery from the long depression was based on the abnormality of war production. We spend considerable time in smug praise of a system that is still shaky.

Since capitalism has given America its material abundance, no appreciable part of the American population wants to see the system changed. But we are entering a world era that is more or less socialistic. Although we are the world's greatest source of food and goods, we will have to trade with countries that must trade on a national basis. In other words, we are moving into a world influenced by planned economies—which, incidentally, derive from a Soviet Russian idea.

Although we won the war with a planned economy achieved through general cooperation of Government, industry and civilians, that is a word that frightens many Americans, for like the Russians we also have our shibboleths. But circumstances have driven us into limited forms of planned economy without our acknowledging it and have produced controls that we hardly notice, since they are so logical and basic.

Although we still talk of free enterprise as though the nineteenth century were the ideal, our limited forms of planned economy include TVA, the other big dams, the soil-conservation program, the conservation of forests, and social-security legislation; and the controls of the free enterprise system include such deep-seated devices as the Federal Reserve Act, the Interstate Commerce Commission and the Securities and Exchange regulations. Since the trend of the world is toward rather than away from planned economy it is likely that the capitalism of America will have to conform.

Last autumn a House Subcommittee on Small Business studied the disposition of the sale of Government-owned war plants. Seventy percent of the plants had been bought by what the committee described as "giant corporation." The report said that if 250 large corporations took up their options on Government plants they would own 65 percent of the Nation's productive facilities; and other of the published facts show a strong trend toward the centralization of capital and power. That is one type of planned economy, although not necessarily in the interest of the Nation as a whole. From the social and political point of view it might be alarming if the Nation did not have the power to establish the necessary controls.

What our position in the world requires is an economy of abundance—the peacetime equivalent for our wartime achievement. Since private industry has developed the enterprise and the techniques that have always given our economy its impetus, it would be ideal if private industry and labor could voluntarily provide the planning that would make the most efficient use of our resources and plant and distribute the profits in the form of a constantly rising standard of living and a constantly widening field of individual opportunity.

But if private industry and labor cannot make our system work efficiently, the people will have to provide the planning through the National Government, which might be the road to collectivization—something that Americans apparently do not want. For

planned economies by Government order are dangerous, and may lead to totalitarianism which substitutes force for the democracy and enterprise that we are trying to preserve. No one is forgetting that the success the Russians have had with a planned economy has been at the expense of freedom, and the Labor Party in England has not yet demonstrated that it can plan economy and preserve English liberties simultaneously.

By virtue of many circumstances we have the margin of a few years to develop a democracy, which has already had a long record of achievement, into a democracy that promotes human happiness by widening individual opportunities and deepening individual security. In the current crisis the contest is not between capitalism and socialism or communism. The economy is not the point at issue. What we cannot tolerate is a world dominated by a tyranny that murders dissenters, deals with human beings in the mass rather than as individuals, ruthlessly moves large masses of people around from one place to another, dumps them into concentration camps and remains impervious to human misery.

But we cannot resist it with angry words and hatred. Confronted with a myriad of political choices, we have to keep in mind the human being who stands in the middle everywhere—the unwitting victim of power politics from both sides in the United States as well as in Greece, Turkey, China, and other countries. In view of the bold statement of our credo in the Atlantic Charter, the burden of the proof is on us. To increase food and industrial production, to achieve national stability, to raise the standard of living, to enrich the spirit of man, by general freedom—those are our assets. If we use them wisely, we can prevent another world war.

Radio Address to My Constituents

EXTENSION OF REMARKS
OF
HON. EDWIN ARTHUR HALL
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Monday, June 2, 1947

Mr. EDWIN ARTHUR HALL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following radio address made by me over Station WNBF on May 31, 1947:

Dear friends of the triple cities and my congressional district, this radio program is nearly 8 years old. Almost as soon as you folks sent me to Congress the first time in 1939, I began to send you these messages and have continued practically without a break.

It is nice to receive your friendly letters expressing approval of my radio talks. I try to make them informal and to the point.

The people back home have every right to know where their Congressman stands and how he feels on important questions. As you listen to my voice each week, you get a pretty good idea about my sentiments, and by the same token I want to have your slant on things. That can be done best by writing to me.

Naturally, I'm always glad to see you when I am home. Feel free to call on me any day then at the Federal Post Office Building in Binghamton, where my home office is located.

But Congress is in session so much that a great deal of my time has to be spent in Washington. Therefore, if I'm not available, pick up a pen or pencil and drop me a few lines.

Moreover, I've had some complaints lately that letters written by citizens to bureaus and departments of the Federal Government are unanswered. This means that bureaucrats feel too superior to the average person to reply to his letters.

To me, that's an outrage. Who are these swivel-chair giants that are too pompous and lordly to answer letters the taxpayers write them? Who pays their fat salaries? How come they don't answer their mail?

Every man and woman in the United States, no matter how rich or poor, regardless of race or religion, if they are citizens, have the right to ask a Government official for a favor. And they have the right to expect an answer, too.

But some big shots in Government consider themselves above the common herd. For that matter, they consider themselves above the Congressmen the people elect and who vote the salaries they are paid. They're so inflated, you could only bring them down by pin-pricking their ego.

In these remarks I don't want you to think that I am indicting all Federal officials. Not all of them are bureaucrats. Many are honest, conscientious and painstaking and believe in giving the Government a full day's work.

But there are too many the other way. Too many are ignoring the fact that they work for the American people and should conduct themselves accordingly.

Congress ought to crack down on these slothful servants who don't consider themselves servants at all. Congress ought to put them in their place.

So far as I go, I hope you'll let me know the time you write a department of the United States Government and don't get a reply. I want you to tell me if they ignore your letters.

If you can't get an answer out of these fellows, call on me. I'll go to bat for you, gladly. I'll guarantee a letter back to you, and fast.

After all, have you and I asked for anything unreasonable? This Government was set up by the people, to serve the people. The Constitution defines all departments of Government as agencies dedicated to public service. This public service is not limited to just a favored few. It is for everybody!

So be sure to get in touch with me if you don't receive satisfaction when you request something. I welcome your letters. You know I'll answer right off the bat. You know they'll answer sooner after they've heard from me.

This goes for you veterans who may be anxious to get word through to the Nation's Capital. This goes for you farm folks who want to find out something about agriculture. And you young people who are students in our schools and write me so often about research work. Also it goes for the great rank and file of working folks of the Triple Cities who are asking many questions of official Washington nowadays.

All of you are citizens. Your names may not be enrolled on some social list like the ones you see in Washington, but that makes no difference. The truth is, you're paying the shot, and every public servant is answerable to you.

Officialdom must realize this. Otherwise we will cease to be America. There are dictator nations whose headmen make it a practice of pushing people around. They live off the fat of the land while the masses barely exist in chill penury.

We just fought a war to get rid of such an unbearable attitude in human relationships. We sent our sons to fight those who were determined to make the people slaves of a few. We must not tolerate a similar condition in our own affairs.

Hard-working, efficient public officials are the only satisfactory ones worth their salt. Let's keep them and throw out the rest.

Thank you.

Plea for Preparedness

EXTENSION OF REMARKS
OF
HON. EDWARD T. MILLER
OF MARYLAND
IN THE HOUSE OF REPRESENTATIVES

Monday, June 2, 1947

Mr. MILLER of Maryland. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include the following address which I broadcast over Station WBAL, Baltimore, Md., on Decoration Day, May 30:

Today, all over the country and, in fact, all over the world, Americans and those friendly to America have gathered to pay tribute to our gallant dead of many wars. A few hours ago, in nearby Arlington, many of our Nation's leaders gathered for this purpose at the Memorial Amphitheater and Tomb of the Unknown Soldier. Today, in all parts of the land, in great cities and rural graveyards, the citizens of the United States have held memorial services for those who fell in their country's service. Similar homage has been, or is being, paid in the far-flung military cemeteries, large and small, where Americans sleep on foreign fields, from Iceland to Japan. The sun never sets on the little white markers of our war dead.

As we think of the members of the armed forces who have given their lives in our country's service, it should be remembered that peace also exacts its sacrifices and takes its toll of gallant Americans. This week Washingtonians, and particularly colleagues in the Congress, have mourned the untimely death of the Honorable Fred Bradley, chairman of the Committee on Merchant Marine and Fisheries, on which I serve.

He was a patriot and gave unreservedly of his energy and strength to the public service. He will be greatly missed.

There is no doubt that we owe a great debt to our warrior dead and to our Fred Bradleys, to carry on their work and to maintain a strong, free America, and a world of peace and good will.

But we, a people devoted to peace, as perhaps no other nation ever has been, have on all too many occasions been called upon to sacrifice not only our wealth but our most precious citizenry on the altars of the gods of war.

In reporting from Washington on this particular day, the questions of management and labor, tax reduction, elimination of Government extravagance, partisan politics, and other vital matters seem vital only as they bear on the urgent duty which faces us to see that "these dead shall not have died in vain."

As Lincoln said in the greatest of all memorial speeches, "It is for us the living, rather, to be dedicated here to the unfinished work which they who fought here thus far so nobly advanced."

We are in grave danger of failing to meet our responsibilities. The danger is not immediate and is therefore obscured by a host of other problems. It will not reach the crisis for 10, 20, perhaps 50 years which seems remote now. But this crisis almost certainly will come and the outcome will be dependent on what action we take now and in the near future.

The threat is nothing new. It is fostered by unpreparedness. We hope that this time we have finally won a war to end wars. The U. N. has been organized for the primary purpose of preventing wars. Plans are in the making for international control of atomic energy and we hope we are on the threshold of an era of peace and international good will.

We hope this is true. However, the record of past experience is all to the contrary.

Even if we assume that, unlike the League of Nations, the U. N. has come to stay, the odds are still overwhelmingly in favor of a third world war, to test the new world organization and its efficacy in preserving peace. Before we can confidently confide our national safety to the new superstate, it must demonstrate that it can meet the pragmatic test. It will have to ride out a storm. Our own Constitution had to be bathed in the blood of the War Between the States before its solidity was assured. If this were true with respect to our small group of neighboring states with similar populations, traditions and ideologies, a test by fire will almost certainly be required before an organization comprising nearly all the nations of the earth can be assumed to be firmly established. Surely we should do all in our power to prevent the Gettysburgs and the marches through Georgia of such a titanic struggle from occurring on American soil.

To do so we must establish a sound and ever ready system of national preparedness. We must lay the foundations at once and it should have top priority now. Not after the next election or at some other convenient or politically expedient time but right now and always, it should be kept in the public eye. Of course strikes, controls, governmental extravagance, taxes, and other domestic problems are of great importance and have an almost daily impact on our lives. The prompt and proper solution of these questions is important to our comfort and security. But they should not distract our attention from preparedness.

We have survived many strikes, financial panics, and depressions, unpleasant though they were. On the other hand history has demonstrated twice within the past 30 years that unpreparedness jeopardizes our all. We have heard repeated warnings from our military leaders. Even without their expert opinions it is obvious to the average citizen that modern scientific developments are constantly adding to the dangers of a surprise attack. Speed, range, and devastating power of weapons, old and new, are ever on the increase. Each new discovery adds to the danger. With the passing of time, the suddenness, scope, and demoralizing effect of any such blow become potentially more serious.

The next big attack would be aimed logically at the industrial areas of the United States. Our wealth and production lines, which have twice saved freedom for the world, are likely to be the first objectives, not Belgium, not the Maginot line, not Pearl Harbor. Even if we have allies who fight as did the Russians at Stalingrad, the British at Dunkirk, the French at Verdun, we cannot count on their giving us the precious time to prepare and deploy as was the case in the last two wars. Not if we are the first objective.

In the past we have finished with mighty impressiveness but we have not looked well in the early rounds. Remember Pearl Harbor, the U-boat carnage, Bull Run, and Bladensburg? In the last two wars, God and our allies gave us the necessary time to mobilize our strength. Both times we paid a shocking price in blood and treasure for our unreadiness, but our friends were able to hold long enough to cover our frantic periods of arming and drafting. If there is a next time we must be strong before the crisis. We dare not rely on any time next time. One of the surest ways of postponing or preventing a third world war is for use to be ever ready for the worst.

We must profit from the errors and experience of the past. In a democracy each citizen shares responsibility for the national welfare. We should all be vigilant to insure that our leaders do not procrastinate with respect to so vital a matter. At first blush the ordinary citizen may not see why he should be required to worry about plans for national defense. He expects the generals and the admirals, the professional experts, to make the plans. They have won our wars in the past and should be trusted to look after the future.

Leaving it to the generals and the admirals might be sufficient in a totalitarian state but the past has proved that it does not work in our democracy. Ultimately, ours is a government based on public opinion. No matter how skillfully a plan is drawn, it will not be fully carried out unless it has popular support. Belief in the soundness and necessity of the plan must be translated by popular will to the Halls of Congress. It must have solid nonpartisan backing and be immune to the ebb and flow and expediencies of party politics. It must not be endangered by local interests, economy drives, or reforms. In other words, our plan for national defense must be more than blueprints devised and approved by the War and Navy Departments, or the new unified command. The plan must also represent the considered will of a substantal majority of the voters of our country. It will not function long without this fundamental support because any sound plan will be expensive and objectionable to strong minority groups.

After World War I a well-conceived plan of national defense was drawn up and enacted into law with the backing of General Pershing and the War Department. It was starved for lack of funds and when World War II arrived it was discredited and scrapped to a large extent. Like the League of Nations, it never had a fair test because of insufficient popular support. This present Congress, although economy-minded and determined to enforce necessary savings, will not deprive the armed services of needed funds. But what about future Congresses after the lessons of this war are not so fresh in the minds of the people?

The generals and the admirals can devise several different plans each of which, properly implemented, would give us protection and enable us to last out the early rounds of a future struggle and gain the time needed to develop our full strength. But the plan they select must have popular backing. Public opposition or even indifference will impair or defeat its success. The past has shown our generals and admirals much less skilled and successful in coping with politicians and voters than they have been with foreign enemies.

They need to know, for example, what support they can expect from the voters for some form of compulsory military service in time of peace. This question should be settled at once. If we are not to have a form of peacetime draft the whole structure will have to be radically different from what is apparently now contemplated. Every item of sound plan is dependent on the other items that go to make up the whole. The size of an adequate Regular Army is directly affected by the strength and quality of the National Guard and Reserves actually available. The quality of all arms and services is influenced by the funds, equipment, and time provided for training. And so it goes.

Our Government should lay an approved plan in basic outline before the American people. Fundamental questions should be settled with utmost dispatch. To win popular backing the plan should have full publicity and the people told frankly what it will cost.

These and similar questions should be fully and promptly discussed so that popular support of some sound plan can be crystalized. The public voice should be raised so that not only the present Congress, but future Congresses, will be in a position to know what basic type of national defense the majority of the people will support. Then, and only then, can the generals and the admirals work out the details with any confidence in the results.

There are bills now pending before the House and Senate that call for compulsory military training for all able bodied young men after they pass the age of 17. The idea of a perpetual draft is objectionable to large segments of our population. As a nation, we prefer a volunteer system. It cannot be denied that compulsory service is a form of regimentation and most Americans abhor being regimented, particularly in time of peace.

Our Constitution calls for religious freedom and many citizens are opposed to forced military training on conscientious grounds. We cannot escape the fact that some individual liberties, some freedom of education will be lost if we go in for compulsory military service.

However, our British cousins extended their wartime draft for another 5 years on May 22, a departure from their peacetime tradition. The cost of an adequate Army and Navy manned principally by professionals may be prohibitive. We are faced by unpleasant alternatives. The problem is an unhappy one, but it is of fundamental importance. If we are to keep faith with those whose memory we honor today, we must settle this issue fearlessly and without undue delay so that our leaders can plan intelligently and start building for the future and for eventual peace on earth. Our preparedness policy must be decided by the people—not by the Eightieth Congress—not by the War and Navy Departments. It should be a nonpartisan or at least a bi-partisan policy and once decided upon receive the loyal backing of all the people—else it and we may fail.

Veterans' Memorial Services

EXTENSION OF REMARKS
OF
HON. GORDON CANFIELD
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES

Monday, June 2, 1947

Mr. CANFIELD. Mr. Speaker, emphasizing that the end of the state is really liberty, our distinguished colleague the gentleman from New York [Mr. KEATING] urged an audience attending memorial services in Rochester, N. Y., Sunday evening, May 25, to remember our heroic dead by keeping America strong and "living our devotion to liberty." The Congressman indulged in a special salute to one in the audience who 5 days later took part in Rochester's Memorial Day parade as its lone surviving Civil War veteran, James A. Hard, who will be 105 years of age next month.

Mr. KEATING's address follows:

Mr. Chairman, comrades, and guests, it is a high privilege to join with you this evening as you do honor to our grand old comrade, James A. Hard, whom God has spared to walk among us as a symbol of the patriotic devotion of the brave soldiers of the Civil War. Here, too, in this gathering are veterans of the Spanish-American War, of the First World War, and you younger veterans of the last titanic struggle, to all of whom our Nation, by custom, acknowledges its great debt at this season of the year.

But we are gathered here in this annual service primarily to pay honor and tribute to the memory of those who in the wars of this country gave their last full measure of devotion to the defense of their beloved land.

Those men—and women—who rest beneath the grassy mounds marked, as they will be on the 30th day of this month, by

flower-decked stones, died for liberty. They gave their lives for Americanism. If their sacrifices are not to have been in vain, then we who are privileged to live must live as devotedly for liberty and Americanism as those departed ones died devotedly for liberty and Americanism.

The lowly Nazarene once said: "Ye shall know the truth, and the truth shall make you free." That text is not only the essence of living; not only is it the complete statement of spiritual salvation; it is a principle to which Americanism conforms completely because in a Government such as ours—a Government of, by, and for the people—it is the liberty of the people to know the truth that makes them free.

The wars in which America has participated have been conflicts begun by totalitarian governments. The American people have always been a peaceful people. They have never been prepared for war when war came because they were motived by good will toward their fellow men—not by any lust for power over other people; nor by any greed for the territory or possessions of other people. Whenever the manhood of America has marched, as you men and your comrades marched, to do battle for your country, the motive and purpose of America always has been to extend freedom—to extend the truth of government which sets men free to know that liberty which we wrote into our Constitution in the Bill of Rights.

No one can deny nor dispute that record and that impelling motive on the part of America. History sustains it completely. Our record in the Philippines, our record in Cuba, our record in every case where we have rescued subjugated peoples from the clutch of the despot has been to prepare them for self-government and then help them to set up their own government.

Today, after the last great struggle, America remains the outstanding bulwark of liberty left upon this planet. Across the world two conflicting concepts of government clash. With the world of the future in between, the United States and the Soviet Union face each other with conflicting ideological doctrines and governmental policies. Now that we have been by force of circumstances impelled into the position of world leadership, as well as being compelled to become the world's banker, and the world's Samaritan of mercy, there has arisen an imperative necessity that we face facts realistically and no longer bemuse ourselves by wishful thinking.

Our whole doctrine and concept of government is to live at peace with our neighbors; to permit self-determination by peoples within our own orbit of influence; to promote self-determination by peoples everywhere else in the world—in short, to permit the peoples of every nation to choose their own form of government. All we asked in the First World War in return for the millions of men, the rivers of blood, and the billions of money we spent was world peace between all the nations. We did not get that world peace.

When we became embroiled in the Second World War our course was perfectly clear to every informed person in the world; we were again going into war, we were again preparing to contribute millions of men and unprecedented billions of dollars that the world might have peace and security, that small, weak nations might be made free of the fear of being overrun, despoiled, destroyed, and enslaved by stronger neighbor powers. In the course of that struggle we not only had to pour millions of fighting forces and billions of dollars of munitions and supplies of war into the European theater, but at the same time we had to pour other torrents of blood and other billions of dollars into a war in the Pacific which we fought alone with practically no aid from any of our allies. Such a feat of waging war directed toward freedom and motivated by a desire that all men might be free and secure has never been witnessed in the history of mankind.

This Sunday evening seems a peculiarly appropriate time to reaffirm our passionate yearning to live at peace with all the world and also to analyze with you why it is that our concept and practice of government by consent of the governed has difficulty to live in amity on this globe with the concept of a dictatorship of the proletariat. America believes in the kind of government which grants men the freedom to worship God as their own conscience may dictate. We believe in political freedom, a free press, a free radio, free schools, and the liberty of the individual to seek his progress in his own way, secure from unjust interference by his government. We believe, and we have demonstrated, that people living under such a government, that individuals enjoying such liberty and equality of opportunity, do not have to and will not bow their heads to any dictatorship; they do not have to and will not take upon their shoulders the yoke of any despotic oppressor; they do not have to and will not look into the dust as they live out a weary life of toil and torture. Freemen under our American concept may lift their eyes to search for their destiny among the stars. Ye shall know the truth, and the truth shall make you free.

Open to all the world, America is a land to which anyone may come, observe and criticize if he chooses. Everyone may know how we live, how we work, how we play, and they may know, too, how we reverently worship the God of our fathers.

Why, then, is there an iron curtain around Russia and all the unfortunate satellite countries she has drawn within her circle? Fellow Americans, veterans who have offered to give your all for liberty, the reason, and you know it as well as I, is because the Russian rulers dare not let their people see how men and women live under the blessings of free government. The Russian rulers dare not permit their people to learn that the humblest laborer in America is better off in every way than the most-favored worker in Russia.

The term "communism" has always been employed to represent the Russian concept of government, just as Americanism has always been employed to represent our system of government. The word communism is misleading as applied to the Russian Government. Russia is not a communism where men share and share alike. There is no such thing in Russia as equality of opportunity. There is no such thing in Russia as a labor union. There is no such thing in Russia as a free newspaper or an independent radio station. Russia, instead of being a communism, is a tight, cruel, ruthless despotism that enslaves its own people. It is a despotism which believes it must have an insulating wall of satellite nations about it in order that the Russian people may not learn how men and women live richly under free government, and how completely and miserably enslaved the Russian people are under their despots. That is the real reason why, in spite of a long history of effort at conciliation on the part of the United States, the Russian representatives have resisted every effort by America to bring about an agreement that will lead to world peace.

You are being told by a small cult of subversionists in this country that America is archaic; that Americanism is outmoded; that your government by consent of the governed is not as efficient as government under communism or socialism or some other alien ism. Let's see about that:

The other nations of the world have had anywhere from a thousand to more than 5,000 years in which to achieve everything we have achieved in America in 170 years. They did not succeed. We did. Now, since our forefathers came from those very countries which failed to reach the heights we have scaled in America, by what magic did they build the foundations upon which in 170 years—a brief and fleeting period in the life of nations—we erected the greatest nation mankind has ever known?

Friends, veterans, it was the magic of our government by consent of the governed; it was the magic of our Constitution in which we bound ourselves under an organic law to restrain ourselves, to refrain from oppression of minorities in moments of passion and vehemence and, perhaps hysteria, on the part of the majority. It was the magic, if you please, of the Bill of Rights—the right to worship God as each should choose; the right to know what his Government does and to criticize it if he sees fit; the right of petition and peaceful assembly; the right to seek work or to go into business or to enter a profession if he chose; the right to exercise individual freedom in orderly liberty under the law to the fullest extent possible without interfering with a like right on the part of his neighbors. That is a government of laws and not a government by men. It was the magic of that concept and that system of government that has brought us in 170 years to the highest standard of living, the highest wages, the best working conditions, the best schools, the best communication and transportation systems, the greatest technique for mass production.

The subversionists would tell you that Americanism is inefficient and has failed in a modern world. Let's see about that:

After Japan had prepared for 40 years for war; after Stalin in Russia had prepared for 20 years for war; after Hitler had driven the German people by lash and spur for 12 years getting ready for war, what happened in America when we were forced into the struggle? Under a free government, a free citizenry, a free agriculture, a free labor, a free industry, all cooperated to put us, in the short space of 3 years, on an offensive war basis and the road to victory. In 3 years, mark you, we in America overcame the decades of preparation in those totalitarian countries. In 3 years we were in sight of victory in two wars, on two oceans, while we were pouring out billions upon billions of dollars' worth of war machines and material to sustain not only our millions of fighting forces in Europe and the Far East but to sustain our allies as well. During that same war, we had a national election without impeding our efforts in the least. That, veterans, is the kind of an America that you fought for. That is the kind of an America your comrades died for. That is the kind of an America we must live for. That is the kind of America that the subversionists say has failed.

Let's look a little further:

After the war was over, after we had proved to be the deciding factor in the two wars, all the other nations of the world turned to us to feed them; to clothe them; to give them the money by which to rebuild their shattered factories and their war-blasted agriculture. In this very hour, every nation in the world is looking to us for help. If there is any other nation in the world that is better than America; if there is any other governmental system in the world that is within cannon shot of our American system; if there is any other concept of government in the world remotely comparable in benevolence and efficiency, where is it? The subversionists, who prosper under the hospitality of this country and who then seek to destroy the very system that makes this Nation all it is, cannot answer that question. They close their eyes willfully to every fact of history.

Fellow citizens and veterans, we know that these forces are at work in this Nation today to overturn our American system. We know that many of the assaults upon the Congress are planned assaults designed to break down and destroy the confidence of the American people in their special instrument of control over their Government and their governors—because the legislative

branch of the Government is just that—the people's special instrument of control over their Government and their governors.

There can be no question in the mind of anyone who is intellectually honest that men may find spiritual progress only under a government which leaves them free to worship God in their own way and to exercise their talents in orderly liberty under the law.

I would like to read to you now what I consider one of the best definitions of government ever voiced by man, and it was written by that great philosopher, Baruch Spinoza, in the 1600's. He described Americanism as completely and succinctly as it could be done. Listen to his words:

"The last end of the state is not to dominate men, nor to restrain them by fear; rather it is so to free each man from fear that he may live and act with full security and without injury to himself or his neighbor. The end of the state, I repeat, is not to make rational beings into brute beasts and machines. It is to enable their bodies and their minds to function safely. It is to lead men to live by, and to exercise, a free reason; that they may not waste their strength in hatred, anger or guile, nor act unfairly toward one another. Thus the end of the state is really liberty."

We all hope and pray that war may never again come to this world. We know that war, instead of being a heroic, chivalrous adventure under flying banners and to the noise of blaring trumpets, is a cold, scientific, efficient method of mass destruction of men and factories, of cities and farms. We know that war has reached such scientific advances that it will be mass suicide if it comes again.

The Teacher of Galilee once said:

"What profiteth a man if he gain the whole world and lose his own soul?" In the utmost reverence may I paraphrase that truism and ask, "What profiteth men if they slay the whole world and lose their own lives?" How can war profit mankind? It is not possible. And yet we must stand on guard on the ramparts of liberty to see that some lust for power does not motivate men somewhere to seek the conquest of their neighbors for sheer love of exercising that lust for power.

We want peace with all the world—and I cannot imagine anyone wanting it more devoutly than you veterans do.

So, then, on this Sabbath Day, as we are gathered here to pay tribute to our heroic dead, we must remember that the peace of the world and the safety of our liberty lie in eternal vigilance. We must remember that in the state of the world today America must maintain a national defense sufficiently strong and efficient that no nation bent on aggression will be invited to direct an attack upon us. Above all, my fellow citizens, we must give our common devotion to our common country just as those who today sleep beneath the grassy mounds gave their common devotion. They died in their devotion to liberty. We must live our devotion to liberty if they are not to have died in vain.

God give us the strength, the wisdom, and the courage to live to perpetuate Americanism. In the words of the Master: "Ye shall know the truth, and the truth shall make you free."

Highway to Alaska

EXTENSION OF REMARKS

OF

HON. MIKE MANSFIELD

OF MONTANA

IN THE HOUSE OF REPRESENTATIVES

Monday, June 2, 1947

Mr. MANSFIELD of Montana. Mr. Speaker, under leave to extend my remarks, I am inserting an article by Richard Neuberger which appeared in the New York Times of May 4, 1947. The story of the Alcan Highway could not have a greater authority to tell it than Dick Neuberger who worked on it, traveled over it, and knows it as few men do.

I commend the reading of this article to all Members of the Congress because of its lucidity and also in the hope that it may stimulate interest in our northwestern and Alaskan areas. To Dick Neuberger I extend my congratulations for a fine article that needed to be written.

A NEW HIGHROAD TO ADVENTURE—ALASKA MILITARY HIGHWAY, NOW OPEN FOR PLEASURE DRIVING, CALLS THE MOTORIST TO A NEW AND VAST WILDERNESS

VANCOUVER, B. C.—For the first time in history the American motorist will be able this summer to travel overland to Alaska. If his car is "roadworthy" and if he has equipment and supplies for the long journey ahead, the Canadian Government will admit him onto the Alaska Military Highway, the fabulous 1,519-mile wilderness road constructed during the war as an emergency route to the American Army's bases in the far North.

Last year the Alaska Highway was closed to general traffic, despite thousands of inquiries from every land in the Western Hemisphere. There were no facilities along the famous road for repairing cars, selling food and providing other services. Now, however, no less than 15 stopping places dot the twisting roadway which extends from Dawson Creek, on the British Columbia plains, to Fairbanks, in the "Golden Heart" of Alaska.

Red-coated mounties patrol the more remote stretches, looking for wayfarers in trouble. It is 200 miles from the inn at Watson Lake to the fuel, food, and overnight accommodations available where the highway arches across the Teslin River on a high steel bridge. This is equivalent to driving on U. S. No. 1 from New York and Boston without seeing a wayside shack or gasoline pump.

Many other stopping places on the Alaska Highway are considerably more than 100 miles apart. For this reason cars must be in good condition. Nearly all the stopping places have gasoline, food, and bunks. Major repairs can be made at Dawson Creek, Fort St. John, Fort Nelson, Watson Lake, Whitehorse, and Fairbanks. These settlements are also the location of airfields, and at most of them medical care is available.

CUT IN WILDERNESS

The Alaska Highway, according to its builder, Brig. Gen. James A. O'Connor, is "the longest stretch of wilderness road constructed since the development of the automobile." Whitehorse is the only community of more than 250 people between the road's terminals.

Traveling the highway is an adventure. The road starts on the high plains of British Columbia. It crosses three mountain ranges, including the Canadian Rockies. It clings for several hundred miles to the outlying ramparts of the St. Elias Mountains, loftiest range in the Dominion. It spans 100 major rivers and many smaller ones. It begins in the Peace River agricultural belt and ends a few miles from the Arctic Circle.

Recent travelers from Alaska report the 1,519-mile route in excellent condition. During the Seattle maritime strike a convoy of 18 big trucks rushed emergency supplies to Fairbanks in record time. Although temperatures were often 50 below, the drivers experienced no difficulties, averaging 300 miles a day.

Pioneered by United States Army Engineer troops, and then later widened and improved by the Public Roads Administration, the highway cost $134,500,000. It is heavily graveled with well-banked curves. Its average width is 26 feet. Most of the bridges are of steel construction. The 2,130-foot suspension span across the Peace River is one of the great bridges on the North American Continent. Another long suspension bridge over the Liard River in the heart of the Rockies contrasts vividly with the primitive domain which it breaches.

HOT AND COLD

In the summer months the temperature on the road often touches 85 degrees. The highway also passes through the remote Yukon Territory settlement of Snag, where in February a temperature of 83 degrees below zero was recorded, the lowest in the weather annals of the North American Continent. From Whitehorse northward, there are comparatively few hours of summer darkness. The midnight sun illuminates the road. In winter the aurora borealis throws a spectacle of sinuous lights across the heavens.

The Canadian Army still exercises control over highway travelers, and although travel restrictions have been relaxed, travel permits must still be obtained from the Alaska Military Highway Traffic Control Board, whose headquarters are in Edmonton. W. J. Eveleigh of the control board recently announced that permits would be granted to "all applicants who are sufficiently self-contained." This means case and personal equipment must be adequate to the undertaking; apparently most Alaskan travelers are, for Mr. Eveleigh also reported that "all applicants for permits to travel have been accommodated, and it is intended to continue this policy."

Equipment should include a roll of mosquito netting to ward off the insect plague from nearby muskeg swamps. Mackinaws, long underwear, and heavy clothes are advised. Even in May and June a film of ice forms on springs and brooks after the sun has passed its noonday height. Although some cars can hold enough fuel in their tanks to cover the gap between all stopping points, a spare drum of gasoline will save worry on the longer jumps.

Probably the most spectacular scenery on the wilderness road is where it clings to the timbered shores of Kluane Lake, 140 miles beyond Whitehorse. This is in the heart of the Canadian solitudes. Moose, bear, and caribou inhabit the fastnesses. Grayling and trout fill the creeks and rivers. Ptarmigan flutter across the road, and now and then a wolf mingles his sinister howl with the throb of trucks and sedans.

Any fisherman who drives the Alaska Highway will be disappointed if he does not bring along his tackle. However, mounties and trappers insist the story is true of the motorist who stopped at Muncho Lake without rod and reel and caught a dozen lake trout with a roll of heavy twine and several bent pins.

Nearest large city to the southern end of the highway is Edmonton, capital of the Province of Alberta. It is 400 miles away via either a twisting prairie road or the Northern Alberta Railway. Edmonton itself is on the main line of the Canadian National Railway. Highways lead to this area from across the international boundary near Sweetgrass, Mont. Most of the roads to Edmonton funnel through the Alberta city of Calgary.

TRAVEL COSTS

The North Pacific planning project, organized by the United States State Department, estimates that it will cost two people $914 to drive from Chicago to Fairbanks and return. For four travelers the expense is put at $1,365. This includes all upkeep on the automobile as well as depreciation for 8,000

miles added to the speedometer. Such a trip would require approximately 35 days, allowing for brief stop-overs at Edmonton, Whitehorse, and Fairbanks.

Travel expenses on the Alaska section of the road are considerably higher than in Canada but four-fifths of the highway is on Canadian soil. Eggs in Fairbanks are $1.50 a dozen, beer 60 cents a bottle, and apples 25 cents each. But at Canadian wayside stations a caribou-steak dinner costs only $1 and ham and eggs and hashed-brown potatoes can be purchased for 35 cents. Gasoline prices frequently reverse this situation. On the Alaskan side of the border a United States gallon costs 55 cents. Some of the Canadian stopping places charge 80 cents for an imperial gallon, slightly larger than its American counterpart.

Pan-Pacific of Seattle has created an Alaska Highway tour that offers a 22- or 28-day round-trip on the romantic road which includes visits to Anchorage, Fairbanks, Mount McKinley Park, Seattle, Victoria, Vancouver, Lake Louise, Banff, and Edmonton. All-expense, conducted trips are scheduled for June 25, July 23, and August 20, each tour being restricted to 20 persons. The 22-day tour, returning by air, costs $689.19; the 28-day tour, returning by bus and railroad, is $665.50, not including meals on the return trip.

The wayfarer who reaches the distant end of the Alaska Highway will find that Alaska qualifies for the Indian description of The Great Land. The road ends in the Fairbanks area. Off toward the south is Mount McKinley, monarch of North America. This 20,300-foot peak towers higher above its immediate base than does even Mount Everest.

TO MOUNT M'KINLEY

Mount McKinley is reached from Fairbanks over the picturesque Alaska Railroad. Fares are expensive, approximately 10 cents a mile. McKinley Park Hotel, used as a rest camp for Alaska Army garrisons during the war, is in the shadow of the great Alaskan Range. The area abounds in big game, although, as in other national parks, hunting is forbidden. The fishing, however, is of the customary Alaska variety—bountiful.

Motorists can swing off toward the seacoast on the Richardson Highway, only major automobile road within the Territory. A spur of this highway extends to Anchorage, largest city in Alaska, with nearly 13,000 inhabitants. It also is the headquarters of the Army's Alaska Department. Hotel rooms in Fairbanks and Anchorage, extremely scarce now, will cost in the neighborhood of $5 a day. The traveler should count on spending $1 for breakfast, $1.50 for lunch, and $2 or more for dinner.

TRAVEL BY BOAT

Should the traveler leave the Alaska Highway at Whitehorse, he can journey to Skagway over the narrow-gage White Pass Railway. From Skagway boats of the Canadian Pacific serve southeastern Alaska, with its vast fiords and limitless spruce forests. Juneau, capital of the Territory, is the principal city. Behind Juneau, in the mountains, are numerous lakes reached by pontoon planes.

If the tourist prepares his own meals, he had better bring along an ample wallet. Grocery prices in Alaska average 50 percent higher than Seattle, one of the most costly American communities. Even before the present spurt in food costs, a bowl of soup was 30 cents in Juneau and a chocolate sundae 50 cents. Housing accommodations in Alaska are even more crowded than in continental United States, largely because of the many ex-soldiers and others who have come to Alaska in the past year in search of opportunity and settlement.

RICHARD L. NEUBERGER.

Russia Expands Its Anti-American Radio Broadcasts

EXTENSION OF REMARKS
OF
HON. KARL E. MUNDT
OF SOUTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Monday, June 2, 1947

Mr. MUNDT. Mr. Speaker, later this week the House will take up for action the so-called Mundt bill—H. R. 3342—which proposes to establish a United States information service abroad and to equip our Government to offset the libelous falsehoods now being disseminated about the United States in various sections of the world. In that connection, the following United Press news dispatch is of more than passing interest.

You will notice in reading the news dispatch accompanying these remarks, Mr. Speaker, that the Russians have very recently added a new voice to their short-wave radio programs which are being beamed to the United States and to people throughout the world who speak the English language. Albert Warner of the Mutual Broadcasting System has deemed this new female Russian broadcaster as Moscow Mary. The connotations of that title seem to make it an appropriate name.

As a nation we Americans are not addicted to short-wave listening so I suppose few people hear Moscow Mary. We are uniquely fortunate in this country in having a highly developed radio industry offering the public a variety of programs so Americans have little occasion to tune in on foreign broadcasts. In other countries, however, conditions are vastly different. Where the Government controls the broadcasting programs as it does in England and throughout Europe and where countries are small in size, listening to short-wave programs is the usual practice. Only by such listening habits do the auditors get variety in their programs and in many areas it is only by listening to short-wave programs from a variety of sources that people can hear the various sides of a story and thus have access to factors which enable them to arrive at the truth. Thus throughout Europe and those portions of the world outside of the United States and Canada listening to short-wave radio programs is the established custom.

Moscow Mary will not be able to deceive or disturb very many Americans, Mr. Speaker, but it is easy to visualize the possibilities of her counterparts in other languages in influencing and effecting listeners in other countries. For example, a Moscow Gretchen broadcasting in German and projecting falsehoods about the United States can make our occupation tasks in defeated Germany increasingly difficult. A Moscow Annette speaking in French and steadily maligning the United States would be certain to create ill will for America among the people of France unless we do something to counteract it.

The United States requires as large an area of good will and friendly attitudes as possible, Mr. Speaker, if we are to exercise our effective world leadership in the fields of international cooperation and permanent peace. We cannot afford to black out the light of freedom as it shines from America and we cannot afford to silence the voice of America as it is beamed abroad by short-wave to tell the world the truth about our American concepts and our American way of life.

GUESS WHO? MOSCOW MARY TALKS ON RADIO

The appearance of a female propagandist on Radio Moscow has given Americans a chance to enter a guessing game.

Moscow Mary, as she is called by Albert Warner of the Mutual Broadcasting System, who discovered her, may be an American. She has either a British or a "cultured" American accent. The poor reception from Moscow makes it difficult to determine which.

Warner said last night that perhaps some listeners will recognize Moscow Mary as a former high school playmate and give a clue to her identity. He pointed out that Americans managed to identify the voices of several Axis propagandists during the war. So he is recording her broadcasts and playing parts of them to Mutual listeners.

SHE DOESN'T LIKE US

Moscow Mary can never hope to compete with Japan's Tokyo Rose in popularity, Warner thinks. Her talks are aimed not at entertaining Americans, but at educating them to Moscow's way of thinking. She denounces "monopolistic Americans." She characterizes the United States as a hot bed of "grabbing imperialists out to take the wealth and freedom of other countries."

She has charged that American newspapermen wrote "preconceived lies" about the recent Moscow conference at the insistence of their "monopolistic newspaper proprietors."

STUMBLES OVER WORDS

She also insisted that the Russian press gives the truth to its people through censorship, while the American press is designed to withhold all truths from the American public.

Moscow Mary showed a tendency in her broadcasts to stumble over words occasionally, but this could be due to reading and not to language difficulties, Warner said.

Conference Report on Tax Reduction Leaves No Alternative

EXTENSION OF REMARKS
OF
HON. ALBERT J. ENGEL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, June 2, 1947

Mr. ENGEL of Michigan. Mr. Speaker, I am voting for the conference report on H. R. 1 when it comes before us today.

I opposed H. R. 1 when it was originally before us. I have not changed my views on it. I do not think it is the proper approach to tax reduction. I believe as strongly as ever that the only fair plan would be to increase family exemptions. The Knutson 20-percent-straight-across-the-board proposal was rankly unfair to those in the low-income group, and hence to the welfare of the country as a whole. The present conference report, calling for approximately a 30-, 20-, 10-percent tax reduction, is only

a slight improvement. Out of the $3,840,000,000 involved in the reduction, the 4 percent of taxpayers at the top will get $1,441,000,000 or 37 percent of the reduction; the middle 43 percent of taxpayers will get $1,378,000,000 or 36 percent of the reduction, while the bottom 53 percent of our taxpayers will get $877,000,000 or only 27 percent of the reduction. That tells the story.

I likewise opposed the Knutson bill because I first wanted to see what our revenue situation would be; how far Congress would go in cutting appropriations and how much of an increase we would get this year in Federal income. I wanted no blind reduction. It is evident now that a tax reduction is justified both on the basis of increased revenues and on the basis of savings being made.

It is a question now of the tax reduction contained in the conference report on H. R. 1, or no tax reduction at all. Under the circumstances I am voting for the conference report. Those of us who opposed the Knutson bill can have the satisfaction, slight though it be, of knowing our efforts were successful at least to the extent of modifying the original straight - 20 - percent - across - the board proposal and in getting the effective date set for July 1 instead of retroactively to January 1, 1947. The July 1 date is far sounder from the point of view of national fiscal policy.

All Japan Being Policed by Less Than 2,500 Yanks

EXTENSION OF REMARKS
OF
HON. GEORGE H. BENDER
OF OHIO
IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 14, 1947

Mr. BENDER. Mr. Speaker, under leave granted me to extend my remarks in the RECORD, I wish to include herewith an article published in the Cleveland Plain Dealer recently by Mr. Ralph J. Donaldson:

ALL JAPAN BEING POLICED BY LESS THAN 2,500 YANKS

The policy of the occupation authorities is to let the Japanese work out their problems in their own way to the greatest possible degree. SCAP (the supreme commander for the Allied Powers) will issue a directive to the Japanese Government saying that it wants certain things done, such as the passage of a law, a purge of individuals or the arrest of certain criminals. Then it is up to the Japanese themselves to carry out the orders.

Thus we have no military government in Japan in the sense that we have military government in southern Korea and the American zone in Germany.

But we do have military-government teams stationed in each prefecture in Japan. Their job is to advise and assist the local Japanese authorities in the implementation of the laws and reforms enacted by the Japanese Government in accordance with SCAP directives.

Most of these teams consist of 7 officers and 25 enlisted men, plus from 3 to 6 civilians, although some are larger. In all of Japan there are 46 prefectural teams and 8 regional teams. These are the only members of the occupation force who come into direct daily contact with the Japanese and who exercise surveillance over SCAP directives.

In other words, we are policing Japan today with a force of less than 2,500 men.

COOPERATION IS EVIDENT

This in itself is an indication of the way the Japanese authorities cooperate with the Americans. And as an indication of the popularity of the Americans among the Japanese, whenever a military-government team is withdrawn from one locality or village, there invariably comes to SCAP headquarters a petition signed by all the residents asking that the Americans be sent back.

It may well be asked what the rest of the American troops are doing in Japan if it takes only 2,500 men to police the entire Empire.

First of all, there is the brain trust at general headquarters. These are the people who make studies of the Japanese economy, who search the records for war criminals, who are seeking loot stolen from other countries, who plan the educational program, who trace the financial ramifications of the Zaibatsu, who plan for the rehabilitation of Japanese industry, who make surveys for reparations, and who compile various reports and recommendations on which SCAP directives are based.

Then there are those engaged in the maintenance of communication and supply lines. Unlike the Russians who live off the resources of the countries they occupy, we bring in all the food and other supplies needed by our military and civilian occupation forces.

In addition, there are the special services which operate the post exchanges, maintain 33 rest hotels in Japan for soldiers on leave, run 900 motion-picture theaters, and supervise various libraries.

One of the important service activities is the maintenance of schools for soldiers. This is under the direction of R. B. Patin, educational adviser to the Eighth Army, who is the former principal of Shaker Heights High School.

He supervises 135 civilian teachers who are conducting 25 schools throughout Japan, in which courses ranging from typing to abnormal psychology are offered. The largest school is in Tokyo, which has an enrollment of 2,400. Yokohama is next with 900.

One-tenth of the soldiers in Japan have enrolled in the Army educational program, and so far 67 percent of those who enrolled have completed their courses.

Patin tries to impress on each of the boys with whom he comes in contact that every soldier is in effect an American ambassador in a foreign country and that his individual conduct will have an important bearing on the future relations between Japan and the United States.

Finally, there are the combat troops who are stationed in various camps strategically located throughout the Empire. Their function ostensibly is to provide a show of force in the event of any resistance on the part of the Japanese to American orders. Actually they are needed to discourage any foreign power which might get a notion to attack or invade Japan. We are not taking any chances on Russia moving in.

The Late Honorable Fred Bradley

EXTENSION OF REMARKS
OF
HON. ROBERT B. CHIPERFIELD
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 27, 1947

Mr. CHIPERFIELD. Mr. Speaker, before the untimely passing of the Honorable Fred Bradley, of Michigan, he prepared a radio broadcast for release on June 2.

Inasmuch as his remarks pay a high tribute to our United States Coast Guard, members of his staff felt they should be placed in the CONGRESSIONAL RECORD, and I am only too happy to comply with that request.

UNITED STATES COAST GUARD CUTTER "MACKINAW"

(By Hon. Fred Bradley)

"Yes, our ship came in today." In these words our neighbor Al Weber back on January 4, 1945, announced the arrival of the United States Coast Guard cutter *Mackinaw* at her home port of Cheboygan. "Our ship" is exactly what I whisper to myself every time that my eyes view that pride of the Coast Guard on the Great Lakes. I wonder how many of our district's citizenry truly appreciate what the world's mightiest ice breaker means to us in the Northland. Mother Nature has ordained that Lake Superior in particular be ice covered for at least 3 months every year but from stories told me, and from accounts carried by our newspapers and Great Lakes periodicals, this year she seemingly was on a warpath. Instead of the ice in the upper lakes breaking up to permit passage of our freighters by early April, our ore-carrying freighters were still battling ice the early days of May. On April 26, after almost 5 weeks of constant ice-breaking duty the *Mackinaw* returned to her home port for but 1 day with the intention of proceeding on to Bay City for fuel and further orders. Instead, she received another S O S and had to return north to rescue additional freighters which became icebound. Were it not for this champion of the Lakes, our 1947 navigation season, in all probability, would not have opened up until May 1.

The *Mackinaw* is, of course, much more than an ice breaker and has many equally important duties to perform as a Coast Guard cutter. She engages in rescue work 12 months out of the year, services lighthouses, puts out and picks up other aids to navigation, such as heavy buoys; and during certain weeks in the summer she serves as a training ship to give actual seagoing training to the graduating class of the Coast Guard Academy at New London, Conn At this point I might also mention that she participates in civic festivals which various of our larger cities schedule during the summer months, but this only when participation does not interfere with her operational commitments.

I keep a scrapbook on the *Mackinaw* because somehow I feel more or less paternalistic about her, if one can be pardoned for using that term in connection with a vessel. Having sponsored the legislation which made possible her construction, I like to closely follow her work in our midst and the efforts of her splendid officers and crew. Let me give you just a brief resume of my 1946 clippings—these show you exactly what she means to Great Lakes interests. The very first one in January records the splendid leader chosen to be the new icebreaker captain—Commander C. H. Stober, who, incidentally, holds a splendid war record as in fact do many of his crew. "Icebreaker *Mackinaw* off to busy season," and under this caption we learn that in the first 3 days of the 1946 season's icebreaking, she went to the assistance of seven ships; then two train ferries became stuck in the ice off Mackinaw City—the *Mackinaw* set them free. The February 11, 1946, issue of the Cheboygan Tribune records the *Mackinaw's* assistance to the icebreaker *Ste. Marie* when she was stopped by a heavy windrow of ice. And then the Republican News, in an editorial headed "Performances of *Mackinaw* reas-

sured skeptics, if any," told its readers that this vessel in 1 month of 1946 had already proven her value. And here in their order are some other of the clippings on the *Mackinaw's* activities: "Three icebound craft released; *Mackinaw* goes to assist," this records the rescue of the fishing tub *Liberty* of Charlevoix and two lifeboats. "Coast Guard to survey straits ice," "The *Mackinaw* sails to fuel lighthouses"; "Icebreaker opens Soo locks Monday," and that clipping is dated March 20, 1946. "*Mackinaw* aids first carriers start season"; "Cutter tows in disabled fish tug"; and then we have numerous clippings on the Coast Guard Academy cadets who explored the wonders of our Great Lakes region aboard the *Mackinaw*; and how she was welcomed by hundreds at visits to various of our Lakes ports. During the 1946 winter season the *Mackinaw* assisted more than $15,000,000 worth of shipping which was icebound—and the records of the 1947 winter and spring seasons, from all indications, will be even more glorious.

I recognize, my listeners, that quite a few of you are well aware of the foregoing but some of you possibly are not. The United States Coast Guard—Uncle Sam's first Navy—has, and is, performing excellent work in our midst and I believe that each of us, who is privileged to live in our marvelous Great Lakes region, and is familiar with the activities of the Coast Guard, is outspoken in his praise and thanks to those able servants of the public whose efforts have so frequently gone seemingly unnoticed.

I was extremely grateful for a letter which was written to me April 25, 1947, by Capt. T. Howard Saunders, chairman on navigation-legislation, International Shipmasters Association of the Great Lakes. Aboard the steamer *Henry G. Dalton* he wrote me thus:

"I would like to take this opportunity to drop a few lines on a subject you have been most interested in, namely, the ice breaker *Mackinaw*, which is now successfully opening navigation on the Great Lakes, and surely as night follows day is doing a whale of a job living up to every expectation of her.

"I have had a chance to observe the operation at first hand; as being master of one of our bigger ships, I have made a trip to Lake Superior and back with iron ore. I locked up at the Soo on April 13 and entered the ice field which extended 100 miles west of the Soo—the ice in Whitefish Bay, which you well know, was 15 to 30 inches, besides being windrowed in places up to 20 feet. I don't have to remind you, Congressman, that conditions like that are just too much for our freighters to get through—they have to have help like that given by the *Mackinaw* to get through.

"As the economy of this country is tied up in the operation of shipping on the Great Lakes, it is important that navigation get started as soon as possible. As a master with 40 years experience, 25 of them sailing a boat, it is my considerate judgment that without the ice breaker *Mackinaw* navigation through Lake Superior would not be a possibility until May 1, or 20 days later. Not only that, but boats trying to force their way through alone would sustain untold damage which is impossible to calculate, and no doubt in my mind force a lot of ships to be drydocked.

"Yes, Congressman, all your efforts in behalf of the *Mackinaw* are paying dividends today, and you should feel pretty good about it all. The breaker is being expertly handled by Commander Stober and his staff. He is efficient, courteous, and very helpful. You know, breaking ice and getting ships moving is not the easiest task in the world, but the commander has been very gracious about it all.

"The Shipmasters Association, whom I represent, wish to express our heartfelt approval of it all to you and through you to all—a hearty thank you."

That letter was unsolicited, my listeners, and it is a tribute to the valiant men of the United States Coast Guard who 24 hours of the day do their duty well and many times "above and beyond the call of duty."

Under date of May 7, Mr. John T. Hutchinson, president of Lake Carriers' Association, Cleveland, directed a letter of thanks to Admiral Joseph F. Farley, Commandant of the United States Coast Guard, reading thus:

"The Lake Carriers' Association and all its member companies desire to express their appreciation of the invaluable assistance rendered this spring by the Coast Guard to shipping on the Great Lakes. Ice conditions have been so unusually severe that the opening of navigation would have been greatly delayed without the ice-breaking operations carried on by the Coast Guard.

"The Commander, Ninth Coast Guard District, Commodore James A. Hirshfield, and his Chief of Staff, Commander E. J. Roland, have met frequently with representatives of the Association to review the ice situation and to plan operations. Their cooperative spirit, their knowledge of localities and conditions, and their ability to plan and carry out necessary operations have been outstanding.

"Commodore Hirshfield has used his forces with efficiency to the fullest extent. The cutters *Mackinaw, Woodrush, Tupelo, Acacia, Sundew* and *Tahoma* have all been employed in ice breaking and have rendered yeoman service. The Association extends its thanks to the commanding officers and crew of all these vessels for their accomplishments under arduous conditions.

"While all the vessels performed exceptionally well, the work of the *Mackinaw* has been oustanding because of the inherent qualities of the vessel. Capt. C. O. Rydholm, chairman of the shore captains' committee of the association, was aboard this vessel for several weeks as an observer. He has expressed high praise for the ability of the commanding officer, Commander C. H. Stober, and for the efficiency of the other officers and the members of the crew. Captain Rydholm's hope that Commander Stober may remain on the *Mackinaw* so that his experience and knowledge may be available another year is seconded by the association.

"Commander T. A. Dahlburg at the Soo has been, as always, extremely cooperative and able in supervising operations at that critical point.

"I am taking the liberty of sending a copy of this letter to Commodore Hirshfield, Commander Roland, Commander Dahlburg, and the commanding officer of each cutter, in order, that they may know the very great appreciation shipping interests on the Great Lakes have of their highly successful icebreaking operations that hastened the opening of navigation on the Great Lakes in spite of unusually severe ice conditions."

It is letters of commendation such as I have just quoted which warm the hearts of public servants and inspire continued faithful service.

The present Commandant of the Coast Guard, Admiral Joseph F. Farley, a man most highly respected, is an inspiration to the men under his command. He graduated from the Coast Guard Academy in 1912; served on various cutters and destroyers; was signal officer on the cutter *Yamacraw* on convoy duty off Gibraltar during World War I and has to his credit over 30 years of meritorious service as an officer of the United States Coast Guard. I want to say that ever since I have been in Washington I have treasured my associations with the men who pilot this splendid military service of our country—I think each one has indelibly inscribed on his mind the mission of the United States Coast Guard Academy—"to graduate young men with sound bodies, stout hearts, and alert minds, with a liking for the sea and its lore, and with that high sense of honor, loyalty, and obedience which goes with trained initiative and leadership; well-grounded in seamanship, the sciences, and the amenities, and strong in the resolve to be worthy of the traditions of commissioned officers in the United States Coast Guard in the service of their country and humanity."

To Admiral Farley, to his associates whether in headquarters here or out in district offices and field stations, to the men under his command, I want to pay tribute at this time—all of you in this postwar period are faithfully fulfilling every demand made of you, just as you did during World War II and in fact as have those who have gone before you since the Coast Guard was founded in August 1790. "Semper Paratus"—Always Ready. You have been, and are, living up to your motto.

Let Us Avail Ourselves of the 7-Mill-Per-Kilowatt-Hour Electric Power Now on Hand—Let Our Endless Supply of Cheap, Never-Failing Alabama Power Attract More Industries to Our State, Modernize Our Rural Homes, and Light Up Every Farm in Alabama

EXTENSION OF REMARKS

OF

HON. FRANK W. BOYKIN

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Monday, June 2, 1947

Mr. BOYKIN. Mr. Speaker, in my long service in this House there is probably no bill to which my colleagues—without regard to sectionalism or party differences—annually give a greater measure of thought, time, study, and effort than they bestow upon the matter of electrifying the farm homes in these United States.

I have given wholehearted support to every appropriation for the Rural Electrification Administration that has ever come before this House. I am desirous of again joining hands with my colleagues. I want to place at the disposal of the Rural Electrification Administrator every last dollar he needs to enable him economically, efficiently and with dispatch to distribute the wonderous magic of electric power to all the people on our farms.

Mr. Speaker, I am in receipt of a telegram pertinent to increasing the amount budgeted by the President for the uses of REA this coming fiscal year.

President Truman recommended an appropriation in the amount of $250,000,000 for expanding the rural electrification program for 1948. Additionally thereto was the sum of $5,600,000 for this year's administration, making a total of $255,600,000.

The bill before the House provides $225,000,000 and the further sum of $4,000,000 for administration, making a total of $229,000,000.

Mr. Speaker, I favor the amendment offered by my good friend, the gentleman from Missouri [Mr. CANNON], and I am also in favor of the substitute amendment to be offered by that great exponent of governmentally distributed power by the TVA and REA, our own beloved gentleman from Mississippi [Mr. RANKIN].

The amendment offered by the gentleman from Missouri [Mr. CANNON] provides:

On page 61, line 3, strike out "$4,000,000" and insert in lieu thereof "$5,600,000" and on page 61, line 6, strike out "$225,000,000" and insert in lieu thereof "$250,000,000."

The substitute amendment offered by the gentleman from Mississippi [Mr. RANKIN], provides:

On page 61, line 3, strike out "$4,000,000" and insert "$5,600,000," and in line 6 strike out "$225,000,000" and insert "$300,000,000."

Mr. Speaker, I want my collegues to know I am supporting both the original and the substitute amendments thereto but I want the RECORD to show that I am far more favorable to the Rankin substitute—providing for a $300,000,000 appropriation for REA rather than the $225,000,000 as carried in the Agricultural appropriations bill as reported from out of the committee.

Mr. Speaker, I want my collegaues to join me in the support of an appropriation for rural electrification of every last dollar needful and necessary to carry that program forward on the greatest possible scale within the coming fiscal year.

The telegram to which I have hitherto referred came to me from some of the most distinguished rural electrification managers that we have in the State of Alabama. These are men known for their devotion and zeal to this program not alone in my State but throughout the United States of America.

These telegrams are short. I am going to read them to you. They are as follows:

Hon. FRANK W. BOYKIN,
House Office Building,
Washington, D. C.:

At a conference of the Alabama REA managers held at Montgomery, Ala., today they unanimously adopted a resolution, requesting said resolution be sent to each Alabama Representative strenuously urging the loan fund for the fiscal year 1948 cut by the House Committee be increased to $361,000,000.

This amount is considered imperative to meet current commitments in this area. Also urge that the administrative budget be increased to assure the necessary service to cooperatives.

BASIL THOMPSON,
B. L. WOODHAM,
J. A. DAVIDSON,
A. B. ROBERTSON.

Hon. FRANK W. BOYKIN,
Washington, D. C.:

This REA cooperative has signed applications pending since 1944 requiring 242 miles of line, urge your support on appropriation in amount of $361,000,000 for fiscal year 1948 to insure sufficient funds for rural electfication. Farmers getting impatient in delays.

W. C. WINGARD,
Manager, Central Alabama Electric Cooperative, Prattville, Ala.

Mr. Speaker, I urge upon you and every colleague in this House to give due thought and consideration to the requests made by these gentlemen. I am confident that they are grounded in sincerity of purpose and in truth. They were sent to this body in order to extend the benefits of the REA Act established by this House.

I am happy, Mr. Speaker, to know that very shortly will go to the President's desk—and for his signature—a bill which passed this House by an overwhelming vote some 6 weeks ago, a bill which reduces the cost of the operation of the Government in this fiscal year by some three to five billion dollars, a bill which is going to prove the equivalent of giving at least a 5 percent raise in pay to every wage earner, not alone in Alabama but in these United States, beginning July 1.

These savings to the American people will be effected by virtue of reducing the amount of the withholding and income taxes now deducted from the weekly or monthly pay envelopes or the pay checks handed to the workers at regular pay periods.

Mr. Speaker, the appropriation by this House for rural electrification does not primarily come in the category of governmental expense except with respect to a small percentage of the total annually allotted for the administration of the act.

Every dollar which we appropriate is put out to our farmers on an interest-bearing basis.

The farmers of America in the full dignity of their integrity, their character, and their ability, back the notes and other guaranties which they hand the Rural Electrification Administrator as security for every last dollar of appropriation made their co-op out of the appropriations made by this Congress.

Thus the Rural Electrification program is a sustaining program. The money borrowed is all paid back to the Government—and with interest.

The history of defaults by rural electrification co-ops are microscopic. Never in the long history of finance—public or private—has such a minima of loss attended the advancement of funds now totaling upwards of a billion dollars.

The Congress of these United States can be justly proud of the Rural Electrification Act, the funds of which fostered and enriched this magnificent Nationwide project to light up the farm homes of America.

Mr. Speaker, upon receipt of the telegrams from the good people of Alabama I sought out the report that came from the Appropriations Committee of the House to this, the Committee of the Whole House.

Particularly did I concern myself with a study of the report made by the Honorable EVERETT DIRKSEN, chairman, and his subcommittee on the REA appropriation bill.

Mr. DIRKSEN and his committee deserve the unstinted praise and unanimous vote of thanks from this body for the splendid work which they have been carrying on day after day, week after week, month after month, and frequently into the long hours of the night, on their committee assignment and in our behalf.

The records of the hearing by that committee covers upward of 3,000 pages of closely written testimony. They pictorialize the calm judicial procedure which the committee followed in their fact-finding studies and in their interrogations of hundreds of witnesses charged with the administration of these funds.

The records exhibit the kindness, the understanding, the tolerance, the frankness, yes, and even firmness of the chairman and his fellow committeemen in their endeavor to discover ways and means by virtue of which every last vestige of waste, of inefficiency, or unnecessary expenditures, could be cured, corrected, or abated by way of the appropriation of funds.

The chairman pointed out to the Rural Electrification Administrator, while he was testifying, some of the many pitfalls which might well be avoided in order to retain to the farmers of our country the benefits of rural electrification as declared by Congress to be its purpose in enacting enabling legislation.

The reports of this hearing disclose that Mr. DIRKSEN, in addressing Mr. Wickard to these pitfalls, spoke in part as follows:

Now, I think the one force that could destroy and impair the Rural Electrification Administration more than anything else, would be administrative incapacity and administrative ineptitude. In other words, a person does not have the qualifications that are requisite to discharge the responsibilities that are his, and I think it is very appropriate, since you are asking us here for $250,000,000, plus $5,000,000 plus for administrative expenses—to take a look at your personnel.

What followed was a free, frank, candid, and honest discussion with respect to the salaries of many officials in the administration—currently paid as much as $10,000 a year for work done for the Rural Electrification Administration.

Then followed further remarks appropriate to the following subjects: The Availability of Material, Available Costs of Installation Per Mile of Line, the Extent of Responsibility of the Rural Electrification Administration After the Completion of the Project, the Requirements for Additions to Existing Lines, the Number of Employees in Rural Electrification Administration, the Consideration of Political Activities in Rural Electrification Administration, the Qualifications of Certain Personnel, the Total Amount of Funds Allotted Since Inception, the Amount of Uncollectible Loans, Questionable Accounts, and the Construction of Power Plants, and so forth.

Page upon page of these records give true report of every word spoken in the long hearings held during the last 3 months. They bespeak the endless hours spent in the hearings as well as in the preparation of the reports made to this, the Committee of the Whole House.

Mr. Speaker, the question of the construction of power plants was a question of seemingly great interest to Mr. Dirksen's committee. What follows are but few of the high lights extracted from the questions and answers which passed between the Honorable H. CARL ANDERSEN, Representative to the Congress from the First District of Minnesota, and Mr. Claude R. Wickard, Rural Electrification Administrator, while the latter was testifying before the committee:

Mr. ANDERSEN. I would like, Mr. Wickard, to add to the points which the chairman stated as possible points which might injure the Rural Electrification Administration in the future one more point, and that is unnecessary competition with private business.

I am getting back into the very same subject we discussed last year, and I wish you would give me, for the record, your attitude toward constructing power plants. Just how closely do you pass upon the need for these particular plants? You do pass upon the feasibility of any proposal for any such plant; do you not?

Mr. WICKARD. We not only pass on the feasibility, Mr. Congressman, we pass upon the desirability from the standpoint of improving the service or giving a cheaper cost of service to the people who will get electricity from that plant. Of course, we always have in mind that we never have enough money for distribution lines. Therefore, we prefer to put our funds in distribution lines, but whenever it is necessary to get power, as it is in so many cases, in order to give adequate service or to build further distribution lines, we then consider putting in a generation plant.

In a number of instances, we have put them in because the power costs of the commercial power suppliers seemed to be unnecessarily high. In a great number of instances all we had to do was to talk about putting in a generation plant, and that enabled the cooperatives to get a much more favorable rate, better quantities of delivery, and more satisfactory service from the power companies.

The project to which you refer was turned down, as I recall, because we found that we could buy the power there as cheaply as we could erect the plant, and whenever we find that we can buy it as cheap, and get an adequate source of power, we do not make the loan.

Mr. ANDERSEN. I think you did perfectly right in that particular case. But, generalizing, you do not approve any generating plant where you can obtain, or, rather where that association can obtain, from private power sources, the energy they need at a reasonable price?

Mr. WICKARD. No, sir.

Mr. ANDERSEN. You are very careful on that point?

Mr. WICKARD. Yes, sir. And we have been criticized, as you may know, by some of the cooperatives and some of the farm people, because we have not made more loans for generation, but we are trying——

Mr. ANDERSEN. On that point, Mr. Wickard, I think the committee realizes that it is up to this committee, in some cases, to save some of these Rural Electrification Administration cooperatives from their overenthusiasm.

Mr. WICKARD. Yes, sir.

Mr. ANDERSEN. But if they can obtain, at a reasonable price, the energy from private sources, you do not, and would not, approve any such applications for a generating plant?

Mr. WICKARD. No; we do not.

Mr. ANDERSEN. But in the meantime, we are using up millions of dollars of loan authorization money that, in my opinion, could be much better—every cent of it—applied to regions where thousands of farmers are begging for extensions and for which funds are not available.

I am just bringing out this situation, gentlemen, as an example of what, in my opinion, should not be permitted anywhere throughout the United States. I do not think that any of the loan funds should be permitted to be allocated to do other than what the basic act is supposed to do, and that is to bring electric energy to the farmer who has not before this had it. This is my contention.

Gentlemen, I may state here that my own farm, which is my home, in Minnesota, is served by the Rural Electrification Administration, and certainly I feel that it is of immense benefit to agriculture.

It is because of that belief I am personally trying to keep, as is Mr. DIRKSEN, the Rural Electrification Administration from going down tangents, perhaps, and roads, perhaps, along which it has no business going. I want to see this money spent where it is supposed to be spent, and I would like your assurance that that is what you are working toward, Mr. Wickard.

Mr. WICKARD. It is.

Mr. Speaker, there are many of us here in this House who have been critical of Administrator Wickard's attitude toward the use of funds for building generating stations. I want you to note that Mr. Wickard stated in no ambiguous terms—when testifying before Mr. DIRKSEN'S committee—that he is going to live within the act with respect to the building of generating stations in areas in which there are ample quantities of reasonable priced power available. Mr. Speaker, in the southern part of Alabama the rate for power is now but 7 mills—less than three-quarters of a cent—per kilowatt-hour.

The question of building generating plants in such areas where ample quantities of "business-managed public power" is available has been a very moot problem in my own State of Alabama.

The Alabama delegation to Congress have heard a great deal of criticism levied with respect to the idea of building a generating plant in the last several months.

I am happy to note that the question of urging the building of power plants, where not necessary, is not altogether confined to the State of Alabama.

Mr. Speaker, I am personally in favor of building such generating plants in any area where there is not sufficient power available, or where there is no existent source of central public power, or where the local farmers cannot secure reasonable rates for their power requirements from business-managed public power companies, but I am compelled to feel that we should live within the law as it is written on the books.

Furthermore, I feel that this House must give serious and weighty consideration to the recommendations made by the Committee on Rural Electrification, wherein they reported:

A condition is arising in the rural-electrification field which merits the attention of Congress, and particularly the legislative committee which has jurisdiction over REA matters. It relates to the construction of generating facilities in those areas where an adequate power supply now exists.

If REA undertakes to duplicate such facilities, it is likely to develop a condition under which the cooperatives which obligate themselves for such facilities, as well as the private utilities operating in the same field, may experience difficulty in operating on a pay-in basis, and no good purpose could be served by such a condition.

The committee wishes to point out that if a duplication of unnecessary facilities should develop it will affect the real payment capacity of cooperatives as well as the return to existing utilities on capital investment and might ultimately produce the same condition which developed in the transportation industry resulting in tremendous losses to innocent holders of securities.

Mr. Speaker, we in Alabama do not need any new generating plants. What we do want is a plentitude of funds that will light up our farm homes in Alabama.

It is a sad commentary on our State that with worlds of power available to us from the great Tennessee Valley Authority on the north, that with vast quantities of power available from lines entering our State from the Gulf Power Co. on the south, that with our own Alabama Power Co., for want of new consumers, 13 times as much power as would be required to service our co-ops in Alabama is now being exported across State lines into 5 neighboring States.

Mr. Speaker, what we in Alabama need is not more generating stations, what we need is to build more REA co-op pole lines; string more wires through our counties, install more switches, more transformers, and distribute the amazing quantities of cheap Alabama power, now available, to every rural town, factory, and farm in our State.

The Late Honorable Fred Bradley

EXTENSION OF REMARKS

OF

HON. ALVIN F. WEICHEL

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Monday, June 2, 1947

Mr. WEICHEL. Mr. Speaker, along with Members of the House I attended the funeral of our beloved colleague, Fred Bradley, a most distinguished Member of the House. At such a time words fail to express our feelings, but I want to include the thought from the Presque Isle County Advance of Rogers City, Mich., of those who knew him best:

FRED CAME HOME TODAY BY PLANE

Yes, that is what Rogers City folks said, Fred came home by plane. They remembered how Fred, not Congressman Bradley, used to buzz the local housetops with his first little plane until we local folks cussed him out, just as he would do when we incurred his displeasure.

They remembered how he liked to come down Rogers City's short main street, where traffic moves leisurely, dressed in rough tweeds, jaunty cap and even coveralls, yelling across at whoever he might see, "How's fishing out on Trout River since we put in the dam?" or "Has the duck flight started yet?" "Hello, you son-of-a-gun, what's going on tonight?"

Washington, yes and Detroit, and London, and Moscow, all will call attention to his passing. He was the fellow who put the small town, where the train backs in, on the map of the world. They too will tell, but in their other words, that Fred came home to Rogers City, and by his favorite transportation, by air.

How did he vote on a certain piece of legislation? Maybe folks don't remember. But they do remember that the boys he appointed to the Government Academies from the Eleventh District of Michigan were never appointed for political reasons.

Was he a prewar isolationist? We forgot long ago, but he was 100-percent American and he always voted that way, regardless of party.

Today at 2 o'clock the town was quiet. Window shades on the town's little stores were drawn and the main street was deserted. Fred had come by plane and the local folks were down at the church on the corner seeing Fred off on his last flight. They were not thinking about Congressman Bradley, his

political record, or his faults. Those things we know, better than the folks in Washington or elsewhere.

They were paying their last respects to Fred, the fellow who mingled with, and liked his fellow men in all walks of life. It might have been said that he was born with a silver spoon in his mouth, to quote that old adage, but that never changed him.

Happy landing, Fred.

It is only fair to say that the above is not our own.

It is an expression of another, and as we read it over we wonder if it might not well come, not from one individual in our community, but from a good many of us who might, if we had the opportunity, say just about the same thing. It seems typical of how many a chap in Rogers City might feel at this time when Fred Bradley has passed from among us.

FUNERAL SERVICES HELD WEDNESDAY AT WESTMINSTER—REPRESENTATIVES OF DISTRICT, STATE, AND NATION WERE HERE TO ATTEND LAST RITES

Congressman Fred Bradley died unexpectedly at New London, Conn., late Saturday afternoon. He suffered a heart attack while visiting the Coast Guard Academy as a member of a congressional committee, becoming ill in an officers' room and died a short time later in the infirmary.

Word of his death reached Rogers City a short time after his passing when a dispatch came to the Advance and the radio carried an announcement of his death early in the evening. His death, at the age of 49, came as a shock to many of his friends here.

Mrs. Bradley was at Norfolk, Va., in company with Mrs. Karl LeCompte and Mrs. Alvin Freeland, attending the launching of the new steamship *Ulysses*, largest tanker afloat, at the time of Mr. Bradley's death. News of his death did not reach her until late in the evening, after which the party drove all night to her home in Washington.

Mr. Bradley was, of course, well known to all of us. He was serving his fifth term in Congress and had reached a position of influence which probably no Representative of the Eleventh District had ever attained. He was chairman of the House Merchant Marine and Fisheries Committee, one of the most important committees, especially to this district, in Congress.

Frederick Van Ness Bradley was born in Chicago April 12, 1898. He came here with his father, Carl D. Bradley, about 1911, when the elder Mr. Bradley assumed the presidency of the Michigan Limestone & Chemical Co. His father was an executive of unusual ability and a man who took a great personal interest in Rogers City and Rogers City people. His memory is revered by all who knew him.

Fred grew up in ideal surroundings. He attended the public schools and later went to the Montclair Academy in New Jersey, and was graduated from Cornell with a bachelor of arts degree. He was married to Marie Hillage, of Front Royal, Va., in 1922, and Mr. and Mrs. Bradley came to Rogers City to make their home, Mr. Bradley being employed as purchasing agent for the Michigan Limestone & Chemical Co. and the Bradley Transportation Co.

Following his father's death, he resigned and ran for Congress. His youth, ability, and dynamic campaign appealed to the voters. He was intensely interested in air travel and campaigned the big district with his plane. He was well to do, a fact often a handicap to a candidate, but he disdained any camouflage, inspired a Republican organization at low ebb, and was elected in November of 1938 over a New Deal candidate.

He was a veteran of World War I. Prior to World War II he opposed some preparedness measures, although he aided materially in building up the air forces.

He urged the development of Great Lakes waterways, and, when war came, worked to enlarge the wartime shipping industry on the Great Lakes, contending that greater protection existed on the Great Lakes than in ocean ports. He waged a vigorous campaign for the fortification of the Soo locks, terming them America's No. 1 air target. It was due to his efforts that the locks were given protection.

He had an almost complete anti-New Deal record during the Roosevelt administration and was, before the war, considered an isolationist, although strong for national defense.

Despite his staunch Republican stand on most issues, Mr. Bradley once took General Motors Corp. to task for making a whipping boy out of OPA, and blamed the corporation for boosting its car prices in 1945.

In recent labor-relations debates in the House, he took the view that the Government should get out of the business of settling strikes and leave labor disputes to union and employers.

Fred owned his own plane for a number of years but later turned his attention more to his work in connection with the Lakes. He had his own yacht and spent a good deal of the summer in Rogers City and at Munising. Mr. and Mrs. Bradley also owned a summer home at Grand Lake. Recently he sold his home in Rogers City but had planned, on retirement, to return to Rogers City and build a home on the site of the Bradley farm.

Congressman Bradley was laid to rest Wednesday afternoon in the Rogers City Memorial Park beside the body of his only son. Mr. and Mrs. Bradley had but one child. The little one, named after his grandfather Carl D., died in 1933 at the age of 2 years.

Mr. Bradley was a member of the board of visitors of the United States Coast Guard Academy and Coast Guard planes provided transportation in connection with the funeral. His body was flown to Alpena Tuesday. With him were Mrs. Bradley, her sister Mrs. A. D. Cone and Mr. Cone, her brother H. G. Hillage, of Front Royal, Va., House Sergeant at Arms Wm. Russell, Admiral Jos. Farley of the United States Coast Guard, Comdr. C. D. Olson and Lt. Comdr. Bender, of New London.

Another plane brought the congressional delegation, Congressmen JOHN D. DINGELL, BARTEL J. JONKMAN, and PAUL SHAFER, of Michigan, and Congressmen GEORGE W. GILLIE and ROBERT GRANT, of Indiana. They were accompanied by Assistant Sergeant at Arms Zeak Johnson. Wednesday morning this congressional delegation was joined by Congressman AL WEICHEL, of Ohio, ranking member of the House Merchant Marine and Fisheries Committee.

The planes were met at Alpena by I. L. Clymer, president of the Michigan Limestone & Chemical Co. and a delegation of Rogers City citizens. An Alpena delegation and an honorary guard of State police were at the airport. Mr. Bradley's body was brought to Rogers City to the chapel of the Shirtum-Ruggles funeral home to remain until the services.

The House, out of respect to Mr. Bradley's memory, met and adjourned Monday without transacting any business.

A prayer service at the Shirtum-Ruggles funeral chapel at 2 o'clock Wednesday afternoon was followed by a church service at 2:30 at the Westminster Community Church. Rev. J. L. Kennedy, of Mount Clemens, former Rogers City pastor, assisted by Rev. William Lichau, officiated at the services. The Westminster Presbyterian Community Church was built during the lifetime of Mr. Bradley's father and largely through his efforts and with his financial assistance, and stands as a monument to the members of the Bradley family.

With flags at half-mast, all business places and the schools closed during the hours of the funeral service. The plant of the Michigan Limestone & Chemical Co. closed at noon until 5 o'clock to allow employees, many of whom were close friends of Mr. Bradley, to attend the services.

The Coast Guard ice breaker *Mackinaw* reported at Calcite at 4 o'clock and remained until Wednesday evening while personnel from the ship attended the services.

Governor Sigler, unable to be present because of a conference with Canadian officials in Sarnia, sent his personal secretary, George W. Averill, as his representative.

Among family members and close personal friends were Mr. Bradley's brother, Ballard Bradley and Mrs. Bradley, of Chicago; John G. Munson, former president of the M. L. & C. Co. and now vice president of United States Steel Corp.; J. M. Crans, of Buffalo; Mr. and Mrs. Lee Hinslea, of Cleveland; and Guy LaBounty, who lately has been associated with Mr. Bradley in Washington.

Mrs. Ann Cook and Al Christopherson, Mr. Bradley's secretaries, arrived from Washington late Tuesday. Elbert Brenner, of Kalamazoo; Rice Fowler, of Charlotte; Merl K. Hopper, vice commander of the Veterans of Foreign Wars of the Michigan department, arrived Wednesday morning.

Planes were to leave Lansing Wednesday morning bringing Floyd Evans; Representative Hugo Nelson, of Indian River; and Representative Emil Peltz, Representative George Knox, of the Soo; and Representative George Gerbach, of the UP; together with Governor Sigler's personal secretary, George Averill. All planes were grounded Wednesday morning, so the men left with State police escort and arrived here in time for the afternoon services.

Many friends and associates of Mr. Bradley from surrounding sections, particularly in this congressional district, and local friends and residents, filled the church beyond capacity. Amid beautiful floral tributes and in the presence of his friends, Fred Bradley was carried to his last resting place. His pallbearers were Harold Terry, Roy Dueltgen, Charles Hoffman, Capt. F. F. Pearse, A. D. Cone, and Guy LaBounty.

Honorary pallbearers were Admiral Joseph Farley, Commodore J. A. Hirchfield, Commander Carl B. Olsen, and Commander Chester Bender.

Checking Hollywood's Termite Trouble

EXTENSION OF REMARKS

OF

HON. RICHARD M. NIXON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, June 2, 1947

Mr. NIXON. Mr. Speaker, under leave to revise and extend my remarks, I desire to include in the RECORD an editorial that appeared in the Los Angeles Times on June 1. In view of the pending investigation of Communist infiltration in the film industry I believe that this editorial by Kyle Palmer, Times political editor, is most timely and constructive. The editorial follows:

CHECKING HOLLYWOOD'S TERMITE TROUBLE

(By Kyle Palmer)

The job of exposing Communists occupying positions of influence in the motion-picture industry—as contemplated by the House Un-American Activities Committee—is overdue. It should have the wholehearted support of all good citizens inside and outside the picture business.

It is a job, nevertheless, to be undertaken not only with zeal and thoroughness but also with intelligence and integrity.

Results from the undertaking should be judged on the basis of actual Reds identified and exposed rather than from the standpoint of the furore which the search inspires.

THE WRONG WAY

Taking Hollywood apart to see what makes it tick or knocking around a lot of famous film noggins as a diversion incidental to a congressional inquiry will serve no good purpose and, in the end, will harm the innocent and find the industry's genuine subversives undismayed and snugly undisturbed.

Obviously, if the real enemies of our governmental forms are to be brought to book, results of the committee's investigations should not wind up either as a whitewash of the guilty few or as a smear of the guiltless many.

Communists among actors, directors, writers, and others responsible for the content of motion pictures represent an active menace. Also they represent a minority in the motion-picture business.

THE IMPORTANT TASK

And these foes of American conceptions of liberty and justice have, according to individual aptitude, opportunity, and inclination, used or attempted to use motion pictures as a medium for the promulgation of doctrines inimical to the people of the United States and designed to be helpful to the purposes of communism.

Caught in such enterprises during the strains and stresses of war, these persons could be convicted of treason. They are not less traitorous in an era of peace which embraces some of the aspects of military conflict.

Discovering what the home-grown Reds may have accomplished in the way of subverting the films is important, but far more important is the task and the obligation of pinning the Communist label on those who should be made to wear it.

Hearsay, innuendo, suspicion, and even circumstantial evidence will have little effect in disclosing the real intent or in revealing the actual practices of men and women whose only hope of success as Communist agents has depended upon their skill in concealment, duplicity, and anonymity.

WHERE THE FACTS ARE

Cold, hard, inescapable, and incontrovertible facts should—and will—determine the issue in each case.

The facts are available.

In the files of the Federal Bureau of Investigation are reliable and carefully scrutinized records which set forth the precise status of American citizens and aliens who are members of the Communist Party in the United States, who supply the party with funds, who associate with Communists, and who by one means or another manage to give aid and comfort to the Communist cause.

Such records can be made available to the House Un-American Activities Committee.

Doubtless the personal testimony of FBI Director J. Edgar Hoover would be enlightening, profitable, and conclusive in a majority of instances.

In addition, the congressional investigators will be confronted with mountains of prejudiced or unverifiable or trivial or wholly mischievous declarations and affirmations.

NO ROMAN HOLIDAY

Too much is at stake here to permit this situation to degenerate into a Roman holiday.

A motion-picture personality is a lodestone which draws the attention of the curious, the envious, the hero-worshiper, and the character assassin. And no screen drama will stir more interest or arouse greater clamor for front-row seats than a parade of such personalities before a congressional inquisitorial body.

The committee should entertain no qualms in exposing Communist affiliations of the most glamorous star; should have no hesitancy in pillorying the Red proclivities of writer or actor— provided the facts justify the procedure. And by the same measure of dispassionate judgment it should protect both itself and those it scrutinizes from the injustice of hasty or biased or ill-considered conclusions.

ADVICE TO COMMITTEE

In undertaking to single out individuals who have become, in fact, the enemies of this country, the House committee has assumed a heavy responsibility which should not in any respect become involved in politics or partisanship.

From start to finish every committee session, every comment by committee members, every word uttered by witnesses, every written statement submitted, will be challenged and derided by the Communist claque.

Fully realizing the consequences of a sound and substantial exposé of Communists and Communistic scheming in the film industry, Red leaders will extend themselves to misrepresent the committee's motives and to discredit the committee's findings.

Inevitably there will be hot competition for favorable press reaction and for the eventual and final decision of popular opinion.

Members of the House serving on this committee should exercise the greatest care in avoiding any act or utterance which can or could be twisted or turned to the Reds' advantage.

JOHNSTON'S PROMISE

Generally speaking, non-Communist members of the motion picture industry will regard the prospect of an ordeal. But this issue of Red influence in the films has gone too far and aroused too much uncertainty and downright anxiety. The motion picture household should be renovated and the atmosphere of filmland should be cleared.

Most of the responsible leaders of the industry are prepared to see the matter through to its logical conclusion.

As spokesman for the studios, Eric Johnston, president of the Association of Motion Picture Producers and Distributors, acknowledges the presence of Communists in the industry, "as in other American industries," and promising full cooperation in efforts of Congress to learn the facts, asks only that the investigation be fair, dignified, and objective.

In other words, what Johnston requests for his people—and what he and they are entitled to—is a bona fide Red hunt and not a political witch hunt.

SEEKING MOTIVES

Perhaps, among other things, a sincere and capable probing of Red influences and Red projects in one of the Nation's most important economic, cultural, and artistic activities may throw some light on why an actor or a writer or a director receiving anywhere from $1,000 to $5,000 a week is hellbent to destroy the system that places him in such a favored position.

My own theory has been and is in a few specific instances that he, or she, may possess skills and artistic capacities that are unrelated to intellectual maturity. Such as these are Alices in a Red Wonderland, blissfully associating with the Mad Hatters, the March Hares, the Walruses and other denizens of the topsy-turvy land of communism with no comprehension of reality.

This specimen of Red sympathizer is dangerous only to the extent of his or her secondary value, represented usually in fronting for Communist objectives or supplying finances.

THE ULTIMATE HOPE

There are others, of course, who are fully aware both of their sinister affiliations and of the destructive goals toward which they strive. Not by accident, delusion or betrayal are these real enemies of our system persuaded to engage in their subversive roles.

Political expediency which dictated the policies of the national Democratic administration until fairly recent times prevented an honest and an effective drive on Communists in Government, in labor unions and in the motion-picture industry.

It may be that a new concept of political expediency now prompts the administration to throw that policy into reverse.

But the House Un-American Activities Committee, being controlled by a Republican majority, is not subject to such influences, pro or con. The committee has a grave duty and a great opportunity. It should hew to the line of that duty and fully measure up to that opportunity.

In any event one may pardonably indulge a hope that the praiseworthy efforts of the Congressmen to rid the industry of a few termites won't prompt the inquisitors to set a torch to the entire establishment.

Equality for Veterans—Terminal-Leave Bonds

EXTENSION OF REMARKS

OF

HON. DWIGHT L. ROGERS

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Monday, June 2, 1947

Mr. ROGERS of Florida. Mr. Speaker, under leave granted me to extend my remarks in the RECORD, I include herewith an editorial from the Herald, Grand Rapids, Mich., of May 26, 1947, endorsing the proposed bill providing that terminal-leave bonds be made negotiable:

EQUALITY FOR VETERANS

A proposal to make veterans' terminal leave pay bonds negotiable, under conditions which would protect the veterans' interests, has been made by Representative DWIGHT L. ROGERS of Florida. As he has outlined his plan, it seems to have a great deal of merit and no objectionable features.

Even though the terminal leave pay bill adjusted some of the inequities, it still discriminated against the enlisted men and women who were unable to use up their furlough time while on active duty. Had they taken it they would have been paid in cash. Under the law as it now stands they hold bonds which are not negotiable, may not be cashed for 5 years after discharge, and bear 2½ percent interest. In the long run, the holders of these bonds cannot lose and actually gain a fair rate of interest.

The bill was unfair only in that one group, the enlisted men and women who were paid in cash when they took their furloughs, and the officers who received their accrued-leave pay at separation centers, was treated in one way, and the other group of enlisted personnel was treated in another way.

Budget difficulties, however, made it impracticable for the Government to pay all of them a lump sum.

Representative ROGERS' plan gets around that. He would permit the veterans to sell their bonds, for not less than face value plus accrued interest. The Government would not cash them until they mature. Banks and other investors, he believes, would be glad to buy them, possibly at a premium. They are a good investment.

It is to be hoped that veterans now holding the bonds will look long and hard at their gilt-edged investments before cashing them for frivolous spending. But at least they should have the option of using their money when they want to and as they want to.

Split Income Taxes

EXTENSION OF REMARKS
OF
HON. FRANK BUCHANAN
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Monday, June 2, 1947

Mr. BUCHANAN. Mr. Speaker, under leave to extend my remarks, I am inserting an editorial from the Pittsburgh Post-Gazette of May 31, 1947, entitled "Split Income Taxes," and an editorial from the Pittsburgh Press of June 1, 1947, entitled "Saving Us Money."

[From the Pittsburgh (Pa.) Post-Gazette of May 31, 1947]

SPLIT INCOME TAXES

The State senate has passed a bill aimed at reducing the amount of income taxes married couples in the higher income brackets would have to pay to the Federal Government.

This bill, if it becomes law, will give Pennsylvania married couples the same tax advantages enjoyed by families in nine other States and the Territory of Hawaii, where community property acts have long been sustained by the courts as a State's right.

Under these acts, family income is treated as belonging to and indivisible between husband and wife, even though the entire income is earned by only one of them. In filing Federal tax returns, husband and wife file for only half the total income. Such a division keeps the income out of a high percentage bracket. Where the family income is around $3,000 or less there is no appreciable difference between the taxes on a joint return or on separate husband and wife returns. In the higher income brackets, however, this law can mean a considerable saving to taxpayers.

It is only reasonable for the taxpayers of Pennsylvania, or any other noncommunity-property State, to seek the same tax advantages as those enjoyed by the residents of Arizona, California, Idaho, Louisiana, Nevada, New Mexico, Oklahoma, Texas, Washington, and Hawaii. Until Congress eliminates this inequality, still other States probably will seek legislation such as that approved by the Pennsylvania senate on Tuesday.

Unfortunately, Congress isn't yet ready to equalize this situation. On Tuesday the Senate beat by a decisive vote an amendment to the tax-reduction bill which would have permitted married couples in all States to split their income for tax purposes.

Apparently there will be no action before next year, when Congress considers the next general tax revision bill. That means another year of unfair burden. Meanwhile, the action of the Pennsylvania senate points up the necessity for a uniform law. While Congress procrastinates, other States probably will seek community property laws.

Congress must do one of two things. It must permit married couples in all States to split their incomes for tax purposes, or make joint returns mandatory, as requested several times by the Treasury Department.

[From the Pittsburgh (Pa.) Press of June 1, 1947]

"SAVING" US MONEY

By a straight-party vote, the State senate has passed a bill which would make Pennsylvania a community-property State.

That means that whatever a husband's income, his wife would hold legal title to half of it.

The purpose of the bill is obvious—and admitted by its sponsors. It would save Pennsylvania residents millions of dollars in their annual income-tax payments to the Federal Government.

Since half a man's income would belong to his wife, she would be required to pay an income tax on it. This would mean twice as much paperwork in a family. But it would mean a large saving in a family's income-tax payment, particularly in case of substantial incomes.

The savings in tax payments would come about because splitting the income-tax returns would put both taxpayers (husband and wife) in lower brackets.

Democratic members of the senate unanimously were against the bill, sponsored by Senator John W. Lord, a Philadelphia lawyer.

Senator John H. Dent, the Democratic leader, offered this pertinent objection to the bill:

"We can't keep sniping at Federal income, ask for more services, and then want Federal tax reductions. This legislation comes with bad grace from a State which is raising its own taxes."

Senator Dent's remarks are well taken.

The community-property system, as applied to Federal income taxes, is unfair. It saves money for taxpayers in the community-property States. But the effect of it is to make other taxpayers pay more.

The effect of community-property laws on Federal income taxes is the fault of Congress, not the States which have enacted these laws.

Already, nine States have such laws. They have been in effect for many years in Arizona, California, Idaho, Louisiana, Nevada, New Mexico, Oklahoma, Texas, and Washington.

In these States, married taxpayers save millions of dollars. Taxpayers in other States make up this loss of revenue to the Federal Government.

But if it is fair in these nine States, why isn't it fair in Pennsylvania? And in the 38 other States.

Congress ought to write the tax laws so they apply equally to all taxpayers, whether they live in community-property States or not.

Every time this has been suggested, however, the lawmakers in Congress from the community-property States have raised such a howl that Congress shied away from the idea.

O. K., then, Congress. If you won't fix up the loophole in the law, why shouldn't the rest of us take advantage of it? Maybe if the house of representatives in Harrisburg will pass the senate bill, Congress will wake up and do something about this invidious situation.

Golden Gate Bridge

EXTENSION OF REMARKS
OF
HON. RICHARD J. WELCH
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Monday, June 2, 1947

Mr. WELCH. Mr. Speaker, the newspapers of San Francisco not only realize the importance of the Golden Gate Bridge to the national security and the Pacific coast, but also to our national peacetime economy.

The Golden Gate Bridge is far more than just another bridge spanning a stretch of water. It is an artery in the life flow of commerce between the great international seaport city of San Francisco, the huge Central Valley, the redwood empire and the great Northwest. During a national emergency, as was proven in the recent war, it is an artery of supreme importance to national defense.

Mr. Speaker, under permission extended to me, I include the following editorial from the San Francisco News, commemorating the tenth anniversary of the opening of that world-famous bridge:

TWO BRIDGE BUILDERS

The tenth anniversary of the Golden Gate Bridge should not pass without full recognition of the contribution two citizens made to its successful completion—Congressman RICHARD J. WELCH and Engineer Joseph B. Strauss.

Originally, as city supervisor of San Francisco, Mr. WELCH introduced the resolution that started the great project on its way—a way that led through a long and arduous maze of legislative, judicial, and executive authorities to the final go signal. DICK WELCH fought doggedly and with real statesmanship to carry the dream to reality in that respect.

The engineering dream was in the ingenious mind of Joe Strauss. Against strong technical opposition he insisted the structure could be built successfully. And build it he did by rising triumphantly above every obstacle. The majestic span ever will stand as a magnificent monument to his daring and imagination.

These two men, above all others—the first still serving his district and his country, the second now gone to his just reward—these two men deserve the highest credit for undertaking and completing what many of their fellow citizens said was the impossible.

The Potato Surplus

EXTENSION OF REMARKS
OF
HON. R. WALTER RIEHLMAN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Monday, June 2, 1947

Mr. RIEHLMAN. Mr. Speaker, last Thursday this body passed House Resolutions 166 authorizing and directing the Committee on Agriculture to undertake an investigation of the potato surplus, also to study the feasibility of encouraging the manufacture of potatoes into potato flour and culture with the thought that it could be used in the production of bread and other bakery products. This is a program with which I am thoroughly in accord. I have had a personal experience over a number of years with using potato flour in making bread and have found that by substituting 4 percent potato flour for the same amount of wheat flour, a better-keeping loaf of bread, better flavored, and more nutritious bread is produced. The better-keeping quality cuts down the amount of stale returns to the commercial baker, and, I believe, proves a real saving to the consumer. Through the proper appeal to the baking industry and the people throughout the United States, urging their assistance in this program, I am convinced that there would be a great market for potato flour which would lend to using the surplus potatoes in a beneficial way.

It has appeared that during the last number of years the policy of the Federal

Government has been to support, destroy, and waste farm products in a futile effort to bring about prosperity. It has tried to regulate production and govern the amount of crops grown. This can never be done successfully as there are unpredictable factors of Mother Nature which are constantly changing the output over successive years. It is time that Americans learn that prosperity can never be attained through waste of essential foods while people in our own country are starving and other countries are looking to us for world leadership and support.

Consequently, I am thoroughly opposed to having the Federal Government subsidize this advertising and manufacturing program for use of potato flour, for I believe it can safely be said that in many instances when the Federal Government has undertaken the operation of private enterprise the expected result has been unsatisfactory. It would seem to me to be more pertinent to encourage the now-operating potato-flour manufacturers to expand their present facilities through Federal Government lending agencies, if need be, to meet the necessary expansion demands.

Another extremely important reason for private enterprise to undertake such a program is that, because they operate on a profit basis, no great surplus of flour will be built up with future waste inevitable. Private manufacturers would employ proper advertising means to popularize the use of potato flour, thus insuring an increase in food for hungry people and cutting the waste of surplus potatoes. On the other hand, if the Federal Govern undertakes the manufacture of potato flour, it will merely be converting surplus potatoes into surplus potato flour at a tremendous cost to the taxpayers, and, having no available market without an effective program of advertising, it will find that over a period of years we will have substituted a surplus stock of potato flour for a surplus of potatoes, which again will bring about a great waste and loss to our Government.

Address at Twenty-fourth Anniversary Convention, Associated Polish Clubs of Massachusetts

EXTENSION OF REMARKS
OF
HON. PHILIP J. PHILBIN
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, June 2, 1947

Mr. PHILBIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address made by me at Gardner, Mass., on June 1, 1947:

I am very much honored and highly privileged today to join with the Associated Polish Clubs of Massachusetts in this twenty-fourth anniversary convention.

Throughout the many years of your existence it is noteworthy that you have maintained the high ideals and standards and purposes of your organization, and I am very happy to compliment your officers and members on this occasion and to offer my hearty congratulations for your many achievements in behalf of your own people, our Commonwealth, and Nation.

I hardly think it is necessary for me to tell you of the warm feelings of friendship and admiration which I hold for the Polish people, both at home and abroad. I am sure there is not a single racial group in America that has been more faithful and loyal to the country, that has offered us better citizenship than our citizens of Polish extraction. In every crisis, our Polish-American sons have been in the vanguard of our fighting forces in every war in which our country was involved and their gallantry and valiant service has been second to none I may well add that the contributions of the Polish-Americans during peacetime have invariably been marked by the same fidelity and high order of patriotism. There is no braver, stronger, or more courageous American than the Polish-American either in peace or in war. You can be proud indeed of your heritage and contributions to America.

Because I know that your membership is vitally interested in the cause of the Polish Nation and the welfare of the Polish people overseas, I desire briefly to touch upon that great human question—that great question of human freedom. How can we possibly reconcile the present slave status of Poland with the express language of the Atlantic Charter and with the exalted phrases of the four freedoms? Here is a nation with a tradition of freedom and love of liberty running back for hundreds of years, a nation which has fought desperately throughout its whole history for its right to be free and independent. No nation and no people in the recent war sacrificed more or suffered more than the Polish Nation and the Polish people who were the first and the most pitiable victims of cruel Nazi tyranny and persecution. No nation or people was more loyal to the cause of the allies.

Is slavery to be the reward of these century-old struggles, these heroic sacrifices for our common war effort? As Americans we can never believe so, because we have faith in the sense of justice of the American people and belief in the fair-mindedness of the American Government. One of the saddest facts of the situation now confronting Poland is that our own Government consented to the arrangements, political and otherwise, which made it possible for Stalin to set up dictatorship over the Polish Nation and thus destroy the liberties of the Polish people. It is true that these commitments were made principally during the war but they were nevertheless illegal, unconstitutional, contrary to our war aims, and, therefore, not binding in any sense upon our Government.

I am convinced that these commitments are not only disapproved but deeply resented by an overwhelming majority of the American people, and I demand now once again in your presence while this convention is assembled, as I have demanded so many times before in the Congress of the United States, that the executive department of our Government, that our State Department and our Congress take immediate joint action to release the Polish people from bondage, to arrange for truly free elections which will enable them to erase the results of the scandalous, trumped-up, Russian-dictated elections that were recently held, and which would permit the Polish people to recapture their hard-won freedom. As believers in freedom ourselves, that is the very least we can do for them, and in my opinion, that is the very least that the American people should do for them, to insure absolute justice in adjudicating their claims for self-determination and national autonomy.

The situation is not encouraging at present, to be sure, and we are meeting with many obstacles in our efforts to free Poland. But the whole history of the struggle for human liberty is one of obstacles and obstruction, one of disappointments and discouragements. Let us not be dismayed and let us never give up the fight, because we are fighting for the right and in the end by God's grace and our own perseverance the right will triumph and Poland will again take her place among the nations of the earth free, independent, and democratic, her loyal, devoted, and liberty-loving people able once again to fulfill the great destiny which history has in store for them.

I want to assure you that I will continue to labor with all my heart for this cause and the cause of the oppressed and enslaved peoples throughout the world. I know that this fine organization will never cease its efforts until victory is ours, and I also know that your members will continue to embrace, defend, and sustain our American institutions and our own great nation as you have done in the past.

Armed Services Merger

EXTENSION OF REMARKS
OF
HON. PORTER HARDY, JR.
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Monday, June 2, 1947

Mr. HARDY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Christian Science Monitor of May 26, 1947:

MUCH MORE THAN A "MERGER" BILL

The so-called merger bill is turning out under close inspection to be something quite different—something much broader and more far-reaching. To put it differently: There is another, less obvious side of the bill which is neither being headlined nor discussed. And it is time the American people are told what this measure really means.

This bill does more than draw a blueprint of unified direction and better teamwork for the military and naval services. Of much deeper significance, it is a piece of basic legislation which establishes how and by whom national policy and the civilian economy shall be controlled in any prospect of war.

We have supported the general provisions of the merger, particularly coordination of foreign policy, military policy, and industrial potential. But because this bill originated in the thinking of military men, the power it assigns or permits to the military over national policy and civilian affairs is very great—much greater, we think, than the American people would knowingly choose.

Here are some of the provisions of the National Security Act which we question in this regard:

1. On the National Security Council, which should not only coordinate but also keep in balance foreign policy, military policy, and national production and resources, the Secretary of State and the Chairman of the National Security Resources Board face not only the Secretary of National Defense, but also the Secretaries of the Army, Navy, and Air Force. The ratio thus is weighted 4 to 2 in favor of the armed forces.

2. The National Security Resources Board, an independent agency, is charged with advisory duties only and concerned with broad preparedness policy. The Munitions Board, however, is placed wholly within the Department of National Defense and staffed with top officials of the three military departments. This board is given the kind of functions which could mean actual control and direction of the civilian economy by the military in case of war, to determine

priorities, to supervise subordinate agencies, and to make recommendations to regroup, combine, or dissolve existing interservice agencies operating in the fields of procurement, production, and distribution.

3. The wording of the act not only permits, but actually encourages, interlocking directors as regards the Munitions Board, the Resources Board, and a third, the Resources and Development Board. Representatives, and perhaps the same representatives, of the military departments could dominate all three.

4. The act permits, in fact suggests, that the director of the Central Intelligence agency serving the State as well as the Defense Departments, be an officer of one of the armed forces rather than a civilian.

5. In somewhat oblique but nonetheless definite language the act perpetuates certain of the war powers of the President "notwithstanding" the expiration provisions in the laws which established them. It hands over to the Secretary of National Defense the blanket authority to assign duties, functions, and powers among the several armed services, an authority which hitherto in peacetime has traditionally rested with Congress.

We do not impute to the generals and admirals any "plot" to set up a military dictatorship. Their training and professional experience have simply made them pattern this legislation by military standards.

But if history teaches anything at all, it teaches that the military do not understand the workings of industry nor the needs of civilian economy. It teaches that the direction of top national policy must be wholly free from military domination.

What to do about this Security Act of 1947? The essential basis of the merger compromises between the armed services, perhaps should not be disturbed. But the broader objectives of the bill need study and public discussion before anything becomes law.

Communism

EXTENSION OF REMARKS

OF

HON. JOHN W. McCORMACK

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, June 2, 1947

Mr. McCORMACK. Mr. Speaker, under leave to extend my remarks, I include a letter received from Joseph J. Forrester, high secretary-treasurer of the Massachusetts Catholic Order of Foresters, enclosing a splendid and affirmative resolution adopted recently by the delegates to the sixty-seventh annual session of the order:

HIGH STANDING COMMITTEE OF
THE MASSACHUSETTS CATHOLIC
ORDER OF FORESTERS,
Boston, Mass., May 29, 1947.

Hon. JOHN W. McCORMACK,
House of Representatives,
Washington, D. C.

HONORABLE AND DEAR SIR: The enclosed resolution on communism was unanimously adopted by the delegates at the sixty-seventh annual session of the Massachusetts Catholic Order of Foresters, held May 19 and 20, 1947, at Swampscott, Mass.

The Massachusetts Catholic Order of Foresters is a mutual benefit society incorporated under chapter 176 of the General Laws of the Commonwealth of Massachusetts and has a membership of 38,000 composed of both men and women.

Very truly yours,
JOSEPH J. FORRESTER,
High Secretary-Treasurer.

COMMUNISM

Whereas the leaders of America have at last awakened to the serious threat that Communism offers to the American way of life; and

Whereas communism is the avowed advocate of atheism and the implacable foe of religion; and

Whereas it has been clearly revealed that Communists have penetrated into all ranks of political life, of industry, and of labor; and

Whereas no union of the red fascism of Russia is possible with the democratic practices and ideals of the America we reverence and love; and

Whereas the Communist practice of infiltration has already reached an alarming stage in this our beloved country: Be it

Resolved, That we, the delegates to the sixty-seventh annual convention of the Massachusetts Catholic Order of Foresters commend our President Harry S. Truman for his forthright condemnation of Communist propaganda in our own country and in other lands; and be it further

Resolved, That we pledge to our President and to all who are allied with him in the crusade against communism, our support in every effort root out this plague which has attached itself to public and private enterprise with the intent of destroying our national unity and our democratic, American way of life; and be it further

Resolved, That a copy of this resolution be forwarded to our President Harry S. Truman and to our Senators and Representatives in Washington.

The Labor Bill

EXTENSION OF REMARKS

OF

HON. ELLSWORTH B. BUCK

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, June 2, 1947

Mr. BUCK. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Saturday Evening Post of May 31, 1947:

THE EXPERTS IN CONGRESS KNOW THEIR PUBLIC

There is no percentage in starting an argument about what the American people think about this question or that. Nobody knows for sure, including Dr. Gallup. However, this is a time when the measurement of public sentiment is supposed to be an exact science and those who trade on the swings of popular whim and fancy have to be within a small percentage of right. Otherwise they sell no iceboxes or get no votes.

Therefore it is a considerable mystery to us why so many people, on both sides of the ideological fence, seem to think Congress was flying in the face of public opinion when it passed strong labor-reform bills as opposed to weak ones. PM for example, went into a terrific dither as to why it was that, with 15,000,000 trade-union members in the country, there have been protests only from trade-union leaders. Where was the spontaneous outburst of feeling and will in every American community that would have made the Tafts and the Hartleys and their cohorts in Congress too scared ever to go back again to the folks at home? The same idea actuated conservative Senators who wanted a tough bill, but weren't so sure the country would take one.

What happened, of course, was that the Members of Congress had a pretty fair idea of how their constituents felt about curbing the power of labor leaders. Massachusetts, where the citizens of the highly unionized industrial cities voted for the Barnes bill in spite of a terrific drive by union leaders to defeat it, is not so different from the other States. The point missed by PM—and one that would not have been missed if recent polls had been studied—is that many union members have come to regard union leaders as nuisances who keep them from work. To dismiss this sentiment as NAM propaganda implies a pretty hard judgment on the intelligence of union members. Our own view is that Congress put several things into the law which might better have been left to free negotiation between the parties, and that a few amendments to the Wagner Act designed to even the balance between employer and union agent would have been preferable to this attempt to take care of so many matters by legislation. That, however, has nothing to do with the people's attitude. They back tough legislation because of their experience with strikes.

We are naive enough to think that one American is pretty much like another, and that selling a union membership in the long run isn't so different from selling a vacuum cleaner. The purchaser may keep up the payments, once he has signed the agreement, but he expects some service. If union leaders use their power to police the private opinions of their members, keep them out on the picket line when they would rather be earning full pay, and block incentive schemes which would enable members to add to their earnings, then that union is just a vacuum cleaner that won't work. The man who is compelled to belong to such an outfit will vote against such compulsion any time he gets a chance.

Anyway, this analysis seems simpler and more realistic than the left-wing view that Members of Congress have suddenly taken leave of their senses, ignored the opinions of their constituents and invited a ruthless group of labor-baiting employers to write labor laws for them. The Senators and Representatives have something to sell, too—namely, the idea of another term. The thing that was itching them was what that spontaneous outburst of feeling and will from the folks back home would do to them if they didn't do something to clip the wings of the Lewises and Petrillos. Even if it turns out that they have set up a field day for lawyers, it can't be said that they ignored public sentiment.

The Labor Bill

EXTENSION OF REMARKS

OF

HON. ROBERT TRIPP ROSS

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, June 2, 1947

Mr. ROSS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the New York World-Telegram of May 31, 1947:

PHONY CHARGES

For the next 2 weeks you will hear from union leaders a crescendo of charges that the Taft-Hartley labor bill is slave legislation—that it means involuntary servitude—that it would compel men to work against their will.

These charges, we believe, are completely phony.

The bill says specifically that no individual employee shall be required to work without his consent, and that it shall not be illegal for any individual to quit work.

So it could not compel anybody to work against his will.

When a number of employees stop work by mutual understanding, for the purpose of enforcing demands or protesting against the actions of an employer, that is a strike.

The bill does say—as the late President Roosevelt said—that Federal Government employees have no right to strike. It requires that they be discharged from their jobs if they do strike. But it does not compel any individual to work for the Government.

President Truman has said that jurisdictional strikes—wars between unions at the expense of employers and the public—are indefensible. The bill does make jurisdictional strikes illegal. It also outlaws strikes to force employers to pay for work not done, or to recognize unions contrary to, or in the absence of, certification from the National Labor Relations Board. It authorizes the NLRB to obtain Federal court injunctions against such strikes, but it says that no injunction shall require any individual to work without his consent.

The bill does authorize the President, acting through the Attorney General, to obtain Federal injunctions for the purpose of delaying key-industry strikes that would endanger national health or safety. Such injunctions could remain in force not longer than 80 days. If Government efforts to settle a dispute failed, and if at the end of 80 days the employees voted to reject their employer's final offer, they would be free to strike. And, at all times, they would be individually free to quit their jobs.

Where national health and safety are not at stake, the bill puts no limitation on the right of employees in private industry to strike for such basic economic reasons as wages, hours, and working conditions.

What union leaders really mean when they shout about slave legislation, is that they want no restriction whatever on the power to strike for any reason at any time. We cannot agree with them. The strike, as this country has learned, can be a deadly weapon, destructive to the rights of employers, workers, and the public. The American people want their Government to make fair rules to preserve its proper uses and prevent its abuse. That, we think, is what Congress has done in the Taft-Hartley bill.

The Panama Canal

EXTENSION OF REMARKS
OF

HON. WILLIS W. BRADLEY

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, June 2, 1947

Mr. BRADLEY. Mr. Speaker, in order that the ideas of the late chairman of the Committee on Merchant Marine and Fisheries of the House—the Honorable Fred Bradley, of Michigan—concerning the Panama Canal may be made a matter of record for future reference, it is my purpose to insert in the Appendix of the RECORD his radio broadcasts on that subject dated for release on March 24, 1947, and March 31, 1947, and his press release on the same subject dated April 10, 1947.

The broadcast of March 31 and the press release of April 10 will be published in subsequent issues of the CONGRESSIONAL RECORD. That of March 24, 1947, follows:

On Thursday of this week, members of our Merchant Marine and Fisheries Committee's Subcommittee No. 4 on the Panama Canal, as well as other committee members, including myself, are leaving New York on the steamship *Panama* for the Canal Zone for purposes of making an official inspection of conditions down there. We will return to Washington on April 9. I believe I have previously mentioned to you that our committee has the responsibility of studying and acting on all legislation affecting the Panama Canal, and in order that our subcommittee and as many of the total membership as possible may have a first-hand knowledge of existing conditions to enable our legislating wisely, I have arranged for this inspection trip. To prepare ourselves for our visit down there and in order to familiarize ourselves particularly with the locks proper, we went to the Navy Department on Friday morning, the 14th, to look over the models of the proposed new canal and listen to an hour's lecture of indoctrination, and this past Friday we made a trip to the Navy's model basin at Carderock outside of Washington.

I believe many of you will be interested in having me give you some little history and information on the Canal proper, and outline in some detail our country's future construction program in the Zone.

The Panama Canal is a great hydraulic machine—great in the simplicity of its basic concept and in its magnitude. Although it was the dream of the ages almost from the time of Columbus, it remained for a distinguished French engineer, Adolphe Godin de Lepinay, at the Paris Congress of 1879, to propound a practical plan for building a waterway across the mountains of the Isthmus of Panama.

With the simplicity characteristic of genius, he exclaimed at the Paris Congress: "Build a dam at Gatun and another at Miraflores as near the seas as the configuration of the land permits. Let the waters rise to form two lakes about 80 feet high. The solution then becomes the joining of the lakes thus formed by cutting across the mountains and connecting the lakes with the seas by locks." That was substantially the plan for the present Canal finally adopted in 1906 when the great decision in building the high-level, lock-type canal was made. Completed in 1914, the Panama Canal remains one of the greatest works of man—a monument of constructive achievement.

The major part of the Panama Canal is a waterway 85 feet above the sea, formed by impounding the waters of the Chagres River Valley, to form the summit level which extends from Gatun locks southward across the continental divide to Pedro Miguel locks. On the Atlantic side of the divide there is Gatun Lake, 163.4 square miles in area and watershed of 1,320 square miles.

Gaillard Cut, extending from Gamboa to Pedro Miguel, joins this lake with the Pacific locks at Pedro Miguel. The Pacific end of the Canal differs radically from the Atlantic end. At the Atlantic end all locks are at Gatun in structures of three continuous lifts. The part of Gatun Lake near the Gatun locks supplies a summit level anchorage adequate for the flexible operation of these locks.

At the Pacific end there are two sets of locks separated by a small intermediate level lake 54 feet high. The Pedro Miguel lock is a single-lift lock located at the end of Gaillard cut. A two-lift lock is located at Miraflores.

Thus the canal as completed embodied an arrangement that was not symmetrical. At the time the Canal was built there was no marine operating experience upon which to base the planning. Now there is a vast storehouse of marine operating experience upon which to draw. This operating experience points unerringly to the benefits of the superiority of the arrangements at Gatun over that at Pedro Miguel and Miraflores, the locks at the Pacific end.

The traffic of the Panama Canal about 1970 will approach its present capacity. Naval vessels have become larger. The Canal is entering an era of decision. Like everything else becomes outmoded as time goes on, so, naturally, has our present lock system across the isthmus.

The question is what should be done. There is the further question of whether recent developments in warfare make the conversion of the Panama Canal to sea level mandatory. Present studies indicate that any canal wherever or however built would be vulnerable to the newest weapons of modern war. We were, indeed, fortunate during the past war that no accident or bombing took place which put those locks out of commission. Since the sole purpose of a canal is to transport vessels, the primary problem thus becomes one of securing the best canal for transiting or transporting ships. This demands a most careful analysis of the marine operating problems heretofore disclosed in navigating the present Canal.

Let me enumerate for you some of the marine operational problems facing our Government. A study of the transiting of vessels through the Panama Canal has conclusively established that the present Canal has seven principal marine operational problems which ought to be overcome in any plan for its improvement. They are:

The dangerous traffic bottleneck at the Pedro Miguel locks.

The double handling of vessels at the Pacific locks and the resulting lock accidents and loss of transit time.

The effect of fog on Canal capacity and operation.

The lockage surges in Gaillard cut caused by the operation of Pedro Miguel locks.

The present limited operating range of the Gatun Lake level (82 to 87 feet).

The navigational hazards caused by the bends and restricted channels, mainly in Galliard cut (300 feet).

To the foregoing problems, we could add others affecting marine operations, such as the regulation of the Miraflores Lake level, the control of traffic, and silting in the Pedro Miguel locks.

When speaking of the dangerous bottleneck at the Pedro Miguel locks, we recognize that the basic cause for this problem is the location of these locks squarely across the south end of a narrow cut. We have learned from experience that the location of these locks was a serious error in original design because it has created a series of operational problems; the principal of which is that we are prevented from using the Miraflores Lake as a traffic reservoir; and unsymmetrical operating conditions were created between the Atlantic and Pacific ends of the Canal, resulting in traffic-control difficulties. And so that you will appreciate to some measure why it is now imperative that our locks system at Panama be changed, I'll briefly name some additional present operational factors which contribute to the formation of this dangerous bottleneck at the Pedro Miguel locks.

The present arrangement causes a double handling of vessels at the double Pacific locks, increases the number of accidents to vessels transiting the Pacific locks, and increases the time of transit.

It endangers Pacific-bound vessels by forcing them to slow down in the Gaillard cut at a point where they are subject to cross winds and maximum surges. It causes Pacific-bound traffic to jam in a restricted channel between rocky banks when traffic schedules have become disarranged. It causes our Atlantic-bound vessels to enter Gaillard cut under adverse conditions for maneuvering. And further, it impairs the operation and reduces the capacity of the Canal during fog periods in Gaillard cut and during periods limited to one-way traffic in the cut.

I should also, at this point, acquaint you with the fact that we have been experiencing quite a number of accidents because of the dangerous nature of these Pedro Miguel locks. From January 13, 1922, to July 12,

1942—some 20 years—we had 152 accidents at the Gatun; 138 at the Pedro Miguel, and 103 accidents at the Miraflores; a total of 393. That is some 19 accidents in a year; not a very good record.

As I mentioned previously, the double handling of vessels at Pedro Miguel and Miraflores is a serious operational difficulty which is emphasized during the transit of each vessel. During the last war this factor was of special military significance because the armor plate above the gate machinery at Pedro Miguel constituted a serious hazard for aircraft carriers with extended superstructures. Not only is there grave danger of lock accidents at this lock but there is also the danger of grounding in Miraflores Lake south of the lock and then striking the banks of Gaillard cut north of it.

Then, also, the separation of the Pacific locks into two sets requires one additional approach, lockage and departure by vessels during each transit of the Pacific end of the Canal. These approaches and departures have to be conducted under unfavorable maneuvering conditions in a narrow gorge or in a small lake with shoals on both sides of the channel, which requires a more studied and cautious approach and is, therefore, more time consuming. The time lost per transit approximates 1 hour—for small vessels it is naturally less, and for larger ones, more.

The climate in this area is hot, muggy, and rainy, with the result that in this tropical climate we experience fog problems. Consequently, Gaillard cut is subject to fogs of the land-radiation type which occur about one night in three with a duration varying from 1 to 11 hours. At times they are light and at other times very dense. They, of course, are of greatest frequency and duration in the wet season and least in the dry. In 1942 there were a total of 118 fog nights reported, 8 in the dry season and 110 in the wet. Gatun locks and the adjoining anchorage in Gatun Lake are fog free, which makes it possible for our Atlantic locks to operate on a 24-hour schedule when necessary. At the Pacific end of the Canal, Miraflores locks and Lake are fog free. The southern limits of fog in Gaillard cut are in the vicinity of the Pedro Miguel locks. Hence, a vessel from the Pacific can reach these locks but when there is a fog in Gaillard cut it can go no farther. Because of the dangers of navigation in a restricted channel with rock banks, fog in this cut is a serious matter. Vessels—since they cannot enter Gaillard cut during fog, assemble either in Balboa Harbor or in Gatun Lake until the fog clears. The capacity of the Panama Canal is thus reduced from its rated capacity of 27 ships per lock per day to the capacity of the Pedro Miguel locks during favorable weather in Gaillard cut.

I have not the time to go into any detail with reference to the operational problems brought about by the lockage surges in Gaillard cut nor the limited operating range of the present Gatun Lake level, nor the navigation hazards caused by the bends and restricted channels which exist mainly in Gaillard cut, which is the part of the Canal most feared by all mariners and dreaded by most pilots.

Public Law 280 of the last Congress authorized an extensive investigation of the Panama Canal for means of increasing its capacity and security and that investigation is now in progress under the direction of the Governor of the Panama Canal and the supervision of the Secretary of War. A report to Congress is required by December 31, 1947. This investigation is a major undertaking with international implications involving all maritime nations. The issue is the type of the future canal. To be sound, any canal plan decided upon must solve the operating problems which I mentioned in this broadcast.

I am sure that, from what I have given you briefly in this broadcast, you can appreciate why those of us who have the responsibility in Congress of studying and handling legislation on the Panama Canal, must have some basic knowledge of the Canal so that we can legislate for the best future interests of the United States. You can also appreciate that our trip down there is not a pleasure junket but is for educational purposes.

Kansas City Again—Stealing an Election—Capitol Stuff

EXTENSION OF REMARKS
OF
HON. DEWEY SHORT
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Monday, June 2, 1947

Mr. SHORT. Mr. Speaker, under leave granted to extend my remarks I include the following editorial, Kansas City Again, which appeared in the Joplin Globe, Friday, May 30, 1947:

KANSAS CITY AGAIN

After holding for 11 days the spotlight of public attention as the Nation's temporary capital while President Harry Truman watched and waited at the bedside of his aged mother, Kansas City continues to hold a prominent place in news headlines because of something entirely different—the brazen theft of grand jury evidence from the vaults of the election board.

A grand jury had been studying the evidence of fraud in last summer's primary election in Kansas City for 8 weeks and had turned in a courageous and startling report, a part of which was expression of the belief that Roger C. Slaughter, Democratic candidate for renomination to Congress, had been elected in fact, though shown defeated on the face of the returns.

There is no dimness about the situation. Investigation of the primary ballots by the grand jury had disclosed ample evidence of fraud and at least some of the guilty were scheduled to go to jail. But justice was not to have such an easy inning. Some of the guilty either hired skilled burglars to break into the vaults of the election board and steal the evidence, or committed the deed themselves.

It seems unbelievable that such a theft could find opportunity for commission. Obviously, after the grand jury's report, the ballots they had investigated were of great importance, yet they were unguarded, for all practical purposes, and the vaults in which they were placed offered no serious obstacle to the skilled artisans of crime who accepted the job of rifling them.

Now, at last, the FBI is to have full charge of the effort to punish the criminals who have been making a mockery of democracy in this city Tom Pendergast made famous for crime only a few years back. It is a job that calls for the utmost efforts of J. Edgar Hoover's experts, who should have been put energetically on the job months ago. If they had been, this latest shocking outrage would never have taken place.

It appears Attorney General Tom Clark had been reluctant to take over a case which involved the home city of the President of the United States, presumably fearful of political consequences. In the face of this latest development, continued failure of the Federal Bureau of Investigation to act with the greatest possible energy and efficiency will react against the President and his administration in no uncertain manner.

Stealing an Election, which appeared in the Evening Star, Washington, D. C., Thursday, May 29, 1947:

STEALING AN ELECTION

A revealing post mortem on a stolen election is now being conducted in Kansas City, Mo. And the facts which are being uncovered should be of more than passing interest to the American people.

The story had its beginning last July when President Truman announced his support in the Fifth Missouri Congressional District of a man named Axtell. (His first name was Enos, but the President could not remember it at the moment.) Also supporting Mr. Axtell was the malodorous Pendergast machine and the Political Action Committee of the CIO, which is against political machines in places like Virginia and Tennessee, but which is not above making common cause with them in places like Kansas City.

With this impressive array of backers, Mr. Axtell defeated the incumbent Representative Roger Slaughter in the Democratic primary. In the general election, however, Mr. Axtell was defeated by the Republican candidate.

The seeming triumph in the primary brought from Democratic Chairman Hannegan the comment that the voters of Missouri, aware of Mr. Slaughter's opposition to many of the policies of President Truman and the late Franklin D. Roosevelt, had relegated him to the political ash can. But a newspaper, the Kansas City Star, was struck by such remarkable pro-Axtell and anti-Slaughter precinct votes as 88–0, 69–0, and 145–1. The newspaper investigated and turned up convincing evidence of fraud.

The Department of Justice, looking into this mess with something less than crusading enthusiasm, found no violations of Federal law. But a Kansas City grand jury, going into the matter more thoroughly, concluded that Mr. Slaughter had been robbed in the Democratic primary by a deliberate, calculated, and premeditated plan to miscount and otherwise steal votes. The grand jury returned 81 indictments against 71 suspects in the voting fraud. And now comes the credulity-taxing announcement that professional thieves have looted the vaults of the Kansas City Election Commission and stolen the ballots upon which the grand jury's findings of fraud were based.

This leaves unravelled a scandal which reaches from the Pendergast machine, through the CIO-PAC, to Washington itself. It may be that the theft of the incriminating ballots precludes any final fixing of responsibility for what happened in the Democratic primary in Missouri's Fifth District. But the least that can be done by the President and his Attorney General is to exhaust every means at their command to get to the bottom of Missouri's stolen election.

Capitol Stuff, by John O'Donnell, which appeared in the Washington Times-Herald Friday, May 30, 1947:

CAPITOL STUFF

(By John O'Donnell)

Governor Dewey, of New York, must have been born with a couple of GOP horseshoes clutched in his chubby little hands.

The outstanding and as of today most powerful contender for the Republican nomination for the Presidency now finds himself, thanks to no efforts by himself, in a position where he can knock the political brains out of his Truman opposition by reverting to his ancient role of gang-busting Mr. District Attorney, which the voters love.

The ever-loving political pals of President Truman back in the Kansas City bailiwick of the Pendergast machine have just pulled the all-time boner of this generation. At least, it measures up in political importance (and consequences) to our last White House scandal. That was when Warren Gamaliel Harding, without personal gain, let himself be sold down the river by such loving pals

and crooks as the Ohio gang, the contemptible Secretary of Interior Fall, and our all-time disgrace to the Federal judiciary, the Honorable Harry Daugherty, one-time Attorney General of the United States of America.

Politically, the President, in all innocence, is in a very hot spot indeed so far as his political fortunes are concerned. When the imported petermen with soup and jimmy cracked the safe in the office of the Kansas City board of elections and stole the grand jury evidence which would prove felony in the primary victory of a Truman-backed candidate for Congress, they probably saved the necks of local political gangsters.

But they put President Truman, as a candidate for the Presidency next year, and his Attorney General Tom Clark, on the political gallows. And a gallows platform is no place to be when an opponent like Tom Dewey is waiting to spring the trap.

To make things simple, here's what happened. Harry Truman was a political protégé of the old Pendergast machine and came to the United States Senate thanks to its aid. The Pendergast machine in Kansas City was tougher and cruder than either Tammany in New York or Kelly in Chicago ever thought of being, and the big boss Pendergast went into the Federal hoosegow during the Roosevelt regime.

Truman's political position improved and he was loyal. As a Senator he turned thumbs down on the Federal attorney who sent old Tom Pendergast to jail, made a point of leaving Washington to attend old Pendergast's funeral, and has been political pals with young Jim Pendergast. And that was all explained as political loyalty and friendship and common decency.

Then last August there came a primary battle in the Democratic ranks in the Missouri Fifth District which cuts into Kansas City. President Truman unwisely jumped right into the middle of the fight. Democratic Congressman Roger Slaughter wanted to be renominated by the Democrats, but he didn't like the Pendergast mob and said so. And furthermore Slaughter wasn't on very good terms with Bob Hannegan, a fellow Missourian picked by President Truman to head the Democratic National Committee.

So Hannegan and young Jim Pendergast blew the whistle on Slaughter and last July picked a relative unknown by the name of Enos Axtell to run in the Democratic race against Slaughter. Then they sucked Truman and the White House prestige into the battle. And so, at a White House press conference July 18 last, President Truman said that he was going out to his native Missouri to vote in the primaries and was against Representative Slaughter because "if Slaughter is right I must be wrong."

The President followed this up by announcing that he was backing Slaughter's opponent, Axtell, because he had known Axtell all his life and that Axtell was an old neighbor.

One of the rude boys asked the President at this point if he could tell the reporters the full name of his old friend and neighbor, Axtell, whom he had known all his life. The President couldn't. Kansas City Star correspondent Duke Shoop cut short an embarrassing moment by suggesting to the President that the first name of the President's old friend was Enos.

Then on August 5 came the Missouri primary with President Truman back in his native State for the fight. When the count came in it appeared that Truman-championed Axtell had won, defeating his fellow-Democrat, Representative Slaughter, but by a narrow margin.

Then, on the analysis of the votes from the Democratic battlefields in the heart of the Pendergast-Truman bailiwick there came some interesting facts. In certain Kansas City precincts where the Pendergast power rules, candidate Axtell was reported as licking Representative Slaughter by such lusty margins as 88–0, 69–0, and 145–1.

The victorious Democrat Axtell was soundly licked by the Republican opponent in November. But the outraged and defeated Representative Slaughter was also back here and howling for vengeance.

Congress moved into the picture—but gingerly. And the Department of Justice naturally didn't bubble over with zeal at the prospect of investigating an election fraud which was smack on the doorstep of the boss in the White House.

And here a newspaper did a good job. The Kansas City Star under Editor Roy Roberts, veteran Washington correspondent, ripped into the picture. Evidence and leads that the paper gathered and supplied to a Missouri grand jury brought 81 indictments against 71 suspects in the voting fraud. The evidence was placed in the vaults of the board of elections. Meanwhile the Department of Justice had shyly retreated from the red-hot case. Then came the fantastic cracking of the official vaults and the looting of the red-hot evidence against the political supporters of President Truman.

Yes, Mr. District Attorney, gang-busting Governor of New York Thomas E. Dewey is sitting very pretty, thank you. We understand he's heading West shortly and will be passing through Missouri. What he says may be interesting.

Mr. Speaker, these editorials require no comment from me, or anyone else. They merely reveal the feeling of all decent citizens back in Missouri, in our Nation's Capital, and, I believe, throughout the entire Nation. The only issue is, Will this Nation be governed by law or ruled by outlaws?

The Rent Problem

EXTENSION OF REMARKS
OF
HON. FRANK BUCHANAN
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Monday, June 2, 1947

Mr. BUCHANAN. Mr. Speaker, under leave to extend my remarks, I am inserting an editorial from the Pittsburgh Post-Gazette of May 31, 1947, entitled "Voluntary Rent Increases":

VOLUNTARY RENT INCREASES

The Senate has voted, in effect, to jack up the Nation's rents a flat 15 percent. All the talk about agreements entered into "voluntarily and in good faith" between landlord and tenant is rank pettifoggery.

There won't be anything voluntary about the 15-percent increase if this measure becomes law.

The landlord could go to the tenant with this argument: Either sign a lease calling now for a 15-percent rent boost extending beyond December 31, 1948, or risk an unlimited rent increase when rent control expires within a matter of months.

Given this sorry choice, the tenant will inevitably accept the immediate 15-percent increase as the lesser of two evils.

The only decent solution to the rent problem is to retain controls for so long as they are necessary, granting individual rent increases on the present adequate basis.

Those who argue that the poor landlord is being victimized need refer only to the regional rent control office for some interesting figures.

Under recently liberalized provisions, landlords are obtaining rent increases wholesale on the basis of "substantial hardship" petitions.

Rent increases ranging from $5 to $7.50 a month for 1,325 western Pennsylvania tenants have been approved during the last 2 months alone. Over a period of years increases granted in 1946 will total more than $200,000. And at the accelerated rate at which increases are being granted the figure will be must greater in 1947.

Passage of the rent bill in its present form will only add to the hardship of thousands of families already having difficulty making ends meet in the face of fantastic prices. Apparently Congress is going to fool around now with rent control just as it did a year ago with OPA, coming up at the last moment before expiration of rent control on June 30 with something preposterous which the President will have to approve rather than have no legislation at all.

Wool Against the People

EXTENSION OF REMARKS
OF
HON. CHET HOLIFIELD
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Monday, June 2, 1947

Mr. HOLIFIELD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Boston Herald of May 26, 1947:

WOOL AGAINST THE PEOPLE

It is nothing new in the Congress of the United States for a small group of self-interested people to put all of the 140,000,000 residents of this country over a barrel and beat the economic daylights out of them. The handful of silver Senators have been doing this for years. They did it so successfully in early New Deal days that, in the interest of fostering the use of silver, they committed this country to policies which drove the few great remaining silver currency countries away from silver. That kind of government, rule by a greedy minority, can only lead to economic ruin, and hold the American system of Government up to ridicule in the eyes of the world.

But last Friday the House of Representatives put over a steal that will not only add appreciably to the cost of woolen goods to every American citizen, but could very easily wreck the Geneva trade conference and put the United States back on the road of economic isolationism.

The thing was done so slyly in the House Agriculture Committee, which brought the measure to the floor, that Representative HAROLD D. COOLEY, North Carolina Democrat, admitted to his colleagues afterwards that he didn't realize what he had done until later when he read some newspaper accounts of the implications of the committee action. Now the House, blinded with isolationist wool in its eyes, has accepted the committee measure and it goes to conference with the Senate, which passed a less objectionable version of the same bill.

The House bill provides that the Government must not only continue to support wool by direct subsidy at the artificial price of 42 cents per pound, but on top of the continued United States wool tariff to add an import fee to make up any other differential in price between domestic and foreign wool prices which the Tariff Commission should find. The wool growers call 42 cents a starvation price, while the wool manufacturers claim that a price of 37 or 38 cents would be profitable. After all, most wool is sold in the United States as a byproduct of meat production.

Not only does the House bill threaten to add to the price of the clothes all of us wear; but its principle of placing an arbitrary tariff

(the import fee) on top of a support price consistent with our domestic agricultural support system, flies in the face of our country's foreign policy. Right now our negotiators are virtually deadlocked at the Geneva trade conference because Australia and the United Kingdom got the jitters from watching Congress act on wool. Under-S :retary of State William L. Clayton, who came back from the Geneva Conference to deal with the wool crisis, said that the House bill's ultimate approval would convict the Nation of insincerity.

What is at stake in the selfish action of the wood growers? Clearly, not very much. Of all wool-growing States, only Wyoming grows enough to account for more than 2 percent of a State's total income (3.2 percent of Wyoming) Most of the wool we wear comes from Australia and it would be much cheaper if it were not for the tariff protection we afford our own producers. Is this the kind of a stake worth the wrecking of vital foreign policy?

We hope the conference committee will save us from this shame.

Lincoln and Negroes

EXTENSION OF REMARKS
OF
HON. WILLIAM M. COLMER
OF MISSISSIPPI
IN THE HOUSE OF REPRESENTATIVES
Monday, June 2, 1947

Mr. COLMER. Mr. Speaker, today when the politicians and the political demagogues, in their search for votes, are going so far afield on the Negro question, it might be well to take cognizance of the fact that the greatest real friend the Negro ever had, the great emancipator, Abraham Lincoln, at no time entertained such wild-eyed views as are now being advocated in some quarters.

In substantiation of that, Mr. Speaker, I submit herewith a timely editorial from the Jackson (Miss.) Daily News, under the caption "Lincoln and Negroes":

LINCOLN AND NEGROES

Perhaps no important figure in American history has been thoroughly misunderstood or misquoted concerning his attitude on the Negro question than Abraham Lincoln.

Although he issued a proclamation freeing the slaves, Abraham Lincoln did not, at any time, favor social equality between the races.

During his famous debates with Stephen A. Douglas in 1858 Lincoln made an address at Charleston, Ill., on September 18 of that year, in which he used these words:

"While I was at the hotel today an elderly gentleman called upon me to know whether I was really in favor of producing a perfect equality between the Negroes and white people. While I had not proposed to myself on this occasion to say much on that subject, yet as the question was asked me, I thought I would occupy perhaps 5 minutes in saying something in regard to it. I will say, then, that I am not, nor ever have been, in favor of bringing about in any way the social and political equality of the white and black races; that I am not, nor ever have been, in favor of making voters or jurors of Negroes, nor of qualifying them to hold office, nor to intermarry with white people; and I will say, in addition to this, that there is a physical difference between the white and black races which I believe will forever forbid the two races living together on terms of social and political equality. And inasmuch as they cannot so live, while they do remain together there must be the position of superior and inferior, and I as much as any other man am in favor of having the superior position assigned to the white race.

"I say upon this occasion: I do not perceive that because the white man is to have the superior position the Negro should be denied everything. I do not understand that because I do not want a Negro woman for a slave I must necessarily want her for a wife. [Cheers and laughter.] My understanding is that I can just let her alone. I am now in my fiftieth year, and I certainly never have had a black woman for either a slave or a wife. So it seems to me quite possible for us to get along without making either slaves or wives of Negroes. I will add to this that I have never seen, to my knowledge, a man, woman, or child who was in favor of producing a perfect equality, social or political, between Negroes and white men. I recollect of but one distinguished instance that I ever heard of so frequently as to be entirely satisfied of its correctness, and that is the case of Judge Douglas's old friend Col. Richard M. Johnson. [Laughter and cheers.]

"I will also add to the remarks I have made (for I am not going to enter at large upon this subject), that I have never had the least apprehension that I or my friends would marry Negroes if there was no law to keep them from it [roars of laughter] but as Judge Douglas and his friends seem to be in great apprehension that they might, if there were no law to keep them from it [laughter] I give him the most solemn pledge that I will, to the very last, stand by the law of this State, which forbids the marrying of white people with Negroes."

The above paragraphs ought to be read over and over again by misguided Negro leaders in Northern States who are clamoring so vociferously for social equality.

Universal Military Training Imperative for United States, President's Commission Advises

EXTENSION OF REMARKS
OF
HON. HENRY D. LARCADE, JR.
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Monday, June 2, 1947

Mr. LARCADE. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD under previous authority, I beg to include herein a newspaper article from the Washington Post of this date written by Marshall Andrews, Post reporter, on the subject of universal military training. The article is as follows:

UNIVERSAL TRAINING IMPERATIVE FOR UNITED STATES, COMMISSION ADVISES—SURVEY GROUP TELLS TRUMAN SECURITY AND FOREIGN POLICY CALL FOR ADOPTION

(By Marshall Andrews)

President Truman's Universal Training Advisory Commission yesterday recommended adoption of universal military training as an essential element of national security and foreign policy.

"We recommend the adoption of universal training," the Commission reported, "because we are convinced that weakness on our part not only involves our country in grave risks but also weakens the United Nations, on which rests our hopes for lasting peace. A weak and irresolute America is an invitation to failure. A strong and resolute America is the best guaranty for our safety and for the success of the United Nations."

OBLIGATION FOR YOUTH

It should be the obligation, the Commission said, of every young man on reaching 18 or completing high school to undergo a period of training which would fit him for service to the Nation in time of any future crisis.

Such service, it said, should include 6 months of basic training in camp or aboard ship under Army or Navy supervision and an additional unspecified period of supplementary service. This latter would include service in a civilian component of one of the forces, or special training for appointment as an officer for technical proficiency.

For practical reasons the Commission excluded training of women at this stage. It suggested that the possibility of including women should be studied by a Commission set up to administer the program. It recommended in turn that this Commission should consist of two civilians and one military representative, reporting directly to the President.

WOULD USE DRAFT BOARDS

Dr. Karl T. Compton, chairman, told a White House news conference immediately after delivery of the report to Mr. Truman that it was estimated the program would cost $1,500,000,000 to $2,000,000,000 a year. He said it could be started approximately 1 year after Congress legislated it into being.

Dr. Compton said he believed the Selective System, including local boards, should be revived to screen young men for service. This system, the Commission itself pointed out, would then be available in case of war.

As for the obligation of young men to serve their country, the Commission agreed that no loopholes should be left, or opportunities for evasion.

"For each youth who is physically and mentally qualified therefor," it said, "such training should be of a predominantly military character and specifically designed to prepare him for service in one of the armed forces. For those who are unfitted for training of this nature, the program should be preparatory service to the Nation. Only those young men would be relieved of the obligation to train in one way or another who could not perform any useful form of service in time of crisis for which preparatory training would be of any value."

The Commission said it was in unanimous agreement on all points and gave three basic reasons for its conclusions. They were:

1. That the belief of other nations that the United States was stripping itself of strength was a deterrent to the effectiveness of the United Nations and adoption of universal military training would reassure those nations.

2. That universal military training was the only alternative to a huge and expensive professional military establishment for the maintenance of essential security.

3. That the atomic bomb had eliminated all former concepts of zones of safety in any attack on this country and had added to the need for trained men in every city and town.

In connection with the atom bomb attack, the Commission considered and discarded the argument most frequently put forward that the atomic bomb has rendered armies useless.

"We reject this conclusion," it said, "because our analysis of the possible types and conditions of future warfare convinces us that increased, rather than decreased, numbers of trained troops would be quickly required for home defense for effective counterattack, and for complete victory."

Dr. Compton supplemented this view in his White House news conference.

"Although the first part of the book may seem a little lurid," he said, referring to that part of the report dealing with the nature of possible future warfare, "we wanted to con-

sider the worst that could possibly happen and be prepared for that. Anything less would be worthless."

"We do not wish, however," the Commission added in its report, "to exaggerate the benefits that would be derived from the establishment of a universal training program. It offers no cheap or easy ticket to security. Only when combined with the other elements that enter into a balanced security system would it provide the measure of strength necessary to deter an aggressor from taking up arms against us or from violating the rights of less powerful nations."

EIGHT-POINT PLAN GIVEN

The Commission outlined an eight-point plan without which it said no program for national security would be complete. (See accompanying outline of the eight points).

Although the Commission throughout its report employed the euphemism "universal training" suggested by Mr. Truman, it left no doubt it was recommending universal military training, with emphasis on the military phase and for reasons of military security.

"Military necessity must be its principal emphasis and concern," it said at one point. "This does not mean that there cannot and should not be substantial accommodations in the interest of other values. But no program which fails to provide the necessary military benefits would be warranted."

"Moreover," it said at another point, "any attempt to convert a military program into general training would inevitably impair its military advantages."

TWELVE SUPPORTING REASONS

Suggestions had been made during public discussion of universal military training that health or physical education or citizenship be made the primary objective of the program if adopted, with military training secondary. It had even been suggested that a free high school year be given to all young people.

The Commission gave 12 specific reasons why universal military training would benefit the Nation. They were:

1. It would shorten the time in which an effective fighting force could be mobilized in case of war.

2. It would give young men the essentials of training which would, in the event of war, result in saving lives.

3. It would make possible an effective National Guard and Organized Reserve capable of rapid absorption into the fighting forces in case of war.

4. It would improve the efficiency, quality, and alertness of the Regular forces in peacetime.

5. It would help produce qualified Reserve officers in sufficient numbers to meet immediate requirements in a crisis.

6. It would present additional opportunities for inculcating spiritual and moral ideals in support of the American democracy.

7. It would establish a pool of young, physically fit, and trained reserves.

8. It would provide a large trained element in every community capable of withstanding and dealing with the problems of civilian defense and disaster resulting from bombing attacks.

9. It would provide a mechanism that could be converted immediately into a wartime selective service system with a continuing inventory of useful skills.

10. It would help to channel qualified young men into programs of scientific and vocational training in fields important to national defense.

11. It would bring together young Americans from all parts of the country to share a common experience and fulfill a common obligation to their country, thus contributing to national unity.

12. It would give greater military strength at less cost than would be provided by a large standing military force.

The Commission prefaced its recommendations with an exhaustive study not only of the problems and procedures of universal training itself but of the national and international factors which entered into its conclusions. It included also studies of universal training in other countries. The 448-page document may be purchased from the Superintendent of Documents for 75 cents.

In addition to Dr. Compton, members of the Commission were Joseph E. Davies, former Ambassador to Russia; Dr. Daniel Poling, editor of the Christian Herald; Judge Samuel I. Rosenman, of New York; Mrs. Anna Rosenberg, industrial relations counsel; Truman K. Gibson, Jr., lawyer and former aide to the Secretary of War; Dr. Harold W. Dodds, president of Princeton University; the Reverend Edmund A. Walsh, S. J., vice president of Georgetown University; and Charles E. Wilson, president of the General Electric Co.

The Commission was appointed December 19, 1946, and shortly thereafter began its study, during which it heard some 200 witnesses "representing every shade and variety of opinion." It also reported that it had studied previous testimony on the subject and published opinions which were available and had held many private interviews throughout the country.

LIST OF RECOMMENDATIONS FOR UNITED STATES SECURITY PROGRAM

Following are high lights of the recommendations released last night by President Truman's Advisory Commission on Universal Training:

"In the light of the conditions that exist in the world today, no program for national security would be complete unless it encompassed all of the following ingredients:

"1. A strong, united, healthy, and informed nation: This is our No. 1 security requirement. It is the bedrock on which all our military preparations depend. The vigor and vitality of our democracy, as expressed in improved health, education, productivity, and morale of the American people, are of paramount importance, not only for ourselves but also for millions subject to the deception of totalitarian philosophies abroad.

"2. A coordinated intelligence service: Only through the most diligent collection and the most exhaustive analysis of every scrap of data that might shed light on the war plans of a potential enemy or the extension of his sphere of influence can we hope to make up for the cushion of time that has been taken away from us by the deadly speed of air and atomic attacks.

"3. Scientific research and development: No lesson of World War II was more convincing to the American people than the effectiveness of science in providing potent new instrumentalities of warfare. We strongly endorse continued interest in and support of both basic and applied research by the armed forces, and specifically add our recommendation in favor of legislation to establish a national science foundation.

"4. Industrial mobilization: The development of new weapons will be of no value unless our scientific progress is matched by industrial readiness for the problems of war that may come without warning at supersonic speeds. Weapons that were not in being and in the possession of our troops when an aggressor struck would be worthless in inflicting swift retribution upon him or in preventing his approach to our shores. Because of the danger that production centers would be demolished in the first days of war, a start should be made now toward decentralizing the most vital plants and, in some cases, toward building underground or otherwise adequately protected facilities. Critical war materials must be stock piled now and in the future.

"5. A striking air force: Spearhead of our professional armed services, this force would be charged with the crucial mission of 'defense by attack.' Its job would be to stop the enemy's first onslaught and to hit back at him with crushing force. We believe that an aggressor's reluctance to start a war, and his handicap in prosecuting it successfully if he did start, would be in direct proportion to the power and readiness of our mobile striking force. Its personnel would have to be highly trained and its equipment would have to be the most advanced in the world.

"6. Other elements of the Regular Army, Navy, Air Forces, Marine Corps, and merchant marine: Long-range operations of great destructive power and control of strategic bases might be decisive elements in determining the outcome of a war. Since we could not under our Constitution and would not under our conception of international morality launch a surprise attack against any country without an open declaration of war, the enemy would have the advantage of surprise. Replacements would have to be available speedily in large numbers. Maintenance of planes, mechanized equipment, and the host of highly technical weapons and devices developed by science increases the need for specialists, supply troops, and unbreakable supply lines.

"7. Unification of the armed forces: There can be no realistic planning or preparation for the kind of defensive and offensive strategy required for modern war without unity of command.

"8. Universal training: For reasons discussed at length in our report we unanimously recommend the adoption of universal training. We do not believe there is any other way of guaranteeing that the armed forces will be able to count on a sufficiently speedy flow of trained men to win a war if large-scale fighting for bases or invasion of the enemy homeland are required. These pretrained young men would be ready to cope with the unprecedented problems of internal security that atomic warfare would bring—problems of such magnitude that our failure to meet them at once, wherever they developed, might lose us the war overnight."

A Weakening Bulwark

EXTENSION OF REMARKS
OF
HON. WAT ARNOLD
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES

Monday, June 2, 1947

Mr. ARNOLD. Mr. Speaker, I wish to include in the CONGRESSIONAL RECORD, an editorial taken from the May 25 issue of the St. Louis Post-Dispatch, entitled "A Weakening Bulwark." This editorial contains a solemn warning against subtle elements and methods that operate to break down our system of free speech and education; and the separation of church and state, so essential to free government. It reads as follows:

A WEAKENING BULWARK

U. S. Grant is rightly remembered as the military genius who won Lincoln's war to preserve the Union. He deserves to be remembered also as a stalwart champion of the public school and a guardian of that great American institution against encroachment and compromise.

Addressing the Des Moines reunion of the Army of the Tennessee in 1875, Grant said as President:

"Let us all labor to add all needful guarantees for the security of free thought, free speech, a free press, pure morals, unfettered religious sentiments, and of equal rights and

privileges to all men, irrespective of nationality, color, or religion.

"Encourage free schools and resolve that not one dollar appropriated for their support shall be appropriated to the support of any sectarian schools. Resolve that either the State or the Nation, or both combined, shall support institutions of learning sufficient to afford every child growing up in the land the opportunity of a good common school education, unmixed with sectarian, pagan, or atheistical dogmas.

"Leave the matter of religion to the family circle, the church, and the private school supported entirely by private contributions. Keep the church and state forever separate."

Americans need to take Grant's sound advice to heart today. They are forgetting the basic principle of separation of church and state which James Madison and his wise associates wrote into the Constitution as article I of the Bill of Rights.

Anyone who doubts this needs only review the evidence compiled by V. T. Thayer in his new book, Religion in Public Education. Ten States have laws which allow public school pupils to be dismissed from class to receive religious instruction in school or elsewhere. Twelve States require the Bible to be read in public schools. Sixteen States provide transportation for pupils in parochial schools, and so on.

Some of these laws have been promoted by the Ku Klux Klan. Others have been advocated by Catholic and Lutheran groups. Still others have had the support of Protestant denominations. They all add up to a slow, steady, almost unseen crumbling away of the wall which has kept church and state apart in the United States.

But it is not only locally and in the States that this breach is being made. There are now pending in Congress bills which would greatly widen it on a national scale. These are the many bills for Federal aid for education sponsored by Senators TAFT, AIKEN, HILL, ELLENDER, COOPER, CHAVEZ, TOBEY, and THOMAS of Utah, and Representatives WELCH of California and WHITTEN of Mississippi, and others.

Though provisions in these bills vary, all would either authorize funds for nonpublic schools or nonprofit educational institutions or leave it to the State to distribute large sums to parochial and other private schools. Senator AIKEN, chairman of the Senate Subcommittee on Education, says frankly that he favors "a substantial measure of Federal aid for private schools, for such purposes as transportation of pupils, health programs and purchase of nonreligious instructional supplies and equipment." This, says the Vermont Senator, would enable such schools, "with their own funds, to strengthen their teaching staffs and their general educational position."

Credit Senator AIKEN with good intent, his thinking is nonetheless fallacious. An appropriation for private or religious schools is a subsidy for them. It makes no difference how many sets of books the schools keep. What matters is that tax funds are used to make it easier to teach doctrines which many citizens either do not believe or frankly reject or even oppose.

Shall tax funds be used to support schools for the Jehovah's Witnesses who have religious scruples against saluting the flag? Shall tax funds be used to maintain schools for Christian Scientists who object to student health programs? Shall tax funds set up schools for the children of radical thinkers who desire to revolutionize the present organization of our society?

These questions answer themselves. The Federal-aid bills have much to commend them as meeting a vital need, but before they are even to be considered they should be freed of all provisions which would authorize Federal funds for nonpublic schools.

Justice Rutledge, in his monumental dissent last February in the 5-to-4 New Jersey school-transportation case, said that one breach would be followed by a second and the second by a third and the third by a fourth until "with time the most solid freedom gives way before continuing corrosive decision."

What a tragic paradox it would be for Americans to be so busy defending democracy over the world that they failed to see one of its stanchest bulwarks weaken and give way at home.

Small Businessmen Must Become Intolerant

EXTENSION OF REMARKS
OF
HON. ROY O. WOODRUFF
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 28, 1947

Mr. WOODRUFF. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address by J. Raymond Tiffany, general counsel, Book Manufacturers' Institute, Inc., National Small Business Men's Association, before the Economic Club of Detroit, Monday, May 5, 1947, Book-Cadillac Hotel, Detroit, Mich.:

Mr. Kane, President Crow, members of the Economic Club of Detroit, and guests, it is indeed a great honor for me to have the privilege of your forum, and I trust that in return you will find the time you spent here today has been worth while.

A salesman for a woolen company said to the lady of the house as she opened the door, "Madam, would you be interested in some rough yarns?" To which she replied, "Indeed I would; come in. I haven't heard a good story in weeks." So you will agree that the same words may connote entirely different ideas in the mind of a speaker and his audience, which leads me to say:

The first thing we should do is attempt to define our terms.

Let us take the word "democracy," for instance. Woodrow Wilson made the words, "The world must be made safe for democracy" a household phrase—a rallying cry for unstinted action in behalf of freedom of the peoples of the world. While the Atlantic Charter does not mention democracy, Generalissimo Stalin, in 1941, spoke of the struggle of the peoples of Europe and America for independence and democratic liberty. Then at Tehran, Potsdam, Yalta, and Moscow the word "democratic" was used by all participants, but unfortunately not with the same ideas in mind. The Russian definition of "democracy" involves state ownership of the means of production obtained through revolutionary and dictatorial methods, while we think of democracy more in the light of the definition of Dr. Elwood, of Duke University, as found in the Encyclopedia Americana, "a form of social control in which the opinion and will of every adult member of the group enters into the determination of group behavior."

The greatest stumbling block to world peace today is confusion of ideas among the peoples of the world—the lack of understanding of the hopes, ambitions, desires, and aspirations of peoples of other lands. We hear or read words and place our own constructions thereon—constructions all too frequently based on our own ineptitude in the science of semantics, our own ignorance of all the facts, our prejudices, our selfish, materialistic impulses, and an almost complete lack of appreciation of the need for a spiritual concept in evaluating human relationships.

Permit me to use a story or two to clarify my point:

While talking with the pastor of my church, in his study, after services recently, his telephone rang and, after the conversation was ended, he said: "This will amuse you. Mrs. Smith just phoned and asked me the exact text of the morning sermon. She explained that she and Mr. Smith had been out on a party last night and did not feel well enough to attend church this morning; that they sent their young son, Johnnie, to church (which, unfortunately is becoming more and more the great American habit—permitting the children to look after our spiritual welfare of the family). On Johnnie's return home his mother was suspicious of his damp hair and questioned him as to his attendance at church and finally asked the text of the sermon, to which Johnnie replied, 'The text was: "Keep your shirt on and you will get a blanket."' Mrs. Smith, then convinced that the boy had not gone to church, called to check the text. I told her, as you know, that I hoped all my listeners had as good a version of my sermon as Johnnie. The text was not exactly 'Keep your shirt on and you will get a blanket,' but rather 'Be patient for the Comforter will come.'"

A couple of years ago we had a very disastrous hurricane on the east coast. The damage was enormous, and one little church up on Cape Cod suffered the loss of one of its three mosaic stained-glass windows. The ruling body of the church convened in special session and voted to replace the window at once. John Jones volunteered to go to New York City and arrange for the replacement. The board, mindful of Jones' propensity to "bending the elbow," warned him to be careful and to arrange so that the window would arrive at the church in condition for immediate placement, that the text be identical with that on the destroyed window, and the coloring in harmony with the remaining windows. After assurances by Jones that all would be well, he left for Providence, where he took the train for New York. After getting on the train he wandered into the lounge car and there shortly found himself with his relaxing formula mixed and in process of consumption. In the course of the 4-hour trip Jones had several of these relaxing formulas, and finally when he arrived at the Grand Central Station he was a bit fuzzy in the head, could not remember what he had done with his memoranda as to the window measurements, text, and color. So, after some difficult concentration, he decided to phone his good wife and ask her to help him out of his predicament. She spoke her mind quite freely at first, but finally agreed to obtain the information and wire it to him in care of the Western Union office, at Grand Central Station, in New York City. John went into the motion-picture theater, killed some time, and finally went back to the telegraph office, and said to the little blonde attendant, "Have you a telegram for Mr. John Jones?" She looked at him and smiled as only a girl of that kind can, and said, "No, Mr. Jones; I am sorry we haven't, but wait a moment. Something is coming in on the machine now." She sat down and began to type, when suddenly her eyes seemed to pop, her face paled, and she dropped off her chair in a faint. Jones, very much astonished, ran around the counter, picked her up, set her on her fanny, got her straightened out, and then looked at the message to see what had caused her to swoon. There he read: "John Jones, care of Western Union, Grand Central Station, New York. Unto us a Son is born, 6 feet long and 3 feet wide, predominating colors blue and green. Signed Mary."

You see, the little fellow at the church construed a profound text within the elevation of his limited observation, and the little telegraph girl read the words, but being wholly unfamiliar with the background against which they were written, just could not take it.

That misunderstanding and prejudices exist in the world is understandable, when you consider the mental, or, should we say, lack of mental development of the great majority of our people.

Recently, a professor of literature of one of our great universities, told me that in his opinion all literature should be rewritten, using only words within the vocabulary of an 8-year-old, inasmuch as that was the average intelligence of our people.

Lester Markel, Sunday editor of the New York Times, speaking of the ignorance and apathy of the public of this Nation, said recently, "Informed public opinion in the United States now depends on a group that consists of only 20 to 25 percent of the Nation's population." Said he, "This is the way it might be worked out mathematically: 20 percent of the population belongs to what I would call the definitely moronic class, another 20 percent is ignorant and entirely unwilling to learn, another 40 percent is ignorant but willing to learn provided that, of course, the lessons are made pretty simple. That leaves a 20 percent segment of the well informed."

Another student of human affairs has stated that 80 percent of all people do not have the capacity to save or preserve anything; approximately 80 percent of all people do not have the capacity to successfully conduct organized human endeavors; probably less than one-half of 1 percent of all people are given the talent to be natural leaders of the remaining 99½ percent.

Then let us not be unmindful of the fact that in every 1,000 persons there are several natural-born thieves, several congenital liars, several abnormally selfish individuals, some of whom possess great capabilities as leaders, some finding their way into labor and others into business.

One other break-down seems to me to be pregnant with meaning. A management consultant in New York states that as a result of a study made by his concern they estimated that 5 percent of our people are factually dishonest thinkers, 15 percent are easily controlled by these 5 percent factually dishonest thinkers, 60 percent of our people will follow the leader in thinking, 5 percent are factually honest thinkers, and 15 percent lean to the views of the 5 percent factually honest thinkers. I am sure you will agree that the task of the factually honest thinkers is first to reach and, may I say, convert the adjacent and susceptible 15 percent, and then endeavor to inculcate in the minds of the 60 percent follow-the-leader group—the great mass of our people—sound American ideologies. If this is not done, and done intelligently and very quickly, we may well find that the great majority of our people will follow the factually dishonest thinkers in evaluating and supporting positions having to do with not only our domestic affairs but with our international policies and relations as well. Indeed, we know all too well from bitter experience that the great masses of our people, unable to think a question through for themselves, take and act on the smooth mouthings of the glib who promise something for nothing; security—cradle to the grave; work less; produce less; have more—some pseudo Americans, posing under the guise of statesmen, politicians, commentators, pulpit orators, columnists, some labor leaders, and now a dismissed Cabinet member.

The economic experience of a great number of our present adult population is foreign to that which you would expect in a country whose people have lived under and been bounteously blessed by the democratic way of life.

The National Industrial Conference Board declares that, as of January 1, 1947, 77 percent, or 110,800,000 individuals in the United States had no adult experience with World War I; 63.3 percent, or 90,300,000 individuals have had no adult experience with the 1929 crisis; 58.4 percent, or 83,400,000 individuals have had—now mind you this—no adult experience under a Republican administration; that 48.2 percent, or 68,700,000 individuals have had no adult experience with a peacetime economy; and 44.4 percent, or 63,400,000 individuals have had no previous experience with a free market for cars, homes, clothing, etc.

Now I ask you very sincerely: Is it not amazing indeed that we in the United States have done so well in our advancement of human relations? Is it not understandable that we have been so susceptible to the medicine-doctor tactics of the bushy-eyed demagogues and the starry-eyed pedagogues who have been foisted upon us and placed in high authority in our poltical, economic, and social life?

I am not a proponent of the belief that formal education necessarily makes one intelligent. In my opinion, excellence of character, a good personality reflecting high spiritual qualities of the soul, are as essential to proper human relations, understanding, and good will, as is a good mind. Yes, I believe more so, and without those essential attributes one cannot be truly a well-educated person.

With these thoughts in mind, let us turn our attention to other peoples with whom we are neighbors and whose problems must be of concern to us. Wendell Willkie, shortly after his return from Russia, spoke profoundly and prophetically, when he stated that the problems of the people of the Far East are of as much concern to the people of the United States as are the problems of the people of California to the people of New York. Our thinking, said he, must be global.

The great French scientist, Lecomte du Noüy, in his recent and most interesting book, Human Destiny, says that it is the scale of observation which creates phenomena. One's scale of observation depends on the individual. It is he who creates it. Du Noüy explains this by saying: "Let us suppose that we have at our disposal two powders—one white (flour) and the other black (finely crushed charcoal or soot). If we mix them we will obtain a gray powder which will be lighter in color if it contains more flour and darker if it contains more soot. If the mixture is perfect, on our scale of observation (that is, without the help of a microscope) the phenomenon studied will always be a gray powder. But let us suppose that an insect of the size of the grains of flour or of soot moves around in this powder. For him there will be no gray powder, but only black and white boulders. On his scale of observation the phenomenon, 'gray powder'; does not exist." Dr. Du Noüy goes on to say that on our scale of human observation the razor's edge is a straight line; on the microscope scale it is a broken but solid line of hills and valleys; on the chemical scale, it is of atoms of iron and carbon; and on the subatomic scale, electrons in perpetual motion attaining a rate of speed of thousands of miles per second. All these phenomena are in reality the manifestations of the same basic phenomena, the motions of the electron. The only difference which exists between them is the scale of observation.

Never before in history has there been such a desperate need for human beings everywhere to raise the scales of their observation. Let us look for a few moments at some of the essential factors which are often omitted from the opinion-forming processes of many people because they are unaware of them.

India, China, Russia are in the news every day. In these countries forces are at work which will eventually shape the economical, political, social, and spiritual future of millions of people throughout the world and play a ponderous part in our own destiny.

Has it occurred to you that India may well emerge from this war and take her place as one of the great nations of the world, just as Russia did after World War I?

India, with over 389,000,000 people, occupies an area of one-half the size of the United States. She has great natural resources; her people speak 11 major languages, and we find not less than 220 distinct dialects; riches and poverty, side by side. More ethnic groups live in India than in any other country in the world. Famine and starvation abound; an average of 246 persons live within the square mile; filiteracy remains completely static—the 1921 census showed only 7 percent literate, leaving 93 percent illiterate in the sense that they cannot read and write a letter in their own vernacular language. Rate of birth was 33.44 per 1,000; rate of deaths, 25.56 per 1,000, one-fifth of the mortality being infants under 1 year old. In years of epidemics the ratio of death is higher, as in 1918, when the ratio was 62.46 per 1,000.

A great people heretofore not permitted to raise themselves within the potentialities of their great agricultural and industrial resources. They like us but do not understand us. One prominent Indian said to me, "Why do you not help us in our quest for freedom—we helped you to liberty." I said, "You helped us to liberty? That's not the way I read it." "Ah," said he, "that's the difficulty with your school system—you do not teach history too well in the United States. Look, when your forefathers rebelled against King George III the British were confronted with a real problem—India was giving plenty of trouble to Britain in the early 1770's and the policy-makers for the King had to determine whether to subdue the Indian situation and retain my country's vast wealth among their possessions or to deflect a large portion of her military strength toward quelling the American Colonies. The British decided to devote much of their strength to India and as a result your forefathers had a much weaker British force to fight. It is true that the French began their hostilities against the British in 1778; however, the First Mahratta and the First Mysore Wars gave your people much aid by drawing off England's might."

Yes, India is a great country, having given the world a great culture and contributed mightily to education. Her problems are our problems.

Then there is India's neighbor, China, about which an American Secretary of State said nearly 50 years ago: "The world's peace rests with China and whoever understands China holds the key to world policies during the next five centuries." The truth of this observation by John Hay is manifest today. Over 450,000,000 souls, with a density of population of 104.8 persons to the square mile, illiteracy and famine rampant—a nation in revolution, the victim of interference of other well-meaning nations all too often selfishly inclined, now struggling between the philosophies of the modern and ancient Chinese as to governmental policies and human rights; 450,000,000 who believe in high moral standards—a people whose culture is founded upon the eight virtues—loyalty, filial piety, benevolence, love, faithfulness, righteousness, peace, and harmony; a people whose state rests upon four great principles—righteousness, propriety, modesty, and honor.

I bring these attributes to your attention because, in my opinion, they are fundamental not only to the Chinese but to the peace of the world.

China, rich in natural resources, with great contributions to the culture of the world, must continue in her want and poverty because the rest of the world does not yet understand her or realize that here is an essential key to peace.

And, finally, Russia with her 202,000,000 existing in 174 nations or tribes in a land larger than all of North America and four times the area of India, with a density of population of only 23.1 to the square mile, more nationalities and ethnic groups than

any other nation in the world except India; 125 language or dialects; over 40 different religions.

In 1913, illiteracy was 70 to 80 percent—fewer than 8,000,000 pupils in primary and secondary schools, fewer than 300,000 in technical and higher institutions. In 1928, illiteracy, had been reduced by 44 percent—enrollments had risen in the primary and secondary schools to more than 11,000,000 and to over 600,000 in the technical and higher institutions. By 1941 there were over 35,000,000 pupils—illiteracy had dropped to less than 20 percent. A country rich in natural resources, practically self-sufficient.

Here in these three lands—India, China, and Russia—we have almost one-half of the world's population of two and a quarter billion souls.

Oh, yes, we in the United States have about 140,000,000 people living with a density of 46 to the square mile. The entire Western Hemisphere has less than 300,000,000 people with a population density of about 18 to the square mile. In numbers we do not compare with the seething Far East.

While I was at the United Nations Conference at San Francisco in the spring of 1945, I found a rather sad situation. There were congregated many groups, all ostensibly to aid in assuring an enduring peace. Let me observe, however, that never before did a group of public officials labor under such heartbreaking assaults in an atmosphere made heavy by the forces of greed, selfishness, prejudice, and passion. Of course, everybody wanted peace, provided the way of peace protected their selfish interests. Certain labor forces were there working for peace, plus their particular ideas for the advancement of the rights of international labor; the Jew was there for peace but—take care of the Jewish interest in Palestine. The anti-British were there for peace but—fix up that Indian situation. Our colored friends were there for peace but—look after the rights of the colored people for they must be advanced. The anti-Russians—the isolationists—were there, working day and night for peace, plus their own interests, shouting "Peace, peace, provided we get our particular schemes advanced or attached to the peace."

The scale of observation of the unofficial groups was indeed on a very low plane and great credit is due to the delegates of our country and of the other nations for the splendid, constructive and far-visioned contribution they made in the creation of the United Nations Organization.

So far we have discussed our rather disappointing level of intelligence and the need for raising our scales of observation. We have taken a quick view of conditions affecting one-half the population of the world and are mindful of the effect they may have on our own future.

So, let us look at the small businessman. Who is he? For what does he account and where does he fit in the picture?

We consider a plant with 1,000 employees or less as small business; also wholesale establishments with retail sales of $1,000,000 or less; retail stores and service etablishments, etc., with annual net sales of less than $100,000 in volume.

There are about 500,000 small corporations throughout the land not listed on the New York Stock Exchange, and about 1,400,000 individual owners of business houses in the United States. More than 150,000 of the 210,000 industrial plants in the United States are in the category of small business. Ninety-six percent of small businessmen earn less than $25,000 annually.

Total United States employment in trade and industry, according to figures submitted to me for 1939, which were the latest available, showed employment of 18,684,136, with large establishments employing 5,727,370 or 30.7 percent, and small business as the employer of 12,956,766 or 69.3 percent.

In manufacturing establishments only, 29.9 percent of the wage earners were employed in plants of 100 or less; plants with 101 to 250 employees hired 18.7 percent; 251 to 500 employees, 16.1 percent; and 501 to 1,000 employees, 13 percent; or a total of 77.7 percent of wage earners in 1939 were engaged in plants employing 1,000 or less persons, and only 22.3 percent in plants employing over 1,000 persons.

In the final analysis the small businessman is indeed the very backbone of our country and, may I say, that not until the National Small Business Men's Association was founded in 1937, with DeWitt Emery as its president, was this fact recognized or appreciated to the extent that anything was done to protect and crystallize this potent force for the preservation of the public welfare and the advancement of the American way of life.

The small businessman is the major employer of our country; the director of our public-school systems upon which the future of our country depends; the molder of popular opinion in his community; the supporter of the churches, hospitals, fraternal organizations, and other community activities. He provides the necessities for the community, he finances political organizations at the local level. Without him—the small businessman—whether he employs one or a thousand, there would be no America. He has a real responsibility. Down through the years he has been more or less content to accept that which came his way, but that day is gone. The small businessman has not only come to realize that he is important; in fact, essential, but he is more determined to discharge the responsibility which always attends those who occupy positions of power.

The small businessman knows the truth of that which a recent Pope declared, when he said, "The causes of war are five:

"1. The hatred of nation for nation.

"2. The adversity to work.

"3. The contempt of authority.

"4. The thirst for pleasure.

"5. An almost complete repudiation of spiritual ideals."

He knows that we now live in a materialistically selfish world—a despiritualized world. He sees the evidence in the shocking increase in juvenile delinquency, in the increasing crime wave with some kind of a crime committed somewhere in the United States every 20 seconds, with someone raped, feloniously assaulted, or slain every 6 minutes. He feels the impact of the destruction of family life through the ever-increasing percentage of divorce. He experiences the greed and selfishness of certain types of labor leaders, of certain sharp practices by some large and some small competitors. He knows the distrust of the people of other nations for the Americans. He senses the loss of the dignity of our courts through their divided judgments and personal bickerings. He sees the church compromising with principles. He sees compromise and surrender of the unalienable rights of man under force of government edict. He knows that in recent years in high places in government we have had men who have been talkers—not doers—men with ideologies diametrically opposed to the principles which have made us a great people.

The small businessman is deeply conscious of the fundamental teachings of his God and he knows all too well how far afield from those teachings many have departed in these latter years. He recalls that it was the Great Teacher who said to one as they walked beside the Lake of Galilee, discussing the problems of their day, that the first commandment was to love the Lord, thy God, with all thy heart, with all thy soul, and with all thy mind, but that there was a second commandment as great as the first, "Thou shalt love thy neighbor as thyself." The force of that great commandment comes home to the small businessman now with the realization that he is indeed a neighbor of all peoples everywhere, that through the advancement of science the world has shrunk, that in fact we are but hours from any part of the world, that the commandment is not limited to loving neighbors of his own social strata but involves his neighbors in China, India, Russia, Burma, South America, and in all parts of the world.

The small businessman knows the soundness of the statement of Mr. Attlee, recently made in Parliament, when he said, "The greatest task that faces us today is to bring home to all people, before it is too late, that our civilization can only survive by the accepted practice in international relations and in our national life of the Christian principle, we are members of one another." The small businessman recalls that our own President Woodrow Wilson, in speaking at Swarthmore, Pa., said, "Do not forget as you walk these classic places that you are here to enrich the world; forget that errand and you impoverish yourself."

The small businessman knows that in all the civilizations recorded throughout the history of the world there has come a time in each when, because the people became overmaterialistic, became despiritualized, became unmindful of His teachings, they passed into oblivion and became but a page in history. The small businessman is determined that the civilization of our day, purchased by the lifeblood of our youth in two of the greatest and most devastating wars of history, both within our generation, shall not pass from the earth.

Had we, the American people, been intolerant of what happened at Nurenberg, the course of the world would have been altered; had we been intolerant of the action of the Japanese in going into China, Mussolini's rape of Ethiopia, Hitler's foulness in Poland, millions now dead would have been alive today. Had we refused to tolerate the now admittedly bad interpretations of the Wagner Act—to say nothing of its original enactment; had we become intolerant of the compromises and appeasements of the so-called bargaining table, the so-called conciliators and mediators; had we become intolerant of the abuses of the workingman, of the assaults on management, of the wasteful extravagance of local, State, and National Governments and their agencies, as well as the incompetence therein, the moral and financial burdens inflicted on coming generations would be lessened and the dignity of man heightened.

It's time to become intolerant—to become intolerant of the practice of bearing false witness in business, labor, politics, in all human relations.

It's time to become intolerant of the practices which lower the dignity of man by indoctrinating him with concepts of human relations which can lead but to his degredation and continuous war.

It's time to become intolerant of the surrender, through incompetence or design, whether for purposes of political or personal expediency or otherwise, of the great principles upon which our country has been built.

It's time to become intolerant of all efforts, at home or abroad, to undermine, weaken, and destroy our form of government.

It's time to become intolerant of intolerance in all but matters affecting the fundamental principles governing human behavior and human relations.

It's time to become intolerant of attempts to destroy our faith in God.

Small businessmen—men in the upper 20-percent strata of our people—in the one-half of 1 percent where we find leadership—should lead the way, should become intoler-

ant of the apathy and ignorance of the people; intolerant of the forces which make for hatred, misunderstanding, and ill will; intolerant of lowered scales of observation affecting human relations and behavior.

"Isn't it strange
That princes and kings, and even clowns
Who cavort about in sawdust rings,
And commonfolks like you and me
Are builders of eternity?

To each is given a book of rules
A shapeless mass and a kit of tools,
And each will make, ere life has flown,
A stumbling block or stepping stone."

Tolerating through ignorance or apathy the things which should be intolerable is but placing stumbling blocks where stepping stones should be.

Thank you.

City of History

EXTENSION OF REMARKS
OF
HON. JACK Z. ANDERSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, June 2, 1947

Mr. ANDERSON of California. Mr. Speaker, the mission San Juan Bautista will celebrate on Sunday, June 29, 1947, the one hundred and fiftieth anniversary of the founding of the mission, the largest in California.

The celebration will feature a fiesta-rodeo at the historic Mission Plaza and new arena directly below the El Camino Real overlooking the beautiful San Juan Valley.

The celebration featured Sunday, June 29, 1947, is known as Fiesta-Rodeo de San Juan Bautista.

Mr. Speaker, I think it is a fine thing that the little City of History, San Juan Bautista, is commemorating such a historic event. Nestled in the beautiful San Juan valley at the foot of famous Fremont Peak, where Gen. John C. Fremont first raised the American flag and defied the Mexicans below, this occasion will again recall the stirring and epic days of early California.

The citizens of San Juan Bautista and San Benito County are to be congratulated.

Helicopters and the Changes They Require in Aviation Law

EXTENSION OF REMARKS
OF
HON. PAT McCARRAN
OF NEVADA
IN THE SENATE OF THE UNITED STATES
Monday, June 2 (legislative day of Monday, April 21), 1947

Mr. McCARRAN. Mr. President, a little over a month ago I had the pleasure of listening to an extremely able and highly informative address delivered by Mr. L. Welch Pogue, president of the National Aeronautic Association, member of the committee on aeronautical law of the American Bar Association, and member of the law firm of Pogue and Neal, which is counsel for the Helicopter Council of the Aircraft Industries Association. Mr. Pogue, as most of the Members of this body know, is a former Chairman of the Civil Aeronautics Board. The subject of his address was helicopters and the changes they require in aviation law.

The address was delivered at a luncheon of the Aviation Law Institute, honoring Carl B. Rix, president of the American Bar Association. The luncheon, which was sponsored by the Milwaukee Bar Association in cooperation with the committee on aeronautical law of the American Bar Association, was held in Milwaukee on April 25, 1947.

I have myself been interested, for a number of years, in the subject of helicopters. I am not a prophet, but I am convinced in my own mind that helicopters will prove feasible and practicable, and that in the near future we shall see a great deal of activity in that field.

Consideration of the many new problems which will be created by widespread use of helicopters is a fascinating subject, and one which I am sure will interest many Members of this body. I therefore ask unanimous consent that the address to which I have referred, delivered by Mr. Pogue, may be printed in the Appendix of the RECORD.

I am informed by the Public Printer that the address will make two and three-quarter pages of the RECORD, and that the cost of printing will be $195.25.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

HELICOPTERS AND THE CHANGES THEY REQUIRE IN AVIATION LAW

(By L. Welch Pogue)

As the title of this talk indicates, the helicopter requires numerous changes in aviation law. By aviation law, I mean, for the most part, statute law—Federal, State, and municipal—including rules and regulations made pursuant thereto by administrative agencies. A large body of aviation law has been developed over the past 30 years. It has been enacted for the purpose of regulating the conventional fixed-wing type of aircraft. Now comes the helicopter, which finds, at the very beginning of its development, that it is subject to all of this body of aviation law, although such law was designed for a different vehicle.

Before it can be understood why changes are required in aviation law to fit the helicopter, it is essential to understand how the helicopter operates in contrast to the ordinary airplane we have come to know, and to have an appreciation of its potential usefulness to the public, and of the extent to which it may become a transportation vehicle widely owned by the average man. Accordingly I shall proceed by first describing some of the more significant and distinguished characteristics of the helicopter and its place in our economy and will refer to some of the changes in aviation law which the helicopter would seem to require in order to permit it to perform its natural functions.

When the age-old desire to shake off the earth and fly entered the twentieth century with perennial hope, it found success, but success with limitations. Flight in the fixed-wing type airplane, requiring lateral movement for support in the air, brought speed, and is bringing in a new epoch in military, political, economic, and social concepts. But during the first half of the century it had not yet reached the common man extensively in his private uses. Now, the helicopter comes along at a comparatively late date with only moderate speeds of from 80 to 100 miles per hour, but with a utility, with operational and safety characteristics, and with mass-production possibilities which give it the promise of the real fulfillment of that age-old desire to fly which the millions of individual world citizens have had. This is for them. It is for them soon.

In the light of the very considerable advance in the art of flight and the science of aeronautics, it is surprising that the helicopter with its wide range of useful possibilities was not developed earlier. Of course, many attempts to do so are recorded in the history of aviation. It is well known that the famous Leonardo da Vinci pioneered the art of flight on paper. It is interesting to note that one of his designs shows a machine consisting of a lifting screw driven about a vertical axis—a helicopter.[1] But the practical helicopter has only recently been created. When you hear anyone raising questions about the helicopter on the ground that it is complicated or costly, just bear in mind that we should give it a little time before judging it under standards calling for the perfect vehicle—as we had to give time for the perfection of nearly every other valuable discovery before it could be expected to achieve its maximum usefulness and acceptance.

In order to understand the helicopter and its future utility, to recognize that it is sui generis, that is, in a class by itself and not an airplane at all in the usual sense, and to appreciate the need for freeing the helicopter from certain laws, rules, and regulations intended for a quite different type of vehicle (that is, the fixed wing airplane), it is essential to have in mind some of the facts about helicopter performance. The necessity of having the facts—all of the facts and the accurate facts—is familiar ground to lawyers. What then are the distinguishing operational characteristics of the helicopter which set it apart from all other kinds of aircraft and render unncessary its conformity with many existing aviation laws, rules, and regulations?

These distinguishing operational characteristics are almost as striking as the art of flight itself was originally. The moving wing, that is, the power-driven rotor, has for the first time given flight a hummingbird omnidirectional agility. I shall mention here the most outstanding only of the special facts concerning helicopter operation which, I believe, will show a compelling need for certain changes in aviation law.

1. Vertical ascent and descent: The moving power-driven wing, or the rotor as it is called, is the remarkable achievement which has freed the helicopter from the limitation, applicable to all fixed-wing type airplanes, which requires that they must maintain a minimum forward speed (that is, in excess of the "stall speed") in order to stay in the air. The helicopter can ascend and descend vertically or at any desired angle. It is more economical to ascend and descend at an angle although it is not in any sense required that the angle be comparable to that required for fixed-wing types.

2. Hovering: The helicopter can hover in mid-air for an indefinite period. This again is made possible by the power-driven rotor. Never before has any aircraft been able to stay in the air without forward speed.

3. Speed may be anything from zero to maximum: The helicopter shares with the automobile the ability to travel at any speed from zero miles per hour to its maximum rate. It has no critical stall speed in the usual sense and can, therefore, slow down at will.

4. Quick stopping in mid-air: The helicopter can stop from a forward cruising speed in a very short distance. From a forward speed of approximately 70 or 80 miles per

[1] See American Helicopter, vol. V, No. III, p. 13, February 1947.

hour at sea level, types now in commercial use can, under emergency conditions, arrest their speed and acquire a hovering stationary position in approximately 75 feet of forward advance from the time the emergency stop is undertaken. Not even an automobile can stop from such a speed in such a short distance.

5. Adjustment to traffic conditions: The helicopter can fly sidewise, backwards or in any direction at adjustable speeds. This characteristic coupled with its ability to hover, to ascend or descend either vertically or at any angle, and to stop quickly, places in the hands of the helicopter pilot an ability to meet traffic conditions which probably exceeds that of an operator of any other known vehicle, including the automobile. As an automobile driver must slow down because of traffic conditions, or fog, or the condition of the highway, so a helicopter pilot can adjust his speed or attain a hovering position in order to meet traffic or weather conditions or surface problems.

6. Parking-lot landings: The helicopter can operate in and out of a space of very limited area. If necessary it can land in an area very little larger than the diameter of its rotor, with or without power.

7. Landing in event of power failure: In the event of power failure, the rotor automatically disengages from the engine and, pursuant to the principle of autorotation, continues to rotate in such a manner as to permit the helicopter to make a relatively safe landing in a few feet of area. This is a complete revolution in the art of flight. Open lots and spaces, suitable for emergency helicopter power-off landings, can be found scattered throughout almost every town and city.

8. Freedom from runways and conventional traffic patterns: The helicopter needs no runways, should never use them, should avoid entry into conventional air-traffic patterns—should be permitted to fly under them in certain cases—and should, so far as possible, stay below or outside the line of flight of conventional aircraft.

9. Noise: Unlike propellers, rotors do not produce an offending noise. If the engines are effectively muffled—as they must be—the helicopter can pass through the air with the greatest of ease without offending the nervous or agitating the fearful.

Thus we see that the helicopter is not an airplane in the conventional sense. Generally speaking, its operational characteristics distinguish it completely from all other vehicles, including airplanes, and establish it as a new and distinct type of vehicle.

One of the early uses of the helicopter will be to carry the mail between suburban areas and between them and central forwarding points in metropolitan communities. The Post Office Department has been a pioneer in this field, as it was in the case of the airplane in the early days.[2] The Post Office conducted experimental tests for the carriage of mail by helicopters in Los Angeles, Chicago, and New York. Los Angeles will probably be the first of these areas where regular mail service by helicopter will be authorized by a Civil Aeronautics Board certificate. Under the law no one can carry mail by air without a certificate of public convenience and necessity issued by the CAB after a public hearing.[3]

The possibilities for time savings in mail deliveries are very great. W. H. Ackerman, postal inspector, has traced two air-mail letters across the country, one using helicopter service at both ends, and the other going by the present method. He finds the elapsed time between mailing and delivery to be 18½ hours where the helicopter is used, and 37 hours where it is not. This is merely illustrative of what can be done.

Next, extensive uses for helicopters in commercial operations will develop; in all probability, develop before there is a widespread private ownership of these vehicles. I will list a few of the uses in which interest has already developed. Rescue work, particularly at sea and in inaccessible places; crop dusting, including orchard spraying and dusting; suburban delivery; pipe-line inspection; power-line inspection (in one case a helicopter did in 1 hour what normally would have required 15 men 5 hours to do, or a total of 75 man-hours); mineral survey; hauling chicle out of the jungle in Central America; exploration of natural resources in undeveloped areas; forest-fire patrol; timber appraisal; aerial photography; traffic control; coast patrol; ship-to-shore operations; lighthouse supply; air express delivery; cattle supervision and animal census; wire laying; and so on.

One category of use deserving special mention is too broad to be developed here. It relates to the military application of this marvelous invention. You can see at a glance that in military rescue work, emergency delivery work, artillery spotting, reconnaissance, and the like, the helicopter offers many possibilities to the military services.

Beyond the experimental uses for mail and specialized commercial uses will come taxi, commuting, and regular local common carrier service. And somewhere along the line the average man will claim the helicopter as his own, somewhat as he claimed the automobile. It is only a question of when—not if. And when that time arrives, helicopters will be counted in very large numbers.

In view of this predicted future wide use, one naturally asks about the subject of nuisance legislation. Nuisance and safety regulation should not be confused. All sorts of weird results and impossible tangles in jurisdiction can and will follow if nuisance regulation masquerades under the name of safety.

Nuisance regulation, whether in the form of statutes, regulations, or ordinances, made under the police power of the States may, but I believe need not, develop into anything of importance in the regulation of helicopters. Intelligent, aggressive self-policing by this new helicopter industry can avoid a mass of nuisance regulation which, if enacted, could smother the use and development of this very promising vehicle for many years. One of the problems is engine noise. As I have indicated, the rotor is not a noise problem as is the propeller in the conventional-type airplane. The engine exhaust can be, and I believe is being, successfully muffled. Other possible nuisance problems can be eliminated by conservative flying, respect for the sensibilities of others both on the ground and in the air, and careful preparation and selection of landing areas so as to avoid unnecessary dust and rotor air wash. Fortunately, good progress is being made in the direction of effective self-policing. Manufacturers are alert to the problem and are not only insisting on thorough careful training of pilots but are prepared to cooperate in a program of indoctrination of both operators and pilots to the end that each operator and pilot should realize that he is representing an important new industry when he operates his helicopter and that he should conduct himself at all times and under all circumstances in such a manner as to avoid endangering its future promising growth and development.

In summary, nuisance legislation need not develop if proper action is taken by those having control of the causes of this problem.

One of the places where change is required is in those provisions of aviation law relating to airports, their establishment and operation. If helicopters do not use landing runways and if they stay out of the traffic patterns of conventional fixed-wing types (as they should do), where are they to land? They should be permitted the maximum freedom consistent with safety in the establishment of helicopter-landing areas. Obviously the helicopter should be permitted to land and take off freely in the country and in the thinly settled districts. If an owner of property wants to permit his helicopter-driving friend to visit him, there should be no law against it, if the operation conforms to all safety rules, any more than there is against your neighbor visiting you by automobile. Of course, I am assuming that the engines will be muffled, as are automobile engines, with comparable results. The same freedom should exist with respect to the individual helicopter owner who desires to base his vehicle at home.

But what about a helicopter landing and take-off area used for regularly scheduled operations or by the miscellaneous public? Several types of landing areas for these purposes will probably be established if sufficient latitude is accorded by governmental authorities. Among these types will be:

1. Privately owned and serviced landing areas open to one or more of the following: (a) Helicopter common carriers of mail, persons, or property; (b) the public generally; (c) individual helicopter owners who have contracted for the landing privilege.

2. Governmentally owned, and either publicly or privately serviced landing areas open to the public.

3. Governmentally owned areas open to use by a helicopter service operated for the Government, such as a helicopter service for the Post Office Department landing in the Government-owned lot near post-office buildings or on post-office rooftops.

Petroleum companies should be very much interested in helicopter landing areas because of the fueling and servicing possibilities. This offers promise of having these facilities operated on a strictly business basis with all of the accompanying benefits resulting from competition. This one possibility might well lead toward placing a minimum amount of emphasis on the need for the municipality to provide them.

It is, of course, clear that zoning laws might prevent the development in a zoned area of a busy helicopter mart (like a garage), servicing and storing helicopters. This type of zoning ordinance is a well-known device to preserve the character of the neighborhood. But beyond this point, it is submitted that the best interest of communities (large and small) do not require licensing by any governmental agency, Federal, State, or municipal, but only that all rules for safe operation be observed scrupulously at all times. If this is to be the result, it is obvious that numerous existing Federal regulations, and State and municipal laws and ordinances, should be adjusted to permit the free establishment of such helicopter landing areas.

This brings us to the major field of laws, ordinances, rules, and regulations relating to safety where certain changes in aviation law are essential. Take, for example, the requirement that an aircraft cannot fly contact unless it has at least 1-mile visibility. This is required for fixed-wing high-speed aircraft in order to avoid the hazard of collision. With the helicopter which can slow down to any desired rate of speed or, if necessary, "stand still" in the air, that is, hover, it is clear that there is a strong case for permitting helicopters to fly at less than 1-mile visibility. This, of course, assumes that the helicopters in so traveling are required to be outside of airport control zones and in a layer of air constituting the first 700 feet above the ground which is not occupied by fixed-wing aircraft operating on instruments.

---

[2] See An Air-Minded Government's Contribution to Civil Aviation, delivered by L. Welch Pogue before the Fourth Annual Meeting of the Southwest Aviation Conference, Wichita, Kans., on April 25, 1941, reprinted in the Technology Review, November 1941.

[3] Civil Aeronautics Act of 1938, as amended, sec. 401.

Another provision requiring a change is the one providing that except when necessary for landing or taking off no aircraft shall be flown over congested areas of cities, towns, or settlements at less than 1,000 feet above the highest obstacle within a radius of 2,000 feet from the aircraft. This is required for fixed-wing aircraft in order to avoid the hazard of collision with structures on the ground or of having insufficient altitude in the event of power failure to glide to a place where an emergency landing can be made without undue hazard to persons and property in the congested area. With the ability of the helicopter to land safely in very small areas, to hover to proceed at a reduced speed, to stop quickly in midair and thus to adjust itself to any traffic or other conditions, and with the desirability of helicopters staying below the flight path of fixed-wing aircraft, it seems clear that, so far as safety is concerned, a change in aviation law is indicated here so as to eliminate this requirement which is unnnecessary insofar as helcopters are concerned.

In the field of safety regulation it is probable that we must evolve new techniques in the daily operation of our Federal-State-municipal system. Since 1789 our experiment in making the Federal-State relationship work has called for adjustments here and there to meet new factual conditions—all, however, in harmony with the farsighted, fundamentally sound concept of this dual form of government. Thanks to the rapid discovery and growth of new forms of communication and transportation, the basic problem of making the Federal-State relationship work would probably be easier today (if it were to be tried for the first time now) than it was originally. But we still have adaptations to work out; and the regulation of the helicopter is one of them.

Briefly stated, the intelligent regulation of the helicopter calls for a new, high level of cooperation in rule making between the Federal, State, and municipal authorities—all three.

Admittedly some safety regulations applicable to helicopters will be required. As a long-range matter, who should make them? Clearly the Federal Government, in the interest of the safety of interstate air commerce, will continue to regulate helicopter flights in the designated airways and otherwise as necessary. This is because theoretically anyone in the air is potentially a hazard to interstate flight. He actually becomes such in case he is in interstate flight or does not stay clear of interstate flights or gets lost or is careless. It has been held that under existing law the Civil Aeronautics Board has power to provide by regulations that no person shall pilot a civil aircraft in the United States without valid Federal pilot and airworthiness certificates.[4]

It is well recognized that in a field where the Federal Government has the proper constitutional authority and the proper enabling Federal legislation its duly promulgated regulations are controlling and take precedence over inconsistent State and local laws and regulations. It is, of course, entirely possible to have valid State and local laws and regulations which are not inconsistent with the Federal regulations. These State and local laws and regulations are based upon the so-called police power of the States. Because of the fact that the helicopter is a slow-flying, low-flying, essentially short-range vehicle it may well be held that it falls within the police power referred to. Let us suppose that is the case and that we have many differing State laws and many more differing municipal ordinance which, while not inconsistent with the Federal regulations, have to be observed by all helicopter operators.

[4] *United States of America* v. *Andrew D. Drumm, Jr. and Luscombe Airplane No. NC 37066* (50 F. Supp. 451 (U. S. D. C., D. of Nev., 1944)).

In such a state of affairs, the first problem is to face the fact that when a multitude of local regulations are made by many different people, none of whom are experienced in helicopter operation or familiar with its operating characteristics, the results are certainly going to be little less than chaotic. In the second place, a much more serious concern will be that a helicopter pilot contemplating a trip across the country on which he will be visiting several States and many municipalities, will have the almost impossible task of reading all the varying State and municipal laws, rules, and regulations before he starts his trip; but he can't read them without first obtaining them. Does he write to each separate State and each separate municipality and wait for a reply? When does he know that he has the most recent amendments of ordinances and laws? Or is he obliged to subscribe to some very expensive loose-leaf service and read in as many different places as he intends to visit the separate rules and regulations applicable in that particular area? In any event, if each of these jurisdictions is to make its own independent regulations, the helicopter pilot must remember which ordinance, law, or regulation applies to each particular town when he arrives there. The impossibility of keeping a mass of differing information clearly in mind is obvious. With the best of intentions, it would take something more than a Philadelphia lawyer to master such an assignment. Without further illustration, it can be seen that chaos will develop unless some means can be devised to provide the helicopter pilot with the means of learning his rules and regulations from one source, in the most simplified manner and with a minimum of duplication.

Theoretically, it would seem that country-wide helicopter rules designed primarily for the protection of interstate-commerce flights of all types of aircraft, supplemented by any necessary State and local rules designed to meet special local conditions, should all be made around a common council table with Federal, State, and local authorities, all represented and under arrangements which would make available at one source all of the regulations needed. Although our constitutional governmental organization may not entirely meet this theoretical need, it is believed that substantially the same results can be obtained through cooperation between the Federal Government and the States and municipalities.[5] This, however, not only requires cooperation between the Federal Government on the one hand and the States and municipalities on the other, but it also requires cooperation between the States and the municipalities.

Take, for example, the development of a standard helicopter traffic pattern for operations within municipalities. The laws, ordinances, rules, and regulations establishing them and providing for their enforcement would be extremely complex if completely different traffic patterns and theories of traffic distribution were adopted for different municipalities. As much uniformity as possible becomes essential here if a helicopter pilot traveling from one city to another is to stay out of the traffic jail. Shall the helicopter traffic go in a clockwise or counterclockwise direction around some central marker in the municipality? Shall the cardinal directions of the compass be used as major helicopter traffic one-way streets? Shall the municipality be zoned so that out-of-town helicopter traffic coming to or departing from the center of the city should come in or go out at a higher altitude than that destined to or coming from a more outlying zone? A new level of Federal-State-municipal cooperation is required to develop satisfactorily the laws, ordinances, rules, and regulations which will control this important problem.

Numerous changes are required in aviation law. The Federal Government, States, communities, and the people would be acting in their own self-interest if they would subscribe to the following program:

1. Regard the helicopter as a distinct type of vehicle and let it be subject to Federal safety regulations only to the extent and in the manner required by its operating characteristics.

2. In order to permit the helicopter to serve to the full extent of its usefulness, be prepared to modify State and municipal laws, ordinances, rules, and regulations as necessary to permit the helicopter the freedom which its safe operating characteristics will permit.

3. Avoid the enactment of nuisance laws under the mask of safety.

4. Permit helicopter landing areas to be established freely under our competitive system, subject to full observance of all safety laws and, in the case of landing areas to be open to the public or regularly scheduled operations, to zoning restrictions enacted for the purpose of preserving the character of the neighborhood; and modify existing laws as necessary to permit the foregoing to be done.

5. Develop a new, high level of cooperation between Federal-State-municipal regulatory authorities so that:

a. The views of all can be developed in a public record.

b. Uniform regulatory measures can be achieved.

c. The regulations a pilot needs to know can be reduced to a simplified minimum obtainable all in one place.

[5] In this connection, section 205 (b) of the Civil Aeronautics Act of 1938, appearing in Title II—Organization of Authority and under a heading entitled "General Powers and Duties of the Authority" and a subheading entitled "Cooperation With State Aeronautical Agencies," provides as follows:

"The Authority is empowered to confer with or to hold joint hearings with any State aeronautical agency, or other State agency, in connection with any matter arising under this act, and to avail itself of the cooperation, services, records, and facilities of such State agencies as fully as may be practicable in the administration and enforcement of this act."

The word "Authority" includes both the Civil Aeronautics Board and the Administrator of Civil Aeronautics.

Truman Policy Set-Back

EXTENSION OF REMARKS

OF

HON. LAWRENCE H. SMITH

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 3, 1947

Mr. SMITH of Wisconsin. Mr. Speaker, Walter Lippmann, in his daily column in the Washington Post for today, points out the weakness of the Truman doctrine as applied to Greece and Turkey. He says that this doctrine was superimposed unnecessarily and most unwisely upon the problem of supporting Greece and Turkey, with the result that Russia can now exploit the Hungarian situation. Mr. Speaker, under leave to extend my remarks, I am including the article by Mr. Lippmann:

TODAY AND TOMORROW

(By Walter Lippmann)

A SERIOUS SET-BACK

The Kremlin has also been making plans, and the first installment of them is now being

applied. The overt act is the seizure of power in Hungary by the Communists. This was preceded by Mr. Molotov's insistence at the Moscow Conference upon terms for Austria which it was impossible to agree to. The terms were meant to be impossible to agree to. For if there had been an Austrian peace treaty, the Red army would have had no license for remaining in Hungary, after the Senate ratified the Hungarian peace treaty. It was in order to stay in Hungary and then to seize power that Mr. Molotov prevented agreement on Austria at the Moscow Conference.

The seizure of power in Hungary has far-reaching strategical importance. It means that Rumania is surrounded. It means that Czechoslovakia now has a long common frontier with a completely Soviet-dominated state. It means that Tito's Yugoslavia has behind it this same Soviet-dominated state. It means that the pressure on the northern frontier of Greece can be intensified because there is now no gap in the Soviet network of communication down through the Balkans. But most important of all the Soviet network of communications to the southwest has been completed just as the situation in Italy is mounting to a crisis. The coup in Hungary is timed perfectly to enable the Soviet Government to get at Italy from Yugoslavia and Albania and to make the most of its opportunities there.

It is not entirely clear at this distance whether the Communists deliberately provoked Prime Minister de Gasperi to exclude them and the main Socialist Party from the government, or whether the initiative came from his own party and from those who believe the time has come for a show-down with communism. In any event the fact is that the new Italian Government does not represent the majority in the legislature. The Communists and the bulk of the Socialists are not only on the outside, but in open opposition, and on the verge of rebellion.

There are ominous but credible reports that an Italian guerrilla movement against the government is forming. The main strength of the guerrillas, or partisans as they are called, would, of course, be in the northern industrial centers of Italy, in the valley of the Po and the plains of Lombardy, which back up upon the Yugoslav frontier. Thus Italian guerrilla actions and a Communist-Socialist rebellion against the government in Rome can now be supported directly overland from Hungary through Yugoslavia.

We have here the Russian strategical counteroffensive to the Truman doctrine, or rather the first phase of the counteroffensive. The pressure on Greece continues, but at the same time the Soviets have opened up a new avenue of influence and power into northern Italy and the central Mediterranean.

The Truman policy has been to try to contain the Soviets by small measures at all the weak spots on the periphery, and if not to encourage, at least not to discourage, the view in all the threatened countries that we favor show-downs with the Communists everywhere and are prepared and able to support those who bring about a show-down. This policy has now been struck a sharp blow.

The plain and bitter truth is that the Russians are better prepared for a show-down than we are. They are operating near to the sources of their own power. We are operating at a great distance. They are organized inside the critical countries. We have not even made the plan, much less appropriated the money, for the reconstruction of Europe which would, we hope and believe, rally the masses of the people against submission to the kind of thing that has just happened in Hungary. It takes only a few weeks to prepare and only a few days to carry out the seizure of power, and it costs almost nothing. It takes months and months to plan recovery, months and months to debate the plan, and years to make the plan work.

Under the circumstances it cannot have been wise to invite, or even to let the world think we were inviting, a general show-down all along the line. In diplomacy as in war a premature show-down is the way to get a bloody nose.

The Truman doctrine, which was superimposed unnecessarily and most unwisely upon the concrete problem of supporting Greece and Turkey, has got us into a position which the Russians can exploit in Hungary, in Italy, perhaps later in France. The great big hot words which Mr. Truman uttered so eloquently cannot at this time be made good by effective deeds. It would, therefore, have been better not to utter them.

The set-back to our diplomacy and our prestige, which we have now suffered, is serious. But it is not final and fatal, and we are quite strong enough to recognize that we have had a set-back and to profit by it, and in the end to reverse it. But we must face up to the fact that this contest can be won only by very large measures of political construction and of economic aid, that the time for planning and acting is shorter than we have assumed, and that we can indulge in no more diplomacy by doctrines, slogans, and attitudes if we are to retrieve successfully the important ground which has been lost.

Federal Aid to Education

EXTENSION OF REMARKS

OF

HON. LISTER HILL

OF ALABAMA

IN THE SENATE OF THE UNITED STATES

Tuesday, June 3 (legislative day of Monday, April 21), 1947

Mr. HILL. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address on the subject Should There Be Federal Aid to Education? broadcast by me over the Columbia Broadcasting System on Monday, April 21, 1947.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

My friends, I want to talk to you about America's children, your child and my child. I want to talk to you about the future of our children.

Did you know that this year 5,000,000 children will receive an inferior education? Two million others will suffer a serious impairment in their schooling. And 75,000 unfortunate children will receive no education of any kind.

All over the United States the people are talking about a crisis in education. A distinguished educator, in a Nation-wide survey for the New York Times, described it this way: "Although the schools of the United States did not suffer from a single air raid during the war, they are being wrecked as surely as though they had been blasted by heavy bombers."

Classrooms are terribly overcrowded. Often more than one class is taught in the same room. Many school buildings are poorly heated and poorly lighted. Equipment is old and inadequate.

We entrust the minds and characters of our most precious resource—our children—to the teacher for many hours in the day. We look to the teacher to mold the child for the responsibilities of manhood and womanhood.

And yet, janitors and charwomen in public buildings are paid more than the average school teacher. Some teachers get less than $600 for a whole year's work. Is it any wonder that since 1939 more than one-third of the Nation's teachers have quit the schoolroom for other jobs? Thousands of today's teachers hold only emergency certificates, and are not adequately trained and prepared for their work.

We talk of a crisis.

What we are really saying, my friends, is that your child and mine are being denied their American birthright. They are being denied that education which will best help them grow up to be good citizens and earn a decent living.

The better your child's education, the better his chance for a good income, the stronger he will be as a defender of our country in time of national danger, and the greater contribution he can make as a citizen to the moral and economic power of our country and to the peace of the world.

We can no longer neglect the education of our children. Neglect means the loss of precious golden minutes which our children can never replace. Your child and my child can never go back and pick up the lost years.

You and I must act.

We must act in our school districts on problems which we can solve by local action.

We must get the States to do all they can.

And then there is a third indispensable step. The Federal Government must act. The problem of poorly educated American children is the whole country's problem. Some of the States, the low-income States, simply do not have the income to give their children an adequate education.

For example, Mississippi makes a greater effort than New York to educate her children. Yet New York spends an average of some $200 on each school child per year, while Mississippi—paying more of its income for education—can spend only $44.80 on each child.

Of course, you can expect arguments against Federal aid to education. In the early days there were arguments against all public education.

You will be told that the Federal Government, with its public debt, cannot afford to aid the State school systems.

This is penny wise and pound foolish. Money invested in education brings our Nation its richest returns in national security, in national prosperity, and in the happiness and well-being of our people.

You will hear that Federal aid will replace State effort for education.

The Federal aid bill requires State effort and provides incentive by increasing Federal aid as State effort increases.

You will be warned that Federal aid means the Federal Government will take over the public schools.

That is not true. The bill which I have joined in sponsoring has strong and effective safeguards against any Federal interference with the control of the schools. Control of the public schools stays where it has always been—in the hands of the States.

There is nothing new about Federal aid for education. We have had Federal aid for years for vocational education in our high schools and trade schools, for the land-grant colleges of the States, and for many State educational enterprises. We have it for our school-lunch program. And it has always left the control entirely with the States.

The bill in the present Congress, sponsored by the National Education Association, was jointly introduced by four Democrats and four Republicans. This is important. It means that neither major political party can disclaim responsibility for the urgent need to educate our children and to see that America's teachers are paid decent salaries.

We have at this moment an opportunity to lead mankind over a new frontier and into a new era. The world is looking to the United States for leadership. We failed to grasp such an opportunity after the First

World War. We now have a second chance. We cannot count on a third.

We must prepare our children for the building of the peace of the world. America's children must be educated, and this can be done only with Federal aid.

The St. Lawrence Seaway

EXTENSION OF REMARKS
OF
HON. GEORGE D. AIKEN
OF VERMONT
IN THE SENATE OF THE UNITED STATES

Tuesday, June 3 (legislative day of Monday, April 21), 1947

Mr. AIKEN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a very excellent article in support of the St. Lawrence seaway which appeared in the Denver Post of May 25.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

ST. LAWRENCE SEAWAY AGAIN IN PUBLIC EYE

(By Roscoe Fleming)

Soon one of the great proposed American public works of all time will be back in the news—Congress will be asked once again to approve plans for the Great Lakes-St. Lawrence seaway, and provide funds for its construction.

By a new plan, backed by Senators VANDENBERG and BARKLEY, among others, the whole project would be designed to pay for itself. Tolls would be charged on ships to pay for the navigation features. Formerly no toll was planned. The project would develop 1,650,000 kilowatts of electric power. This would pay for itself—at wholesale rates even lower than those of Bonneville, the continent's cheapest water power up to this time.

Canada, our partner in the gigantic venture, is said to be receptive to the idea of charging tolls for ship passage. The prospect for the seaway, fought over for many years, appears more favorable.

CHANNEL MAIN ITEM

What is the St. Lawrence seaway? Briefly, it is proposed to build a 27-foot-deep channel to admit mid-sized oceangoing ships up the route of the mighty St. Lawrence River which drains the Great Lakes.

Here is a 2,700-mile deep waterway stretching from the Atlantic, past the East's ocean ports, right into the heart of the continent. There is now fairly deep water everywhere, save for one 50-mile stretch of rapids along northern New York.

There is a 14-foot channel now. But, loaded, only ships 250 feet long or less, and 1,500 tons displacement or less, can use it.

The new channel would be 27 feet deep with an effective depth of 25 feet (ships sink 6 inches deeper in fresh water; and at least 18 inches of water between the keel and the bottom are favored by careful shipowners).

AN ENGINEER'S DREAM

It would permit ships of 10,000 tons or more, such as the Liberty or Victory type, to moor at Chicago, Duluth, Milwaukee. These great cities would become ports of the seven seas, though not for the very biggest ships.

The St. Lawrence is an electrical engineer's dream. The Missouri in flood flows 70 times as much water as at its dryest period. The St. Lawrence drains five inland seas with a total water surface as large as Colorado. It never flows less than 50 percent of its maximum.

The power plants would develop their 1,650,000 kilowatts—twice as much as Hoover Dam now develops—so efficiently that the cost of the power would be only about one-tenth of a cent per kilowatt-hour.

The cost of the whole project at 1940 prices was estimated at about $285,000,000. It might run to $400,000,000 at present prices. Canada would bear half the remaining cost—she has already done useful work worth about $140,000,000.

The State of New York stands ready to pay $93,000,000 in consideration of getting half for power—Canada gets half—for distribution through the New York State Power Authority. (One of the Nation's pools of high-cost power is in lower New York.)

RAILROADS OPPOSED

What has held up the seaway so far? Once the Senate voted in favor of it, but it was presented as a treaty with Canada, and did not get the necessary two-thirds. Since then it has been stymied by various blockades.

Chief among its most effective opponents have been the national railroad lobby, and the national private power company lobby. The latter doesn't want any more low-cost public-power developments, as exemplified in its fight to cut the Interior Department's throat in the House.

But, you say, surely, the railroads springing off the Great Lakes, like the Burlington, Great Northern, Northern Pacific, Union Pacific, Northwestern, Milwaukee, would profit?

Yes, and up until 1934, according to Julius Barnes, of Duluth, Herbert Hoover's great friend who has fought so long for the waterway, they were for it.

In that year, says Mr. Barnes, they came under the domination of the eastern railroads via the American Association of Railroads. And they began to fight the waterway against their own interest and that of their patrons. Here is another count in the charge being built up that the eastern railroads and eastern financiers dominate the United States railroad scene to the West's detriment.

FARMERS WOULD BENEFIT

Arguments pro and con for the waterway:

1. It would greatly reduce the freight costs of shipping upper Missouri Basin farm products, due to the approach of low-cost water rates as near as Duluth. This would mean more money for farmers clear out to Wyoming and Colorado.

2. It would reduce freight costs on manufactured goods for the same reasons, both for export and import. Some opponents of the seaway have painted it as placing both farmers and manufacturers more at the mercy of cheap imports. Tell that to New York City. How hard she is fighting the seaway to retain her present status of being ruined by cheap imports and exports.

It would open up channels to heavy raw materials, like the immense iron deposits of Newfoundland, when our own near exhaustion.

Opponents say that the waterway would be shut by ice 5 months of the year anyway. But the Great Lakes, in 7 months of the year, carry the world's greatest tonnage of heavy materials. They are an indispensable link in our economy, very nearly its heart.

Opponents say the waterway isn't needed, and no one would use it. In the same breath they say it would ruin eastern ports like Boston and New York and Baltimore, by bypassing them. They can't have their argument and eat it, too.

Lastly they say it is socialistic to build another great public power plant and save the mighty energy that now goes drifting uselessly out of the St. Lawrence with the tide.

What effect would the seaway have on the Western part of the Rocky Mountain Empire? Probably not much directly. The wave of cheaper freight rates might smooth out before it reached here. But it would provide an enormous stimulus for growth, population and prosperity in the Eastern part of the Empire, all the way west through the Dakotas and Nebraska.

We should certainly get the reflex of this—more visitors in summer and winter, more buyers in our stores, more livestock moving through our markets, more customers for our industrial products.

TWENTY STATES AFFECTED

According to proponents of the seaway—and the Government's studies of it—people in 20 States would receive large or small benefits. They include Colorado, Iowa, Kansas, Montana, Nebraska, North Dakota, South Dakota, Wyoming—besides Indiana, Illinois, Michigan, Maine, Massachusetts, Minnesota, New Hampshire, New York, Ohio, Pennsylvania, Vermont, Wisconsin.

Actually what helps one helps all, contrary to the current economic and political attitude that one region or community can grow rich or stay rich only by keeping others poor.

The Rocky Mountain Empire's economic growth has been stunted and blighted by eastern opposition and jealousy. There's another backward region neighboring the St. Lawrence—all the way from New York State up beyond Maine. Release that enormous cheap-power possibility on the St. Lawrence, touch the region with ocean navigation, and watch the story of TVA repeat itself in a different setting.

And the Nation will have added another dispersed self-sufficient industrial area, in protection against the atomic age.

So far as the record shows, Colorado Senators have voted only once on this. That time they voted not to attach a seaway bill to the 1945 rivers and harbors bill. Parliamentary considerations may have influenced their votes, rather than the merits of the measure.

American Relief for Poland

EXTENSION OF REMARKS
OF
HON. ANTONI N. SADLAK
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES

Monday, June 2, 1947

Mr. SADLAK. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include the address made by the Honorable Clare Boothe Luce, a former distinguished Member of the House, on the occasion of the launching of the Connecticut drive for $500,000 for American relief to Poland, at the Bushnell Memorial in Hartford, Conn., on May 28, 1947. Mrs. Luce is chairman of the drive in the State of Connecticut.

Connecticut's quota for Polish relief is $500,000. This is to be raised by voluntary contributions throughout the month of June. It will be collected in money, food, and clothing. We have just heard our newly appointed Ambassador and fellow Nutmegger, Mr. Stanton Griffis, urge us to go over the top with our share. His forceful words will bring hope to the Polish people and enthusiasm to the many friends of Poland in our State.

Now let me read you a letter. It was written to me by another distinguished public servant, the Honorable Arthur Bliss Lane. Mr. Lane is our recently retired Ambassador to Poland. You all know why Mr. Lane asked President Truman to relieve him of his Warsaw post. He wanted to talk frankly and freely to the American people about the Polish situation. He saw, after 2 years in his post, that this is the most tragic human situation and dangerous political situation

we have to face. This is the letter of a man whose patriotism is not to be questioned, since he renounced all personal ambition and preference in order to serve better the interests of America:

"DEAR MRS. LUCE: In connection with the meeting at Hartford to mark the opening of the campaign to raise funds to support the work of the American relief for Poland, I should like to say a few words on behalf of this organization which has done such splendid work in Poland.

"While I was Ambassador in Poland I was greatly impressed by the efficient and wholehearted efforts of the organization, and I was especially gratified to note that the supplies were distributed in Poland without regard to political, religious or racial considerations.

"As you well know, I do not approve of the present Communist-controlled Polish Government nor of its policies to dominate the people of Poland without regard to the Government's commitment to hold free and unfettered elections. I feel, however, that it would be an appalling injustice if the Polish people, which has already suffered from Nazi occupation and now from Communist domination, should be punished because of the misdeeds of its rulers.

"By contributing to the American Relief for Poland, American citizens will not only be rendering assistance but we shall be doing something even more important—demonstrating to the Polish people that the American people are still thinking of them during their unhappy time.

"The Polish question is of such importance to the United States in its greater international implications that it concerns all Americans whether of Polish descent or otherwise. It is to be hoped, therefore, that all Americans sympathetic with democratic principles will support the splendid work of the American Relief for Poland.

"Sincerely yours,

"ARTHUR BLISS LANE."

The previous speakers on this program, Dean Francis Swietlik, Mr. Chester Bowles, Dr. S. L. Smykowski, Ambassador Griffis, have all said in effect the same thing. A charitable regard for the sufferings of the Polish people, combined with a patriotic commonsense regard for our American world position, is the motive which brought us together tonight. And these additional words, coming from such a disinterested and authoritative source as Ambassador Lane, must dispell any remaining doubt in your minds that the help you give to Poland will be used to aid the forces of tyranny.

They will be used, in his words, "without regard to political, religious, or racial considerations." Here is democratic action: Your funds will not only keep life in the bodies of men, women, and children who will otherwise die; they will fan the fire of freedom in hearts that will otherwise despair.

And now I speak for myself. Like you, I am proud of my country. It is more than the truth to say that American is today, as yesterday, the last best hope of men on earth. I have no patience with the people who never have anything good to say of Uncle Sam. The cynics and sourpusses who call him Uncle Sap and Uncle Shylock; the ostriches who call him Uncle Butinsky, and the butinskies who call him Uncle Ostrich. And I despise the saboteurs who traipse around inciting hatred against us by telling other nations that Uncle Sam is a money-mad, power-hungry, war-minded imperialist itching to chuck an atomic bomb at anyone who gets in his way. When you think about the demands that our taxpayers have met and are still meeting for military aid, financial, political, and charitable aid—well, we are not boasting when we say once in a while a few kind words for Uncle Sam.

But no nation—as no individual—is above all reproach. Besides, when free Americans stop finding fault with their own conduct, and the conduct of their Government—beware. That day we will be a hard-hearted people and a short-sighted people. And that day we will be a people ripe for the plucking by dictators at home or abroad.

It is in this spirit that I say any American who has not lost all sense of his country's honor must look upon America's conduct to Poland since Yalta as the most shameful chapter in American history.

Let's take a brief look at that history.

In 1939 a free, independent Poland was brutally attacked by Hitler. Attacked because it would not give in to Nazi demands, as far stronger countries had.

I was in Poland on the eve of that attack. I saw Polish people preparing to lead their little army into battle against German tanks, on cavalry horses. Oh, the Poles knew that to meet Hitler's iron hordes on horseback meant slaughter, destruction, and defeat. They met them. God knows where they found the courage. It seemed such folly. And so it was: The folly of the Cross. And when Stalin shook hands with Hitler on the Nazi-Soviet pact, Poland was crucified—between two thieves.

Then Poland lived under a reign of double terror, the like of which the world has never seen. Wherever Brown hands, or Red hands could be laid on Polish patriots and leaders they were liquidated, put at forced labor, thrown into concentration camps, sent into Siberian exile. Three and one-half million Jews were cremated. Then thieves fell out: Hitler attacked Russia. Only then were the Polish men and leaders, who had not already been exterminated by the Reds, freed by Russia to form an anti-Nazi army. But Poles don't have to be free to fight. In the very heart of Hitler-held Poland, General Bor-Koromoski formed an underground army. On a prearranged signal with Russia and ourselves, General Bor launched an uprising in Warsaw. But the Red Army that then stood at Warsaw's gates, and had smoothly promised to come to his aid, never showed. No; it never showed at all. And Warsaw was reduced, block by block, house by house, to a city of rubble and mud, blood and corpses.

All during these days, America looked upon the suffering of Poland and wept. And promised. Promised, in the name of the Atlantic Charter, that at war's end both Germany and Russia would leave Polish soil. Promised that Poland would again be free. Day long during the war, the American radio blared these promises by short wave to Poland. These promises had the sanction of a President, a Secretary of State, the Congress, and—is it not so?—the whole American people.

Were these crocodile tears Americans wept? Were we giants in our promises; pygmies in our performance?

A free American people must judge. Yalta was the measure of our promises. Yalta sanctioned the fifth partitioning of Poland. And Potsdam confirmed it.

The week that the hush-hush news of Yalta leaked to the Allied Armies, I happened to be visiting General Anders' army, fighting under General Mark Clark's gallant United States Fifth on the Italian front. That was the army recruited in Russian-held Poland, and Russia after Hitler had two-timed Mr. Stalin. General Anders had marched his men thousands of miles through Russia and the Near East to join our forces in the African campaign. His men had fought six long years. They knew neither leave nor rotation. Their homes lay ahead of them in enemy hands. And so did their replacements. In that week of Yalta I found it hard to look in the hurt, accusing eyes of General Anders' soldiers. I shall never forget how ashamed I was that day to be an American.

For any army but a Polish army that betrayal by its strongest ally—the one that had wept most and promised loudest—would have been the signal to quit. To quit in hate and despair. General Anders' army did not quit. Why? Said General Anders to me: "We fought all the way out to keep our country free. We will fight all the way in to make it free. If we don't fight, who in all the world will fight for us now?"

You know the rest: The slow, mealy-mouthed acceptance by our leaders of Soviet expansion in Poland, our double-talk betrayal of Poland's real democratic leaders, the hypocritical countenancing by our Government of that disgraceful farce—the recent "free and unfettered" elections in Poland. Some may call this conduct prudence, others power politics. Still others impeach it softly, as appeasement. In plain words, it is either stupidity or cowardice. Neither is it worthy of our Uncle Sam.

Does all this sound political or somehow partisan? Then shall Americans tremble to be called a partisan of freedom? Shall we blush to be found partisans of our country's honor? Shall we apologize to be branded partisans of America's interests?

Oh, sure, I wish there were no need to speak this way tonight. How fine if we could put Poland's case on the sole grounds of democratic bounty and Christian charity. But we are honest men and women. Poland's misery does more than twist our hearts; it taunts our consciences. And we are freemen, living in a free country. We are mixed up beyond dispute, in the mistakes our leaders have made in our name. We have not inflicted the wounds that Poland suffers. But we have let them widen. We have broken no heads in Poland. But we have helped to break Polish hearts.

Let me tell you, in closing, a Polish story. I suppose you would call it a Polish joke. It is a joke that is very popular among Polish peasants just now, particularly among the ones who were hurled into jail for refusing to vote as told in those recent "free, unfettered elections."

God, it seems, wanted an angelic estimate of how things were going on His earth. So He sent the angel Gabriel to make a survey. Gabriel returned with this report, "I visited America," he said, "and in America the people were talking of war. But they had cut down their armies, destroyed their air forces, and done away with all rationing. So I visited Russia. In Russia, their leaders were all talking of peace. But they were keeping a vast army, building big air forces, and rigidly controlling all foodstuffs. I came back by way of Poland. Poland was dominated and even occupied by an alien power. The people had no shelter, no clothing, no food, no army, and no air force. But the Poles were all talking of victory and freedom!" Then God shook His head and smiled. "Those Poles," He said, "they always did count on Me."

It is said that God helps those who help themselves. But when a people is so sick and hungry and homeless that they can no longer help themselves, maybe God will help those who help them.

No citizens have ever been more generous in the past than the citizens of Connecticut, when the sufferings of others challenged their help. Let us, in this campaign surpass all our previous generosity.

Let us dig deep in our purses, raid our larders, ransack our attics for Poland.

Let us give to this cause—not in charity, but in gratitude. For if the freemen of the world won't all be Poles together—we'll end up poles apart.

Niech zyje wolna Polska!

A Yankee Trick?

EXTENSION OF REMARKS
OF
HON. DANIEL A. REED
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 29, 1947

Mr. REED of New York. Mr. Speaker, I am sure that every patriotic American will be shocked to hear that the character of Abraham Lincoln has been assassinated by an unreconstructed rebel. I believe the character of the Great Emancipator and savior of our Republic will survive the attack of Dr. Charles C. Tansill.

I suggest that the doctor take time to read the speech made by the Honorable Alexander H. Stephens, of the State of Georgia, in which he urged the southern hotheads bent on a war of rebellion to abandon their treasonable and ruinous course.

I insert the eloquent appeal of the Honorable Alexander H. Stephens to his colleagues in an effort to cool their tempers and thus lessen their zeal for rebellion:

Mr. President, this step of secession, once taken, can never be recalled; and all the baleful and withering consequences that must follow, will rest on the convention for all coming time. When we and our posterity shall see our lovely South desolated by the demon of war, which this act of yours will inevitably invite and call forth; when our green fields of waving harvest shall be trodden down by the murderous soldiery and fiery car of war sweeping over our land; our temples of justice laid in ashes; all the horrors and desolations of war upon us; who but this convention will be held responsible for it? And who but him who shall have given his vote for this unwise and ill-timed measure, as I honestly think and believe, shall be held to strict account for this suicidal act by the present generation, and probably cursed and execrated by posterity for all coming time, for the wide and desolating ruin that will inevitably follow this act you now propose to perpetrate? Pause, I entreat you, and consider for a moment what reasons you can give, that will even satisfy yourselves in calmer moments—what reason you can give to your fellow sufferers in the calamity that it will bring upon us. What reasons can you give to the nations of the earth to justify it? They will be the calm and deliberate judges in the case; and what cause or one overt act can you name or point, on which to rest the plea of justification? What right has the North assailed? What interest of the South has been invaded? What justice has been denied? And what claim founded in justice and right has been withheld? Can either of you, today, name one governmental act of wrong, deliberately and purposely done by the Government of Washington, of which the South has a right to complain? I challenge the answer. While on the other hand, let me show the facts (and believe me, gentlemen, I am not here the advocate of the North; but I am here the friend, the firm friend, and lover of the South, and her institutions, and for this reason I speak thus plainly and faithfully for yours, mine, and every other man's interest, the words of truth and soberness), of which I wish you to judge, and I will only state facts which are clear and undeniable, and which now stand as records authentic in the history of our country. When we of the South demanded the slave-trade, or the importation of Africans for the cultivation of our lands, did they not yield the right for 20 years? When we asked a three-fifths representation in Congress for our slaves, was it not granted? When we asked and demanded the return of any fugitive from justice, or the recovery of those persons owing labor or allegiance, was it not incorporated in the Constitution, and again ratified and strengthened by the fugitive slave law of 1850? But do you reply that in many instances they have violated this compact, and have not been faithful to their engagements? As individual and local communities, they may have done so; but not by the sanction of government; for that has always been true to southern interests. Again, gentlemen, look at another act; when we have asked that more territory should be added, that we might spread the institution of slavery, have they not yielded to our demands in giving us Louisiana, Florida, and Texas, out of which 4 States have been carved, and ample territory for 4 more to be added in due time, if you, by this unwise and impolitic act, do not destroy this hope, and, perhaps, by it lose all, and have your last slave wrenched from you by stern military rule, as South America and Mexico were; or by the vindicative decree of a universal emancipation, which may reasonably be expected to follow.

But, again, gentlemen, what have we to gain by this proposed change of our relation to the General Government? We have always had the control of it, and can yet, if we remain in it, and are as united as we have been. We have had a majority of the Presidents chosen from the South, as well as the control and management of most of those chosen from the North. We have had 60 years of Southern Presidents to their 24, thus controlling the executive department. So of the judges of the Supreme Court, we have had 18 from the South, and but 11 from the North; although nearly four-fifths of the judicial business has arisen in the free States, yet a majority of the Court has always been from the South. This we have required so as to guard against any interpretation of the Constitution unfavorable to us. In like manner we have been equally watchful to guard our interests in the legislative branch of Government. In choosing the presiding presidents (pro tempore) of the Senate, we have had 24 to their 11. Speakers of the House we have had 23 and they 12. While the majority of the Representatives, from their greater population, have always been from the North, yet we have so generally secured the Speaker, because he, or to a great extent, shapes and controls the legislation of the country. Nor have we had less control in every other department of the General Government. Attorney generals we have had 14, while the North have had but 5. Foreign ministers we have had 86, and they but 54. While three-fourths of the business which demands diplomatic agents abroad is clearly from the free States, from their greater commercial interest, yet we have had the principal embassies, so as to secure the world markets for our cotton, tobacco, and sugar on the best possible terms. We have had a vast majority of the higher offices of both Army and Navy, while a larger proportion of the soldiers and sailors were drawn from the North. Equally so of clerks, auditors, and comptrollers filling the executive department; the records show, for the last 50 years, that of the 3,000 thus employed, we have had more than two-thirds of the same, while we have but one-third of the white population of the Republic.

Again, look at another item, and one, be assured, in which we have a great and vital interest; it is that of revenue, or means of supporting government. From official documents, we learn that a fraction over three-fourths of the revenue collected for the support of the Government has uniformly been raised from the North.

Pause now while you can, gentlemen, and contemplate carefully and candidly these important items. Look at another necessary branch of Government, and learn from stern statistical facts how matters stand in that department. I mean the mail and post-office privileges that we now enjoy under the General Government as it has been for years past. The expense for the transportation of the mail in the free States was, by the report of the Postmaster General for the year 1860, a little over $13,000,000, while the income was $19,000,000. But in the slave States the transportation of the mail was $14,716,000, while the revenue for the same was $8,001,026, leaving a deficit of $6,704,974, to be supplied by the North, for our accommodation, and without it, we must have been entirely cut off from this most essential branch of Government.

Leaving out of view for the present, the countless millions of dollars you must expend in a war with the North; with tens of thousands of your sons and brothers slain in battle, and offered up as sacrifices upon the altar of your ambition—and for what, we ask again? Is it for the overthrow of the American Government, established by our common ancestry, cemented and built up by their sweat and blood, and founded on the broad principles of right, justice, and humanity? And as such, I must declare here, as I have often done before, and which has been repeated by the greatest and wisest of statesmen and patriots, in this and other lands, that it is the best and freest Government—the most equal in its rights, the most just in its decisions, the most lenient in its measures, and the most aspiring in its principles, to elevate the race of men, that the sun of heaven ever shown upon. Now, for you to attempt to overthrow such a Government as this under which we have lived for more than three-quarters of a century—in which we have gained our wealth, our standing as a nation, our domestic safety, while the elements of peril are around us, with peace and tranquillity accompanied with unbounded prosperity and rights unassailed—is the height of madness, folly, and wickedness, to which I neither lend my sanction nor my vote.

The Washington Post of June 3, 1947, carries a story, Just a Yankee Trick, which has caused the insertion of the speech of the Honorable Alexander H. Stephens:

JUST A YANKEE TRICK—LINCOLN CAUSED SOUTH TO OPEN CIVIL WAR, HISTORIAN ASSERTS

(By Walter T. Pulliam)

Abraham Lincoln was charged yesterday with tricking the South into starting the Civil War.

That allegation echoed through hallways of the United States Capitol yesterday as nearly 100 loyal children of the Confederacy gathered to pay homage to Jefferson Davis.

The speaker was Dr. Charles C. Tansill, a Georgetown University history professor.

He accused the Great Emancipator, in language reminiscent of Johnny Reb of dubious intrigue before the 1861 opening gunfire at Fort Sumter.

"The responsibility for the Civil War," he declared, "rests securely upon only one pair of shoulders—and those shoulders belonged to Abraham Lincoln."

Of Fort Sumter, he charged Lincoln "played fast and loose" with southerners in order to trick them into a bombardment of the famous fort, and make them appear the aggressors.

Tansill was principal speaker at a wreath-laying at a statue of Jefferson Davis in the Capitol's Statuary Hall. The service was part of a 3-day observance of the Confederate

President's one hundred and thirty-ninth birthday anniversary.

The United Daughters of the Confederacy, Children of the Confederacy, and the Sons of Confederate Veterans took part in the service, but the commander in chief of the last-mentioned organization, Fred P. Myers, disavowed Tansill's speech as representing the sentiments of the SCV.

"I think he went too far," Myers said. "I don't think he should have made such an attack on Lincoln. Several others present expressed concern over it."

Mrs. John M. Wilcox, president-general of the UDC, also disavowed the speech.

"His allusions to Mr. Lincoln," she said, "do not reflect our views. We think it rather untimely that those remarks were made. We don't care to start up a controversy."

Lincoln's election in 1860, Tansill charged, killed the Federal Union Washington, Jefferson, and Jackson had worked for, and he added the President-elect "did not have the decency to give it a polite burial."

He charged Lincoln did nothing following his 1860 election "to quiet the growing friction that pointed to war" between the States, and he said that as the 1860 crisis deepened the "Sphinx of Springfield remained eloquently silent."

He praised Jefferson Davis as an ideal for freedom-seeking peoples.

"On January 10, 1861, Jefferson Davis," he declared, "clearly saw the futility of any further moves toward erecting a bridge of understanding between the North and the South.

"Like Horatius of old, Lincoln stood at the northern end of such a bridge and he would permit no messenger of peace to pass through his careful guard."

Thirty-five UDC and SCV members, including Mrs. Wilcox, were received by Mrs. Truman at the White House after the Capitol ceremony.

The high light of the birthday celebration will come this afternoon at 2 p. m., when the Confederate organizations unveil the eastern terminal marker of the Jefferson Davis Highway. The marker is on the Virginia side of the Highway Bridge. Senator ALBEN W. BARKLEY (Democrat, Kentucky) will speak.

Federal Aid to Education

EXTENSION OF REMARKS

OF

HON. LAURIE C. BATTLE

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 3, 1947

Mr. BATTLE. Mr. Speaker, when I appeared recently before the House Subcommittee on Education to testify in behalf of Federal aid to education, considerable discussion followed my statement that both Great Britain and Russia spend more of their national income for education than does the United States.

I desire to submit the following information in support of that statement: First an excerpt from an article appearing in the New York Times on February 12, 1947, in which Benjamin Fine reported on the state of American public education.

This article, one of a series of twelve, was the basis for a statement by the Honorable William Benton, Assistant Secretary of State, before the American Association of School Administrators, March 3, 1947, at Atlantic City, N. J.

To me the most interesting and significant statement in Dr. Fine's report—

Said Mr. Benton—

is the following: The United States is spending 1.5 percent of its national income for its schools; Great Britain is spending 3 percent; the Soviet Union is spending 7.5 percent. Every major power except the United States is sharply increasing its budget for education. The contrast between the United States and the Soviet Union applies to absolute figures as well as to percentages.

A portion of Dr. Fine's February 12 article follows:

[From the New York Times of February 12, 1947]

LOW PAY COMPELS TEACHERS TO QUIT

(By Benjamin Fine)

The United States spends less of its per capita income for education than does Great Britain or the Soviet Union. During the past year this country spent about $2,500,000,000 for public-school education, or approximately 1.5 percent of the estimated income.

For the same period, Great Britain, with its tremendously improved school program, is estimated to have spent close to 3 percent. The Soviet Union, sky-rocketing its support for schools and colleges, averages around 8 percent of its total income.

Frankly conceding that education is an important part of its 5-year plan, the Russian Government increased its 1946–47 educational budget over the preceding year by 52 percent. Its new budget, recently announced, calls for an appropriation of $7,500,000,000 for education.

LACK OF SUPPORT CRITICIZED

Many educators are concerned at the lack of financial support that education is receiving in this country. They say that if Russia can spend seven and one-half billion dollars for education to insure the continuation of its communistic form of government, the United States can do no less to spread knowledge of democracy among the youths of the land.

At present the money spent for the support of education in this country is far less than that spent for liquor or tobacco. In 1945 the United States spent $7,700,000,000 for alcoholic beverages, or $55.65 per capita of population. At the same time, we spent about $2,500,000,000 for elementary and secondary schools, or $17.76 per capita.

Tobacco, too, came out ahead of the support for public schools. In 1945 we spent $3,000,000,000 for tobacco, or $21.49 per capita of population. It is probably much higher today. Beauty- and barber-shop services, together with toilet preparations, came to just about the figure we spend for schools.

The following tables indicate the importance attached to education in Russia:

TABLE 1.—*State budget of the U. S. S. R. for 1946 and 1947—expenditures on defense, education, and social services*

	1946 actual		1947 planned		1947 as percentage of 1946
	Billions of rubles	Percent of total	Billions of rubles	Percent of total

Analysis of the New Wagner-Ellender-Taft Bill

EXTENSION OF REMARKS

OF

HON. EVERETT M. DIRKSEN

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 3, 1947

Mr. DIRKSEN. Mr. Speaker, under leave to revise and extend my remarks, I include in the RECORD an analysis of the housing bill, commonly referred to as the new Wagner-Ellender-Taft bill, which bears the official title of Senate 866 and which is styled "National Housing Commission Act."

This summary and analysis was prepared by Mr. Morton D. Bodfish, chairman of the executive committee of the United States Savings and Loan League, and Mr. Abner Ferguson, former Commissioner of the Federal Housing Administration.

Mr. Bodfish is a highly respected citizen of Chicago, who has served as a member of the Chicago Planning Commission and as chairman of the city planning advisory board. He is a former professor of economics, real estate, and real-estate management, and has

served with distinction on the faculties of three of our outstanding universities. He has been complimented with the presidency of the International Union of Building Societies and Savings and Loan Associations, which is an international organization devoted to the extension and development of individual thrift and home ownership. During World War II he rendered highly important service to the Navy Department and also in the Office of Strategic Services and has served without compensation, other than reimbursement for out-of-pocket expenses.

Mr. Abner Ferguson, who cooperated in the preparation of this analysis, has had long experience in the housing field in the Federal Government, and has over the years been assigned to many positions of trust and responsibility, and was finally designated as Commissioner of the Federal Housing Administration in the Federal Home Loan Bank Administration. In this capacity he was the active and directing head of the Federal Government's activities in the field of insured mortgages as provided in the Federal Housing Act, and achieved singular success in this field. This analysis, therefore, has behind it wide experience and expert knowledge in the home-building and finance field and should prove of extraordinary interest.

Both of these gentlemen have had long experience in the housing field and have been moved by the single purpose of making the maximum of housing facilities available to the American people on a basis which is most effective and in the best American manner. The United States Savings and Loan League has a long and distinguished record of achievement in the field of thrift and housing and home ownership and is unsurpassed by any group or organization in or out of Government in seeking to provide for the American people adequate housing developed at the local level on a sound fiancial basis.

SUMMARY OF IMPORTANT DIFFERENCES BETWEEN 1946 AND 1947 HOUSING BILLS

The important differences between the Wagner-Ellender-Taft bill, S. 1592, which was before the Congress in 1946, and the new Taft-Wagner-Ellender bill, S. 866, introduced in the Senate on March 10, 1947, are as follows:

Organization: Under the 1947 bill, as was the case in the 1946 bill, the Home Loan Bank Board is legislated out of existence and all its functions are turned over to the present Federal Home Loan Bank Administrator (or Commissioner). The new bill proposes to set up a National Housing Commission composed of a National Housing Administrator, a Coordinating Council, and an administrative staff, but a careful reading of the title provides convincing proof that all the power, authority, and functions of the set-up are lodged in the National Housing Administrator and, although it is done through the devious method of creating councils and commissions, it is not substantially different in its final results from the National Housing Administration provided for in the 1946 bill.

The Coordinating Council is composed of the National Housing Administrator, a position created by the act with a salary of $15,000 a year; the Federal Home Loan Bank Administrator; the Federal Housing Administrator; the Federal Public Housing Administrator, the Secretary of the Treasury, Secretary of Agiculture, Administator of Veterans' Affairs, and the Chairman of the Board of Directors of the Reconstruction Finance Corporation. But when we come to the functions of the organization, we find that the Coordinating Council only has authority to advise and assist and that all the functions of making decisions are placed under the Administrator.

As was the case in the 1946 measure, the Administrator has broad and complete authority in connection with all features of housing research, including building techniques, development of materials, city planning, appraisal and credit techniques, as well as housing statistics, estimates of housing needs, and economic studies. In addition, he is also given the authority to conduct studies in technical research and the application of new and improved techniques and materials. In a word, there is nothing about housing that he cannot look into.

Insofar as the organization question is concerned, it can certainly be said that the 1947 version is no improvement over the 1946 version. The United States Housing Authority is succeeded by the Federal Public Housing Authority, headed by a Federal Public Housing Administrator with a salary of $12,000 per year. This legalizes the status which was created by the Executive Order 9070 of February 24, 1942. The bill expressly terminates this Executive order.

Title V of the 1947 bill undertakes to provide a number of amendments to the Federal Home Loan Bank Act, the Home Owners' Loan Act, and title IV of the National Housing Act, which are of interest to savings and loan associations.

An amendment to subsection (c) of section 5 of Home Owners' Loan Act would give Federal savings and loan associations the authority to invest their funds in obligations of the Federal home-loan banks and the Federal Savings and Loan Insurance Corporation. This provision was not in the 1946 bill, but other provisions in that measure authorizing Federal savings and loan associations to invest a portion of their funds, without regard to type of improvement, location, or amount of individual loan, in rental housing projects and loans insured under title VII of the National Housing Act, are not in the 1947 bill. On the other hand, there is a provision in the 1947 bill which was not in the 1946 measure authorizing Federal savings and loan associations to invest their funds in loans insured under the National Housing Act or insured or guaranteed under the Servicemen's Readjustment Act of 1944.

The new bill also gives authority to Federal savings and loan associations to convert into State associations "subject to approval, by regulations or otherwise, by the Board of the Federal Home Loan Bank Administration and by the Federal Savings and Loan Insurance Corporation." It is also provided that, if the Federal Savings and Loan Insurance Corporation shall elect to terminate its insurance with respect to a converted institution, it shall be allowed to do so concurrently with such conversion. Under a provision of this sort, which requires the approval of both the bank administrator and the insurance corporation, it is difficult to conceive of many conversions being made from Federal to State institutions.

The 1946 bill contained no conversion provision.

Other provisions, which appear in both the 1946 and 1947 bills, authorize the home-loan banks to make advances to their members on the security of loans insured under the National Housing Act and loans insured or guaranteed under the Servicemen's Readjustment Act of 1944 to the extent of 90 percent of the unpaid principal of such obligations; make 25-year loans eligible for loans at home-loan banks, instead of the present maturity of 20 years, and change the present provision which requires semiannual examinations to annual examinations.

Another section deals with the so-called criminal provisions, an amendment similar to legislation proposed by the United States League repeatedly in the past. There was no such provision in the 1946 bill.

There is another provision to the effect that the dividends on the stock of the Savings and Loan Insurance Corporation, which is owned by the HOLC shall be changed from the present rate which is a rate equal to the interest rate on the bonds put up by the Corporation to a rate equal to the average interest rate currently being paid on bonds of the HOLC. This provision is precisely the same as that contained in the first section of the so-called Spence bill, which passed Congress last August and was vetoed by the President. This provision was not in the 1946 bill.

It is significant to note that the second section of the Spence bill, which reduced the premium rate on insurance from one-eighth to one-twelfth of 1 percent, which was a feature of the 1946 bill, is omitted altogether from the 1947 bill.

There is another section which authorizes the Secretary of the Treasury to purchase obligations of the Savings and Loan Insurance Corporation up to three times the aggregate amount of outstanding capital stock, reserves, and surplus of the Corporation. This is a provision that has been in many bills before Congress during the last 4 or 5 years and was included in the 1946 measure.

The amendments to the National Housing Act are substantially the same as those of the 1946 bill.

In addition to the purely technical amendments, they are as follows:

Title I is made permanent and the maturity of title I loans is increased from 3 to 5 years, the amount of insurance which may be granted for repair or improvement of hotels, apartment houses, hospitals, orphanages, colleges, and schools is increased to $10,000.

Authority is given to the Administrator to increase the amount of a mortgage up to $1,000 when he finds that, because of temporarily higher costs, it is not feasible to construct dwellings within the limits of the maximum mortgage amounts provided for in section 203 (b) (2).

Authority is also given to the Federal Housing Administrator to extend the period of mortgages up to 3 years when he finds that in view of possible unemployment, economic conditions, or misfortune, the mortgagor is not able to meet his monthly payments. The Administrator is also given authority to extend the period of mortgages made by veterans for a period equal to the amount of time they were in the service.

The Administrator is also authorized to insure apartment-house loans under section 207 up to $250,000 without retaining control of rents, charges, etc. The maximum amount of any loan under section 207 of the National Housing Act is limited to $5,000,000, except a mortgage made by Federal or State instrumentalities, municipal corporations, or limited-dividend, or redevelopment corporations restricted by Federal or State laws as to rents, charges, and capital structure, in which case the limit of any mortgage is $50,000,000.

In the 1947 bill, the maximum maturity for the 95-percent mortgage insured by FHA is 30 years, while under the 1946 bill it was 32 years.

The FHA is also authorized under section 207 of the National Housing Act to insure loans on apartment houses up to 90 percent for families of low income in metropolitan areas, or in case of mortgages of mutual-housing corporations or nonprofit-housing

corporations. These mortgages may have a maturity of 40 years, with interest not to exceed 4 percent.

The yield-insurance provision is retained in the 1947 bill in exactly the same form as in the 1946 bill.

Title VIII is represented as setting up a plan under which slum areas may be reclaimed and redeveloped primarily by private enterprise with Federal and State governmental assistance. This is what is claimed for the plan, but, in fact, it is not a private-enterprise plan at all but a plan through which public, subsidized housing comes into the economic structure through the back door. Although in the new bill, this title is much simplified in language and is much more nearly understandable, yet there is substantially no difference in meaning between the 1947 bill and that of last year. They both pretend to cater to private enterprise but both are so written as really to prevent the participation of private enterprise on any practical or attractive basis.

The National Housing Administrator under the title is given a borrowing power of $500,000,000 with which to make loans for the purchase of land and preparing it for redevelopment. It is provided that two-thirds of this total expense of land shall be provided by the United States and one-third by the State, county, or city. And in this respect, it must be said that there is not quite so much water in the local participation portion as in the 1946 bill. The title expressly provides that these loans by the Administrator can only be made to local public agencies (which is the new name for local housing authorities), and final definitive financing can only be made to a lessee of the land. This would prohibit a private investor from buying one of these projects and developing it because of the provision which says that loans can only be made to a lessee. This, in turn, means that the Government permanently owns the land.

In addition to the loans which the Administrator is authorized to make, the title provides for annual contributions over a period of 45 years amounting to $900,000,000 for this title alone. These annual contributions or subsidies will, of course, be used to pay back the money which the Administrator has loaned in the first place, and not one penny of this money is ever repaid to the Government.

S. 866 goes a step further than the 1946 bill in also providing that the Administrator may make loans to local public agencies for the purpose of making studies, surveys, and plans in preparation for a program of projects. This provision was not in the 1946 bill.

One significant thing about this title VIII that should be pointed out is that the National Housing Administrator is designated to administer the title. This puts the Administrator right in the middle of the administration of housing and gives him substantially the same power as he had under the old bill. Instead of getting rid of the NHA, this bill makes it as permanent as the Treasury Department.

Title IX is the public-housing title of the 1947 bill. It is substantially the same as title VII of the previous bill. The only substantial difference between the two is that S. 866 raises the permitted construction cost from $1,000 to $1,250 per room in cities under 500,000 population, and in cities exceeding that figure the room cost is increased from $1,250 to $1,500 per room. In Alaska the permitted cost per room is increased from $1,750 to $2,200. The title provides for the building under the United States Housing Act, of 500,000 publicly owned and financed housing units and authorizes the payment of annual contributions to finance these houses totaling $4,752,000,000 to be paid over 45 years.

Title X of S. 866, which is title VIII of the 1946 bill, provides for Government financing of farm housing. There is no substantial difference between the two titles. Under this farm program, the Secretary of Agriculture is authorized to make annual contributions in the amount of $115,000,000 over a period of 10 years.

Title XI of the 1947 bill, which is a part of title VIII of the 1946 measure, deals with nonfarm houses in rural areas. This really means houses and apartments in small towns, under the definition made in the bill of the term "rural areas." Under the bill this phase is defined as meaning all areas other than those designated as urban by the Bureau of the Census, and the Census Bureau has defined as "rural areas" all unincorporated towns and all incorporated towns with less than 2,500 population. This title is admittedly a public-housing title and annual contributions in the amount of $1,125,000,000 are authorized to be paid, over a period of 45 years, in connection with its operation.

Title XII of the bill in effect authorizes the FPHA to turn all livable war houses over to the local public agencies for use as low-rent housing for families of low income. This provision is in direct violation of the provisions of the so-called Lanham Act, under which these war houses were built. That act expressly prohibits the utilization of these war houses as public housing after the war and expressly directs that within 2 years after the war, they shall be sold to private enterprise, but that no part of them can be turned over to local public-housing authorities. These houses have a very substantial money value and there is not any reason in the world why the Government should not realize the value of them through sale just as other surplus war property is being sold.

As a matter of fact, the local public-housing authorities are not paying anything at all for these houses because the bill provides that "the Federal Public Housing Authority may, in lieu of any other method prescribed by law for the disposal of such projects, sell any such project for use as low-rent housing to a local public agency for a consideration which consists of the payment to the Authority during the useful life of the project (as defined in the contract of sale) of all the net income from the project." It can readily be seen from this that if there is no net income derived, the Government will get no payments, and can anyone doubt that this small detail will be taken care of?

In brief, the 1947 bill, S. 866, known as the National Housing Commission bill, is a public-housing measure from start to finish. In addition to this, it proposes to set up a new administrative bureau in Washington at a large annual expense to the Government and further, it destroys the Home Loan Bank Board, which successfully directed the reserve system for the savings and loan associations of this country for many years before it was done away with by Executive Order No. 9070, issued on February 24, 1942, as a war measure, and which is essential to the successful and efficient operation of this important segment of our financial structure. The bill runs counter to all economic measures, which are supposed to be the prime objective of our Government at this time. It not only continues all of the annual contributions, or subsidies, which are contained in the 1946 bill, but it actually increases those subsidies in the amount of $792,000,000.

To sum up, the annual contributions, or subsidies, provided for in S. 866 are as follows:

Land assembly and preparation for redevelopment, title VII	$900,000,000
Public housing, title IX	4,752,000,000
Farm housing, title X	115,000,000
Rural nonfarm housing, title XI	1,125,000,000
Total	6,892,000,000

Jefferson Davis

EXTENSION OF REMARKS
OF
HON. HENRY D. LARCADE, JR.
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES

Thursday, May 29, 1947

Mr. LARCADE. Mr. Speaker, today we observe memorial of our war dead in the South, and I am reminded on this anniversary of Jefferson Davis that this great soldier and leader was honored by one of the parishes (county) in my district by naming their parish in honor of Jefferson Davis. Jennings is the parish seat and is the location of the first discovery of oil in Louisiana in 1901. The original (Jennings) oil field has produced and is still producing millions of barrels of oil as well as natural gas. The parish is one of the largest rice producing centers of Louisiana and the people are progressive and patriotic. While at this period we are honoring our war heroes, I think it appropriate to include a short biography of the great leader of the South:

JEFFERSON DAVIS

Davis, Jefferson, American statesman: Born in Christian County, Ky., June 3, 1808; died, New Orleans, La., December 6, 1889. A year or two after the birth of Davis the family removed to Wilkinson County, Miss., a new and prosperous cotton region. Young Davis was sent to various private schools in Mississippi and Kentucky before he became a student at Transylvania University in 1822. From Transylvania he went as a cadet to West Point in 1824, where Robert E. Lee, Albert Sidney Johnston, and Joseph E. Johnston were his friends or classmates. After his graduation, in 1828, Davis served 7 years as an officer in the United States Army along the Northwestern frontier; that is, in Iowa, Wisconsin, and Minnesota. Col. Zachary Taylor was for a part of this period his commander. In 1835 he was married to Miss Taylor, and the same year he resigned from the Army and settled as a cotton planter in Warren County, Miss., where he quickly rose to the position of a wealthy and influential citizen and owner of slaves. An older brother, a leading public man of the State, contributed much to this easy success and was in considerable measure responsible for the entry of Jefferson Davis into politics, 1843, as a candidate for a seat in the house of representatives. Meanwhile, the first Mrs. Davis had died, and he married Miss Varina Howell, a daughter of a well-to-do planter of the State. Hence, the connections and social ties of the young political aspirant were such as to advance him rapidly. The issue which drew him into public affairs was the proposed repudiation of a great debt which the State of Mississippi had contracted with Nicholas Biddle, the Philadelphia capitalist. The older counties, those along the Mississippi River, were prevailingly Whig and opposed to repudiation on both moral and political grounds. Davis was a Democrat who broke with his party on the issue and offered himself as candidate for the legislature with the purpose of preventing the Democrats from carrying out their plans. Although he was defeated, he became an elector on the Polk ticket in 1844. As such he canvassed the State and became widely known as an effective speaker and ardent expansionist. The next year he was elected a Member of Congress, but he resigned to take command of a regiment of Mississippi volunteers in 1846.

He played a conspicuous part under Gen. Zachary Taylor at Monterey and Buena Vista, for which his name became familiar to the whole country. On his return from Mexico in 1847 he was appointed by the Governor of Mississippi to a vacancy in the United States Senate. When the legislature met he was unanimously chosen for a full term. When he appeared in Congress he was promptly made chairman of the Senate Committee on Military Affairs, and as such he labored constantly for a larger Army and for the conquest and retention of that part of Mexico which borders on the Gulf of Mexico. To the disgust of Davis, John C. Calhoun lent his influence to the party of opposition, and the extreme expansionists were defeated. Nevertheless, Davis was an avowed follower of Calhoun, and upon the death of the latter he became the accepted leader of the South in national affairs. In the critical struggle of 1850, when there was imminent danger of a disruption of the Union, Davis was an extremist who urged secession on the part of the South rather than submission to the compromise measure which allowed California to enter the Union as a free State. He demanded the extension of the Missouri compromise line to the Pacific, which would have made southern California a slave State and left New Mexico, Arizona, and Utah open to slave colonization. Failing to secure the adoption of his plan, he signed, with most of the other southern delegates in Congress, a protest against the compromise, resigned his seat in the Senate, and went home to lead a party of protest there. He retired to his plantation, but he soon began to take an active part in public discussions, and when his friend, Franklin Pierce, was nominated for the Presidency by the Democrats in 1852, he made an active canvass in his behalf both in Mississippi and Louisiana. After the election of Pierce, Davis was asked to become a member of the Cabinet. The offer was declined, but the President-elect prevailed on him finally to enter the administration as Secretary of War. Although the avowed purpose of the Democrats was never to disturb the compromise of 1850, Davis, the bitterest opponent of that measure 2 years before, was now one of the first advisers of the administration. There was uneasiness in the country, but Davis had changed his mind. He never again urged the South to secede but insisted on fighting for the South and slavery within the Union. As Secretary of War, Davis was a vigorous and resolute reorganizer. He undertook to reform and enlarge the Military Academy at West Point; he enlarged the Army and tried to abolish the rule of seniority which he considered a handicap to any military organization; and he brought camels from Arabia to be used as carriers on the dusty plains of the far West. But his greatest work was the survey of the Rocky Mountain region with a view to building a Pacific railroad.

When Pierce's term closed, Davis returned to the Senate where he continued to represent and press Southern interests upon Congress and the country. The repeal of the Missouri Compromise in 1854, which he had favored, had set the sections to fighting each other as fiercely as before 1850. He now took the view that Kansas should be kept open to slavery and he saw in the Dred Scott decision of the Supreme Court full justification for his contention. The new President, Buchanan, was not in the beginning in sympathy with the extreme pro-slavery demand and he sent Robert J. Walker, whom Davis and most other leading Southerners distrusted, as Governor to Kansas. When the Lecompton constitution was defeated in Kansas, Davis denounced Walker as a traitor to the South. Buchanan removed Walker in obedience to the entreaties of Davis and others. Stephen A. Douglas, the Northern leader of the Democratic party, denounced the President for his treatment of Walker and for his acceptance of the Lecompton constitution. Douglas immediately regained the popularity he had lost in 1854. The issue was joined and Davis became the irreconcilable opponent of Douglas and of his candidacy. The Senate was made the scene of their maneuvers. Douglas was "read" out of the party by Davis which only added to the followers of the former at the North. Davis procured the adoption of a series of resolutions in April which was made the platform of the reactionary or Southern element in the convention which was about to meet in Charleston. Davis gave instructions to the national committee while the convention was in session. Douglas directed the conduct of the majority of the delegates. The unyielding attitude of the two leaders caused the break-up of the convention and the nomination of two Democratic candidates, Breckinridge and Douglas. But when it became increasingly clear that Abraham Lincoln, the candidate of the Republicans, would be elected, Davis, who had remained in Washington all summer, endeavored, in September 1860, to bring about a reconciliation between the angry sections of the party. Unable to find a leader who could unite the followers of Douglas and Breckenridge, he gave up and let events take their own course. He was in Mississippi when the election of Lincoln was announced and his opinion was at once sought by secession and anti-secession men. He wrote the Charleston Mercury on November 10 that he was opposed to breaking up the Union and advised that Mississippi would probably not follow South Carolina. Later the Governor of Mississippi called a conference of the State's delegation in Congress in which Davis again advised against secession. * * * But the shaping of events had already passed beyond the control of the leaders. South Carolina was almost a unit in favor of immediate secession. The cause had long been a popular one in that State. And if South Carolina left the Union and should then be coerced by the Federal Government nothing could prevent the secession of the other Southern States. South Carolina seceded. Davis, again in Washington, urged Buchanan to recognize the act as the right of any State. Buchanan refused to follow this advice and when Mississippi withdrew Davis gave up his place in the Senate with the greatest reluctance. He returned to Mississippi warning the people along the way that there would be a long and bitter struggle. Insofar as he had any plans for the new regime, he wished to become the commander of an army in the field. But his election to the presidency of the Confederacy on February 9, 1861, placed him at the head of the movement which he had, to be sure, favored in the beginning but which he had certainly not urged in recent years. He now endeavored to reconcile all elements of the South. * * * Seeking to enlist the conservatives of the South on his side, he also sought to conciliate the conservatives of the North and thus isolate the radical Republicans who urged the prompt coercion of the seceded States. To this end Davis labored consistenly to prevent bloodshed at Charleston where a Southern army was gathering to compel the surrender of Fort Sumter. William H. Seward, the most influential man of the North before the inauguration of Lincoln, likewise endeavored to prevent an outbreak. The policy of conciliation was so publicly and openly cultivated that Southern leaders of the radical type insisted that there would be no war, that Davis and Seward had an understanding between them whereby the Union was to be restored. * * * The firing on Major Anderson on the night of April 12, 1861, stirred the martial spirit of the whole South, as well as of the North, and the border States of Virginia, North Carolina, Tennessee, and Arkansas joined the Confederacy. Davis became the President of all the seceded States and the capital was removed from Montgomery to Richmond. The constitution of the new group of commonwealths was in many respects the work of Davis and the moderate attitude of the Confederacy toward the foreign slave trade and the tariff was due to his influence. Although presidents of republics are not held rigidly to the strict letters of constitutions, Davis was most careful not to overstep the bounds set him save in the gravest emergencies. He set aside the writ of habeas corpus only in rare instances and then for limited districts and for limited periods. He allowed the greatest freedom of the press, even when most of the leading papers insisted upon denouncing him every day. * * * Zeal and energy characterized his administration from the start and the positive blunders of serious magnitude of which he was guilty were few. With a population of less than 7,000,000 white people, the Confederacy raised armies which numbered near a million men and it required the work of 2,000,000 soldiers and 4 years of time to suppress them. But the pressure of the blockade which President Lincoln increased with every month and the failure of every European power to recognize the Confederacy finally brought Davis and his generals to expect defeat. Moreover, the railroads wore out; rolling stock failed and the plentiful supplies in the country districts could not be transported to the armies or the centers of population. * * * He [Davis] was captured at Irwinsville, Ga., on the 10th of May, following, and he was promptly imprisoned at Fort Monroe. There he remained until May 15, 1867, when he was released on bail signed by Horace Greeley and other lifelong opponents. Broken in body and fortune, he visted New Orleans, his former home near Vicksburg, England, and France; but settled down to work as the president of a life insurance company in Memphis in 1870. The panic of 1873 caused the business to fail. He then endeavored to promote some large commercial enterprises in New Orleans but these never materialized and he took up his residence at Beauvoir in 1878, a pretty home on the Gulf coast which was presented to him by a friend, where he spent the remainder of his life. He died in New Orleans where he had gone on a business journey. His remains were buried there, but removed to Richmond in 1893.

The Wool Bill

EXTENSION OF REMARKS

OF

HON. HERMAN P. EBERHARTER

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 3, 1947

Mr. EBERHARTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Mark Sullivan from today's Washington Post:

WOOL BILL—FACTORS IN THE PRESIDENT'S DILEMMA

(By Mark Sullivan)

It is not merely two major bills that face President Truman for signature or veto, it is three. The two that everybody is watching—the tax bill and the labor bill—are as important as common talk says they are. But the so-called wool bill contains even more headaches for President Truman.

Mr. Truman's decisions about the tax bill and labor bill are a matter of balancing one

set of considerations against another. But in the case of the wool bill there are considerations which bear upon Mr. Truman with peculiar and paramount force.

The wool bill does two things, both containing dynamite. First, it supports the price of wool at the present figure, which was already fixed by Government and is very high, 42 cents a pound. Second, the bill provides for increasing the tariff on wool. That is already high, averaging about 17 cents a pound. On top of that the bill places an import fee—a semantic term for a tariff increase—whenever imports interfere with keeping the price of domestic wool up to 42 cents a pound. To keep up the price of wool is the purpose which the bill seeks.

That Mr. Truman should, by an affirmative action of his own, keep up the price of an important commodity in practically universal use, would run counter to a consideration which one would expect to weigh strongly with him. For several months Mr. Truman has earnestly advocated a lower level of prices. Partly because of his exhortations, and concretely because of the burden of high prices on the public, the country is in a mood which calls strongly for what Mr. Truman has urged. The country wants lower prices.

Another consideration must have strong force with Mr. Truman. When he weighs whether to sign the wool bill or veto it he weighs more than the price of wool. He has proclaimed for America a momentous policy. It has passed into the talk of the world as the Truman doctrine. The purpose of the Truman doctrine is to restore the world to economic health, and the principal means of restoration is increase of trade between nations. To this end Mr. Truman has said it is necessary for "the other nations of the world to join us in reducing barriers to trade. * * * We have proposed negotiations toward the reduction of tariffs."

At the moment when the wool bill was being considered in Congress there was under way a conference of nations at Geneva to set up international machinery for reducing barriers to trade. We had a representative at the conference, Under Secretary of State Will Clayton, and he flew hurriedly back to America to try to prevent passage of the wool bill. Said he: "If we at this time, when we are actually negotiating with other countries at Geneva for the lowering of trade barriers, raise new barriers as this bill proposes, we stand convicted of insincerity."

Increase of our tariff on wool would be peculiarly deadly to Mr. Truman's foreign-trade policy, for the reason that to us wool is a small matter. It is less than one-half of 1 percent of our agricultural production. But to some other countries, especially Australia, wool is the most important crop, and opportunity to sell it to us is the principal means of buying from us. Increase by us of our tariff on wool would alarm the world over the possibility of increases on other products. The hope of world-wide tariff reductions would vanish. Signing of the wool bill by President Truman would amount to saying, "I hereby abandon the Truman policy about international trade."

There is one consideration which makes the problem complex and deprives the wool bill of being solely a deference to a small number of wool raisers, chiefly in Western States. Wool is in wartime a military necessity; the Army has called it a strategic material. For that reason it is desirable that our wool-raising industry be kept alive. How to accomplish this, but at the same time not increase the tariff on wool, and not raise the price of wool to private consumers is the problem. A proposed answer is that the Government pay to each wool grower an amount of money which will enable him to sell his crop to private purchasers in competition with foreign producers.

Amount Spent for Relief

EXTENSION OF REMARKS
OF

HON. RAYMOND S. SPRINGER

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 3, 1947

Mr. SPRINGER. Mr. Speaker, the people of our country are greatly concerned over the constant demand for money, machinery, supplies and food for some foreign country. These demands began immediately after World War II was over, and the actual shooting stopped. They have continued since that time, and they will still continue—under the guidance of the President, and his crowd—unless enough of the Members of Congress stand up and wage the fight to do something for our own people, and for our own country. The people will not forget, I am certain, the taxpayers of this Nation have already contributed the staggering sum of $17,500,000,000 for postwar aid and relief. It has been estimated by those entirely familiar with this entire situation that such sum represents a sum equal to $125 for every man, woman and child in our country. Most of that money has been absorbed and used in the payment of high salaries to those in charge of administering the fund, and the rest of it has gone down the European drain. This is a very pathetic and sordid story, but it is nevertheless true.

Mr. Speaker, our national debt is approximately $260,000,000,000. This debt must be paid. Our Government has many other commitments, the exact amount of which has not yet been ascertained. We must balance our budget, and we must reduce our taxes. Our people cannot withstand the terrific burden of their present taxes, and maintain their business operations. We must reduce taxes and give the people a chance—a chance to work and to make jobs for the workers, and a chance to pay their debts and go forward as real Americans. We must get back to normal again—or as nearly so as it is possible to accomplish under the stress of the heavy burdens which are now upon us.

A very enlightening editorial appeared in the Washington Times-Herald, of recent date, upon this same subject. I herewith insert this editorial with my own remarks in the Appendix of the RECORD, upon the granting of my unanimous consent therefor, all of which I ask.

This editorial to which reference is made reads as follows:

GOOD NEWS FOR JAPAN, ANYWAY

As far as we've been able to figure out, we Americans have gotten mighty little in exchange for our past 2 years as Europe's official Santa Claus, except a lot of high-class abuse. On Mondays our ex-allies in Europe denounce Uncle Sam as a decadent, reactionary old capitalist. And regularly on Tuesdays Sam gets demands for more dollars, locomotives, machinery, and groceries; also some more cigarettes.

So far we unhappy taxpayers have anteed up $17,500,000,000 for postwar aid and relief, which amounts to about $125 for every American man, woman, and child. Most of this has gone down the European drain.

Prospects are that this gloomy business may continue indefinitely, or anyway until we approach national bankruptcy ourselves, and our European wards are forced to rustle their own grub and makings, or else.

But we note with considerable pleasure that things aren't quite so glum in our Far East sector; Gen. Douglas MacArthur, proprietor. Japan and adjacent islands, in fact, are not only comparatively low-cost projects now, but may soon be getting around to paying us some reparations.

According to the Far Eastern Commission, allied governing board for Japan, MacArthur has been doing O. K.

The Japs, it seems, are eating regularly, and believe that MacArthur has been treating them fairly. They are working and, as stated, will soon be able to pay honorable war reparations from current production of silk, food, etc.

NOTHING FOR UNITED STATES

Such reparations, it has been decided, will be divided among the 11 allies who fought Japan in the Pacific. Each share will be in accordance with "each country's contribution to the cause of the defeat of Japan, including the extent and duration of its resistance to Japanese aggression." Which may or may not be a crack at Russia, which didn't see fit to come into this war until 48 hours after we had "atomized" Hiroshima.

The United States will probably be entitled to about half the total reparations. We, however, have said unofficially that we won't keep any for ourselves.

Instead, our share will be handed over to the Philippines, Korea, and perhaps some other hard-hit nations. This gesture on our part will mean that Japanese workmen and raw materials, rather than American, will feed and rebuild the Philippines and other friendly countries.

RUSSIAN WAR LOOT

Also, as the wily MacArthur knows well, a generous offer of this sort is the best possible propaganda for us in the Pacific. The Reds, in the course of their looting in Manchuria and northern Korea, have pulled a considerable quantity of machinery up by the roots, and have made few friends in so doing. By contrast, MacArthur's tough but fair dealing has astonished them, and has even caused a few enthusiastic Japs to insist that he must be God.

Our Russian friends, of course, don't like Mac's success in Pacific economics, and frequently have so remarked.

They don't like his success in setting up and advertising democracy, either. One of MacArthur's guest advisers in this department has been Roger N. Baldwin, director of the American Civil Liberties Union.

A lot of Americans were astonished when MacArthur requested the assistance of Baldwin. He and his organization have often been termed extremely left wing.

REALISM ABOUT REDS

But actually, as MacArthur knew, Baldwin was and is a single-track and fanatic exponent of democratic liberties and free speech. And he knew the Communists well, so well as to have no illusions about any Commie doubletalk concerning democracy, free speech, or plain, everyday truthfulness.

Just to round out his democratic team, MacArthur also asked and got the services of Father Edward Flanagan, of Boy's Town. Father Flanagan, like Baldwin, likes democracy and hates communism. And he too is an expert in the technique of booting them out, and taking no guff.

So, as we have remarked, there is good news in Japan, though it hasn't been getting the attention and publicity which is accorded our expensive fumblings in Europe.

As for MacArthur—well, there used to be some lively arguments about who licked the Japs, also why did Doug have to wear all those gold scrambled eggs on his hat? But we have a hunch that we won't be hearing many more cracks about Mac's military haberdashery. As an administrator, he seems to be winning us a good hunk of peace, and that's what our taxpayers are most interested in right now.

Memorial Day Address

EXTENSION OF REMARKS
OF

HON. PHILIP J. PHILBIN

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 3, 1947

Mr. PHILBIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address delivered by me at Spencer, Mass., on Memorial Day:

I am very much honored as your Congressman to join with you today in these very impressive exercises which your able committee has arranged in commemoration of Memorial Day.

Since the Civil War the American people have dedicated this day to pay tribute to the memory of departed heroes of our various wars and also to join together in the fellowship of remembrance of our honored dead and the dear ones who have left us for that land from whose bourne no traveler ever returns. This beautiful custom, born of the carnage and slaughter of a fierce domestic struggle between the States, has grown and developed with the passing years until it embraces the entire Nation.

On this day of fond devotion and grateful remembrance of the departed, the Blue and the Gray who sleep side by side in their silent hero bivouac are again united with all our departed in the spirit of brotherhood and our people congregate in gatherings like this all over the Nation to render homage to the gallantry and sacrifice of the brave men whose precious blood has saturated the battlefields of the Nation and the world in order that men and women might continue to breathe the air of freedom.

As Americans, as proud citizens of this great Nation, it is only fitting that we should pause today to do honor to those who have done honor to themselves and to our beloved country. In accordance with the cherished custom of our forefathers, we tenderly lay garlands of the beautiful flowers of spring upon the graves of our departed heroes, and we place again over their last resting places the flag for which they fought.

The Nation will never cease to express the profound gratitude which moves our people of every class, race, and creed for the loyal service and matchless sacrifice of our gallant veterans of every American war. It is beyond the province of the human mind, indeed it is beyond the capacity of the Nation, rich and powerful as it is, ever to recompense in a material sense those who have given so much for the preservation of American rights and liberties. Their deeds will be inscribed in the most glorious chapters of American history. Their gallantry, devotion to duty, loyalty to American institutions, dauntless courage in the face of great danger, their indomitable spirit which finally overwhelmed the power-crazed tyrants seeking the destruction of our Nation—all their noble achievements comprise an illustrious record in the history of the human race. No words could possibly measure this contribution.

And so today, my friends, as we also honor the memory of all those who have gone, and thank God for the bravery of our noble sons, we may well find inspiration in their deeds and sacrifices, and constructive lives. At this critical juncture in the affairs of our Nation and the world, we may well ask ourselves what they fought, bled and died for, why they were willing to leave everything that was dear and precious to them and us, and pay the supreme sacrifice, if necessary, so willingly and unselfishly upon the sacred altar of American patriotism.

These young heroes did not fight and die for monarchy or for any other kind of dictatorship. They did not fight and die for a world of chaos and confusion, nor for fascism, nor for godless communism with its blighting tyranny over the minds and souls of men and women. They did not fight and die to bring to pass in Europe and the Orient, as it now unfolds, the infamous creed, doctrine, and practice of the radical totalitarian superstate in order to subject millions of peoples in foreign lands to an abominable form of slavery under the sway of Soviet domination. These fine young sons of ours did not fight and die to make possible the destruction of free, unfettered religious faith and worship, the suppression of democratic government, the sinister and evil realities of the communistic system of mass serfdom with its antagonism to God and hatred of the ordinary civil rights which men and women enjoy under free democratic systems of government, particularly in our own fair land.

These brave and noble sons, if their great sacrifices were not made in vain, fought for our right to be free. They fought for liberty, for American liberty, if you will, the greatest kind of liberty that the world has ever known. They fought, so they were told and so they believed, for the principles set forth in the Atlantic Charter which guaranteed freedom to all nations. They fought to sustain our own priceless Constitution and our own cherished democracy.

If we would be true to the principles and objects for which our honored dead suffered, struggled, and died, we of this generation must courageously accept the living testament which they have bequeathed to us. First, we must resolve, notwithstanding obstacles and obstructions, to strive with every ounce of our energy and strength to establish and preserve the kind of world peace based on justice for all to which they dedicated their lives—a peace that will make it impossible ever again for American mothers' sons to be fed as cannon fodder into the welter of greed, aggrandizement, imperialism, and power politics which in the past has periodically been responsible for the terrible scourge of war, with its waste of material resources, its heartaches, its mad destruction and death. Our statesmen must earnestly seek some better way of settling the problems of nations than by periodic slaughter of the finest flower of youth. A policy designed to this end must be just, firm, and unflinching. It cannot be predicated on vacillation or compromise of basic principles.

Let it be known that we are ready to promote the cause of humanity and the prevention of war in a wholehearted spirit of cooperation. We will seek friendship and amity with all nations. At the same time let us serve notice upon nations pursuing territorial and political ambitions and expansionist policies, upon nations who are conspiring and working against free institutions, spreading undemocratic concepts throughout the world by force, by stealth and other equally obnoxious methods, that we do not propose to stand by and see our war aim scrapped, small helpless nations overrun, American democracy challenged, freedom everywhere threatened with extinction.

Let us make it manifest to all leaders of aggression, whether they be found in Russia or anywhere else, that this great Nation of ours, conceived in and dedicated to purposes of freedom, desiring to be animated always by the promptings of fundamental justice secured by democratic methods, does not intend to be ridiculed throughout the world, does not intend to stand by in silence and submission while onslaughts are made against the freedoms we believe in, while challenges are directed against our own security, and while all the aims and objectives our sons fought and suffered for are brazenly violated. If a separate peace treaty is necessary because of the obstruction of totalitarian nations, let us not hesitate to negotiate it.

Americans are not warmongers, and we are not militaristic. We have no designs on other peoples or other territories. But we are determined to stand for and by the ideals and principles of our own Nation and will never abandon or compromise them because of those, either at home or abroad, who are working to destroy our democracy and the business, social and economic systems which have contributed so vitally to the prosperity and happiness of our own people and the welfare of the human race.

America must be strong and secure against aggression, military and ideological. America must be ready to meet every contingency. Our armed might, reinforced and sustained always by the loyalty and determination of our people and our great productive strength, must be maintained until we are able to prevail upon other nations to accept universal disarmament and judicial settlement of international disputes as a substitute for the horrors of war.

Let me come to another vital question. As I have pointed out so many times before in the Congress and in public utterances, our own country is gravely beset by threats of subversive movements. Organized communistic activities are still infiltrating into many segments of American life. This process has been going on for years despite solemn treaty agreements and has been very greatly increased during and since the war. Subtle attacks by propaganda and campaigns designed to undermine the faith of our people in most of our basic institutions are being directed against our form of government, our economic and business system, our educational system, our civil liberties and our social and family life. Our Congress and public servants are constantly held up to bitter and unwarranted scorn and ridicule, our leaders are unjustly attacked in the hope of arousing class hatred, our democracy is deplored and denounced, our shortcomings and mistakes are magnified, while our social gains, the virtues of the American way of life, our free opportunities are obscured and our remarkable achievements as a free nation are belittled. Even the home and the family unit—the very basis of our American social structure—is being assailed by those who aim to nationalize and regiment our families and children just as they would nationalize and regiment our industrial and economic structure and stifle our liberties.

These same radical groups are endeavoring through various means to spread discontent and rebellion among our veterans; but here again their efforts are doomed to failure. Those who fought for America in war will protect and preserve America in peace. Moreover, they will assume the vigorous civil leadership in our communities which is necessary to combat the activities and baneful influences of subversive groups. Our veterans can be depended on to wage unceasing opposition to left-wing movements because they, above all others, having sacrified so much for liberty, dearly appraise its true value. They know that once liberty is lost, it may never again be regained.

By the same token, it is the duty of Congress and of the Nation to strengthen and perfect our laws in the interest of the veteran and his dependents. The improvement

of our hospital and medical facilities so as to insure the best care and treatment for the wounded, the sick, and the disabled of all our wars is a vital necessity. There must be adequate compensation and pensions for those who are entitled to receive them, as well as full and broad educational advantages, decent subsistence allowances, housing, and most generous opportunities for all veterans to make up for the material and educational losses they sustained by reason of their service and to prepare themselves for careers in business, the professions, and other fields of leadership in the America of the future.

The Government cannot longer be lax in the rehabilitation of the veteran. The promises which the Nation made to him must be kept and failures in the administration of laws passed for his benefit must be promptly exposed and corrected. The veteran is entitled not only to the most sympathetic consideration but also speedy adjudication of his claims; and petty bureaucrats cannot be permitted to block, hinder, or delay the settlement of these claims on the most generous basis provided by law.

Let us remember always, and especially on this day dedicated to sacred memories, the great debt which we owe to those who have done so much for us and the cause of our country.

Guam

EXTENSION OF REMARKS
OF

HON. NORRIS POULSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 3, 1947

Mr. POULSON. Mr. Speaker, under leave to extend my remarks in the RECORD, I should like to include the statement by the Honorable Harold L. Ickes, former Secretary of the Interior, made before the House Subcommittee on Territorial and Insular Possessions on June 2, during hearings being conducted on various bills introduced to grant a form of government to Guam.

In this statement which Mr. Ickes made before the Public Lands Subcommittee, I believe that he definitely hit at the core of this problem. I recommend that it be read carefully.

STATEMENT BY HAROLD L. ICKES

This committee is, I hope, about to recommend that we do justice to the people of Guam and American Samoa—a justice that has been too long delayed.

We took Guam from Spain in 1896. By the Treaty of Paris we obligated ourselves to establish, by act of Congress, the civil rights and political status of the people of Guam. With words of great promise, President McKinley launched the naval government of the island. That government, President McKinley proclaimed, would "insure that full measure of individual rights and liberties which is the heritage of free peoples"; it would prove to the Guamanians that "the mission of the United States is one of benevolent assimilation, substituting the mild sway of justice and right for arbitrary rule."

This was our promise, but what has been our performance? Within 1 year of the date of this pious utterance by President McKinley, the naval government had abolished all of the very considerable home rule which Guam had enjoyed under Spain. By the year 1902, the Guamanians were petitioning for those civil rights and that congressionally defined political status which the Treaty of Paris had promised them. They are petitioning still, after nearly half a century, although the Navy has never permitted itself to know about it and Secretary Forestal's most recent expedition headed by Dr. Ernest M. Hopkins, undoubtedly after the most diligent and extensive search, was not able to find a single Guamanian who wanted civil rule. In fact, we are asked to believe by the Hopkins' report that the ever-present fear of the Guamanians was that the Navy should no longer be in the position of a benevolent despot—and sometimes not too benevolent at that.

A year or two before the war these people, out of their own meager resources, sent two representatives to Washington to beg our democratic government to lift the dictatorial hand of the American Navy from off of Guam and to place its jurisdiction within the Department of the Interior.

And yet, Secretary Forrestal's committee of three reported: "Nowhere did your committee find any expression of desire to be removed from under the auspices of the Navy * * *." A good word that "auspices."

I wonder if the committee could hear the thunder roll when the tropical storms came.

Let us take a look at Samoan history. The Samoans came voluntarily under United States sovereignty in 1899, on the basis of an express understanding that they would be given civil status and a rule of law. From 1899, up to and including today, Samoan life has been lived under naval absolutism. But the Samoans are a less patient folk than the Guamanians, and in the early 1920's their petitioning for their denied rights became an uproar, although without physical violence. Thereupon their leaders were seized by the naval government and charged with conspiracy. They were thrown into jail and kept there for a number of years. But news of the outrage reached Washington, so that in 1930 President Hoover, pursuant to a resolution of the Congress, appointed a joint commission to study the Samoan situation. The commission was headed by Senator Hiram Bingham, of Connecticut, and it went to Samoa to do its work on the ground.

The commission unanimously concluded that the Samoans ought to be given American citizenship, a bill of rights, and an organic act. It announced its findings to the assembled Samoans, came home, and pressed for the promised legislation. The Senate passed an appropriate bill and the Navy (backed, I regret to have to say, by the Department of State) succeeded in having it killed in the House.

Through all of the succeeding years we have been in default of our promises to the peoples of Guam and American Samoa.

Exactly a year ago this week, I stated these and other facts in a speech before the Institute of Ethnic Affairs and the Institute of Pacific Relations here in Washington. The Secretary of the Navy lost no time in charging me with "irresponsible" criticism in a long communication to the New York Times over his own signature, a communication that refuted no single fact.

When Secretary Forrestal's charge of "irresponsible criticism" proved to be the dud that it was, he hastily arranged a dress parade tour of the Pacific islands for a carefully selected group of newspaper correspondents who were given the hospitality for which the Navy is famous.

However, the hoped-for whitewash by the correspondents failed to materialize. The Navy's guests wrote stories pretty much in the same vein as that of Mr. Roland Sawyer, staff writer of the Christian Science Monitor, who said in part: "The paramount impression which the trip across the Pacific left with this correspondent, reflected in the attitude of various commands from Hawaii to China, is the naval determination to retain sole authority and autonomy in the Western Pacific, whether the challenge comes from the United Nations or from the Federal Government."

I hope that the Secretary, and the members of this committee, have read carefully the report of the Special Civilian Committee appointed by Mr. Forrestal. That report fully supports the most important allegations which I made, of (1) wage discrimination against the Guamanians; (2) extreme dilatoriness in the disposal of war damage claims; (3) laxity in performing the work of rehabilitation; (4) failure to pay Guamanian owners for lands seized; (5) seizure by the Navy of the Guamanian bus system; (6) that Guam and American Samoa are governed by men, and not by laws; and (7) that civil rights exist if, as, and when the Navy graciously permits them to exist.

I hope, for their sakes, that Messrs. Hopkins, Ryerson, and Tobin will not be charged with "irresponsible criticism" by the Secretary of the Navy, for having made the same allegations which I made 12 months ago.

Having made these accusations, what does the Committee of Three conclude? It concludes that no person, no institution, no policy or lack of policy, and, by repeated affirmation, certainly not the Navy, is responsible for the conditions. No one, and certainly not the Navy, is to blame; vaguely, our Government is to blame, but never the Navy. Whereupon the Committee recommends that for an indefinite future, if not forever, the Navy shall continue to rule Guam, American Samoa, and Micronesia.

What are the Committee's grounds for this recommendation? They are sketchily stated and consist of arbitrary assertions without supporting facts, some of the assertions being a flat contradiction of the Committee's findings of fact. For example, the report says:

"This [continued Navy rule] would certainly be more economical, both in dollars and manpower, so that the National Treasury would benefit by such retention [of rule by the Navy]." Please note that no alternative possibility is considered, nor are the Navy's expenditures for the government of the islands analyzed. The budget of the island government of Guam for the fiscal year 1948 is $2,037,754, apart from all rehabilitation expenditures, war-damage payments, and compensation for Guamanian properties taken. The $2,037,754 are $88.43 per capita. The United States Indian Service in the United States and Alaska will spend $75 per capita in the fiscal year of 1948, and its services are much more comprehensive than those of the naval government of Guam, because the Indian Service provides schooling, including the expense of 13,000 children in boarding schools; hospitals; field medical and nursing service; agricultural extension; the costs of a large forest service and of conservation work and rehabilitation on millions of acres of range land; law enforcement and a court system; and large irrigation construction and maintenance.

The per capita cost of the Territorial government of Alaska, including its schools and health service, is about $55 per year.

Puerto Rico nearly doubled its disbursements from the fiscal year 1940 to the fiscal year 1944. In this peak year the total disbursements were $53,733,800, including $12,332,607 for work relief and direct relief; all public debt service; costs of the legislative, executive, and judicial branches; education, health, highways, agriculture, commerce, labor, public safety, etc. That total cost was $25 per capita for the population, compared to the Navy's $88.43 per capita for Guam.

The District of Columbia, for all governmental purposes, including all educational and social services, water and sewer systems, fire protection and highways, etc., spent, in the fiscal year 1946, $69,815,413, or $74 per capita.

The Navy's administration of Guam tops this list.

Continuing, the committee reasons:

"It [continued naval rule] would also serve for a more efficient and capable administration, since the Navy has a pool of trained officers, Regular and Reserve." This statement, if you will refer to the report, prefaces the findings of fact as to the fantastic inefficiencies of naval rule on Guam, and goes along with the committee's characterization of the Navy rulers as untrained in government and as being on short tours of duty which handicap their naval careers.

"The islands are now dependent on the Navy for health service, communications, transport, supply, and public works," says the report. The fact is evident but constitutes, of course, no argument. It merely emphasizes that the status quo exists, and it overlooks the obvious fact that the Navy could go right on providing communications and transportation, and health service, if desirable, through joint arrangement with whatever agency might be given jurisdiction over the islands. The committee had before it an exact, detailed statement of how naval service might be effectively and economically integrated with the services of a civilian agency. Apparently, this statement was not given attention.

Again I quote from the committee's report:

"In addition, on Guam, the Navy is in the midst of the difficult and complex problem of relief and rehabilitation. No other agency exists which can step into the Navy's place in these matters, or in the general and special civil administration of the local populace." This is from a foreword to the committee's detailed findings as to the inefficient and even brutal handling, by the Navy, of the rehabilitation and compensation and war damage tasks. As for its assertion that "no other agency exists," has the committee ever heard of the Security Agency and its various Bureaus and Divisions? It has heard of the Interior Department, because it states: "To the best of our knowledge there exists no conflict (of opinion as to naval versus civilian rule of the islands)" between the Departments of the Interior and Navy. Yet several weeks before the committee wrote its report, Secretary Krug, of the Interior Department, after inspection of the islands, had stated publicly that the islands ought to be placed under civilian rule. Here we have another admirable instance of the three wise monkeys being able to "hear no evil, see no evil, speak no evil" so far as the Navy is concerned.

The above, as quoted from the report, actually is the extent of the committee's argument to support its recommendation of continued naval rule.

But only four pages further on in its report the committee confuses both its recommendation and its argument, by saying: "We believe that a separate independent agency may very well be the best place in which to lodge general supervision over all Pacific areas, excepting Hawaii and Alaska, under the sovereignty of the United States." However, this is a recommendation for some indefinite future time. What does the committee really recommend? It throws prominently to the fore its recommendation of continued naval rule and its reasons for that recommendation, as quoted above. Then it seeks to save its intellectual integrity by obscurely recommending the opposite. The practical effect, of course, is to serve the Navy's strategy of delay, a strategy which is based upon the hope that public interest will fade and that the Navy's influence in the Congress may prevent action in the future as it has done during the past 47 years.

Let us look briefly at the affirmative recommendations of the committee of three. Unequivocally and strongly it recommends citizenship for the islanders at once, and organic acts for both American Samoa and Guam.

Equal pay for equal work is recommended, but not in a hurry, for the island's economy must not be disrupted. Yet the committee finds that the cost of living for the Guamanians is just as high as for the non-Guamanians. The only disruption of island economy which would follow from an equalization of wages would be a disruption of the domestic economies of those whites who now hire the Guamanians at the depressed wages decreed by the Navy.

The committee recommends that war damage claims up to $10,000 be allowed to be settled locally on the island, without Washington review; and that those Guamanians who, in their desperate need for some ready cash, have slashed their own claims in order to get more prompt payment, be allowed to reinstate their claims at their rightful figure.

The committee, as already quoted, attacks the Navy's regulation which forces down to a mere fraction of its present value or reproduction cost the appraisals of Guamanian property destroyed or taken, and forces down to a pittance the value placed on Guamanian lives.

The committee calls for quick and enormous simplification of the Navy's regulation governing procedures, etc., in the settlement of claims, compensation for property seized, etc. Its figures show that up to March 25 last, 16 months after Congress passed the Guam Claims Act, only 5.8 percent of the estimated value of the claims on file have been processed. At this rate, the settlement of the claims will not be completed for more than 20 years.

This portion of the committee's report is lengthy and very specific. Having read it, one wonders afresh how it was possible for the committee to say, categorically, that no other agency of the United States could replace the Navy for a more efficient handling of Guam claims and rehabilitation. In this connection I quote the following, which is not a characterization by some irresponsible critic of the Navy, but the sober words of the committee of three:

"Under the (Navy's) regulations injury and death claims require an involved computation of future installments of compensation under the regulations governing the administration of the United States Employees Compensation Act of 1916, and an over-all ceiling on the amount of the lump sum is fixed at $4,000. This involves an elaborate and difficult computation. For example, assume a claim involving a guardian and three minor children whose father was beheaded by the Japanese. The Commission must first ascertain the date of the death, and the birthday of each child, and the fact that their guardian was duly appointed. Then they must ascertain the average monthly income of the deceased father during 1941. The computation is divided into two parts, that which accrued on the date of the settlement and that which would accrue until each child reaches 18 years, this latter sum then being commuted into a lump sum by deducting 4 percent compounded annually. (The committee proceeds to describe yet further complications required by the regulations.) When the calculation is finally completed, the amount awarded is often a mere pittance." Such a pittance may be observed by referring to claim No. 21 transmitted to Congress on April 5 last; the life of the man who was beaten to death by the Japanese because of his loyalty to the United States was capitalized at precisely $665, with 10 cents thrown in for good measure.

Such procedures, and such shameful results as above, have not been forced upon the Navy by Congress or the President or the Budget or by anyone. They are exclusively the Navy's own, and throw a strong light on the Navy's high regard for human life.

Secretary Forrestal in transmitting the report of the committee of three to the State, War, and Navy coordinating committee (an agency dominated by Navy and War) concurs in the recommendation for citizenship and organic acts for the two islands. So far, good. But what of the proposed organic acts?

The proposed drafts would provide for bills of rights, except a guaranty of the right of trial by jury. The reason for the omission, as set forth by the committee, is that: Trial by jury has not existed in the past, does not exist now, and therefore should not exist. If the Congress had followed this theory, there would never have been a Federal Reserve System, a Social Security Act, or even a Constitution of the United States.

The drafts provide for a governor of each island, who may be a civilian or may be a naval officer, according to the President's discretion. This means that he would be a naval officer, just as Puerto Rico and the Virgin Islands at times have been havens for superannuated brass hats. They provide for the full use of naval personnel in the island's governments. They establish island legislatures whose lawmaking is subject to the Governor's veto but the veto may be overridden by a two-thirds vote which will prevail if sustained by the President. In addition to United States citizenship, they provide island citizenship, an excellent proposal. There would be island courts, with an appeal to the United States courts, via Hawaii. In general, as described, these drafts of bills are about as adequate as they can be made within the assumption of continuing naval rule. They are defective in that they do not propose for the islands resident delegates at Washington. The existing organic act for the Virgin Islands has the same deficiency, but the omission is less serious in that case because the Virgin Islands are much nearer to Washington as compared with the far Pacific islands. As the result of this omission, the Navy would remain the Washington spokesman for the islanders.

In summary then, the committee has supplied some fuller details than were known before, has corroborated the principal allegation made against naval rule in the islands, has recommended citizenship, and organic acts, subject to naval rule.

In short, it has thrown its weight, if not its facts, behind continued naval rule.

For one, I am not too much impressed by the report of this committee of three. I recall that it was appointed by the Secretary of the Navy to investigate the procedures of the Department of the Navy. It is no great shock to find that the resulting "whitewash" is generous, even if somewhat splotchy.

One of the members of your committee before which I appear today, has, very properly I think, suggested that the function of "investigation" is one of the most important vested in the Congress. An investigation by a department of itself is not a proper investigation at all. Generally speaking its purpose is to cover up and the remarkable thing about the report of the Hopkins committee is that there were so many skeletal remains bleaching in the hot tropical sun that could not be covered up.

I do not know where the Secretary of the Navy got the funds, or the authority, for such an investigation as has been conducted. Perhaps you do. But I submit that it is the duty of the Congress to determine for itself the validity of the report, and the true situation in Guam and Samoa, and to enact such remedial legislation as may be indicated.

There is another matter in which I think that the Congress may be interested in order to determine the facts. It is my understanding that the Secretary of Interior made a report some time ago to the White House

on his trip a few months ago to Guam and Samoa. However, this report has not been made public. The failure to give out the report excites my curiosity. Is it possible that the report contains opinions and recommendations which are in conflict with the desires and purposes of the Navy Department?

Perhaps you know that on February 27 of this year, the Honolulu Advertiser quoted Mr. Krug as saying: "I feel strongly that the basic principle of our Government is civilian government for civilian people. That is why I am for statehood for Hawaii and civilian administration of Pacific islands."

On the same date, the same paper carried the following: "The towering head of the Interior Department strongly endorsed the substitution of civilian administration for military government of these islands (Guam and Samoa) and said he advocated such a change soon. He said such a change could be accomplished in areas which the military has labeled strategic."

The committee surely will agree that this is forthright and unqualified endorsement of civil rule. I believe that the people are entitled to the information in Secretary Krug's report. Undoubtedly he went to Guam and Samoa in an official capacity and there can be no gainsaying the fact that the considerable expenses to pay for this trip came out of the Federal Treasury.

I also raise the point whether the administration has not sent a Paul Revere, in the person of Admiral Leahy or General Vaughan, galloping to the various Secretaries to demand silence and submission to the Navy's will. Perhaps we are witnessing another instance of the administration's willingness to tell even Cabinet officers what they are to think and what they may or may not say. If this is the case, I can imagine how embarrassing it might be for Secretary Krug to produce his report here if it recommends civilian government for these islands as he so sturdily recommended it on his return through Honolulu.

However, it is within the power of this subcommittee to solve the mystery of the undisclosed report if it has the interest to do so.

So far I have read from a statement that I had prepared several days in advance of the appearance before you of Secretary of the Interior Krug and Under Secretary of the Navy Sullivan. They came, and, in full harmony, sang a duet. The harmony was further emphasized by the fact that Mr. Krug read half of the statement and Mr. Sullivan the other half, a performance that must have impressed you. It is also new in my experience for a Cabinet officer to be required by the President to reverse views that had already been made public. As has already been shown, Secretary Krug said, in Honolulu on February 27, that he was for civilian administration of the Pacific islands, and he advocated such a change soon. But the tune that he sang before this subcommittee to the accompaniment of Navy brass was quite different. I am more curious than ever now to know whether Secretary Krug's report to the President recommended immediate civilian rule for Guam and Samoa, as I suspect that it did. If so, the suppression of the report is easy to understand.

In any event the two gentlemen in question, with the approval of the State and War Departments, recommended that "at the earliest practicable date the administrative supervision of Guam should be performed by a civilian agency rather than a military agency of the Government."

Strangely enough, nowhere in their statement did they mention Samoa. I wonder why. This was a significant omission, which can only be explained on the supposition that Samoa, to which we are also under a solemn obligation to bestow civilian rule, is to continue indefinitely under the domination of the Navy.

There is another highly important sentence in the Krug-Sullivan statement which I want to quote:

"It is recommended, therefore, that the timing of the transfer and the designation of the agency to which the transfer is made, be delegated to the President * * *."

In leaving to the discretion of the President "The timing of the transfer and the designation of the agency," does one find the word "civilian" used?

Not at all.

Mr. Krug and Mr. Sullivan have very carefully refrained from recommending that the President designate a "civilian" agency. And if the committee will scrutinize the language of the bill jointly introduced by Messrs. Krug and Sullivan, it will find that the bill does not require that the President designate a "civilian" agency. As a matter of fact, there is no requirement in the bill that the President ever transfer Guam to any other agency. He could permit it to remain under naval absolutism for another 50 years or even twice that length of time, or he could transfer it to the Army. That the Army and Navy should make such a shabby recommendation is understandable, but what I must view with the deepest regret, is that the Departments of State and Interior should join in such a recommendation, especially in view of the Secretary of the Interior's statement—"I feel strongly that the basic principle of our government is civilian government for civilian people. That is why I am for * * * civilian administration of Pacific islands * * *."

The Congress will not be taken in by this tricky language, as the State, War and Interior Departments have been. This is one of the Navy's famous delaying actions, a strategy that may be appropriate in battle, but not when human liberties are at stake.

I hope that this committee will examine closely the structure of the civil government which the Navy bill would provide. Under it, the President would appoint the governor of the island with the advice and consent of the Senate. And then, in the very next sentence there is language to the effect that a naval officer, on active or reserve duty, may be appointed. In view of this, how can it be said that this is a bill for civil administration? It is the very negation of that. The word "may" might just as well be changed to "must," because if passed, that is the interpretation that the Navy would insist upon as it would have warrant in doing under well-established legal precedents.

With mellifluous voices, Navy and Interior started to chant a duet exalting civil rule, but their voices became brassy when they handed you a bill which would legalize the tyranny of continued naval rule. Under the bill, all heads of the local government of Guam would be appointed by the governor, without the approval of the legislature. This language would permit the people of Guam to be governed without their consent, in defiance of the fundamental principle of democracy. And by the same token, Naval officers could, and, I predict, would be appointed to administer the departments of the local government.

I hold it to be most unbecoming, that one member of the duet, the one who unequivocally spoke out for civilian rule in Honolulu, should have endorsed this Navy-inspired bill. I hold it to be equally unbecoming that the second gentleman should appear here to speak empty words in behalf of civilian rule, and then offer a bill that would legalize the naval rule that was imposed upon the Guamanians in violation of President McKinley's sincere promise and maintained for almost 50 years.

The gentlemen ask you to believe that the problems of rehabilitation and reconstruction and revitalization of the island and its economy must be resolved by the Navy before it can hand the government over to civilian authority. This is the purest hokum. I submit that the measure of the Navy's concern over these matters is the lack of progress that it has made in its rehabilitation program.

I further submit that it is time that the Department of State ceased to be beguiled by the pleasant tinkle of brass and the luster of gold braid, and pledge itself to democracy for all areas within the jurisdiction of the United States. Then, with better face it could urge the blessings of American democracy upon other peoples.

The record shows that the Navy cannot be trusted to rule civilian populations. It is not necessary, in the interest of military security to make a mockery of the human welfare and the civil rights of the peoples of such areas as we have been considering. If there is any merit in the claim of the Navy that it be permitted to keep its fetters upon the civilian populations of Guam and Samoa, then by a parity of reasoning, civil rights should be struck down in the Aleutian Islands, Puerto Rico, and the Virgin Islands.

If we require naval absolutism for reasons of military security in such places as these, then there is no logical reason why we should not hand over to its benign rule such vital continental regions as Boston, New York Harbor, Charleston, San Diego, San Francisco, and Seattle.

This subcommittee has before it for consideration, several bills relating to the problems of Guam and Samoa. Their authorship is unimportant. The only thing of importance is that Guam and Samoa be granted the civil rule that they have petitioned for, and that, at long last, America's word be kept.

You will do well to remember, however, that the Congress can pass organic acts for these islands every day of the session, and still if those acts are administered by an agency in which arbitrary personal rule is as deeply ingrained as it is in the Navy, you will have failed to accomplish your purpose.

Almost 50 years ago, America made a pledge to Guam and Samoa to "insure that full measure of individual rights and liberties which is the heritage of free peoples."

This Congress should consider it a privilege to redeem that pledge.

Japan Gets Labor Ills Along With New Freedom

EXTENSION OF REMARKS
OF
HON. GEORGE H. BENDER
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 14, 1947

Mr. BENDER. Mr. Speaker, under leave granted me to extend my remarks in the RECORD, I insert herewith an article by Mr. Ralph Donaldson of the Cleveland Plain Dealer:

From the standpoint of conferring rights upon individuals, releasing them from economic and feudalistic bondage and giving them political freedom, General MacArthur's new deal for the Japanese has been an outstanding success. But there are some weaknesses in it. One of these is the labor policy in Japan.

An observer in Tokyo quickly reaches the conclusion that we are importing some of America's bad habits to Japan, along with the good.

It is all very well to give Japanese labor the right to organize, to bargain collectively, and to strike. That is part of the new free-

dom for Japan. But strikes are a luxury which only prosperous countries can afford. It doesn't make sense to encourage strikes in a nation which is plagued by shortages of every kind, which cannot sustain itself, and which needs help from the outside to prevent starvation.

That outside help is coming only from one place—the United States. Consequently, to the extent that strikes and demonstrations cut down production in Japan, the bill will be paid by the American taxpayers.

There are some high-ranking officers in the army of occupation who are not in sympathy with the labor policies we are pursuing. They claim that Communist sympathizers have had a hand in formulating our labor policies and that some branches of the occupation force are actually encouraging strikes. Other officers at general headquarters say that the Communists who infiltrated headquarters at the beginning of the occupation were weeded out long ago.

The storm center of the controversy is Anthony Costantino, former major, who had an excellent combat record with the First Cavalry Division. He is now civilian chief of the labor relations branch of the labor division at supreme headquarters.

I went to see him after hearing a number of officers complain about his activities. He said that his home was in Dunkirk, N. Y.; that he was a college graduate and lawyer and that he had been an organizer for the CIO Steelworkers Union and for District 50 of the United Mine Workers Union. He said that he was not now and never had been a member of the Communist Party.

COMMISSION POLICY CITED

Costantino then produced a policy decision of the Far Eastern Commission, which sits in Washington, outlining principles for Japanese trade-unions. It was made December 6, 1946, and announced December 24.

Among other things, this decision stated that trade-unions should be encouraged to negotiate with employers, that strikes and other work stoppages should be prohibited only when the occupation authorities consider that such stoppages would directly prejudice the objectives or needs of the occupation, that trade-unions should be allowed to take part in political activities and to support political parties and that Japanese workers should be free to organize on a craft, industry, company, factory, or territorial basis.

The decision also ruled against organizations with "militaristic, ultra-nationalistic, Fascist, or other totalitarian aims" but did not mention Communists by name. (Incidentally, the Communists are very active in the Japanese trade-union movement.)

ORDERS ARE FULFILLED

Costantino said he merely had been carrying out the policy thus laid down by the Far Eastern Commission. He also said a remark he had made about "production control," a maneuver under which Japanese workers seize possession of a factory and operate it themselves, had been misinterpreted in the Japanese press as an indorsement of this tactic. In proof of this he produced clippings of a statement in which he said that a person whose property had been seized in this manner could seek redress in the courts under Japanese law.

Gen. MacArthur is not worried about the possibility of Communists acquiring control of the Japanese labor movement. The occupation authorities make no effort to interfere with the demonstrations on the Imperial Palace grounds and the parades through the streets of Tokyo.

The newspapers estimated that 400,000 people took part in one such demonstration while our party was in Tokyo. The demonstrators were orderly and in good spirit. They halted obediently whenever a Japanese policeman held up his hand to allow traffic to pass. Red flags predominated, but not all of them indicated Communist affiliations, observers said.

This particular demonstration and parade was in support of a general strike of government workers, scheduled for February 1. The workers were demanding higher pay and the overthrow of the Yoshida cabinet. About half of the organized workers in Japan were planning to walk out at the same time in sympathy with the government employees.

Vigorous efforts were made by SCAP headquarters to get the government to settle the controversy and to persuade the unions to call off the strike voluntarily. But those efforts failed. Finally, 9 hours before the strike was scheduled to begin, MacArthur himself had to step into the controversy and prohibit the walk-out. The union leaders promptly obeyed and called off the strike.

But what would have happened if they had taken a page from the book of John L. Lewis and had refused?

Under existing conditions in Japan, the result would have been the same. The workers would have obeyed MacArthur's order not to strike and the union leaders would have lost face. But conditions may not always be the same.

The Labor Bill

EXTENSION OF REMARKS
OF

HON. CHARLES R. ROBERTSON

OF NORTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 3, 1947

Mr. ROBERTSON. Mr. Speaker, at an early date the Congress will be called upon to vote on the question of the conference on the labor bill. Perhaps not in the last 50 years has so much pressure been brought to bear upon the Congress as has been the case in connection with this labor legislation. Every phase of American labor has brought to bear every conceivable means to induce both the President and the Congress not to pass this legislation.

In an overzealousness on the part of the Congress to pass legislation that a labor-conscious President will probably sign, the Congress of the United States—in my personal judgment—has yielded very important measures that should become law. It is a sad commentary when we come face to face with a situation that has paralyzed the country on two or three occasions that we seem to lack the fortitude essential to protect the interests of the vast majority of the American people.

David Lawrence, an accomplished author, syndicated writer, and a student above question, writes intelligently on the compromises that have been made in order to draft a bill in conference that might avert the veto of the President whose sole ambition, if he does veto it, is to forsake the welfare of the people of the Nation to win labor votes in the next election. Under unanimous consent, I include herewith the following article written by David Lawrence taken from the Evening Star of June 2, 1947:

LITTLE REASON IS SEEN FOR TRUMAN TO VETO WEAKENED LABOR BILL

(By David Lawrence)

Analysis of the bill on labor-management relations agreed upon by the Joint Conference Committee of the House and Senate shows that not only did the House give up the heart of its proposals but that the bill passed recently by the Senate—generally considered a mild measure—has been adulterated and weakened.

Just why President Truman should now hesitate to sign such a milk-and-water version of labor legislation is unexplainable unless he merely wants to placate the labor-union chieftains who do not want to see any legislation whatever enacted.

The sabotaging of the Senate bill—which certainly cannot be blamed on the House conferees—will not lose any votes for it in the Senate. A Presidential veto, if it comes, will be easily overridden now in both Houses.

The fact remains, however, that with the exception of a few abuses that now are corrected, the new labor bill is just as ambiguous, if not more so, than the original Wagner Act, and gives the present National Labor Relations Board far more power over employers than it ever had before and some innocuous powers over labor unions to which any reasonable labor leader ought not to object—for these clauses are easily circumvented by legal devices provided in the new bill itself.

UNION SHOP STRENGTHENED

Thus, for example, there has been much hullabaloo about outlawing the closed shop. A certain form of closed shop has been prohibited but another form of closed shop, known as the union shop, has been given added strength.

An employer, under the new bill, can be compelled by a successful strike to sign a contract which provides that he must fire any worker who has not joined the union after 30 days of employment. This 30-day provision has been hailed as restoring the employer's right to hire whom he pleases. But in a separate section of the new bill, the unions are granted the right to make whatever terms or rules of admission to membership they please. This means that, if unions say a man must serve as an apprentice for 3 years or measure up to any other tests prescribed by the union before he is permitted to join, he can be barred. The only requirement is that all applicants must be treated alike, which is easy to comply with. The employer's right to hire, therefore, is subject to ratification after all under the union shop clause.

The important provision of the Senate bill, moreover, making it an unfair practice to violate a collective bargaining contract, has been omitted from the conference bill and, instead, such violations can only be the subject of civil suits to get redress. Experience under the Smith-Connally law shows how reluctant employers are to file damage suits because unions can stay out on strike until an employer agrees to withdraw his suit. This problem should have been left to the labor board to handle, as the Senate bill provided.

FREE-SPEECH CLAUSE MEANINGLESS

The so-called free-speech clause in the conference bill is meaningless and merely confirms the whimsical and arbitrary interpretations made by the present Labor Board in a variety of cases. The new language says it is not an unfair labor practice to express an opinion—and "express" means not only orally but in writing. There must, however, be no threat or promise of benefit. An employer, now as before, cannot discuss his problems freely with his own workers individually or in a group without risking a lawsuit to find out what is meant by "benefit" or "reprisals." The present Labor Board majority must be chuckling at how this was put over on both the Senate and House conferees.

There are a number of provisions in the new bill which were not in the original Wagner Act. But the key to their significance is

in the penalties which are in most instances ineffective. Even the hue and cry about injunctions vanishes when it is apparent that, under the new bill, injunctions must be terminated in 60 days and neither side is required to agree to any proposal or concession or arbitration. The so-called injunction clause for national emergencies might act as a cooling-off device, but the chances are it will operate as did the same type of clause in the Smith-Connally law—merely to postpone by 60 days the effective date of the strike and Nation-wide paralysis of industry.

Since some Republican Senators have played politics to placate certain elements of the labor vote, possibly there will be less criticism now of President Truman for doing the same thing if he vetoes the bill.

Expediency is the watchword of the politicians nowadays. Expediency has caused abandonment of principle and has postponed indefinitely the show-down in America between collectivism in the form of a supergovernment by labor unions and the right of the individual to work and keep his job without being compelled to join a labor union. In this respect the conference bill is the biggest victory the labor-union lobbyists have won since the Wagner Act was passed in 1935. They ought to be very happy.

Safety Development in Aviation

EXTENSION OF REMARKS
OF
HON. CHARLES R. ROBERTSON
OF NORTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 3, 1947

Mr. ROBERTSON. Mr. Speaker, the people of the United States have been shocked by the tragedies of two recent airplane crashes. Air transportation has become an indispensable thing in the lives of the American people. It is imperative then that certain important improvements be made that will add to the safety of transportation by air.

Howard Hughes makes the public announcement of a lightweight, inexpensive radar collision warning device for pilots, and is rightly considered one of the most important aviation news stories of recent date. Under unanimous consent, I include herewith the following article entitled "A Hughes-TWA Achievement" from the Aviation News of May 12, 1947:

A HUGHES-TWA ACHIEVEMENT

Public announcement by Howard Hughes of a lightweight, inexpensive radar collision warning device for pilots is probably the most important aviation news story so far this year. This is one radar air safety development that is ready to operate today—not 5 years hence.

We have no doubt that the Hughes unit will bear the brunt of some narrow-minded criticism because it fails to do everything that our best technicians know is possible—5 years hence. But at least Howard Hughes and TWA are doing something about collisions, and doing it now.

For a long time the public has been baffled because airplanes continued to hit mountains. Fortunately, the number of collisions with other aircraft has been amazingly small, but increasing air traffic will tend inevitably to increase this hazard. The public simply could not understand why wartime radar could not be utilized in some way for air-line safety. The air-transport industry now has one of the best public-relations talking points since it started work on the complicated instrument approach and landing systems.

The Hughes unit was demonstrated to newsmen on the West Coast, including two experienced staff members of Aviation News, Scholer Bangs and Robert Hotz. Its performance was impressive. Mr. Hotz reports that it recorded individual ocean swells which probably were less than 5 feet in height. The unit costs less than $150, and its weight is under 20 pounds. Thus, for the first time we have a major radar instrument that does not represent an economic strain because of weight, original cost, or maintenance. It requires no personnel training. It warns of an obstruction both visually and audibly, in time for the pilot to maneuver even the fastest transports. The warning continues steadily until the course is clear. There is no additional load on the already busy pilot because there is no scope or instrument to read or interpret at any time. In short, it appears that the Hughes unit will enable TWA pilots to do what the public thinks—rightly or wrongly—all pilots should have been equipped to do for a long time—use radar to prevent many crashes.

Although the Hughes unit may be found eventually to have a few shortcomings—as most man-made inventions possess—this new collision warning indicator is an important step forward. Mr. Hughes has ordered its installation on every TWA transport within 6 weeks and this work is already well underway. (This, thanks be, is one vital aid that need not await unrolling of Government red tape for its use.)

Mr. Hughes has said he will sell the indicator to other air lines at cost. This is an outstanding public and industry service, and we cannot imagine how any other air line can refuse to utilize it for the safety of its passengers.

ROBERT H. WOOD.

No Time for Political Bickering

EXTENSION OF REMARKS
OF
HON. EARL WILSON
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 3, 1947

Mr. WILSON of Indiana. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Bedford (Ind.) Daily Times-Mail:

NO TIME FOR POLITICAL BICKERING

Lawrence county farmers are likely to get a few thousand dollars less in governmental aid next year if recommendations of the House Appropriations Committee for drastic reductions in the Department of Agriculture's budget are voted into law by Congress.

But the reduction in governmental handouts for this or that, will be reflected in savings to farmers and all other taxpayers in reduced income taxes. And more than that, the reductions may well pave the way for retirement of a small portion of the national debt. And retirement of any part of the debt means less interest on the debt and further savings to the taxpayers in years to come.

But all of that is beside the point of this article. It is the desire of the writer to put the people on guard against political maneuvers, by some Washington lawmakers who would scuttle the Nation for a handful of votes of misled citizens.

We are referring to a charge by Representative CANNON, of Missouri, who declared Saturday that the farmers "have been tossed to the lions by the Republicans." He said that the USDA budget proposal is "the worst bill of its kind ever sent to the House floor." CANNON is a Democrat.

CANNON speaks a partial truth. It probably is the "worst" bill from the standpoint of cut-backs in agricultural spending. It is always more difficult to cut governmental expenditures than to increase them.

Governmental action was necessary to save many farmers during the depression. Now it appears that action in the opposite direction is needed to save the Government.

This isn't to say that a full agricultural budget wouldn't be a good thing. The field of agricultural promotion is virtually unlimited. It would be fine to devote the entire Federal budget to that end. But that can't be.

The Agriculture Department is not alone in proposed reductions. Congress seems to be striving for what may be termed an "across the board" cut in Federal spending. To exempt certain departments from the cuts would only cause confusion and would defeat the effort.

One thing we must remember that if the Nation goes down from economic or any other cause, we all go down together.

Most of the Nation's taxpayers will agree that governmental spending must be cut to the bone. If it is necessary during these lush times of prosperity to pour out millions to assist one particular group or another, then we may as well accept the fact that we are heading into socialism.

Of course, Federal aid is sometimes essential to repair the hole in the hulk of a sinking ship. But our ship is not sinking now. That is the economic ship from the individual's standpoint. More in danger of sinking is the national ship which is about to be washed under by the overwhelming national debt.

It's a real struggle and particular groups who will be directly affected by governmental economies must remember that this is a genuine effort on the part of Congress to take advantage of good times to cut governmental expenditures and the national debt and taxes while such reductions are possible.

The No. 1 need of the Nation at this time seems to be to effect as much economy in Government as is humanly possible. High prices for all types of goods and a high level of employment should make it possible for the Government to bow out of a lot of relief activities. Our armed forces must be kept strong and a lot of money will be needed for relief abroad. So cuts must be made elsewhere.

Playing politics in this financial emergency is like playing with fire at the end of a dynamite fuze. Unless we play our cards right, we stand to lose all.

The people are still the captain of the ship of state—but if the ship sinks, there will be no further need for the captain.

Income Tax Discrimination

EXTENSION OF REMARKS
OF
HON. ALBERT RAINS
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 29, 1947

Mr. RAINS. Mr. Speaker, in a recent issue of the Avondale Sun, of Sylacauga, Ala., Mr. J. Craig Smith writes a very interesting editorial entitled "Old and Rank Discrimination Should End." This editorial points up very clearly the discrimination in our tax laws against those States which are not community-prop-

erty States. I suggest this editorial as interesting reading for all Members of Congress. It follows:

OLD AND RANK DISCRIMINATION SHOULD END

Does every citizen of the United States earning the same income and with the same exemptions pay the same Federal income tax? If your answer is "Yes," you are wrong. Let's look at the situation of a Congressman from Alabama and a Congressman from California. Assume both are married, with no dependent children and no income other than their salaries. They both live in Washington, perhaps in the same apartment house, and both have the same heavy living expense. They, of course, maintain their respective legal citizenship in the State which they represent. The Congressman from Alabama pays an annual Federal income tax of $655.50 more than the Congressman from California. Why? California and eight other States are known as community-property States. Consequently citizens from these States are allowed to divide the family income equally between husband and wife and then pay taxes on the two halves separately. This procedure is rank and gross discrimination against Alabama and the other 38 States which do not have community-property laws. The discrimination has existed since the first Federal income tax became effective 34 years ago and has amounted to literally hundreds of millions of dollars. Why we have allowed it to continue through all these years surpasses understanding.

Oklahoma has recently solved the problem for her citizens by becoming a community-property State. Alabama might do likewise, but Congress should not encourage such tax evasion. Congress should end the present discrimination by extending the privilege now enjoyed by the community-property States to all States. Marriage is supposed to be, and usually is, the perfect partnership. The wife contributes her full part whether she brings home a pay check or not. Our tax laws should recognize this truth and should recognize it in 48 States.—J. C. S.

Address by Rev. Bernard W. Dempsey, S. J., Before Mortgage Bankers Association of America

EXTENSION OF REMARKS
OF
HON. JAMES P. KEM
OF MISSOURI
IN THE SENATE OF THE UNITED STATES

Tuesday, June 3 (legislative day of Monday, April 21), 1947

Mr. KEM. Mr. President, I ask unanimous consent to have printed in the Appendix to the RECORD a thoughtful and stimulating address on the present basic trend of American business, delivered by Bernard W. Dempsey, S. J., regent, School of Commerce and Finance, St. Louis University, before the members of the Mortgage Bankers Association of America, Mortgage Clinic, Hotel President, Kansas City, Mo., May 8, 1947.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

One of man's special blessings is his capacity for adjustment. When we are confronted with genuine difficulties, which in prospect we were certain we could not bear, we sometimes astound ourselves by the resources we can call up in the crisis. This capacity for adjustment is a work of the healthy organism and we are going to need all of it that we have because there are some real adjustments to be made.

Like all virtues and good qualities, capacity for adjustment can be overdone. Man can get used to situations and habits that he should not allow himself to tolerate. He gets into a situation he knows is bad and he intends to do something about it but he doesn't and he soon finds himself living comfortably in circumstances he would have called unnecessary and inexcusable.

This happens to a nation in wartime. War imposes direct and immediate adjustments on everybody, and most obviously on the boy in uniform but in one form or other on everybody. You find yourself eating oleomargarine, walking to work, and wearing a green shirt, and not minding it one-tenth as much as you expected. That's a good thing, but we transfer it to the more important things that war involves. We get just as accustomed to casualty lists and wartime morals as we do to oleomargarine. And worst of all, we adjust ourselves to the crude fact of war itself—the fact that nations have found no better way of adapting themselves than killing each other off—and we learn to live in the same world with that monstrosity without reflecting on it at all.

This fact makes it necessary for me to make a statement that will sound like, and should be an absurdity: Do not forget, in talking about the trend of American business today, that we have just been through a war—the most disruptive war in history. When I say this, I do not really think that you are going to forget 1941–45. I mean that you do not realize how well you have adjusted yourselves to the abnormal. You do not realize because 5 years have made you accustomed to things that cannot endure. Never forget that the adjustments that now confront us are the product of one of history's major upheavals. Do not be deceived into blaming our problems on the Jews, or the monopolies or some local circumstance when we have just moved out from under one of the blackest clouds that ever settled on mankind.

And when you remember that we were in a war, remember that war is a boom, and a boom precedes a bust. War not only inevitably dislocates production but furnishes the one set of circumstances in which inflation can be made to look respectable. And we have had both in large doses—dislocation and inflation.

The first trend in American business that we should look for is a price collapse just like we had in 1920. The average index of wholesale prices for 1920 was 154, for 1921, 97; hides, for example, dropped from 267 in 1919 to 89 in 1921. Prices received by farmers went from 211 in 1920 to 125 in 1921 and the purchasing power of a dollar rose from 52 in 1920 to 82 in 1921. All of the basic reasons for that collapse are certainly present now in extreme degree. Yet economists did not expect it and it has not happened. Why not? There seem to be two principal reasons.

Our part in the last war was brief and during it inflation was uncontrolled either at its source or in its effects. Inflationary pressure developed quickly and strongly and showed itself in the price level. What this would have done in a long war is not pleasant to think of. Our recent war was long; inflation at the source was even stronger and less courageously and intelligently handled than in 1918. But noneconomic means were used to prevent the huge inflationary pressure from finding its normal expression in prices. Costs were permitted to rise; dollar incomes were inflated but the consumer paid in the form of quality lost and in some curtailment of the range of choice. The result of this is that, unlike 1920, quoted prices rose less but the tensions within the price structure are much greater than 1920. By tensions within the price structure, I mean first, inconsistencies, that is one price allowed to rise while a related price is held down, and second, inflationary pressure from high incomes causing the price structure not to rise in quoted prices but to bulge out sideways in bootleg markets, or in hidden considerations not shown in dollars. Furthermore, the inflationary pressure was so great that the American people came out of the war with a huge wad of disposable savings, roughly equivalent to a full good year's income. We have been saved thus far from a collapse like 1920 by the fact quoted prices had not risen as far as in the earlier period and people spent their accumulated free savings at a rate both faster and steadier than was expected.

Granted then that there are good reasons why we do not get a simple repetition of the 1920 sequence, what can we expect? In economic terms war is a shift in demand. One day we have no need of torpedoes and the next day we will pay anything for them. One day men's ties are of all colors and within a few months, 12,000,000 men are wearing only khaki or black. This abrupt shift in the relative value of different goods reflects itself in productive capacity and we twist our productive capacity all out of shape to meet the new demand. This is costly in itself and the need for speed makes the process doubly costly. With the shift in productive capacity goes the shift of manpower. The population movements within the United States during the war constitute a social earthquake if the war had had no other effect. We spend our resources to meet the war demand without regard for present or future cost and finally get running a war economy.

Then the day comes when the demand for war goods disappears in an instant and demand for peace goods arises in the same instant. And there is even less time for adjustment to the demand than there was at the beginning of the war. It takes the enemy time to organize an attack but consumers with dollars can move in on an hour's notice. Therefore, we must not forget the size of the war from which we have just emerged. Three huge tasks had to be accomplished before industry could handle the rush of consumers:

1. Demobilization—military and industrial.
2. Reconversion—mechanical and personal.
3. Elimination of controls, priorities, rationing.

II

These things have now largely been done with one conspicuous exception of which you are all aware. What then are the factors which will govern the future?

They are basically two:

(a) Labor-management relations.

(b) Inflation.

Though economic in their expression and effect both are strongly conditioned by Government policy.

During the war, American production was the marvel of the world and America won two wars on two world fronts across two oceans because her men were constantly supplied with an endless stream of high-grade materials. The source of that material was not merely our natural resources; they are necessary and important but passive. The source of that power was cooperation from the drawing board to delivery at the front. With a very few very sordid exceptions, Americans submerged their personal advantage for the sake of the common good. The result of that cooperation was the greatest flood of output in economic history even though 12,000,000 of the most capable producers were withdrawn from production and were in direct military service.

The lesson of this is pretty obvious. You get goods when and only when you get cooperation on the job. This department

must supply that department. From the front office to the delivery platform there must be teamwork or there are no goods. And if anybody is dragging his feet, to just that extent you get less goods.

During the war, labor became accustomed to high money wages. Hourly rates rose but overtime rose even more. In many families, persons usually at home went into war plants, and family income rose still more. The money wages bought less than they would have before the war but real income for many people greatly increased during the war. Labor came out of the war determined to hold that level of income and we have had two waves of serious strikes aimed at that goal. These strikes have gravely hampered production and prevented the production for which the consumer was clamoring and to that extent have aided in keeping prices up. How seriously they have hampered production is hard to estimate statistically, but one does not need to be a statistician to know that basic industries and services like coal, steel, motors, railroads, and telephones cannot be interrupted one after the other and production still be maintained.

Why does labor adopt such a policy of cutting its own throat? Because labor is interested in dollars and jobs, not goods. A thousand-dollar bill can't be eaten or worn and the multiplication of jobs that don't result in the output of goods is not going to give a pay check that will buy very much no matter how big the figure written on the check.

This is clearly a foolish policy. Why then is it followed? It is followed because American labor whether or not Socialist or Communist, operates on Karl Marx's theory of class conflict. Because they accept this theory, they act as though there were a well defined capitalist class from whom it is possible to wring definite permanent gains. This operates on the theory, the more there is for me the less there is for you; as though the economic pie was of a definite and fixed size. Actually the size of that pie varies enormously and usually the share of labor and the other shares go up and down together But labor operates on the basis for being able to get something from capital regardless of what labor produces and Karl Marx leads them in quest of money and jobs at capital's expense and deprives them of goods at their own expense. And the result is less goods coming off the end of the assembly line for labor to buy.

If this error of Karl Marx is so obvious and so wrong, how does labor fall into it? They have had plenty of bad examples in high places. That idea was not original with Karl Marx; he got it admittedly and explicitly from the early Victorian economists of England—Ricardo, Malthus, Mill. These men accepted the idea of class and class conflict and made it part of their system and Marx took it from them and used it to very different purposes in his system. The applications were different but the practice was the same. Labor and capital have been educated to a fictitious opposition of interest and "capital" whatever that may mean in a society like ours believed that labor had to be kept in its place and that the more there was for labor the less there was for capital. Let it be said to the credit of the late Henry Ford that he was one of the first influential Americans to realize the falsity of this division. These ideas of Ricardo, Malthus, and Mill are exactly what many people regard as the "old fundamentals" that we have to get back to. They are just as false in their respectable classical form as they are in their aggressive Marxian form. They are not fundamental to anything except disorder and low output.

Nineteenth century British economics, wholly out of tune with American facts, had sufficiently wide acceptance so that it was built into some of the labor legislation of the 1930's. NRA and the National Labor Relations Act, however useful in some of their provisions were sources of trouble because they assumed that the interests of employer and employee were opposed.

So labor has had plenty of very respectable precedent for its error, but that is no reason for maintaining it.

The radical error has become more important in the last 10 years because we have had a change in the type of so-called liberal leadership. The old-style American liberal was a midwestern commoner, a La Follette, Borah, or Norris. Whether you liked them or not, you had to admit they were home-grown. The so-called liberal today is a follower of Marx, or at least a man who is scared to death to hint that Russia is not the most democratic country in the world, or he is a follower of the late Lord Keynes, a recent British economist whose doctrines are described as rendering Marx unnecessary. He is not a man who thinks Americans have any good ideas or that we have traveled a long way on the road to a classless society without liquidating the opposition.

These may not be the sort of things you expected in a talk on the trend of American business, but that is the basic trend—the imposition on our American economy of a set of theories that are false in themselves and peculiarly and conspicuously false when applied to American conditions. Yet these theories affect production right now, and they are behind the difficulties that confront Congress on labor legislation right now. Congress is willing to pass a fair and sensible labor bill if labor will tell them how. If class-conscious labor condemns any legislation whatever, labor will get a class-conscious punitive law.

Now this trend underlies much American business today. Production is restricted, not only by monopolists but by unions. Union policy is not concerned with producing a large volume of goods to raise the standard of living, but they are concerned with the multiplication of jobs at high pay regardless of output. That leads to high hourly rates, low annual incomes, high prices, poor buying power, and unemployment.

This is still the dominant trend. The building trades seem to have set their prices so high that building is falling off sharply in the face of terrific demand. There are signs that the recent settlements indicate a willingness to call it quits for a while. But only for a while. Owner managers and workers alike are still thinking in terms of class conflict and squabbling over the division of a dwindling product, when the most elementary cooperation could give us the greatest output ever known, abundance for ourselves, and plenty for the victims of war abroad.

III

The other big factor in present trends is the fact of inflation. This is not a possibility or a danger; it is a reality. If there is any question of this in anyone's mind, let us look at the figures. Back in the twenties the American people did business with between three and four billion dollars of legal money. This is the nickels, dimes, quarters, the five's and ten's that are constantly moving in and out of pockets, purses, cash registers, and tellers windows. In 1933 that figures was $7,500,000,000; in 1944 it was $25,000,000,000. Today it is $28,000,000,000. Nothing has happened since the twenties to require us to have about seven times as much money as we used then.

What has happened to legal money has happened to deposits—the total sum for which Americans could write checks if they all did it at once. In June 1929 there were $55,000,000,000 in deposits, regarded as a dangerously high figure as events showed it was. By 1933 that fell to $43,000,000,000. In 1937 it was up to 57, in 1939 to 64, in 1941 to 78, in 1942 to 110, in 1944 to 150, and in 1945 to 175. The end of the war brought an end to the extreme inflationary movement and loans by banks to industry instead of Government has not taken up all of the slack. At the moment the figure stands at about $167,000,000,000, with no indication that it will go lower. Do you know any reason why the American people need three times as much money to do business with as they needed in 1929? Do you know what happens when money is long and goods are short? Money declines in value, which is just a roundabout way of saying that prices rise.

If money makes prices rise, why have not our prices risen further? The rise has been substantial but it has not been nearly as great as the increase in the volume of money. The answer lies in the way the money is used. The price structure that a given volume of money can support depends on the way the money is used, chiefly the speed at which on the average a dollar goes from hand to hand. When business is brisk a dollar moves rapidly. An average velocity for an American dollar in normal times is about 13. That is, on the average, currency changes hands in about 13 transactions a year. In recent years that velocity has been down below 9. An increase from 9 to 13 is almost 50 percent. Without any further increase in the volume of money we could furnish the basis for a 50 percent price increase if it were not offset by an enormous output of goods.

One does not need a college course in economics to know that when prices are rising we try to get rid of money. Goods are increasing in value and money is declining. so businessmen prefer goods to money. At such times velocity increases. In extreme inflation, this velocity becomes visible. At the height of the collapse of Germany's currency, on pay day the member of the family that could run the fastest met father at the factory gate and ran to the grocery store where mother was waiting in order to spend the money as quickly as possible before it declined further in value.

It is worth noting that our inflationary problem is related to class consciousness I mentioned Lord Keynes a moment ago, whose ideas ruled Washington from 1934 to 1941. Keynes based his ideas on considerations which may have some validity for England's peculiar and grave problems but do not apply here. It is peculiar that Keynes' ideas were adopted by self-styled liberals and by labor unions when the crux of the system was to lower wages. The first axiom of his system was that when prices fall, the unions will not accept cuts in hourly wage rates to bring labor costs in line with other costs. Since you can't cut wages directly, the only way to reduce wages is by raising prices and the way to raise prices is by inflation.

The second step in his system was based on the idea that investment was slow because the concentration of wealth (in England) gave big investors too much money and enabled them perhaps unconsciously to have too great an effect on the economy. The remedy for this was to beat down the rate of interest by making money so plentiful that those who wished to hoard cash could hoard all they wanted and there would still be plenty to circulate. This meant that Government had to take over the function of maintaining investment. This meant Government spending, this meant Government borrowing; Government borrowing as actually conducted meant inflation. This when combined with the tax system was defended as improving the distribution of income. And in the thirties, the ideal of the system seemed to be a better and better

distribution of a smaller and smaller product, till we reached the ideal of an absolutely equal distribution of absolutely nothing.

IV

The elements that make up the present basic trend of American business, then, are these:

1. The policy of unions and corporations.
2. Inflation.
3. Special price situations.
4. Government policy on 1 and 2.

As to the first, there is reason to believe that the worst of the adjustment is over, that labor is anxious to go back to work. There will be continued agitation by Russian controlled unions, or unions with strong Russian sympathizers. Their policy will be to damn all legislation concerning labor as antilabor and to make as much noise as possible, cut production as much as possible, and maintain an atmosphere of uncertainty. Most American labor leaders realize that the public sympathy labor enjoyed until recently is largely exhausted and people are beginning to get impatient for that postwar output that they were led to expect.

As to the second factor, inflation, the volume of money is there traveling at a low velocity. The inevitable drop associated with war financing apparently has taken place and ordinary bank lending to business has begun to take up the slack. Therefore, there is no monetary factor making for an abrupt price decline.

There are, in particular commodities and industries, price situations which are definitely out of line and subject to some adjustment. Conspicuous examples of these are building materials, farm and food products, hides, leather and their products. Some of these are subject to special circumstances growing out of the war. The paint industries, for example, use materials that come out of the Orient from areas that have long been shut off from us where the actual physical source of supply or of processing has been physically damaged and the paint and varnish industry has been selling at high prices an unsatisfactory product made out of costly synthetics. As the natural sources of their supplies are rehabilitated, a substantial drop in price as well as a rise in quantity are indicated. Cotton goods were one thing which consumers sought to buy with their wartime incomes which resulted in high prices especially after the release of controls. There seems to be no reason to expect that these prices can be maintained at their present levels. Building material has been high because of low record of residential building during the thirties and there was a certain distress market for persons settling down after the war. Once this imperative demand had been met, the person who wants a new home but has some place to live now has decided to wait it out, and there is no reason to suppose the building costs can be maintained at their present high levels.

At the beginning of this year, there was general agreement among economists that the peak of the postwar rise should occur in the second quarter of 1947. But the general movement of prices having passed their peak, there would be a general downward drop, with no general break in prices but with erratic and spectacular exceptions. Even though we are reaching the end of the second quarter that still looks like a good prediction, but I must repeat that obviously no discussion of prices can ignore output and no economist can predict prices or output as long as owners, workers, and Government proceed on a falacious class-conflict basis that prevents people from getting together and promoting the common good by the production of goods which everybody needs.

In Reply to Hon. John Phillips, of California

EXTENSION OF REMARKS
OF
HON. JOHN C. BUTLER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 3, 1947

Mr. BUTLER. Mr. Speaker, under date of April 17, I extended in the Appendix to the RECORD some remarks, and included excerpts from an editorial by Dr. Francis E. Townsend which was published in Townsend National Weekly, issue of February 15, 1947, entitled "Free Enterprise Versus Communism."

I charged Dr. Townsend, and his so-called leading liberal newspaper, with selling free enterprise short and catering to communism.

Under date of April 20, 1947, there was an attempt to defend Dr. Townsend and his leading liberal newspaper extended in the Appendix of the RECORD by my good friend and colleague the gentleman from California [Mr. PHILLIPS.] The gentleman admitted that he too had been worried in the past over the communistic leanings of this paper. He states, however, that since a change of editors the policy of the paper has now returned to normal. He also points out ably that I have used only certain portions of the editorial, and have left out other parts, which, when taken together, make the meaning of this editorial different. He also makes it clear that he feels it is very unfair to draw conclusions from mere extracted parts of an editorial, and indicates that I have been unfair to Dr. Townsend. Now to make the record complete, I desire, Mr. Speaker, to insert at this point in the RECORD the entire editorial in question. I do not wish to take any advantage of anyone, and we shall let the editorial speak for itself:

FREE ENTERPRISE VERSUS COMMUNISM
(By Dr. Francis E. Townsend)

It seems that the entire world is concentrating its attention upon the controversy as to which is the better system of government: The free enterprise or the communistic nobody-free system regulated from the top.

It begins to look as if the people of the world are so nearly equally divided on the subject that nothing but a contest of fighting strength can settle the question.

If either side had a vast preponderance of strength, the other side would give way without resorting to armed conflict.

So it looks to a casual observer as if there must be pretty strong argument for, as well as against, both sides.

Naturally, we who live under the free-enterprise system think ours is the better, or shall we say, the lesser evil of the two; for it is apparent that neither is anywhere near perfect.

Perhaps if we are firmly enough convinced of the rightness of our system to be willing to fight the rest of the world to maintain it, we had better analyze both systems and see just how logical the advocates of both systems are. We think both sides are claiming virtues they do not possess.

There is this to be said for a communistic system: a dictatorial system under a benevolent and all-wise manager would probably be the most nearly efficient of any conceivable system. A ruler who loved humanity and was determined to do everything possible for the betterment and advancement of his people could, without doubt, do more for a people than they could ever do for themselves. Too many people under any governmental system are too much like "dumb, driven cattle" to know what is best for them.

Unfortunately for humanity the all-wise, wholly unselfish and all-benevolent ruler has never yet presented himself. And if he ever does, and expects to rule the world, he will have to come equipped with the strongest armed force in the world, and use it ruthlessly in order to establish himself.

Blood-bathed benevolence is never likely to become popular. Hence we think it safe to assume that communism developed by force will never long prevail in a world that is rapidly becoming enlightened by science.

But how about an enlightened voluntary democratic communism? The type of economy which used to be called socialism and which already is working so well in our own United States in the fields of public power, of postoffices, and of street lighting in every community. Would an extension of this system to other fields be practical? We believe it might.

Now let us see just what the free-enterprise system is and what its chances are for world domination. Free-enterprise system, price system, profit system—these titles are synonymous. This we must concede. So as to be understood by all, let us talk about the profit system. What does it mean? It means that all those who take raw materials from the earth and convert them into usable materials; all those who grow foodstuffs or raw material for fabrics do so with but one motive, profit.

It will be conceded that there is nothing benevolent about profit. In its very essence it is a selfish motive that prompts us to take profit. Oh, many will say that in taking profit they give back in service or improved quality full value for what they take, but the evident truth is that without the profit their benevolence ceases at once.

So here is the bald, unlovely truth about profit-taking. Whether we manufacture and sell, buy and sell, or grow and sell, we expect to get more for what we handle than the article costs us. And those of us who live by profit hate mightily to be restricted by rules as to the amount of profit we can take in a transaction.

We want free enterprise—and let the buyer beware. As a result the biggest and fastest profit-takers become powerful and able to extract profits from the many who must sell what they have in order to live.

Big profiteers are never satisfied with reasonable profits. The more they get the more they want. Perhaps they are driven to this attitude by competition but, whatever the reason, the results are the same—the weak suffer and the strong become stronger and more calloused.

The free-enterprise system as it exists today cannot last, for it is rapidly strangling itself to death for want of a market; so there is little use of our advocating its spread to the rest of the world.

Any system that produces goods with a speed out of all proportion to the ability of the population to buy and use is bound to collapse.

Shortly the machines will be manned entirely by the young and vigorous, those below the age of 45 years. All the rest, the old (above 45), the children, the sick, the blind, the crippled, etc., will live precariously if at all and their combined buying power will be insufficient to absorb the output of the machines.

What shall we do? Free enterprise will not look so free to a pauperized majority. It will look like slavery to them. Let us not mince words. Free enterprise means freedom to exploit—freedom to rob legally. It is as un-American as anything that ever came out of Europe; and far indeed from the conception of a government as envisioned by those who gave us our Constitution.

Can free enterprise be made to work? No. The enterprise of exploitation must be restricted and restriction is the very antithesis of freedom. Free enterprise must be replaced by a system of cooperation in which all will benefit proportionately from the activities of all.

The profit system as we have known it is near its end. Profit, in the near future, will mean profit for all, not aggrandizement of the few at the expense of the many.

Let us make the transition as quickly as possible and avoid a total coNapse of industry and a condition of chaos. The first step? National insurance for all citizens a la the Townsend plan.

That ends the editorial. It is now complete. Let me ask you, Mr. Speaker, and particularly, let me ask the gentleman from California just this one question. When a believing reader reads that editorial, will it make him a better advocate of our free enterprise system? I might ask also will such a reader be more proud of his country. Will it increase his faith in America, or will it cause him to doubt and add to his confusion? What effect would it have on you?

Permit me to return now to the matter of this change of editors of this so-called leading liberal newspaper. I understand there was a change of editors just about 1 year ago. However, I find that it was merely a change of one editor for another and with no noticeable change of policy. The same radical left-wing headlines, pictures, editorials. No, Mr. Speaker, my friend should know, and if he has read this paper, he certainly does know, that the policy of this paper has not been changed since it was committed to the policy of left-wing radicalism.

It is a favorite trick of these leftists and fellow travelers to change personnel when they come under surveillance or question in order to throw off suspicion. Sometimes they even clean up their propaganda sheets for a time and publish some good issues. All of this, Mr. Speaker, is merely a trick that has been used so consistently by this Moscow party line that it is well known to many of us. As Dr. Townsend frequently has said, "In the medical world, if a patient balks on his medicine we simply sugar-coat it so he tastes one thing while he is actually taking something else." In other words they undertake to dress up their real ideology in some cloak of respectability. They will use beautiful American words and phrases—liberalism, security, democracy. Yes, they go to every known length to accomplish their ends. But when we follow them, we soon find that they are back to a well-recognized pattern. That pattern is to criticize, discredit, and smear everything, Mr. Speaker, that is American. I ask my colleague to go back over all the issues of this so-called leading liberal newspaper for the past year or more. Look at their glaring headlines, observe the cartoons and pictures. What will he find?

They attack our political party system.
They attack the Congress.
They attack our profit system.
They attack banks and big business.
They attack property rights.
They attack the President.

Yes, Mr. Speaker, they attack and attack, everything that is American. But, they do not attack one thing, they never attack communism, the Soviet Union, or anything that would even hint of an unfriendly attitude existing on the part of this paper toward Russia. And yet they so cloak their subversive propaganda that when it comes under question, they run along and emphasize all of the nice words with which they have sugar-coated this unholy medicine. I have said, and I say again, that any newspaper or periodical published in this country that will cause its readers, the citizens of this country, to even think less of our country and our flag, is, to say the least, rendering a disservice to the cause of freemen, and should be barred from the mails.

Mr. Speaker, I charge that Townsend National Weekly is such a paper. Let him who doubts my statement simply read its issues. Note the glaring headlines, observe the cartoons and pictures, and then ask these question: "Will the reader of this paper be caused to love or hate his country? Are these nice sounding words and phrases real, or are they merely sugar-coated communism?"

Veterans' Housing Program

EXTENSION OF REMARKS
OF
HON. GEORGE A. SMATHERS
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 3, 1947

Mr. SMATHERS. Mr. Speaker, under leave to extend and revise my remarks, I wish to insert into the Appendix of the RECORD three articles from the Miami Daily News of May 18, 19, and 20, 1947, each of which goes into detail showing the failure of the veterans' housing program. There is no question in the minds of the veterans, and I believe there is no question in the minds of the people generally, that the biggest domestic problem we have facing us today is that of housing. Just why the leaders of this Congress do not do anything about it and do not undertake to at least assist the veterans in finding homes is beyond my comprehension. I am certain from an examination of these articles, each of which is specific and well-written, that all of us will get some better idea as to what the situation really is and the urgency for doing something about it.

The articles follow:

LOOPHOLES WRECK VET HOUSING HERE—FORMER SERVICEMEN ARE PRICED RIGHT OUT OF PLACE TO LIVE

(By S. W. Matthews)

Biggest joke in Miami today—except it isn't funny—is the so-called veterans' housing program.

Basically, the program's failure is due to the simple fact the veteran has come back from a war to find housing costs doubled since he went away. He has been priced out of a place to live.

This is recognized in an FHA order of February 11 which permits anyone to buy a home in a veterans' housing project. The builder of such a project is required now to reserve only one unit of the total for a veteran, and he must reserve that one unit for only 30 days. Then he can sell it, too, along with the others.

On rental projects the story is quite similar. The veteran is supposed to have preference in rental of a house or apartment constructed under veterans' priority. There is nothing, however, which requires the landlord to show to whom he rents or for how much.

EXAMPLE OF FUTILITY

In off-the-record talks, nearly any official connected with any phase of the veterans' housing program here will admit its complete breakdown. And in those same conversations it becomes apparent that drastic steps from top to bottom of the housing program must be taken at once if any progress is to be made.

Of all governmental agencies, veterans' housing, born malformed and smothered in red tape, is probably the outstanding example of futility. Yet it is impossible to point the finger of blame to any one person for the failure, miserable as it is, of the program.

Housing regulations, as written and handed down from Washington, have loopholes which apparently make enforcement, even were there adequate enforcement staffs, impossible. As an example, exactly two violations have been brought to trial in Federal court to date. Both of these resulted in hung juries.

The scores of additional complaints filed with Federal agencies here have yet to see the light of a courtroom. Some apparently still are gathering dust in pigeonholes in Atlanta.

Yet one official who at least is in a position to know, estimates that of the 8,000 residential units constructed here under the veterans' program probably not more than 500 are occupied by veterans.

Building is going on rapidly in Greater Miami, and although the average veteran can't afford to buy or rent, there is a glimmer of hope for him that some day the law of supply and demand will swing around and do him some good.

Houses are for sale, new ones constructed under the veterans' program. A current but by no means complete check shows one firm has 12 homes, ready for buyers at $8,500 each; another has 19 ranging between $7,500 and $8,000; a third firm has 8 ready for buyers at $9,000.

SELLS 34 HOMES

One builder has sold 34 homes to nonveterans in the last three weeks, the price ranging between $9,000 and $10,000.

There is a belief construction costs will drop in the next several months if the line is held against commercial building projects, although this of course is nothing more than the opinion of a number of men in close touch with the building trade.

Despite a recent survey released in New York showing certain building materials are commanding prices equal to those of the wide-open black-market days, some dealers say privately they expect decreases soon.

Builders also are finding labor prices dropping, they say. A year ago, for example, builders were happy to send trucks to pick up men and pay them regular wages for riding to and from work. They likewise felt themselves lucky, so they say, if they could obtain 50 percent of a prewar day's work from the 1946 worker.

Now, with jobs scarcer, the laborer isn't quite so independent. He's more willing to work, knowing he can't walk away and take his choice of a dozen other offers.

These conditions are working, slowly, it is true, to the veterans' advantage. Apparently they are his only hope. Bureaucracy's efforts to house him, he has learned, mean nothing.

[From the Miami Daily News of May 19, 1947]

"OUR BOYS" GOT CHEERS, BUT LITTLE OR NO HOUSING—PRESENT PROGRAM AMOUNTS TO SUBSIDY OF BLACK MARKET IN BUILDING MATERIALS

(By S. W. Matthews)

Amid a fanfare of patriotic bugles, a waving of flags and benign words to "our boys back from the war," the veterans' housing program was launched in Washington some 15 months ago. To date the only practical accomplishment of the program has been a governmental subsidized black market.

"Our boys" who had a tent to sleep in if they were lucky overseas, a foxhole if they weren't, still are lucky if they get a tent now that the shooting is over.

Most of the people who design a budget for your daily living agree that 20 percent is the maximum which the average worker can pay for shelter. Most economists likewise will agree the average returning veteran is drawing considerably less than $300 a month, here in Miami. Therefore, he can't afford to pay, if he makes $300 a month, more than $60 a month for rent.

But where, in the new housing projects built under the veterans' program, can a one-bedroom apartment be found for $60 a month? Older buildings, caught under the rent ceiling, are being held very firmly by the people who had them during the war. Advertise for an apartment, or house, and offer less than $100 a month, and you won't get an answer; yet to be able to afford a $100-a-month rent, you should be making a minimum of $500 a month.

Ceilings? Yes, there are ceilings on rentals under the veterans' housing program. This is the way they work.

A builder obtains a priority under veterans' housing with which to erect a 16-unit apartment, his cost is estimated and he's given a shelter rent ceiling of $52 a month. He builds the apartment, comes back in to show the estimated cost was much too low (because he had to buy on the black market) and is given an adjustment on his shelter ceiling of $65.

Next, and all this is legal, he can make a "service charge" of $3 per room for mowing the lawn and cleaning the halls once a week. That makes $12 a month more for a living room, bedroom, bath, and kitchen. Now his legitimate ceiling is $77 a month.

On top of this, the builder decides to furnish the apartment. He is permitted to charge 2 percent a month for the cost of the furniture. How does this work out? Here are some actual figures, taken from the records of the unofficial veterans' housing committee:

A builder constructed an eight-unit apartment. Before he started, he was given a shelter rent ceiling of $52.50 for one-bedroom apartments and $57.50 for the two-bedroom units.

PLEA OF HARDSHIP

He then went out on the black market (obviously) and paid black market prices to get scarce materials. Back he comes, pleading hardship, and the obliging housing officials grant him an increase to $81.50 and $89.50. Next, the builder furnished the apartments and their ceiling today is $123.50 and $149.50.

Naturally, these rentals are far out of reach of the average veteran.

But suppose, in desperation, the veteran agrees to rent such an apartment. Does he get it? The answer is "No." He is supposed to have first choice for 30 days after completion, but the builder never has it quite completed when the veteran calls. He doesn't have to inform anyone when it is completed. In actual practice, he rents it to a winter visitor for a bonus of $500 for the season.

He takes that $500 in cash. There is no way to prosecute him. The winter visitor grumbles about the high cost of a vacation in Miami, the veteran finds its useless to complain and the black market, recognized and subsidized by the Government in granting hardship ceiling increases, goes merrily on.

Does the veteran wish to build a home, rather than rent? He takes his priorities in one hand, his borrowed money in the other and starts looking for materials. He finds that through legitimate channels he must wait at least 3 months for this item, 6 months for something else, and can get no estimate on another.

He finds, however, that by contracting on the black market, these scarce materials suddenly become available, for a price. But he can't buy them, because he can't go back and appeal for a hardship increase in his loan. The housing program doesn't recognize that kind of a hardship. So he has to rent.

Is there no enforcement machinery to stop such practices? There is not. One builder got priorities to erect 18 single and duplex units last year in Miami. He built, instead, four eight-unit apartments. Why? Because there is no ceiling on the sale price of multiple-unit buildings, multiple being construed as more than two. So he built his 32 units. The case was reported in September. Nothing has been done.

Another builder constructed a 12-unit building and told several veterans they were only for seasonal rentals. That case likewise was reported last September. Still, nothing has been done.

[From the Miami Daily News of May 20, 1947]

VETS WADE HIP DEEP IN HOUSING COMPLAINTS; PROGRAM IS TERMED FAILURE BECAUSE OF VAGUE RULES AND CHANGING BUREAUS

(By S. W. Matthews)

If ever a Federal program needed concise and clear rules upon which to work, and fearless and adequate enforcement for a chance of success, that program has been veterans' housing.

A combination between organized labor and contractors, even before the war, was blamed for high building costs which kept adequate housing out of reach of many Americans. Then the war, with its orgy of "plus 10 percent" contracts and labor scarcity, sent construction prices beyond the budgets of 90 percent of the people.

Knowing veterans' housing would meet almost insurmountable troubles in the natural course of events, it would seem those responsible for the program could have given a minimum of thought to the machinery which would power it through the stormy seas ahead.

Instead, the program was launched under vague rules in a mumbo-jumbo of legal jargon, split authority, and changing bureaus which would have made even an easy job difficult of accomplishment. Insofar as Greater Miami is concerned, veterans' housing is not taken as seriously as the State law requiring motorists to come to a full stop at every railroad crossing—bus drivers at least, observe that law.

As conceived originally, veterans were to get priorities on scarce materials with which to build homes. As it worked in actual practice, few veterans were lucky enough to obtain scarce items under their priorities although anyone, with enough cash, could purchase those materials on the black market.

PLUMBING AN EXAMPLE

Plumbing materials, to take an actual case on the files here, show how this worked. A veteran with a priority could not find materials with which to build a bathroom. He did find, however, a plumber who would contract both to obtain and install the bathroom. The only catch was the plumber wanted $1,500 to do this job, or about three times the normal price.

Priorities also were issued to builders under the condition they give preference to veterans in selling or renting houses and apartments to be constructed, 30 days preference on rental projects, 60 on sales.

No provision was made, however, to require the builder to report completion of his project. It was up to the veteran to watch homes and apartments under construction, come around when they were completed, and buy or rent. Many veterans did this, only to be informed an apparently completed house really wasn't complete at all. Knobs still had to be installed on the back door, for instance.

Could the veteran complain at this subterfuge? He could, and many of them did. He might as well have been baying at the moon. You can wade around hip deep in complaints in the enforcement office, but you can find only two cases which have been brought to trial, neither successfully.

POSSIBLE SOLUTION

What is the answer? There is, of course, no answer to the high cost of building unless the Government starts spending money for displaced persons in the United States as well as throughout other parts of the world.

The veterans' program, however, could be assisted by a thorough overhauling, starting in Washington and extending down to the smallest office. The entire program should be placed under one office instead of being separated; with enforcement knowing nothing of priorities issuance, and the issuing office entirely in ignorance of what enforcement is doing.

So-called hardship cases should be eliminated, the hardship cases being increases granted in ceiling rentals or sales prices due to unexpected expenses encountered in construction, or, in plain words, black-market buying.

Preference should be given veterans in renting and buying new houses, if the program is to be called a veterans' housing program. This could be accomplished by requiring builders to list, with the housing office, each unit for rent or sale as it is completed. This list could be advertised, and kept available at the housing office, for veterans.

PREFERENCE ASSURED

Provision should be made for a running file on permits to build and expected date of completion. Any delays in completion should be investigated and the builder required to explain. Thus the veteran would be assured of his preference in renting or buying.

Shipment of building materials, from the source of production to the retailer, should be of record. Any dealer, wholesaler, retailer, or manufacturer should be required, on demand, to show disposition of materials sold. Housing offices should be kept informed of materials shipped into their areas, and dealers be required to show priorities for sale in fact as well as theory.

Such a program would entail more expense, because it would mean employment of more inspectors, clerks, and prosecutors, but it should not be prohibitive. With such a set-up in action and a few of the violators successfully prosecuted, both civilly and criminally, homes for veterans might become something more than a hollow phrase.

Patent Office Fees

EXTENSION OF REMARKS
OF

HON. KENNETH B. KEATING

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 3, 1947

Mr. KEATING. Mr. Speaker, the Patents, Trade Marks, and Copyrights Subcommittee of the Committee on the Judiciary has been conducting hearings on H. R. 2520 which proposes substantial increases in Patent Office fees.

Although there was a time when this Office was self-sustaining, since 1923, except for 5 years, it has operated at a loss. The annual deficit for the last 4 years has averaged a little over $1,000,000. This situation, we are told, is likely not to improve. Probably as the applications mount and the Office is faced with increasing complexity, due to the need for examination of more and more possibly conflicting claims, the spread between income and outgo will widen.

The representative of the Patent Office informed us that when its proposed budget was presented to the Committee on Appropriations, request was very properly made that they prepare an estimate of the increase in Patent Office fees which would be required to wipe out the prospective deficit in their operations. H. R. 2520 was the result.

The principal objection to the bill which we have had under consideration, as voiced by the witnesses and by voluminous correspondence received by the members of the subcommittee from all over the country, has been that the increase in the fees for filing application for patent from $30 to $50 and for issuance, also, from $30 to $50, or a total increase from $60 to $100, would discourage individual inventors and work a definite financial hardship on them. It has been pointed out to us that whereas applicants financed by large corporate interests would have no difficulty in meeting these increased payments, inventors, as a class, are inclined toward the side of impecuniosity, that they now have a hard time in many cases to raise the filing fee, and that often the additional $40 contemplated by this bill would impose a burden of really serious proportions. I find myself very sympathetic with, and quite convinced by, the representations which have been made to us in this regard.

In an effort to strike a fair and just balance between two worthy objectives—to increase the income of this Office and endeavor to put it on a self-sustaining basis and, in so doing, to prevent individual inventors from incurring expense in making their applications which would result in great hardship and a possible deterrent to inventive initiative—I am today introducing a bill which approaches the problem from a new point of view. Under its provisions, the fees for filing the original application and for issuance remain as they are, but it is then provided that at the expiration of the fifth year of the patent a maintenance fee of $50 shall be payable, and at the expiration of the tenth year of the patent a further fee of $75. The merit of this approach is that the threat of discouragement to inventors is removed, while at the same time provision for increasing the revenue of the Office is made, arising out of fees payable after the holder of the patent has had an opportunity to test the public acceptance of his product and determine whether it is worth while to keep the patent in force. At the end of the fifth or tenth year he can either pay the fee, which, if his product has been well accepted, should then appear to him modest, or he can decide that it is not in his interest to invest any further funds in his invention and let the patent lapse for nonpayment of fees.

A somewhat similar system has been in force for many years in England and France and has met with general favor.

During the last 5 years the average number of patent applications filed annually was 58,000, of which the average number granted was 30,000. Assuming this average for the future, under the scheduled increase of $20 on filing the application and on issuance, the additional revenue envisioned in H. R. 2520 would be $1,160,000 on applications filed and $600,000 on patents granted, making a total of $1,760,000 per annum.

It is estimated, based on the British experience, that about 60 percent of those to whom patents are granted would pay a maintenance fee at the end of 5 years. If this fee were $50 the amount collected would be $900,000. It is further estimated that about 30 percent would pay another maintenance fee at the end of 10 years, which, at $75, would amount to $675,000, totaling, therefore, an increased revenue of $1,575,000, or approximately half as much again as the present annual deficit.

The bill which I am today introducing is presented primarily for the purpose of permitting a thorough study of the desirability of adopting this admittedly radical departure from precedent in the administration of the Patent Office, and not with any contention for finality in this suggested manner of meeting the problem before us. It is hoped, however, that, if the proposal has merit, its novelty will not spell its death knell.

Possibilities for amendment, it seems to me, should be considered by the committee. One would be, as a further spur to inventors and aid to them at a time when they most need help, actually to decrease the application and issuance fees by $5, which would cause an estimated reduction of the above figure of $1,575,000 to $1,135,000, still well in excess of the present annual deficit. Another suggestion would be to decrease the application fee by $10 but increase the issuance fee at the time when an inventor is assured that his labors will result in receiving a patent, also by $10, which would mean a net reduction of the $1,575,000 estimate by $280,000, or an annual increase in Patent Office income of about $1,295,000.

It is certainly arguable that either of these suggestions might result in sufficient encouragement to inventors that the number of additional applications filed would partially or, perhaps, completely narrow the gap and restore the full amount of additional revenue of $1,575,000, or nearly so.

There are further changes in this bill for a comprehensive alteration in the schedule of Patent Office fees which would increase the income of the Office and constitute a more equitable burden of spreading the cost of administration.

For instance, under existing law, when one files an application for a design patent, he must decide whether he will seek such a patent for 3½, 7, or 14 years. The fees for each are, respectively, $10, $15, and $30. It is contemplated to double these in H. R. 2520. My bill provides that all design patents shall be issued initially for a term of 15 years at a fee of $20, subject to the payment of maintenance fees of $25 at the end of 5 years and another $25 at the end of 10 years. A rough calculation would indicate that this should increase the income of the Patent Office by some $30,000, at the same time removing from the design patentee the hazard of being required to decide, before he has had an opportunity to exploit his design, whether its life should be short, medium, or long.

Section 4 of this proposed measure provides that the act shall take effect on January 1, 1948, and apply to all patents which have not, by that date, reached their tenth anniversary. Here, again, a debatable question arises, whether attempt should be made to put this new plan of operation immediately into effect, or whether it should only apply to patents which are actually issued after next January 1. In the latter event, the increased revenue contemplated by the bill would, of course, not begin to take effect for 5 years, except for the rather minor increases in incidental fees. The bill, as drawn, provides that the Commissioner shall send a notice of the requirement for payment of a maintenance fee at least 3 months before the fee is due, and that one who fails to pay this additional sum to keep his existing patent alive shall not be entitled to procure an injunction until the fee is paid, nor to recover any damages accruing for infringement during the period between the date when the fee was due and the date when it was actually paid. It is believed that the imposition of this additional charge on existing patents, in order to give the holder the complete exercise of all his rights, infringes no constitutional guarantee.

Again, let me emphasize that I have no pride of authorship in the particular provisions of this legislation, but submit it for careful scrutiny and consideration in the earnest belief that it may furnish the solution to a difficult problem and result in greater encouragement to inventors, increased income in the Patent Office to the point of self-sustenance, and greater equity in the spread of the burden of fees imposed for the services rendered by that Office.

Analysis of Taft-Hartley Bill as Reported by Conference Committee

EXTENSION OF REMARKS
OF

HON. VITO MARCANTONIO

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 3, 1947

Mr. MARCANTONIO. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following analysis prepared by Lee Pressman of the Taft-Hartley bill as reported by the conference committee:

ANALYSIS OF TAFT-HARTLEY BILL AS REPORTED BY CONFERENCE COMMITTEE

The Senate and House conferees have now reached agreement and made their report on the proposed antilabor legislation. The bill which they have agreed upon is in all likelihood the bill which will be sent to the President of the United States. He will now have to decide whether he is prepared to veto or accept this bill.

The bill as approved by the conference committee should now set at rest once and for all any possible doubt as to whether the President will be offered a vindictive and reactionary piece of legislation. The bill, as now approved by the conference committee, revises the Wagner Act and turns it into an antilabor weapon. It substantially upsets the Norris-LaGuardia Anti-Injunction Act and even goes further by putting the Government itself in the business of getting antistrike injunctions for the employer. It offers a hitherto unknown series of regulations and restrictions on the right to organize, to bargain, to strike and to conduct in freedom the affairs of voluntary associations.

The bill as reported by the conference committee covers a total of some 73 printed pages. It is not possible in a short space to outline all of its details. The following summarizes some of its major features:

I. ABOLITION OF UNION SECURITY

A. The closed shop is prohibited (sec. 8 (a) (3)).

B. The bill pretends to permit other forms of union security such as union maintenance, union shop, etc. But:

1. In order to be able to secure such a clause a union must not only have won an election and been certified as the collective bargaining representative (as the law now provides), but—

2. Must in addition request and secure from the Board another and special vote on the union's authority to make an agreement with an employer containing a union security clause; and

3. In order to receive such authorization the union must secure an affirmative vote of a majority, not merely of those who participate in the vote but of all the employees in the entire unit (including those who fail to turn out to vote); and

4. In any event the union is prevented even from having such a vote taken if it cannot prove that it has filed all required financial and other reports with the Secretary of Labor and has furnished copies of such reports to all its members (not merely the employees of the particular employer), and it must also show, not only that it itself has complied with this requirement, but that its international union has complied with the requirement with respect to all members of the international through the Nation; and

5. In any event a union will not be permitted to have a vote to authorize it to have a union-security clause unless not only all of the officers of the local but all of the officers of the international file with the Board affidavits that they are not members of or affiliated with the Communist Party; and

6. Even after having succeeded in securing such a ballot and having succeeded in receiving the necessary vote and even if the union can secure the employer's agreement to grant a union-security clause, the clause cannot be enforced against any employee expelled from the union for disruption, dishonesty, acting as a company spy, or any other reason except the nonpayment of dues; and

7. If the union is lucky enough to secure such a clause, it subjects itself to regulation by the Board as to whether its initiation fees are, in the Board's judgment, excessive (secs. 8 (a) (3), 8 (b) (5), 9 (e), 9 (f), 9 (g), 9 (h)).

C. Even this slight pretense of preserving some forms of union security is completely thrown in the ash heap if you happen to be in one of the dozen or more States which have now passed laws outlawing any and all forms of union security. Although normally State laws are supposed to give way to Federal laws, the drafters of this bill want to make sure that if the State law is worse than the Federal law, the State law will apply. Therefore, they inserted a special section specifically sanctifying any State law which goes further than the Federal law (sec. 13 (b)).

D. Even after the union has cleared all of the preceding hurdles, won all the necessary elections, and signed a contract, then at any time after 1 year has elapsed from the ballot on the union's authorization, a minority group of 30 percent of the employees can secure a new ballot to take away the right to unior security (sec. 9 (e) (2))

E. Regardless of any vote and regardless of any contract requirement, there may be no check-off for payment to the union of any items other than union dues; and even with respect to union dues there may be no check-off except on the basis of individual written assignments from each employee. In other words, even though a majority or unanimous vote may have authorized the collective bargaining representative to negotiate a check-off, the collective representation must be broken down into individual assignments.

II. PREVENTION OF RECOGNITION AND COLLECTIVE BARGAINING

The bill hypocritically retains some of the language in the statement of policy attached to the present Wagner Act recognizing that public policy requires encouragement of collective bargaining. The statement of policy specifically points out that refusal of employers to accept the procedure of collective bargaining has led to industrial strife. The bill itself, however, proceeds to free the employer in a number of ways to prevent his employees from organizing and to commit acts which would otherwise be unfair labor practices. In addition the bill creates a large number of new devices by which an employer can evade collective-bargaining obligations and refuse to bargain even after his employees have selected their representative.

The following are a few samples:

A. While the employees are attempting to organize, if the employer engages in a campaign of coercion, intimidation, or discriminatory discharges, the following are a few of the special techniques which the new bill offers to help the employer avoid any responsibility for violating the law:

1. If supervisors go around making threats and doing all the other things which employers are forbidden to do under the law, the employer can deny any responsibility for the actions of his foremen, superintendents, etc., simply by denying that these people are technically his "agents" for these purposes. The law has been amended by the new bill so as to make it necessary to prove that the person making the threats and committing the unfair labor practices was in a technical legal sense an "agent" of the employer. In the law as it has been up to now it was sufficient to prove that the person making the threat was acting "in the interest of" the employer. This also gives a free hand to employer associations to escape responsibility for their destruction of unions in behalf of an employer (sec. 2 (2)).

2. Even if it be proven that an employer committee the unfair-labor practice of a discriminatory discharge, nevertheless the discharged man will be denied reinstatement if the employer can show that the discharge was for cause. It has been a standard practice of employers, when they wished to fire a man for union activities, to wait until they could discover some trifle of violation or deficiency for which they would never have fired any other person. It has been the law up till now that if the employer discovered some cause for discharge, but if it is proven that he was actually discriminating and would not have fired another man for the same cause, then, since there had been a violation of the law, the discharged man would be entitled to return to his job. Under the proposed bill the employer's activities may be as viciously discriminatory as he chooses, he may apply his rule vigorously to discharge union men while condoning the violations by nonunion members. He may, in short, engage in clear unfair labor practices. Nevertheless, the new bill would prevent reinstatement for the victim (sec. 10 (c)).

3. While the union is engaged in organizing, the employer will now be able to go to the NLRB with the charge that the union is restraining or coercing employees in their rights of self-organization. This will be a charge which will not be used where any actual force or violence can be proved, since if there were any force or violence used the employer would of course call the police rather than use the slow procedures of the Board. The Board machinery and the unfair-labor-practice charge will be used by the employer in any case of peaceful organizational activities as a means of confusing the campaign, disrupting the organization, and smearing the union (sec. 8 (b) (1)).

B. Even if the employees succeed in organizing themselves, the bill discovers new ways of preventing them from achieving collective bargaining rights. Here are a few samples.

1. While the employees are engaged in organizing, they will be denied any collective bargaining rights unless and until they succeed in organizing as large a unit as the Board may deem appropriate. Up to now, where employees succeeded in organizing themselves in some reasonable and appropriate subdivision such as an entire division or department or building or other reasonable unit of the employer's establishment, it was possible for the employees so organized to secure for themselves the right to engage in bargaining with the employer without having to wait for what might be an impossible task or a task of many years, namely the organizing of many thousands of employees in other divisions or buildings. The Board has held that employees in such a case may be certified for a reasonable unit representing the extent to which organization has already gone. The new bill, anxious to prevent collective bargaining wherever possible, declares that the extent of organization may never be considered controlling in deciding an appropriate unit. Even if all the employees in a department or building or other reasonable unit wish to bargain collectively with their

employer, they must be denied that right unless and until there is organization throughout the entire plant or all of the plants which the Board may consider an appropriate unit (sec. 9 (c) (5)).

2. Even if a majority or all of the employees clearly indicate their desire to be represented by a union the employees will not be permitted to have an election or even to have the Board investigate the question of representation if the particular organization in question has not satisfied all technicalities established by the Secretary of Labor with respect to the filing of the constitution and bylaws of the organization, reports on its officers and employees and their compensation and allowances, their election and appointment, the dues and fees, the total finances for the current year, and has not distributed to all members copies of such financial report. And this must be shown not only for the local union but for the international with which it is affiliated. An employer may evade any obligation to bargain with a union representing any or all of his employees if he can show that among all the members of the international union throughout the country there may have been one member who did not receive the required financial report. As a matter of fact, under the bill, the employer would not even have the burden of proving this because the burden is on the union to "show" that it has "furnished to all of the members" such a report (secs. 9 (f) and 9 (g)).

3. Even if all of the employer's employees have selected a labor organization as their representative, certification may not be issued and the employer is free to refuse to bargain collectively if he can discover even one officer, either of the local union involved or the national union with which it is affiliated, who has not filed with the Board, within the previous 12 months, an affidavit stating that he is not a "member of or affiliated with" the Communist Party. Under the proposed bill, once any officer or a national union anywhere in the country has failed to file such an affidavit, all collective bargaining with all locals of that national union throughout the country may break down. Those favoring and those opposed to the individual officer in question suffer equally. The officer in question may represent a majority group; he may represent a minority group; he may have been elected by national ballot or a territorial subdivision. Under any and all circumstances all employers dealing with any local union throughout the country are free to refuse to engage in collective bargaining and certification may be denied. In those few unions where one or more avowed members of the Communist Party have been elected to leadership, the members are thus penalized under this section for exercising their free right of democratic choice. And all members are thus penalized regardless of how they voted. Moreover, even with respect to those unions in which there are no leaders who are members of or affiliated with the Communist Party, every officer called upon to sign and file such an affidavit is to be compelled to do so with full knowledge that its probable result may be to transfer the smear tactics to the criminal courtroom. In other words, the same kind of tactics which labeled as "Communists" those whose names appeared on mailing lists or those who were members of organizations condemned by Martin Dies or the FBI are now to be available as a device for jailing union leaders. Hereafter if a jury can be gotten to hold that membership in certain organizations or support for certain principles or even support for the New Deal constitutes "affiliation" with the Communist Party, a labor leader belonging to such an organization may be jailed. If labor leaders seek to protect themselves by refusing to file such affidavits, collective bargaining breaks down throughout the entire industry. If they do sign such affidavits, the door may be open to sweeping criminal witchhunts throughout the labor movement. It would seem quite obvious that such a proposal could come only from such forces which were willing to use every possible device either to prevent collective bargaining from taking place or to throttle the labor movement (sec. 9 (h)).

III. BREAKING UP OF COLLECTIVE BARGAINING UNITS

While erecting the elaborate scheme described above to prevent unions from getting recognized at all and to prevent any collective bargaining from taking place, the proposed bill also takes steps to make sure that if collective bargaining does occur it will be on a carved-up basis least beneficial to the employees.

It is ironic and typical of the bill that it insists on breaking up units where collective bargaining is to take place but it refuses to allow a small unit to be determined upon if that might permit collective bargaining where there would otherwise be no bargaining. Thus, where a large unit is not completely organized, the Board forbids certification of a small unit as has been heretofore possible when the Board certified to the extent that organization had taken place. This the new bill forbids (sec. 9 (c) (5)). But where there is a possibility of collective bargaining occurring in a large and strong unit, the new bill throws its weight on the side of breaking up such units.

A. In some industries, notably newspaper publishing, years of experience have established collective bargaining on the basis of a single unit covering so-called professional and all other employees as a single group. The new bill would require that so-called professional employees vote separately in all Board elections (secs. 9 (b) (1) and 2 (12)).

B. For approximately 12 years the National Labor Relations Board has been engaged in the process of analyzing and determining the unit most appropriate for collective bargaining in the many industries of the United States. In many of the mass-production industries it has been perfectly clear that only organization on an industrial basis, combining into a single unit all the employees of the plant or employer, is practical and can produce the kind of employee organization capable of bargaining with the employer and dealing with the problems of the establishment as a whole. Without rhyme or reason the proposed bill declares that all of the body of Board experience and decision must be disregarded and may be given no consideration in the event of any efforts by isolated, splinter, craft groups in these mass-production industries to separate themselves off from the main unit of the employees (sec. 9 (b) (2)).

C. Plant guards will be permitted to organize only if their bargaining unit is completely separate and, further, if the union is not affiliated with any organization of other employees (sec. 9 (b)).

IV. COLLECTIVE BARGAINING RESTRICTED

Even if a union is able to secure certification, is able to secure recognition, and collective bargaining becomes possible, the bill sets up certain matters on which the parties are prohibited from reaching agreement.

A. If the employer and the union representing the employees wish to agree on a union security clause, they are prohibited and restricted by the provisions outlined under heading No. 1 above.

B. If the employer and the union representing a majority of his employees wish to agree on a provision whereby the employer gives to his employees the convenience of the check-off as a means of payment of dues instead of requiring extensive, disorganized, and frequently wasteful efforts at collection in the plant or outside, they are forbidden to arrive at such an agreement except by getting separate assignments from each of the thousands of employees who may be involved.

C. If the employer and the union representing the majority of his employees wish to reach an agreement whereby a welfare fund will be established, to be financed by the employer but to be administered by the union, the proposed bill would prohibit such an agreement. Many employers have been quite willing to finance health and other insurance funds but have been reluctant to assume the responsibility of participating in the administration of such programs and have therefore agreed that it be left in the hands of the union. Many industries consist of large numbers of employees, each operating a small unit, each of whom alone could not establish such a fund. In such industries the union is the only means of providing a single central fund to which the employers can contribute and over the years has developed such a fund. Such an arrangement is made illegal under the proposed bill. The conferees virtually admitted the complete dishonesty of this entire section by providing that all such arrangements may continue in existence if they were established before January 1, 1946. Only new ones are to be forbidden. In other words, the conferees admitted that where such arrangements have been in existence they are justified and have worked well. Normally, laws are passed to forbid activities which have been proven to be evil or dangerous. In the present instance apparently something which is admitted to be a good idea meriting preservation is nevertheless to be forbidden unless the union has already gotten it (sec. 302).

V. INTERFERENCE WITH THE RIGHT TO STRIKE—REVIVAL OF ANTILABOR INJUNCTION

In a number of different ways the bill aims very direct blows at the right of workers to strike. In some instances it does this by setting aside the Norris-LaGuardia act to permit the issuance of court injunctions. In other instances it empowers the Government even more directly acting through the National Labor Relations Board to issue restraining orders equivalent to antilabor injunctions. In still other instances the right to strike is attacked by making even peaceful strike activity the subject of damage suits by employers. In some instances the attack on the right to strike is contained in an open and blunt prohibition of certain strikes. In other instances there is a general restriction on union activity which can and may be expected to be interpreted to include a prohibition on strike action.

The following are a few examples:

A. Where the Attorney General decides that a strike affects "an entire industry or a substantial part thereof" and may "imperil the national health or safety," he can appoint a board of inquiry and thereafter can disregard the Norris-LaGuardia Act and apply to the courts for a strike-breaking injunction. Such an injunction may remain in operation for at least 75 days. After 60 days, and before a strike may take place, the National Labor Relations Board is required to take a secret ballot of the employees of each employer to vote on whether they will accept the last offer made by the employer (title II, secs. 206 to 210).

B. In any strike the strikers who have been replaced would under the bill be denied the right to vote in National Labor Relations Board elections. If the employer can replace enough of the strikers, he or the strike-breakers would then be able to call for a vote and cancel the union's collective-bargaining rights.

C. Where workers refuse to handle scab products or products made under sweatshop conditions, or where workers refuse to work for an employer who is helping another em-

ployer to break a strike, such activity is made an "unfair labor practice" for which the Board may issue a restraining order (sec. 8 (b) (4)). In addition, even before hearings to decide whether to issue an order, the Board may apply to the Federal courts for an injunction (sec. 10 (1)). Furthermore, the union involved may be sued by the employer for damages (title III, sec. 303).

D. Amidst much talk about "featherbedding" the conferees inserted into the bill a provision which actually threatens any union which seeks call-in pay or allowed time or adequate safety crews. It is made an unfair labor practice for a union to "cause" an employer to pay "for services which are not performed or not to be performed." In the many contract clauses under which an employer agrees that once a worker is permitted to report on a regularly scheduled day, he must receive a certain number of hours of pay, it is quite possible that the worker will thus be paid "for services which are not performed." Similarly, in the case of work under excessive heat or similar conditions requiring periods of rest or in work requiring appropriate relief periods for safety purposes, it is quite possible that employees may be paid for "services which are not performed." While the bill apparently leaves the employer free out of the goodness of his heart to grant such arrangements, it is made an unfair labor practice for the union to do anything to "cause" the employer to agree to such an arrangement. This apparently forbids the union even to ask for it.

E. It is made an unfair labor practice for a union to "refuse to bargain" (sec. 8 (b) (3)). It is also made an unfair labor practice for a union to "restrain or coerce" employees in connection with the union membership. These are words which have a very definite meaning in themselves and as spelled out in decisions during the past 10 years as applied to employers. Employers, before the Wagner Act, had regularly refused to bargain with the representatives of the employees, insisting on dealing only with individual employees. Employers had regularly used their power over the workers' jobs as a means of restraining and coercing the workers into rejecting union membership. As applied to unions, however, these words either have no meaning or may be interpreted to affect a wide variety of thoroughly legitimate activity. It is an unfair labor practice, for example, for an employer to offer higher wages if his employees will stay out of the union. Is it now to be an unfair labor practice for a union to promise a drive for wage increases if the workers join the union?

If an employer engages in a "refusal to bargain," all that the Board can do in most cases is to order the employer to bargain. If, on the other hand, the Board should disapprove of the bargaining tactics of a union, will it have the power solely to order the union to bargain or will the Board also have the power to order the termination of any strike which may be in progress? All these problems indicate that the language of many sections of this bill can serve as devices for attacking legitimate union activity.

F. The newly established Federal Mediation and Conciliation Service is encouraged and directed not merely to conciliate and mediate but to attempt strike breaking. The conferees came up with a provision which was not in either the House bill or the Senate bill. They eliminated the usual suggestion that, among other things, the Director of Conciliation should urge the parties to submit their disputes to arbitration. Instead they make it the duty of the Director of Conciliation to urge that the employer's last offer of settlement be submitted to the employees in a secret ballot. This is typical of the entire attempt of the bill to set aside the collective-bargaining agency and break up the collective-representation principle. There is, of course, no suggestion that the Director of Conciliation should urge the parties to submit the union's last offer to a vote of the stockholders (sec. 203 (c)).

G. It is made unlawful for Government employees to participate in any strike. Those who do will be subject to immediate discharge, forfeiture of civil-service status, and be ineligible for reemployment for 3 years by the United States (sec. 305 (f)).

VI. ADDITIONAL GROUPS OF EMPLOYEES EXCLUDED FROM COLLECTIVE-BARGAINING RIGHTS

While obstructing collective bargaining and making collective-bargaining rights extremely difficult to obtain for all employees, the bill goes further as to certain groups and makes it impossible for them ever to engage in collective bargaining with their employers.

A. Supervisors are denied any right to certification for collective bargaining and any protection against unfair labor practices (sec. 2 (3) and 2 (11)). To make sure that no State law will give them collective-bargaining status, any such law is declared contrary to Federal policy (sec. 14).

B. Employees in agriculture are excluded from any rights to certification or from any protection against employer unfair labor practices (sec. 2 (3)). Under the present law and practice, only an agricultural laborer is excluded and this has been defined in decisions over the years so that collective bargaining is permitted by those who are employed by large employers in industrial-type operations. The conference committee dropped from the bill any definition of agriculture.

C. Employees of nonprofit hospitals are denied collective-bargaining rights and protection against unfair labor practices (sec. 2 (2)).

D. In addition to Government employees who are already denied collective-bargaining rights under the present law, employees of wholly owned Government corporations and of Federal Reserve banks are also to be denied protection or rights under the law (sec. 2 (2)).

VII. OBSTRUCTION AND INTERFERENCE WITH NATIONAL LABOR RELATIONS BOARD OPERATION

A. The Board membership is packed and made unwieldy and cumbersome by raising the number of members from three to five (sec. 3 (a)). In addition the Board's integrated operation is upset and a complex and not very clear separation of powers and functions is made between it and its own general counsel. The general counsel, instead of being appointed by the Board, is to be appointed by the President with the advice and consent of the Senate for a term of 4 years. The general counsel, instead of the Board, is given the power of supervision over all Board attorneys and all regional officers. He is also given final authority over the investigation of charges, issuance of complaints and prosecution of complaints before the Board. He is also to have such other duties as the Board may prescribe.

B. At the same time the Board is forbidden to retain its present staff of review attorneys who analyze voluminous records for the Board. The bill would require each member separately or his secretary or legal assistant to analyze the hundreds of thousands of pages of record which come before the Board (sec. 4 (a)). The Board is now 6 months to a year behind in its docket.

C. The Board is forbidden to hire economic analysts whose services are needed to study company records and statistical data in order to help analyze charges of discriminatory practices, or in order to help compute back-pay obligations (sec. 4 (a)).

D. The Board is forbidden to take action on any charges which are filed more than 6 months after the unfair labor practice occurred. Thus if an employer sets up a company union or otherwise interferes with the self-organization of his employees and his violations do not come to the attention of a bona fide labor organization or his employees are not advised of their rights for 6 months, the company union and the employer are free from any effort to undo the illegal act (sec. 10 (b)).

E. One of the means by which the Board has attempted to speed up its proceedings has been the procedure of holding elections even before waiting for hearings where only one union is involved and where there is no serious issue to be litigated. The conference bill appears to prohibit any such prehearing selections (secs. 9 (c) (1), 9 (c) (4)).

F. To make sure that the Board may become bogged down in technicalities and red tape, the new bill would require, contrary to the provisions of any other piece of legislation covering an administrative agency, that in hearings before the Board the technical rules of evidence which normally apply in the United States courts must be followed.

VIII. THE BILL ENCOURAGES RAIDS ON UNION TREASURIES

Under the guise of permitting suits against labor organizations (an action for which no legislation is needed since such suits may be brought in State courts), the bill permits employers to sue unions in Federal courts, not only in the district where the union has its principal office but in any district in which it has any officers or agents. Thus a national union may be harassed by lawsuits brought against it in any part of the country where it may have a local union (sec. 301). Such suits may be brought not only for alleged violations of contract (sec. 301), but even for any damages resulting to the employer from a perfectly peaceful and otherwise lawful strike resulting from a refusal of employees to work on scab products, products manufactured under substandard conditions, etc. This provision moreover permits suits under all collective-bargaining contracts to be brought into the Federal courts regardless of the normal jurisdictional requirements that would otherwise apply to any attempt to sue in the Federal courts under any other type of contract. This provision is unnecessary for any legitimate reason since there is a perfect right to sue under these contracts or any other contracts in the State courts. It is intended to and will have the effect of encouraging employers to draw collective-bargaining enforcement into the red tape of court litigation. Moreover the section eliminates the present rule of law under which a union may be held responsible only for activities which it has authorized or ratified. Under the proposed bill the union may be held responsible for the act of any member if the court should decide that the member, however unauthorized his activity, was acting as an agent of the union. The union is also to be considered as having been brought into court even if the papers were not served on its officers but on some member whom the court may term to be an agent of the union.

IX. POLITICAL EXPENDITURES FORBIDDEN

The law up to this time has forbidden only political contributions by unions and has operated only with respect to general elections. This has at least left unions free to participate in primaries and also has permitted a union to make known its views through its own publications and other activities such as meetings, etc., so long as such activity did not take the form of financial contribution to the campaign. The proposed bill would forbid not only contribution but also expenditures and would apply not only to general elections but to primaries, conventions, caucuses, etc.

LEE PRESSMAN,
General Counsel.

JUNE 2, 1947.

The Republican Ax

EXTENSION OF REMARKS
OF
HON. GEORGE A. SMATHERS
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 3, 1947

Mr. SMATHERS. Mr. Speaker, under leave to revise and extend my remarks in the Appendix of the RECORD, I would like to insert an editorial from the Miami Daily News of May 31. I think this editorial states in a few words that it is not wise to base our economy cuts on imagination, wish, or guess; that cuts based on such factors are demoralizing, not only to Federal employees, many of whom are extremely efficient and have devoted most of their lives to Government service, but also to the average citizen.

THE REPUBLICAN AX

To the Congressmen marking their tally sheets as each appropriations bill comes before the House and is slashed, the score now stands at about $2,500,000,000; they have not yet reached the halfway mark in the $6,000,000,000 retrenchment in President Truman's budget.

Meanwhile, in other parts of Washington, the score is being kept in different units. The law requires that Government employees cannot be dismissed without a 30-day notice, and the executive departments, unable to forecast the Senate's action, have to be prepared to translate into employees and Government programs the dollars lopped off with every stroke of the Republican economy ax.

Jerry Kluttz, veteran Washington Post reporter covering the executive departments, has assembled the various scores on dismissal notices now prepared. The War Department has little pink slips for 45,000 employees, and will prepare 25,000 more if the House Appropriations Committee goes through with a projected cut of $800,000,000. Agriculture will dismiss between 15,000 and 25,000; State will get out notices for 4,000, including every one of the 3,100 employed in its Office of Information and Cultural Affairs. Navy, Commerce, Treasury, the Veterans' Administration, WAA, and the office of the Housing Expediter have from 2,000 to 8,000 each. Interior and Labor have already fired thousands, and 3,000 more employees of Interior will get their notices this week.

There would be nothing wrong with these figures, even though they total around 100,000 if they represented even a halfway systematic study of the needs of the Government service. But when we realize that they are only the rough translation of dollar figures which are themselves plucked from the thin air, they are nothing short of demoralizing.

Jefferson Davis

EXTENSION OF REMARKS
OF
HON. JOHN BELL WILLIAMS
OF MISSISSIPPI
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 3, 1947

Mr. WILLIAMS. Mr. Speaker, today marks the one hundred and thirty-ninth anniversary of the birth of the greatest of all Mississippians—and one of the greatest of all Americans—Jefferson Davis, the president of the Confederate States of America.

Davis will be remembered by Americans for all time to come, not only because he led the Southern States in their valiant struggle for independence, but also for his historic contributions to the preservation of American democracy as a Member of both Houses of Congress, as a member of the President's Cabinet, and as a soldier.

Jefferson Davis was a great man in every sense of the word, and nothing could be more exemplary of his ability and character than his farewell address to Mississippians, delivered to the Mississippi Legislature on March 10, 1884, which I ask leave to include herewith:

Friends and brothers of Mississippi, in the briefest terms, but with the deepest feeling, permit me to return my thanks for the unexpected honor you have conferred upon me. A waif on the political sea, I have in my secluded home by the seashore observed with intense interest all passing events affecting the interest or honor of Mississippi, and I have rejoiced to see in the diversification of labor and the development of our new sources of prosperity and the increased facilities of public education, reason to hope for a future to our State more prosperous than any preceding era. The safety and honor of a republic must rest upon the morality, intelligence, and patriotism of the community.

We are now in a transition state, which is always a bad one, both in society and nature. What is to be the result of the changes which may be anticipated, it is not possible to forecast, but our people have shown such fortitude and have risen so grandly from the deep depression inflicted upon them that it is fair to entertain bright hopes for the future.

Sectional hate, concentrating itself upon my devoted head, deprives me of the privilege accorded to others in the sweeping expression of "without distinction of race, color, or previous condition," but it cannot deprive me of that which is nearest and dearest to my heart, the right to be a Mississippian; and it is with deep gratification that I received this emphatic recognition of that right by the representatives of our people. Reared on the soil of Mississippi, the ambition of my boyhood was to do something which would redound to the honor and welfare of the State. The weight of many years admonishes me that my day for actual service has passed, yet the desire remains undiminished to see the people of Mississippi prosperous and happy and her fame not unlike the past, but gradually growing wider and brighter as years roll by.

It has been said that I should apply for pardon. But as repentance must needs precede pardon, I have no complaint to make that pardon has not been granted to me. Remembering as I must all which has been suffered, all which has been lost, disappointed hopes and crushed aspirations, yet I deliberately say, if it were to do over again, I would again do just as I did in April 1861. No one is the arbiter of his own fate. The people of the Confederate States did more in proportion to their numbers and means than was ever achieved by any people in the world's history. Fate decreed that they should be unsuccessful in the effort to maintain their claims to resume the grants made to the Federal Government. Our people have accepted the decree; it therefore behooves them, as they may, to promote the welfare of the Union, to show to the world that hereafter, as heretofore, the patriotism of our people is not measured by lines of latitude and longitude, but is as broad as the obligations they have assumed and embrace the whole of our ocean-bound domain. Let them leave to their children and children's children the grand example of never swerving from the path of duty, and preferring to return good for evil rather than to cherish the unmanly feeling of revenge. But never question or teach your children to desecrate the memory of the dead by admitting that their brothers were wrong in the effort to maintain the sovereignty, freedom, and independence which was their inalienable birthright, remembering that the coming generations are the children of the heroic mothers whose devotion to our cause in its darkest hour sustained the strong and strengthened the weak. I cannot believe that the cause for which our sacrifices were made can ever be lost, but rather hope that those who now deny the justice of our asserted claims will learn from experience that the fathers builded wisely and the Constitution should be construed according to the commentaries of the men who made it.

It having been previously understood that I would not attempt to do more than to return my thanks which are far deeper than it would be possible for me to express, I will now, Senators and Representatives, and to you, ladies and gentlemen, who have honored me by your attendance, bid you an affectionate, and it may be a last, farewell.

The Panama Canal

EXTENSION OF REMARKS
OF
HON. WILLIS W. BRADLEY
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 3, 1947

Mr. BRADLEY. Mr. Speaker, I present here the second of the radio broadcasts on the Panama Canal made by our late colleague, the Honorable Fred Bradley, then chairman of the Committee on Merchant Marine and Fisheries:

In my broadcast of last week, I went into some little detail with respect to the operational problems facing us down at the Panama Canal. As authorized by the Congress in Public Law 280 of the Seventy-ninth Congress, an intensive investigation of the Panama Canal has been undertaken under the direction of the Governor of the Panama Canal and the supervision of the Secretary of War, which investigation is to be reported to the Congress by December 31 of this year. There is no doubt but reconstruction of the Canal to improve its operation and increase its capacity is imperative.

The specific remedies for the major marine operational problems about which I told you last week consist generally in removing the causes:

Since the basic cause of most of these problems is the location of Pedro Miguel locks on the Pacific side squarely across the south end of Gaillard cut where it forms a bottleneck, the physical removal of these locks is definitely indicated.

Because the separation of the Pacific locks into two sets of locks was an obvious error in operational design, it is felt this defect can be corrected by constructing all Pacific locks in continuous lifts near Miraflores at the place where the excavation for the third locks project was made.

Operational studies indicate that the effect of fog on Canal capacity and operation can be mitigated by the formation of a high-level lake anchorage at the Pacific end of the Canal to match the lake anchorage at Gatun on the Atlantic side. This would also increase the normal operation capacity of the Pacific end of the Canal and place it on a par with the Atlantic end.

The creation of this high-level lake between the Pacific locks and Gaillard Cut would supply a surge damping reservoir that would reduce lockage surges from a maximum amplitude of 3 feet to less than 1 inch.

It is felt the raising of the Gatun Lake level and the elimination of the surge factor of 1.5 feet will increase the water-level operating range materially and improve navigation accordingly, and that it will supply more water for lockages and greater depths for navigation during both the wet and dry seasons.

The hazards of the restricted channels of Gaillard Cut can be reduced by the widening, straightening, and other improvements. The raising of the water level to 90 feet will also widen the channel through the cut.

The limitations caused by the narrow width of the present locks (110 feet) can be overcome by the construction of a set of larger locks of such dimensions as may be deemed adequate.

A study of the topography at the Pacific end of the canal indicates that the hills surrounding the present Miraflores Lake form a suitable impounding perimeter for creating a high-level lake between Miraflores and the south end of Gaillard cut. Geological investigations near Miraflores indicate that there are ample foundations suitable for heavy-lock structures. It is the conclusion of those who have studied this problem that the solution of the principal marine operation problems consists of, first, the elimination of the Pedro Miguel locks; second, the construction of all Pacific locks in continuous lifts near Miraflores; third, the creation of a high-level lake at the Pacific end of the Canal between Miraflores locks and the south end of Gaillard cut for use as an anchorage basin for ships transiting the Canal to match the anchorage at the Atlantic end at Gatun; and, fourth, the elevation of Gatun Lake to optimum level of approximately 90 feet.

There has been so much discussion of the so-called sea-level canal as an assumption in the planning of the evolution of the ultimate Panama Canal that an examination of this proposal is essential before focusing attention on the fundamental marine problems that should be solved and which I related to you earlier. The idea is not new. It has been an alluring dream of all mariners since the age of discovery along the Isthmus of Panama. The alluring prospect of the Strait of Panama is an ancient historical conception that has had great public appeal. This idea has even been symbolized in the Canal Zone seal which shows a Spanish galleon sailing through Culebra Cut into the waters of the Pacific.

The first question of prime navigational importance in estimating the sea-level canal idea is that of tides. At the Atlantic end of the Canal, there is a maximum tidal range of approximately 2 feet; on the Pacific the maximum tidal range is 20 feet. In any tidal canal without means of controlling the flow of the tide between the oceans, currents with a maximum strength estimated at 4.6 knots or more would be caused. This is a strong current especially when considered with reference to low-powered vessels and tows.

Due to these circumstances, we are told that any tidal canal must be considered under two general headings: First, an open strait or lockless canal and, second, a tidal lock canal. In the first of these would be strong currents; in the second, the current would not be so great. Navigation in a long narrow rocky gorge with strong currents and navigation in a similar gorge with less current are different problems.

Ths critical situations which most frequently require vessels to anchor during transit of the Panama Canal are—steering gear failures and to break a dangerous sheer in Gaillard cut. Other emergencies which have required the use of anchors are fog, wind, and blinding rain. Relatively few incidents have resulted in damages of serious proportions to vessels, but, as I mentioned last week, there have been some. Vessels have struck the rock sides of Gaillard cut, have ruptured their plates, and have sunk in the cut.

The primary reason for the relatively safe operation of the canal is believed to be the absence of strong currents in the hazardous part of the channel and excellent pilots. Vessels in difficulty are thus free to maneuver unhampered except by the narrow channel.

Navigational experience indicates that the following minimum channel widths are essential for sound marine operational planning depending upon the strength of the currents.

1. Open strait (lockless canal)—a width that will permit safe swinging of the larger vessels when anchoring in emergency.

2. Tidal lock canal—a width that will enable unrestricted two-way traffic with the degree of safety now afforded in the wide channels in Gatun Lake.

We are told that in the open strait, or lockless canal, the width should be twice the sum of the length of the vessel and the scope of chain, with a factor of safety to clear the bank. This would probably be about 1 mile. A project of that magnitude would be of such vastness as to eliminate it as an economically feasible solution.

In the tidal level lock canal, the channel width, so we have been told, can be somewhat less; but there should still be space for unrestricted two-way traffic with a safety comparable to the Gatun Lake channels—estimated at 1,200–1,500 feet. Any decision as to this width will depend upon the result of the restricted channel model tests now in progress at the Taylor Model Basin, and navigational experience of canal pilots. This also represents a project of vast proportions.

The published project for the "sea level" canal contemplated in previous studies consists of a 500-foot channel with its characteristics approximating the present channel with one tidal lock at the Pacific end of the canal.

According to studies made to date, the evidence seems to be overwhelming that the high-level lake canal modified to include a terminal lake at the Pacific end is vastly superior for transiting ships over the tidal lock canal.

You probably wonder why these fundamental ideas were not presented in years past. The answer is that they were, but they were presented differently and by men without marine operational experience. For example, in recent years Mr. Ralph Z. Kirkpatrick, former Chief of Surveys of the Panama Canal, saw the weakness in the present canal arrangement and submitted suggestions. His main purpose seemingly was to combine the Pacific locks into one structure and his plans, not being backed by operating experience, were not adopted.

Before Mr. Kirkpatrick there was the late Maj. Gen. W. L. Sibert, the builder of the Gatun locks. He wanted to place all Pacific locks between Cerro Cocoli and Cerro Miraflores in one structure as at Gatun. While he seemingly had an excellent understanding of the needs for traffic, his main thesis was economy of construction. A board investigated his plan and reported favorably thereon and the report was referred to the President of the United States, who decided against adopting the change in the Canal plan because the Pacific locks had then been started; because it would have meant a delay in completion date; and because any modification would have given the enemies of the Canal an opportunity to seize it as an evidence of weakness in the lock-type canal at a time when a political attack would very well have endangered the completion of the Canal.

The Panama Canal is, indeed, again in an era of decision. A great store of operating experience, not available to the early Canal builders, is available for guidance. When the Canal was constructed engineering considerations were the chief bases for decisions. Now marine operational requirements rather than engineering problems are the factors that will undoubtedly govern decisions. There is no doubt, from my limited study of this major problem, that the time has come for us to eliminate the Pedro Miguel locks and dam and concentrate all Pacific locks near Miraflores to form a high-level Miraflores Lake. The plan finally adopted for changing our present Panama Canal system should equip the Canal for ages to come. Those who bring about the reconstruction will truly bestow a tremendous service on the United States naval forces and on the shipping of all maritime nations.

Those who bring about the modernization of the Panama Canal will achieve the rare distinction that will rank them with its builders.

Chances We Had

EXTENSION OF REMARKS
OF

HON. WILLIS W. BRADLEY

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 3, 1947

Mr. BRADLEY. Mr. Speaker, in southern California, the Long Beach Independent is one of our clear-thinking newspapers. In view of this, I take pleasure in inserting the following editorial from the edition of May 21, 1947, in which the editor gives full support to the policy of this Congress in its efforts to stop further Russian aggression in eastern Europe:

CHANCES WE HAD

As we listened to Henry Wallace it sounded like an old story often told. We had heard it with slight variations for the 10 years before our smugness was crushed out of us at Pearl Harbor. It did not seem possible men were again urging that we appease dictators and aggressors. It recalls the march of Japan into Manchuria in 1931. We protested, not too loudly, and were told that this kind of arrogant aggression would lead to world war. But none of us wanted war, and besides, Manchuria was a long way off, as was Japan. It is doubtful if a bomber force could have made it to Japan in less than several months at that time. Today it could be there in a few days, as could a Russian bomber force from Siberia or the northern Japanese islands be here.

We let Japan get by with this bit of aggression and occupation of the territory of another nation. It was the signal for other aggressors to make their plans. While the little German children were starting to heil Hitler as they goosestepped through the streets, another dictator in Rome decided to defy the League of Nations and ourselves. It was then the black-shirted Fascists moved against weak and backward Ethiopia in 1935. Mussolini thumbed his nose at all who cried out in protest. There were millions of words of protest. But no military force opposed him. From all facts now known, any one of the big three, France, Britain or the United States, could have easily stopped him. Instead, they appeased him and thereby asked for further aggressive moves from Mussolini or any other dictator.

As the world daily heard and saw pictures of the military machines being built in Japan, Italy and Germany, yes, and in Russia, we refused to be disturbed. Everything we knew of history and of the acts of dictators

told us these machines were being built for action. And yet we remained complacent. We refused to fortify Guam because it would hurt the feelings of the Japs. Instead, we shipped them billions of gallons of fuel oil, gasoline and other products for making war. Daily during this period ships left our harbors loaded with scrap iron that even the loitering dock watcher said would come back to us in the form of shrapnel. We got a lot of it back at Pearl Harbor.

Only a few years after Mussolini got by with his rape of little Ethiopia, the sword-rattling Nazis moved in and took over Austria. They demanded Czechoslovakia, then the most democratic country in the Balkans. It was then Chamberlain met Hitler at Munich. We were absent. Again an aggressor was appeased, and Hitler marched into Czechoslovakia and immediately started preparations for his march on Poland. At Munich we had our chance to stop Hitler and probably have peace in our time, as the poor deluded Chamberlain expressed it.

In 1939 Hitler and Stalin reached an agreement for the dividing of Poland. Twenty-four hours after that agreement was signed Hitler marched into Poland. Stalin moved in a few days later. It was then France and Britain came to life and decided to stop the march of aggressors. But we made no move; we still appeased. We still shipped scrap iron and gasoline to Japan, who had taken advantage of the situation to conquer most of China. Japan had even sunk a gunboat of ours. But we still refused to throw our strength against the march of aggressors. Only when they struck us at Pearl Harbor did we come to life.

Since the end of the war Russia has marched into most of the Balkan countries, where she rules with an iron hand through puppets. The issue now is: Shall she be allowed to move into Greece and Turkey? There is little difference between the issue now and the issue when Japan invaded Manchuria in 1931, Mussolini invaded Ethiopia in 1935, and Hitler invaded Austria in 1938. Our problem is to make a decision based on past experience. We either stop this kind of aggression while the aggressors are comparatively weak and we are comparatively strong, or we suffer the consequences we have seen in two world wars. There is no issue between us and Russia that would not be solved if Russia would stay within her own borders. There can be no lasting peace if Russia or any other nation is allowed to cross the borders of other countries by forceful methods.

The Henry Wallaces and all the other communist apologists or appeasers should remember how other appeasers kept us weak and vacillating while the dictators crushed all that stood in their way. With Russia we must appease or we must stand firm. We have one more chance to stop an aggressor before he is well started. We may never have another chance.—L. A. C.

Charles Oscar Andrews

MEMORIAL ADDRESS
OF
HON. ROBERT L. F. SIKES
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 19, 1947

On the life, character, and public service of Hon. CHARLES OSCAR ANDREWS, late a Senator from the State of Florida

Mr. SIKES. Mr. Speaker, few men enjoyed a more complete life, or contributed more to their fellow man in constructive service, than CHARLES O. ANDREWS. And he passed on to eternal glory at the threshold of the Biblical three score and ten, secure in the affection and high esteem of his State and his Nation.

CHARLES O. ANDREWS was born in Holmes County, in historic old West Florida. He came from that sound pioneer stock which did so much to shape the traditions and the ideals of this Nation, and which even today provides the bedrock of good judgment that preserves its balance. His people are respected leaders in community after community throughout Florida.

As a young man just starting out in the world he taught in a one-room school at Crestview, my home town. When he came back some 30 years later to ask for a place in the United States Senate, he already had achieved prominence far beyond that given to most men. The confidence he inspired in one small community as one of its first school teachers had grown until it was State-wide. After his election to the United States Senate in 1936 the justification for that early confidence was quickly shown. For his stature grew steadily, and the respect for his sound judgment increased in each succeeding year.

Senator ANDREWS provided the sound, solid balance that a community, a State, and a Nation need. He was neither radical nor reactionary. His creed was Americanism, love of God, and love of country. And his works and his memory are indelibly etched on the scrolls which record the story of good and great Americans.

Jefferson Davis, President of the Confederacy—Address of Bishop Charles B. Galloway

EXTENSION OF REMARKS
OF
HON. JOHN E. RANKIN
OF MISSISSIPPI
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 3, 1947

Mr. RANKIN. Mr. Speaker, today is the one hundred and thirty-ninth anniversary of the birth of Jefferson Davis, President of the Confederacy, one of the noblest men who ever lived in the tide of time, and Mississippi's greatest contribution to the world's list of illustrious men.

On June 3, 1908, Bishop Charles B. Galloway, of my State, delivered an address before the student body of the University of Mississippi on the life and character of Jefferson Davis which is regarded as the greatest speech ever delivered on the life and character of this immortal American.

Under permission granted me to extend my remarks in the RECORD, I am inserting Bishop Galloway's address at this point.

The matter referred to follows:

ADDRESS OF BISHOP CHARLES B. GALLOWAY AT THE UNIVERSITY OF MISSISSIPPI ON THE ONE HUNDREDTH ANNIVERSARY OF THE BIRTH OF JEFFERSON DAVIS

With unaffected distrust of my ability to meet the demands of such a great hour as this, I rejoice to be again on the beautiful campus of my alma mater and have the opportunity of bringing a message to the young men of my country. And as this commencement day chances to be the one hundredth anniversary of the birth of Jefferson Davis, the most illustrious citizen whose name ever adorned and enriched the annals of Mississippi, I have had the temerity to select his life and times as the theme of this hour's discussion. To paint, with skillful hand, the full-length portrait of that majestic man, or adequately portray the qualities that gave him greatness and the virtues that make him immortal, I cannot; but, with you, I can reverently sit at his feet and listen to a story that will stir within us many a noble aspiration and cause us to seek more diligently the old paths of manly honor and high endeavor. My purpose is not to indulge in extravagant or indiscriminate eulogy but, if possible, give a judicial estimate of a great man who was the most commanding figure in a fierce and eventful national crisis. It shall be alike removed from unreasoning censure and unreasonable praise. We need not deify Mr. Davis, or disproportionately exalt the pedestal on which the Genius of History will surely place him, in order to show adequate appreciation of his noble character and splendid genius. On the other hand, the use of bitter invective and lurid superlatives about this man of destiny may evidence literary ingenuity and partisan malignity, but can never any more command the respect of patriotic, thoughtful students of our national history.

The days of malignant vituperation are gone, and the time of judicial interpretation has come. It is not necessary now to measure all facts by considerations of latitude and longitude. The character and life work of Jefferson Davis were never so diligently and dispassionately studied as today. War passions have sufficiently cooled, and war clouds have so floated from our national skies that even the most ardent and sentimental nationalist can study the man and his times in a clear, white light. A citizen whose moral and religious ideals were the most exalted, and whose daily conduct was sought to be modeled after the Man of Galilee, and whose life has in it as little to explain, or apologize for, as any leader in American politics, can never be caricatured as a monster or condemned as a traitor, and have anybody really believe it.

The unanswered question in England for 240 years was, "Shall Cromwell have a statue?" It required nearly two and one-half centuries for public opinion to reach a just estimate of the most colossal figure in English history. The great lord protector died at Whitehall and was laid to rest, with royal honors, in Westminster Abbey. But when the monarchy was restored, and Charles II ascended the throne, his body was disinterred, gibbeted at Tyburn Hill, and buried under the gallows, the head being placed on Westminster Hall. Now a magnificent statue of the great Oliver stands opposite where his head was exposed to the jeers of every passer-by—England's sane and final estimate of the mightiest man who ever led her legions to victory or guided the course of her civil history. In the New World, events move faster, popular passion cools quicker, and calm judgment more speedily reascends its sacred throne. After 40 years since the Civil War, the Nation's estimate of Jefferson Davis—the Oliver Cromwell of our constitutional crisis—has almost entirely changed, and points to the not far-off day when no place in our Federal Capital will be too conspicuous for his heroic statue. Mr. Davis can no more be understood by reading the heated columns of the political newspapers and historical writers of the days immediately succeeding the Civil War than Oliver Cromwell could be judicially interpreted by the obsequious literature of the reign of Charles II.

Mr. Davis had his limitations and was not without his measure of human faults and frailties; but he also had extraordinary gifts and radiant virtues and a brilliant genius that rank him among the mightiest men of the centuries. He made mistakes because he was mortal, and he excited antagonisms because his convictions were stronger than his tactful graces; but no one who knew him, and no dispassionate student of his history, ever doubted the sincerity of his great soul or the absolute integrity of his imperial purpose. Let us, on his anniversary day, learn some patriotic lessons from the life history of this greatest Mississippian, replight our faith to the unalterable principles of constitutional liberty to which he was passionately devoted, and renew our fealty to the flag of our reunited country, which he never ceased to love.

I have read of a peculiar notion entertained by the ancient Norsemen. They supposed that, beside the soul of the dead, a ghost survived, haunting for a while the scenes of his earthly labors. Though at first vivid and lifelike, it slowly waned and faded, until at length it vanished, leaving behind no trace or memory of its spectral presence. I am glad that the ghosts of old sectional issues are vanishing and soon will cease to haunt and mock the fears of the most anxious and nervous of American patriots. It is a grateful fact, in which all rejoice, that this Nation is more united in heart and purpose today than ever in its history.

While I would not needlessly stir the embers of settled strife or reopen the grave of buried issues or, by a word, revive the bitter memories of a stormy past, it is due the truth of history that the fundamental principles for which our fathers contended should be often reiterated, in order that the purpose which inspired them may be correctly estimated and the purity of their motives be abundantly vindicated.

If the condition of affairs in 1860 be thoroughly understood, and one has a clear and accurate knowledge of the nature and character of the Federal Government, together with the rights of the States under the Constitution, we need not fear the judgments that may be formed and the conclusions that will be reached. But unfortunately for the truth of history, up to recent years, we have been confronted by dogmas which are substituted for principles by preconceived opinions which are claimed to be historical verities, and by sentimentality which closes the avenues of the mind against logic and demonstration.

But before studying the lessons of a great cause, a great leader, and a great era, I call attention to a rather singular historic fact. The most illogical and unreasoning sentiment—which yet lingers, but is fast fading—a sentiment universal in the North and more or less entertained in the South—is that which has persistently discriminated against Mr. Davis, holding him to vindictive account for the ever-to-be-lamented war and all its terrible consequences, while others have been acquitted of blame, and many applauded as patriots and heroes. Upon his weary shoulders have been piled the sins of the South, and he has been execrated as the arch traitor of American politics. Those who thus judge have taken counsel of their prejudices, and evidence an almost criminal ignorance of the facts of history. Was Mr. Davis more a sinner than Robert E. Lee and Stonewall Jackson, that he should be condemned and they so universally praised? Did he follow any flag for which they did not draw their swords? Did he advocate any doctrine to which they did not subscribe, and write their names in blood? Did he avow allegiance to any government to which they did not pledge life and sacred honor? And yet, in some sections of our country, he has been gibbeted, and they have been applauded.

I know there is a certain glamour that gathers about a military hero which commands admiration and calls for extravagant laudation. One who braves the shout of battle and wins the chaplet of victory is unconsciously invested with a halo more brilliant than the crown of any civilian, however marvelous his gifts or magnificent his achievements or immortal the results of his public labors. People will applaud the returning conqueror while they forget the founder of an empire or the author of a nation's constitution. By virtue of his exalted position, first as the trusted political leader of a great party, and then as the President of a storm-cradled nation, Mr. Davis invited antagonisms and could not escape the sharpest criticism. Having to deal with the rivalries of political leaders, the jealousies of military aspirants, the bitterness of the disappointed, the selfishness of the discontented, and indeed all classes, in every department of the civil and military service, he had to hear every lament and patiently bear every complaint. In the North he was charged with everything, from the sin of secession to the "horrors of Andersonville" and the assassination of Mr. Lincoln. In the South he was held accountable for everything, from the failure to capture Washington after the first battle of Manassas, to the unsuccessful return of the peace commission and the surrender of Lee's tattered legions at Appomattox.

As this discussion will be more the study of an epochal man and his times, rather than the recital of personal history, I shall not repeat in detail the well-known facts of an eventful career. The son of a gallant Revolutionary soldier, and with the finest strain of Welsh blood flowing in his generous veins, Jefferson Davis was born in the State of Kentucky. In infancy he was brought by his father to Mississippi, and here his entire life was spent. At the county school he was prepared for Transylvania College, from which, at the age of 16, he passed to the United States Military Academy at West Point. In that institution he was distinguished as a student and a gentleman, and in due time was graduated with high honor.

Jefferson Davis began life well. He had a clean boyhood, with no tendency to vice or immorality. That was the universal testimony of neighbors, teachers, and fellow students. He grew up a stranger to deceit and a lover of the truth. He formed no evil habits that he had to correct, and forged upon himself no chains that he had to break. His nature was as transparent as the light that shone about him; his heart was as open as the soft skies that bent in benediction over his country home; and his temper as sweet and cheery as the limpid stream that made music in its flow through the neighboring fields and forests.

Graduating from West Point in 1828, he was commissioned a second lieutenant in the Regular Army, and spent 7 laborious years in the military service, chiefly in the middle Northwest, and had some conspicuous part in the Black Hawk War. In 1835, Lieutenant Davis resigned from the Regular Army, married the charming daughter of Gen. Zachary Taylor, and settled on his Mississippi plantation, to follow the luxurious, literary life of a cultured southern gentleman. But the untimely death, in a few short months, of his fair young bride, crushed his radiant hopes and disappointed all his life plans. After 7 years, spent mostly in agricultural pursuits, and in literary study, especially the study of political philosophy and constitutional history, he entered public life, and almost immediately rose to trusted and conspicuous leadership.

In 1844 Mr. Davis was elected to Congress, and ever thereafter, up to the fall of the Confederate Government, was in some distinguished capacity or other connected with the public service of his country. When he entered the Halls of Congress, the Oregon question, the reannexation of Texas, and the revision of the tariff were the stormy issues that divided the Nation into two hostile camps. The scholarly young Representative from Mississippi soon appeared in the lists, and by his thorough mastery of the questions involved attracted national attention. The venerable ex-President, John Quincy Adams, the "old man eloquent," at that time a Member of the House, was greatly impressed with his extraordinary ability and predicted his brilliant parliamentary career. Referring to his first set speech in Congress, a recent biographer makes this just and suggestive observation: "He manifests here, in his early efforts as a legislator, some of the larger views of national life and development which have been so persistently ignored by those who have chronicled his career."

In that first great speech, which had all the marks and carried all the credentials of the profoundest statesmanship, Mr. Davis made this broad declaration, from the principle of which he never receded: "The extent of our Union has never been to me the cause of apprehension; its cohesion can only be disturbed by violation of the compact which cements it."

Believing as he did in the righteousness of the conflict with Mexico, Mr. Davis earnestly advocated the most liberal supply of means and men to prosecute the war, and announced himself as ready, should his services be needed, to take his place in the tented field. In June 1846 a regiment of Mississippi volunteers was organized at Vicksburg, and Jefferson Davis was elected its colonel. He accordingly resigned his seat in Congress, hastened to join his regiment, which he overtook at New Orleans, and reported for duty to General Taylor on the Mexican border. At Monterey and Buena Vista, crucial positions of the war, his command rendered conspicuously heroic service. Our American knighthood was in fairest flower that day, especially on the plains of Buena Vista, when Colonel Davis, against overwhelming numbers, snatched victory from almost certain defeat, and won immortal fame for himself and his gallant Mississippi Rifles. By a brilliant tactical movement he broke the strength of the Mexican army and sent General Santa Anna southward with only half the force of the day before. Though severely wounded he remained in his saddle, refusing to quit the field until the day of glorious triumph was complete. General Zachary Taylor, commander in chief of the American forces, paid this eloquent tribute to the soldierly courage and genius of the distinguished Mississippian: "Napoleon never had a marshal who behaved more superbly than did Colonel Davis today."

Returning from Mexico, having won the highest honors of war, Colonel Davis and the brave remnant of his magnificent regiment were everywhere welcomed with boundless enthusiasm. He was tendered the position of brigadier general of volunteers by President Polk, but declined, on constitutional grounds, holding that such appointment inhered only in the State.

Within 2 months after his return from Mexico, crowned with immortal honor, Mr. Davis was appointed by the Governor to represent Mississippi in the United States Senate, a vacancy having occurred by the death of Senator Speight. When the legislature met he was elected unanimously for the remainder of the unexpired term, all party lines having disappeared in a universal desire to honor the brilliant young colonel of the Mississippi Rifles. That was a position most congenial to his tastes and ambitions, and there his superb abilities shone with a splendor rarely equaled in the parliamentary history of America. He was an ideal Senator, dignified, self-mastered, serious, dispassionate, always bent on the great things that concerned the welfare of the Nation. He

was never flippant—never toyed with trifles—and never trifled with the destiny of his people. His was the skill and strength to bend the mighty bow of Ulysses.

When Jefferson Davis entered the United States Senate the glory of that upper Chamber was at its height. Possibly never at one time had so many illustrious men sat in the highest council of the Nation. There were giants in those days. There sat John C. Calhoun, of South Carolina; Daniel Webster, of Massachusetts; Henry Clay, of Kentucky; Thomas H. Benton, of Missouri; Lewis Cass, of Michigan; Salmon P. Chase, of Ohio; Stephen A. Douglas, of Illinois, and other men of lesser fame. In that company of giants Jefferson Davis, of Mississippi, at once took rank among the greatest, "eloquent among the most eloquent in debate," and worthy to be the premier at any council table of American statesmen. The historian Prescott pronounced him "the most accomplished" Member of the body.

One who spoke by the authority of large experience with the upper Chamber thus correctly characterized our brilliant and accomplished young Senator: "It is but simple justice to say that in ripe scholarship, wide and accurate information on all subjects coming before the body, native ability, readiness as a debater, true honor, and stainless character, Jefferson Davis stood in the very first rank, and did as much to influence legislation and leave his mark on the Senate and the country as any other who served in his day."

Senator Henry Wilson, of Massachusetts, afterward spoke of him as "the clear-headed, practical, dominating Davis."

That which preeminently signalized the public character and parliamentary career of Jefferson Davis was his sincere, unwavering devotion to the doctrine of State sovereignty, and all the practical questions that flowed therefrom. He held with unrelaxing grasp to the fundamental fact that the Union was composed of separate, independent, sovereign States, and that all Federal power was delegated, specifically limited, and clearly defined. The titanic struggles of his entire public life were over this one vital issue, with all that it logically involved for the weal or woe of his beloved country. The Articles of Confederation declared, in express terms, that "each State retains its sovereignty, freedom, and independence, and every power, jurisdiction, and right, which is not by this Confederation expressly delegated to the United States in Congress assembled," and that principle was transferred intact to the Constitution itself. And as one function of sovereignty was the right to withdraw from a compact, if occasion demanded, he planted himself squarely upon that doctrine, and never wavered in its able and fearless advocacy—a doctrine, by the way, that was never questioned by any jurist or statesman for 40 years after the Constitution was adopted.

Having read and reread, with great diligence and no less delight, the whole history of the fierce controversies that culminated in the War between the States, including the ablest speeches of our profoundest statesmen on both sides, and with all my genuine pride in a restored Union, I am bound to say that the southern position was never shaken, and that the overwhelming weight of argument was on the side of John C. Calhoun and Jefferson Davis. And further, it was by surrendering the constitutional argument and resorting to what was denominated "the higher law" of political conduct and conscience that the North found apology or defense for its attitude toward the inalienable rights of the Southern States.

In order that you may appreciate the grounds of my confident assertion, I quote a few paragraphs from what seems to me an absolutely unanswerable argument by John C. Calhoun, the greatest logician and profoundest political philosopher in the Nation: "In that character they formed the old confederation, and when it was proposed to supersede the Articles of the Confederation by the present Constitution, they met in convention as States, acted and voted as States, and the Constitution, when formed, was submitted for ratification to the people of the several States. It was ratified by them as States, each State for itself; each, by its ratification, binding its own citizens; the parts thus separately binding themselves, and not the whole, the parts; and it is declared in the preamble of the Constitution to be ordained by the people of the United States, and in the article of ratification, when ratified, to be binding between the States so ratifying. The conclusion is inevitable that the Constitution is the work of the people of the States, considered as separate and independent political communities; that they are its authors—their power created it, their voice clothed it with authority; that the Government formed is in reality their agent; and that the Union, of which the Constitution is the bond, is a Union of States and not of individuals."

And it is an interesting and suggestive fact that the latest historians and writers on constitutional government sustain the fundamental contention of southern statesmen.

The Honorable Henry Cabot Lodge, the accomplished scholar and distinguished Senator of Massachusetts, in his Life of Daniel Webster, makes this candid statement: "When the Constitution was adopted by the votes of the States at Philadelphia and accepted by votes of States in popular conventions, it was safe to say there was not a man in the country, from Washington to Hamilton on the one side, to George Clinton and George Mason on the other, who regarded the new system as anything but an experiment entered upon by the States, and from which each and every State had the right to peacefully withdraw—a right that was very likely to be exercised."

And in a recent illuminating address, the Honorable Charles Francis Adams, abundantly and absolutely vindicates the contention of Mr. Davis and other southern leaders, in this noble utterance: "To which side did the weight of argument incline during the great debate which culminated in our Civil War? The answer necessarily turns on the abstract right of what we term a sovereign State to secede from the Union at such time and for such cause as may seem to that State proper and sufficient. The issue is settled; irrevocably and for all time decided; it was settled 40 years ago, and the settlement since reached has been the result not of reason based on historical evidence but of events and of force." And Mr. Adams further added: "The principles enunciated by South Carolina on the 20th of December 1860 were enunciated by the Kentucky resolutions, November 16, 1798."

The position of Jefferson Davis, though by his enemies often denied and persistently obscured, was this—that while consistently and unanswerably defending the right of a State to secede, he never urged it as a policy, and deplored it as a possible necessity. Or to use the language of the resolution adopted by the States' rights convention of Mississippi in June 1851, drawn by his own hand, "Secession was the last alternative, the final remedy, and should not be resorted to under existing circumstances."

It may be interesting in this connection to inquire when the exercise of a State's right to secede had its first and most threatening assertion. Alexander H. Stevens affirms that the right of a State to withdraw from the Union was never denied or questioned by any jurist, publicist, or statesman of character and standing "until Kent's Commentaries appeared in 1826, nearly 40 years after the Government had gone into operation." And it is historic truth to state that the first threat to exercise this right, universally recognized in the early days of the Republic, was not heard in the South; "it first sprang up in the North." Not only so, but from 1795 to 1815, and again in 1845, there was an influential party in New England who favored and threatened the formation of a northern confederacy. Roger Griswold, a Representative in Congress from the State of Connecticut in 1804, declared that he was in favor of the New England States forming a republic by themselves and seceding from the Union. Joseph Story, when in Congress, afterward a Justice of the Supreme Court and commentator on the Constitution, said: "It was a prevalent opinion then in Massachusetts * * * of a separation of the Eastern States from the Union."

In a famous speech delivered by Josiah Quincy, in Congress, January 14, 1811, against the admission of Louisiana into the Union as a State, these sentiments were defiantly uttered: "I am compelled to declare it as my deliberate opinion that if this bill passes, the bonds of this Union are virtually dissolved; that the States which compose it are free from their moral obligation, and that, as it will be the right of all, so it will be the duty of some, to prepare definitely for a separation, amicably, if they can, violently if they must." It must not be forgotten that these are not the words of Jefferson Davis. When he defended the doctrine of a State's right to sever its relation with the Union, he was denounced as a conspirator against the life of the Nation.

On December 15, 1814, the Hartford Convention assembled, composed of delegates from all the New England States, to protest against the war then in progress between the United States and England. They had suffered immense loss by the destruction of their commerce and fisheries, and rather than endure more for the Nation's account, they preferred to withdraw from the Union. The report, adopted unanimously by the convention, contains this language: "In case of deliberate, dangerous, and palpable infractions of the Constitution, affecting the sovereignty of a State, and the liberties of the people, it is not only the right, but the duty of such a State to interpose its authority for their protection, in the manner best calculated to secure that end. When emergencies occur, which are either beyond the reach of judicial tribunals, or too pressing to admit of the delay incident to their forms, States which have no common umpire, must be their own judges and execute their own decisions."

While that threat was never carried into execution—the Treaty of Ghent having been signed in the meantime—there is the solemn assertion on the part of these New England delegates of their sovereign right to withdraw from the Union if occasion seemed to demand. I make no comment upon the fact that while New England was meditating withdrawal from the Federal compact Gen. Andrew Jackson and his heroic legions in the battle at New Orleans were shedding their blood for the honor of our national flag. But I venture to ask this question, Is there anything in the lapse of a few years to make the utterances of Roger Griswold and Rufus King and Joseph Story and Josiah Quincy and the Hartford Convention less disloyal than the calm, philosophic reasoning of John C. Calhoun and Jefferson Davis? And yet no one ever hears of New England as "the hotbed of secession" and her political leaders as conspirators against the life of the Nation. No fair-minded student of history can acquit Josiah Quincy and find fault with Jefferson Davis.

The Legislature of Massachusetts in 1809 declared the embargo law "not legally binding on the citizens of the State." Now, in New England that was simply the assertion of inalienable rights. If in South Carolina, it would have been, and was, denounced as the vilest nullification.

Now I come to the conditions and questions that immediately preceded, if they did not

precipitate, the dismemberment of the Union. Slavery, which existed in all but 1 of the States when the Union was formed, and in 15 of them when the war began, was the occasion but not the cause of the lamented conflict. But as Mr. Davis well said. "In the later controversies * * * its effect in operating as a lever upon the passions, prejudices, or sympathies of mankind was so potent that it has been spread like a thick cloud over the whole horizon of historic truth."

The right or wrong of slavery we need not discuss, or attempt to determine who was most responsible therefor. The institution is dead beyond the possibility of resurrection, and the whole Nation is glad. The later geographical limitations of slavery in the United States were determined not by conscience but by climate. It was climate in the North and the cotton gin in the South that regulated the distribution of slave labor. I have scant respect for a conscience too sensitive to own certain property because it is immoral, but without compunction will sell the same to another at full market value. Had the slave holders of the North manumitted their slaves and not sold them because their labor ceased to be profitable, there would have been more regard for the subsequent abolition zeal. It is a matter of pride with us that no Southern Colony or State ever had a vessel engaged in the slave trade. And several of the Southern States were the first to pass stringent laws against the importation of African slaves.

But apart from the ethical question involved, as we now see it, slave property was recognized by the Constitution and existed in every State but one when the Union was formed. And a clear mandate of the Constitution required slaves to be delivered up to their owners when escaping into another State. Congress passed laws to enforce the same, and their constitutionality was sustained by the Supreme Court in the famous Dred Scott decision. Daniel Webster, too great to be provincial, and too broad to be a narrow partisan, in a noble speech at Capon Springs, Va., in 1851, made this emphatic declaration:

"I have not hesitated to say, and I repeat, that if the Northern States refuse, willfully and deliberately, to carry into effect that part of the Constitution which respects the restoration of fugitive slaves, and Congress provide no remedy, the South would no longer be bound to observe the compact. A bargain cannot be broken on one side and still bind the other side. I say to you, gentlemen in Virginia, as I said on the shores of Lake Erie and in the city of Boston, as I may say again, that you of the South have as much right to receive your fugitive slaves as the North has to any of its rights and privileges of navigation and commerce."

And yet Charles Sumner, speaking for a great party growing in strength and dominance with the rising sun of every day, said the North could not and would not obey the law. William H. Seward declared that there was "a higher law" than the Constitution which would be the rule of their political conduct.

Now, the insistence of Mr. Davis and his compatriots was that the Constitution and laws should be obeyed—that the individual, sovereign States must regulate their own domestic affairs without Federal interference, and that their property, of whatever kind, must be respected and protected. They resisted any invasion of the State's right to control its own internal affairs as a violation of the sacred Federal compact. Over that one fundamental question an "irrepressible conflict" was waged for many stormy years. The advocates of State sovereignty were charged with disloyalty to the Union, while the Federalists were denounced as enemies of the Constitution and usurpers of the rights of the States.

And by the way, our present-day political discussions are eloquently vindicating the patriotic jealousy of Mr. Davis for the rights of the States. The most significant fact of these strenuous times is the solemn warnings, in endless iteration and from both political parties, against the ominous encroachments of Federal authority. More and more the Nation is seeing that Jefferson Davis was not an alarmist or an academical theorist but a practical, sagacious, far-seeing statesman when he contended so persistently for the rights and unconstrained functions of each member of the Federal Union.

Sectional agitation and alienation continued, with slight interruption and increasing violence, for many weary years. Every lover of the Union deplored it, and every patriotic American sought some common ground on which all could stand, and the rights of each be preserved. But with every congressional debate and political convention and Supreme Court decision, this animosity was kindled into fiercer flame. On both sides the bitterness was intense. Political differences ripened into personal hates and hostilities. Encounters between Congressmen over sectional issues were a daily dread in Washington. One Senator said: "I believe every man in both Houses is armed with a revolver." Fourteen of the Northern States passed so-called personal liberty laws, designed to nullify the Constitution, and encourage the people to disregard the Dred Scott decision of the Supreme Court. State officers were prohibited from assisting in the arrest of fugitive slaves, while State's attorneys were required to defend them, and provision made for paying the fugitive's expenses out of the State treasury. Charles Sumner openly declared that the North would not obey the fugitive-slave laws. William H. Seward, it was said, contributed money to John Brown which was used for pillage and murder. John Brown's midnight raid on Harpers Ferry was applauded to the echo throughout the North. And when the old assassin was executed, according to law, bells were tolled in many places, cannon were fired, and prayers offered for him as if he were the saintliest of martyrs. By fervid orators he was placed on the same canonized roll with Paul and Silas.

On the other hand the South was equally intolerant and aflame with intense excitement. Commercial conventions in Charleston, Montgomery, Memphis, and elsewhere adopted retaliatory measures against the aggressions of the North. Southerners declared that nonintercourse in business was "the one prescription for Northern fanaticism and political villainy." Southern parents were condemned for patronizing Northern colleges, and urged to enlarge and equip their own institutions and to use only Southern textbooks. "If our schools are not good enough," they said, "let them be improved by a more hearty support; if this is not enough, let them patronize the universities of Europe rather than aid and abet in any way the bitter enemies of the Southland."

And as further evidence that northern leaders had determined no longer to uphold the Constitution and give to the South what she considered her rights and equality in the Union, we have only to reread the extreme and inflamed utterances of their chief men. What could the Nation hope for when men in authority declared that the Constitution under which we lived is no longer of binding force, and that there is a higher law for the guidance of a citizen's conduct and conscience? William H. Seward, the acknowledged head of the Republican Party, and the author of that doctrine, uttered these words: "There is a higher law than the Constitution which regulates our authority over the domain. Slavery must be abolished, and we must do it."

Horace Greeley, a most potential voice in the councils of his party, did not hesitate to say: "I have no doubt but the free and slave States ought to be separated—the Union is not worth supporting in connection with the South."

William Lloyd Garrison, at first derided as a fanatic, but afterward followed as the voice of an apostle, thus advocated the cause of disunion: "The Union is a lie. The American Union is an imposture, a covenant with death, and an agreement with hell. We are for its overthrow. Up with the flag of disunion, that we may have a free and glorious republic of our own."

Wendell Phillips, the most eloquent orator in New England, and whose leadership was commanding, fed the flames of sectional animosity with speeches such as this: "There is merit in the Republican Party. It is this: It is the first sectional party ever organized in this country—it's not national; it is sectional. It is the North against the South. The first crack in the iceberg is visible, you will yet hear it go with a crack through the center."

The New York Tribune, for many years the acknowledged and most influential organ of Republican opinion in the United States, thus bade the South a respectful adieu: "The time is fast approaching when the cry will become too overpowering to resist. Rather than tolerate national slavery as it now exists, let the Union be dissolved at once."

With such utterances and the applauding echoes of a party flushed with political victory ringing in their ears, the South had little occasion to hope for aggressions to cease and conditions to improve. But through all the years this storm was fiercely raging, the cool, sagacious Jefferson Davis never lost the clearness of his vision or allowed himself to be swept from his political moorings. He fought with all his superb skill and herculean strength for the rights of the States and warned his opponents that continued Federal invasion might drive them from the Union, but at the same time he reiterated his undying love for the whole country and its organic law, and prayed that the day of disunion would never dawn.

In an eloquent speech delivered at Portland, Maine, in 1858, Mr. Davis strikingly demonstrated the fact that State pride and devotion to State integrity strengthened rather than weakened our attachment to the Federal Union; that the larger love we have for our national flag is fed by the passionate devotion we manifest in the welfare of an individual State. He said: "No one more than myself recognizes the binding force of the allegiance which the citizen owes to the State of his citizenship, but the State being a party to our compact, a member of the Union, fealty to the Federal Constitution is not in opposition to but flows from the allegiance due to one of the United States. Washington was not less a Virginian when he commanded at Boston, nor did Gates and Green weaken the bonds which bound them to their several States by their campaigns in the South. In proportion as a citizen loves his own State will he strive to honor her by preserving her name and her fame free from the tarnish of having failed to observe her obligations and to fulfill her duties to her sister States. Do not our whole people—interior and seaboard, north, south, east, and west—alike feel proud of the Yankee sailor, who has borne our flag as far as the ocean bears its foam, and caused the name and character of the United States to be known and respected where there is wealth enough to woo commerce and intelligence to honor merit? So long as we preserve and appreciate the achievements of Jefferson and Adams, of Franklin and Madison, of Hamilton, of Hancock, and of Rutledge—men who labored for the whole country and lived for mankind—we cannot sink to the petty strife which saps the foundations and destroys the political fabric our fathers erected and bequeathed as an inheritance to our posterity forever."

And a few weeks thereafter, when on a visit to Boston, addressing a great audience

in Faneuil Hall, and speaking not only for himself but for the entire South as well, he uttered sentiments as broadly and loyally national as were ever spoken by Thomas Jefferson or sung in the battle hymns of the Republic. "As we have shared in the toils," said he, "so we have gloried in the triumphs of our country. In our hearts, as in our history, are mingled the names of Concord, and Camden, and Saratoga, and Lexington, and Plattsburg, and Chippewa, and Erie, and Moultrie, and New Orleans, and Yorktown, and Bunker Hill. Grouped all together they form a record of the triumphs of our cause, a monument of the common glory of our Union. What southern man would wish it less by one of the northern names of which it is composed? Or where is he who, gazing on the obelisk that rises from the ground made sacred by the blood of Warren, would feel his patriot's pride suppressed by local jealousy?"

As late as December 20, 1860, after the Presidential election and when events were hastening to a crisis, on the floor of the United States Senate, Mr. Davis reannounced his passionate love for the Union and pathetically plead for a spirit of conciliation that would make unnecessary the withdrawal of the South from their national fraternity. He said: "The Union is dear to me as a union of fraternal States. It would lose its value if I had to regard it as a union held together by physical force. I would be happy to know that every State now felt that fraternity which made this Union possible, and, if that evidence could go out, if evidence satisfactory to the people of the South could be given that that feeling existed in the hearts of the northern people, you might burn your statute books and we would cling to the Union still."

Instead of conspiring to disrupt the Union, as has been charged, Mr. Davis loved this great Republic with passionate ardor and sealed that devotion with his richest blood. He served his country with a conscientious fidelity that knew no flagging. He went out at last in obedience to what he felt was imperative necessity, and the going almost broke his great heart. So reluctant was he to sever relations with the Union that some more ardent friends became impatient with his hesitation and almost suspected his loyalty. Despairing of any fair and final adjustment of issues that had agitated the Nation for more than a half century, and believing that the election of Mr. Lincoln would embolden his party to great aggressions upon the constitutional rights of the Southern States, he at length, with many a heartache, yielded to the inevitable and joined his people in the establishment of a separate civil government.

On January 20, in a letter to his special friend ex-President Franklin Pierce, he thus expressed the grief of his patriotic heart: "I have often and sadly turned my thoughts to you during the troublous times through which we have been passing, and now I come to the hard task of announcing to you that the hour is at hand which closes my connection with the United States, for the independence and union of which my father bled, and in the service of which I have sought to emulate the example he set for my guidance."

As Mr. Blaine justly said of L. Q. C. Lamar, so will history say of Jefferson Davis: "He stood firmly by his State in accordance with the political creed in which he was reared; but looked back with tender regret to the Union whose destiny he had wished to share, and under the protection of whose broader nationality he had hoped to live and die."

And so consistent was his entire public career, and so conspicuous the unstained purity of his motives, that when nearing the close of his eventful life, he could challenge the world and triumphantly say: "The history of my public life bears evidence that I did all in my power to prevent the war; that I did nothing to precipitate collision; that I did not seek the post of Chief Executive, but advised my friends that I preferred not to fill it."

Long after Yancy and Rhett and Toombs and others had thrown hesitancy to the winds Mr. Davis still wrought with all his great ability and influence to preserve the Union. He favored and earnestly advocated the "Crittenden Resolutions" on condition that the Republican Members accept them. Had they not stubbornly refused—and they did it on the advice of Mr. Lincoln—war would have been averted and the dissolution of the Union prevented or postponed. All the undoubted facts go to prove that Jefferson Davis, at the peril of sacrificing the confidence of his people, exhausted all resources consistent with sacred honor and the rights of the States to stay the fatal dismemberment of the Union.

Jefferson Davis' farewell to the United States Senate, in which he had so long towered as a commanding figure and where he had rendered his country such distinguished service, was one of the most dramatic and memorable scenes in the life of that historic Chamber. Mississippi, by solemn ordinance and in the exercise of her sovereign right, had severed her relation with the Union, and he, as her representative, must make official announcement of the fact, surrender his high commission, and return home to await the further orders of his devoted people. It was a supreme—a fateful hour—in our country's history. The hush of death fell upon the Chamber when Jefferson Davis arose. The trusted leader and authoritative voice of the South was about to speak, and an anxious Nation was eager to hear. Every Senator was in his seat, Members of the House stood in every available place, and the galleries were thronged with those whose faces expressed the alternating hopes and fears of their patriotic hearts. The fate of a nation seemed to hang upon that awful hour.

Pale, sad of countenance, weak in body from patriotic grief and loss of sleep, evidently under the strain of sacred, suppressed emotion, and yet with the calmness of fixed determination and settled conviction, the majestic Senator of Mississippi stood, hesitant for a moment, in painful silence. The natural melancholy in his face had a deeper tinge "as if the shadow of his country's sorrow had been cast upon it." His good wife, who witnessed the fateful scene, and felt the oppressive burden that almost crushed the brave heart of her great husband, said that "Had he been bending over his bleeding father, needlessly slain by his countrymen, he could not have been more pathetic and inconsolable." At first there was a slight tremor in his speech, but as he proceeded his voice recovered its full, flutelike tones, and rang through the Chamber with its old-time clearness and confident strength. But there was in it no note of defiance, and he spoke no word of bitterness or reproach. He was listened to in profound silence. Hearts were too sad for words and hands too heavy for applause. Many eyes, unused to weeping, were dimmed with tears. And when he closed with these solemn words, there was a sense of unutterable sorrow in the entire assembly: "Mr. President and Senators, having made the announcement which the occasion seemed to me to require, it only remains for me to bid you a final adieu." Senators moved softly out of the Chamber, as though they were turning away from a new-made grave in which were laid their dearest hopes. Mrs. Davis says that the night after this memorable day brought no sleep to his eyelids, and all through its restless hours she could hear the oft-reiterated prayer: "May God have us in His holy keeping, and grant that before it is too late peaceful councils may prevail."

In this open, manly, but painful way, the Southern States withdrew, with never a suggestion of conspiracy against anything or anybody. The men of the South wore no disguises, held no secret councils, concealed no plans, concocted no sinister schemes, organized no conclaves, and adopted no dark-lantern methods. They spoke out their honest convictions, made their pathetic pleas for justice, and openly announced their final, lamented purpose if all efforts at a peaceful adjustment should fail. And at length, whether wisely or unwisely, feeling that nothing else would avail, they determined to take the final step and fling defiance to the face of what they considered an aggressive, overbearing, tyrannous majority.

As Alexander H. Stephens admirably and correctly says, the real object of those who resorted to secession "was not to overthrow the Government of the United States, but to perpetuate the principles upon which it was founded. The object in quitting the Union was not to destroy but to save the principles of the Constitution." And it is a significant fact, that the historic instrument, in almost its exact language, became the organic law of the Confederate Government. The Southern States withdrew from the Union for the very reason that induced them at first to enter into it; that is, for their own better protection and security.

Secession was not a war measure; it was intended to be a peace measure. It was a deeply regretted effort on the part of the South to flee from continued strife, feeling that "peace with two governments was better than a union of discordant States." Hence Greely himself said: "If the Cotton States shall decide that they can do better out of the Union than in it, we insist on letting them go in peace." And, while fearing the direful possibility, the Southern States seceded without the slightest preparation for war. As Dr. J. L. M. Curry said: "Not a gun, not an establishment for their manufacture or repair, nor a soldier, nor a vessel had been provided as preparation for war, offensive or defensive. On the contrary, they desired to live in peace and friendship with their late confederates and took all the necessary steps to secure that desired result. There was no appeal to the arbitrament of arms nor any provocation to war. They desired and earnestly sought to make a fair and equitable settlement of common interests and disputed questions." And the very first act of the Confederate Government was to appoint commissioners to Washington to make terms of peace and establish relations of amity between the sections.

Some days after his farewell to the Senate Mr. Davis returned to his home in Mississippi to await results and render any service to which his country might call him. He did not, however, desire the leadership of the Confederacy that was in process of organization. But the people who knew his preeminent abilities and trusted his leadership declined to release him. By a unanimous and enthusiastic vote he was elected to the Presidency of the young republic, and felt compelled to accept responsibilities from which he hoped to escape. It was the thought of his countrymen, voiced by the eloquent William L. Yancey, that "the man and the hour have met." He could well say, therefore, in his inaugural address, delivered a few days after, that "It is joyous in the midst of perilous times to look around upon a people united in heart, when one purpose of high resolve animates and actuates the whole; when the sacrifices to be made are not weighed in the balance against honor and right and liberty and equality." His address was conservative and dispassionate, but strong and resolute, not unequal to the luminous and lofty utterance of Thomas Jefferson. If others failed to measure the awful import of that epochal hour, not so the serious and far-seeing man about to assume high office, who was at once an educated and trained soldier and a great statesman of long experience and extraordinary genius.

To rehearse in detail the well-known story of carnage and struggle is not within the

purpose of this discussion. Nor is it necessary to consider at length the many and perplexing problems which signalized the administration of the young nation's first and only President. It is sufficient to say that he conducted the affairs of the stormy government with consummate wisdom, meeting the sternest responsibilities, awed by no reverses, discouraged by no disaster and cherishing an unshaken faith that a cause could not fail which was "sanctified by its justice and sustained by a virtuous people." Even after Richmond was evacuated and the sun of Appomattox was about to go down amid blood and tears, a final appeal was issued in which he said: "Let us not despair, my countrymen, but meet the foe with fresh defiance and with unconquered and unconquerable hearts."

Mr. Davis was a great President. In administering the affairs of the Confederate Government he displayed remarkable constructive and executive genius. Considering the resources at his command, all the southern ports blockaded, and without the recognition of any foreign nation, with no opportunity to sell cotton abroad and import supplies in return, having to rely entirely upon the fields and strong arms of the homeland, and constantly menaced by one of the greatest armies of the world, it was remarkable that the young nation could have survived a few months, instead of four memorable years. And much of that wonderful history is due to its Chief Executive. In answer to one who sought General Lee's estimate of Mr. Davis as the head of the Government, he thus replied: "If my opinion is worth anything, you can always say that few people could have done better than Mr. Davis. I know of none that could have done as well."

And on the other side harsh criticism is giving way to generous and discriminating judgment. The Honorable Charles Francis Adams, in a recent review of the latest Life of Jefferson Davis, which has issued from the press, pays fitting tribute to the extraordinary ability displayed by the Confederacy's great President: "No fatal mistake," says he, "either of administration or strategy, was made which can fairly be laid to his account. * * * He did the best that was possible with the means that he had at command. Merely the opposing forces were too many and too strong for him. Of his austerity, earnestness, and fidelity it seems to me there can be no more question than can be entertained of his capacity."

Mr. Davis has been charged with cruelty to prisoners, and on his shoulders have been laid the so-called horrors of Andersonville, a charge as utterly baseless as it is despicably mean. No more humane or gentle spirit ever walked this earth than Jefferson Davis. As a matter of fact, there was no deliberate purpose on either side to maltreat prisoners of war or fail to make proper provision for their care. The sufferings endured were only the exigencies of the awful days when great armies were in the death struggle for mastery. All that humanity could suggest and the meager resources of the South could provide were freely given for the brave men captured in battle. Mr. Davis said they were given exactly the same rations "in quantity and quality as those served out to our gallant soldiers in the field, which has been found sufficient to support them in their arduous campaigns." On the contrary, goaded doubtless by false reports from the South, the United States War Department, on April 20, 1864, reduced by 20 percent the rations issued to Confederate prisoners.

"With 60,000 more Federal prisoners in the South," said Senator Daniel, "than there were Confederate prisoners in the North, 4,000 more Confederates than Federals died in prison." If those figures are correct the very repetition of the charge is an insult to intelligence and blasphemy against the truth. The real reason for so much suffering and mortality among the men in southern prisons was that the Federal Government refused to observe the cartel agreed upon for the exchange of prisoners. And General Grant boldly assumed the responsibility for such refusal in these words: "It is hard on our men in southern prisons not to exchange them, but it is humanity to those left in the ranks to fight our battles. If we commence a system of exchanges which liberates all prisoners taken, we will have to fight on until the whole South is exterminated. If we hold those caught they amount to no more than dead men. At this particular time to release all rebel prisoners North would insure Sherman's defeat and compromise our own safety here."

If any unfortunate prisoner was not comfortably provided for, it was not because the South would be cruel to a brother but on account of her exhausted source of supply. During the last year of the war General Lee had meat only twice a week, and his usual dinner was "a head of cabbage boiled in salt water, sweetpotatoes, and a pone of corn bread." If the peerless commander in chief of the Confederate armies was reduced to such scanty fare, the government could not well provide very liberally for the gallant men in the ranks or behind prison doors.

Now, with this very imperfect sketch of a most remarkable career I shall briefly refer to some of the qualities that made this heroic history a sublime possibility.

He was an accomplished orator and a magnificent debater. Having always complete mastery of himself and of the subject in hand, he became a veritable master of assemblies. He met Sargent S. Prentiss in debate, that inspired wizard of persuasive and powerful speech, and his friends had no occasion to regret the contest. Stephen A. Douglas found in him the mightiest champion with whom he ever shivered a lance. During the exciting discussion in 1850, Henry Clay turned to the Mississippi Senator and announced his purpose, at some future day, to debate with him a certain great question. "Now is the moment," was the prompt reply of the brilliant southern leader, whose intrepid courage and diligent student habits kept him fully armed for the issues of any hour.

"He was an archer regal
Who laid the mighty low,
But his arrows were fledged by the eagle
And sought not a fallen foe."

One of Mr. Davis' biographers, well acquainted with his parliamentary career, who knew his mastery in debate and his superb power as a statesman and an orator, and who witnessed his brilliant gladiatorial combat in the Senate with Stephen A. Douglas, gives this discriminating estimate of the great Mississippian:

"In nearly all of Mr. Davis' speeches is recognized the pervasion of intellect, which is preserved even in his most impassioned passages. He goes to the very foundations of jurisprudence, illustrates by historical example, and throws upon his subject the full radiance of that light which is shed by diligent inquiry into the abstract truths of political and moral science. Strength, animation, energy without vehemence, classical elegance, and a luminous simplicity are features in Davis' oratory which rendered him one of the most finished, logical, and effective of contemporary parliamentary speakers. * * * He had less of the characteristics of Mirabeau than of that higher type of eloquence, of which Cicero, Burke, and George Canning were representatives, and which is pervaded by passion, subordinated to the severe tribunal of intellect."

His sensitiveness to personal and official honor, and his exceeding conscientiousness in the discharge of public duties were among the chief characteristics of this serious and stainless man. "Great politicians," said Voltaire, "ought always to deceive the people." But such was not the sacred creed of Jefferson Davis, who held that public men should invariably and scrupulously be honest with the people, having no confidences from which they are excluded and no policies in which they were not invited to share. Free from conscious sophistry and the very soul of candor, he never sought to conceal or obscure, but to make the truth so luminous that he who ran could read. His own eloquent characterization of President Franklin Pierce might be fittingly applied to Jefferson Davis himself: "If treachery had come near him it would have stood abashed in the presence of his truth, his manliness, and his confiding simplicity."

In official life he knew no word but duty. When in Congress a river and harbor bill was pending on one occasion, and seeing that combinations had been formed to secure certain local, trivial appropriations, he opposed the measure with characteristic vigor. In the course of the debate he was asked if he did not favor appropriations for Mississippi, in response to which he retorted sharply and concluded: "I feel, sir, that I am incapable of sectional distinctions upon such a subject. I abhor and reject all interested combinations."

He was the very soul of chivalry. No plumed knight of the Middle Ages ever had higher regard for the virtue of woman or the integrity of man or the sacredness of a cause. Sensitive to wrong, cherishing above measure his stainless honor, he never in the least betrayed it nor allowed another to impugn it. Had he remained in the military service I doubt not that he would have been on the tented field what Sir Henry Havelock became to the chivalry of England.

His was a proud but a noble and affectionate nature. Some have thought him a cold, austere, severe man, lacking in the gentler elements and sympathies of a generous soul. But nothing could be further from the fact. His affections were most ardent, his friendships partook of the pathetic, and the tenderness of his heart often dimmed his eyes with tears. And he was at all times most approachable. No citizen was so poor, no soldier so humble, no man so obscure, as not to have ready access to his presence and sympathetic attention.

Mr. Davis was a statesman, with neither taste nor ability for mere political manipulation. He relied upon high argument, and not political management, to achieve the great ends for which his party stood, and for which this young Republic was called into being. It was impossible for him to resort to questionable methods and demagogical appeal in order to win elections and carry out party or governmental policies.

He was a profound, philosophical statesman, with a thoroughly trained intellect and an exalted sense of moral responsibility. In his logical processes he quite resembled the illustrious John C. Calhoun, whose genius he greatly admired and with whose political creed he was in substantial accord. And when Mr. Calhoun passed away, amid the lamentations of the whole Nation, the great party he had led with such consummate skill turned instinctively to Jefferson Davis as incomparably the ablest exponent of the basic principles for which they fearlessly stood. His superb and commanding leadership vindicated their generous confidence and vastly enlarged the strength and measure of his national influence.

As Secretary of War in the Cabinet of Franklin Pierce, and by common consent he was the premier in that body of statesmen; it is no disparagement of others to say that no abler or more accomplished Secretary ever sat at the council table of an American President.

Providence designed him for leadership and amply endowed him with gifts to meet its repeated exigencies and imperial responsibilities. And in every position to which he was summoned the results of his labors and

the splendor of his achievements gave eloquent attention to the prescience of his statesmanship and the grandeur of his character. The verdict of history will be, notwithstanding the fall of the Confederate Government, that he was preeminently the man for a crisis. His genius was most resplendent when the clouds were darkest and the tension was greatest and the danger was nearest. When passion swayed the hour, he was in most perfect command of his highest powers and seemed to exercise the coolest judgment. He was cautious without timidity, intrepid without rashness, courteous with condescension, pious without pretense.

And no public man ever had more loyal support and a more enthusiastic following. The Tenth Legion of Caesar and the Old Guard of Napoleon never followed their leaders with more perfect assurance or thrilling ardor than did the friends of the superb chieftain whose one hundredth anniversary we celebrate today.

"Courage that could dare and do,
Steadfast faith and honesty,
Were the only craft he knew
And his sole diplomacy."

Mr. Davis was a devout believer in the fundamental verities of our Christian faith, and sought to make them the inspiring rule of his daily life. He was acquainted with the Scriptures from a child, and knew the place and power of prayer. His unshaken faith gave him sublime courage for duty, a serene fortitude in calamity, softened the rigor of the cruel prison, and made radiant the evening skies of life's long stormy day. His intimate friend, the eloquent Senator Benjamin H. Hill, of Georgia, paid this heart tribute to the beauty and consistency of his Christian character:

"I know Jefferson Davis as I know few men. I have been near him in his public duties. I have seen him by his private fireside; I have witnessed his humble Christian devotions, and I challenge the judgment of history when I say no people were ever led through the fiery struggle for liberty by a nobler, truer patriot, while the carnage of war and the trials of public life never revealed a purer and more beautiful Christian character."
